Oil Workers Go on Record for Constitutional Monetary System

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. VOORHIS of California. Mr. Speaker, for the second time in 2 years, the Oil Workers International Union has passed at its annual convention a very strong and well-prepared resolution calling for constructive changes in the monetary system of our country and a restoration to Congress of its constitutional power to "coin money and regulate the value thereof."

I take great pleasure in inserting in the RECORD with my remarks the resolution passed at the annual convention this year:

RESOLUTION 57—MONETARY SYSTEM

Whereas it is an established and self-evident fact that in order for a nation of people to enjoy economic security and freedom it is imperative that government shall have the sole power to create and regulate the value of the nation's money; and

Whereas the founding fathers of this great American Republic recognized this fact and specifically provided for the Government of the United States of America to have the sole power to create money and regulate its value by making it mandatory on Congress, as provided in article I, section 8, of the Constitution of the United States of America, to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures; and

Whereas among other great Americans we find that the scientific-minded Benjamin Franklin, the democratic Thomas Jefferson, the noble George Washington, the martyred Abraham Lincoln were all advocates of the powers vested in Congress by article I, section 8, of the Constitution of the United States of America; and

Whereas it is a widely known fact that Congress has violated its own oath and trust to support the Constitution by delegating to private bankers its powers to create money and regulate its value thereof; and

Whereas the private bankers, and in particular the heads of the Federal Reserve banks (private banking institutions) have abused their powers to create money and by regulating its value to destroy money as well have caused widespread unemployment, economic chaos, loss of homes, farms, business savings, and paved the way for world warfare; and

Whereas it is a positive matter of record that the overlords at the top of the money world deliberately planned and viciously carried out the program to cause the depression, widespread unemployment, loss of homes, farms, and savings after World War No. 1; and

Whereas the same people have the same power to do the same thing after World War No. 2, unless Congress restores to itself the powers, vested in article I, section 8 of the Constitution of the United States of America; and

Whereas the overlords at the top of the private-banking institutions can continue to exploit the American people and the resources of this Nation so long as they have the power to create our Nation's money and regulate its value thereof; and

Whereas it is a widely known fact that our Government is compelled to borrow its own money from private banking institutions and pay interest tribute to private-banking institutions for the use of its own money; and

Whereas the national interest-bearing debt is growing larger and larger because Congress has delegated its power to create and regulate money to private banks; and

Whereas the United States Government does not own 1 cent of stock in the Federal Reserve banks; and

Whereas even when the war is ended with full and complete victory for the United States of America and her allies, there can never be a secure and lasting peace so long as a few ruthless, cold-blooded, brutal private bankers have the power to bring on a condition which will cause continued economic chaos and eventually bring about either a revolution or another world war; and

Whereas our representative form of government is in the very gravest danger of being destroyed and a dictator form of government in one of its various forms being instituted, because the intent of the blueprint for representative American democracy is being grossly violated by those sworn to uphold and defend it; and

Whereas many sincere but uninformed Americans are being seduced into embracing foreign ideologies and philosophies of economics and government, due in large part to the violation of article I, section 8, of the Constitution of the United States of America; and

Whereas it is becoming increasingly necessary that American trade unions crusade for the American ideal of living; and

Whereas American labor unions can never gain their goal or objectives by simply bargaining collectively in the matter of hours, wages, and general working conditions until Congress restores to itself the power to regulate the value of the buying power of the wages bargained for; any attempt to bring about economic security for wage earners being futile while the New York Stock Exchange and the overlords at the top of the money world set the value of the buying power of the dollars earned; and

Whereas an amazing revolution has taken place in the science of production, no change in any way commensurate has taken place in the financial mechanism; and

Whereas it has become increasingly necessary for the United States of America to institute a scientific, noninterest bearing, constitutional monetary system; and

Whereas this scientific monetary system should have its supply of money so regulated as to prevent a material decline of the domestic average wholesale commodity price; and

Whereas a Government-created money interest free at source of origin used scientifically would prevent inflation, deflation, repudiation; and

Whereas an equitable and scientific Government-controlled monetary system should be based on a balance being constantly attained in order that distribution, exchange, and consumption shall keep pace with production; and

Whereas the volume of money should be increased year by year to match growth of production; and

Whereas it is an established fact that an honest, scientific, constitutional monetary system must have these essential principles:

1. It must be created and controlled by Congress.

2. It must be free from interference by politicians and private bankers.

3. It must be interest-free at the source of origin and be based on the total wealth of the Nation and not on the bonds or basic metals owned by private bankers; and

Whereas one of the main contributing factors to our present unsound monetary system is the practice of the so-called fractional reserve requirements; and

Whereas in order to secure a sound monetary system, it will be necessary to institute a 100-percent reserve requirement on demand deposits held by banks, or, in other words, a dollar-for-dollar, or 100-percent reserve being mandatory; and

Whereas it is common knowledge that many, and probably a majority, of the Members of Congress are ready to restore to Congress the powers vested in article I, section 8, of the Constitution of the United States of America when they are convinced that they have the support of their constituents: Now, therefore, be it

Resolved, That we, the delegates of the Oil Workers International Union in convention assembled at the city of Fort Worth, Tex., respectfully request Franklin Delano Roosevelt, President of the United States of America, to immediately call upon Congress to restore to Congress the powers vested in article I, section 8, of the Constitution of the United States of America; and be it further

Resolved, That we go on record urging the Senate and House of Representatives of the United States of America in Congress assembled to immediately enact such legislation as will be necessary to restore to Congress the sole power to issue money and to regulate its value as provided in article I, section 8, of the Constitution of the United States of America; and be it further

Resolved, That we go on record urging the Senate and House of Representatives of the United States of America in Congress assembled to immediately enact legislation to provide for truly noninterest bearing, constitutional United States Government money; and be it further

Resolved, That we urge the Senate and House of Representatives of the United States of America in Congress assembled to seriously consider the monetary bills introduced by Congressmen JERRY VOORHIS, PATMAN, and others, and in particular the following: H. R. 112, H. R. 118, H. R. 373; and be it further

Resolved, That in order to carry out the intent of the qualifying clause of article I, section 8, of the Constitution of the United States of America, to wit, "and regulate the value thereof," we go on record urging the Senate and House of Representatives of the United States of America in Congress assembled to set up a value stabilization committee of its own Members, together with representatives of labor, industry, agriculture, the professions, etc. The purpose of said committee to immediately plan, devise, or work out an equitable, just, and stabilized price schedule or value on all property, goods, commodities, and services; and be it further

Resolved, That we earnestly request and we go on record urging each C. I. O. international union, each American Federation of Labor national organization, each national railroad brotherhood organization, each legitimate national independent labor organization, the national executive councils of the Congress of Industrial Organizations, American Federation of Labor, railroad brotherhoods, legitimate independent labor organizations to adopt this resolution and urge immediate action on the part of Congress to carry out the intent of this resolution.

To Show the World the Real America

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Henry Gillen, which appeared in the Boston (Mass.) Sunday Post, December 17, 1944:

TO SHOW WORLD REAL AMERICA--NEW POSITION IN STATE DEPARTMENT WILL TELL OF CULTURAL ADVANCE UNDER PURE DEMOCRACY

(By Henry Gillen)

We went to call, the other day, on a relative who lives by the side of a broad highway in the suburbs. As she opened the door for us, excitedly she squeezed our arms and said, "For heaven's sake, what is that thing there?"

She pointed to a mammoth trailer truck going by. Ensconsed on the truck was an equally mammoth machine. We told her that it was a bulldozer.

"So that's a bulldozer," she said with awestruck tones. "You know, since the war began those machines have been hauled up and down this road every day and I couldn't figure out what they were."

To any European in a liberated country, to any native on a liberated island of the Pacific, it would probably be incredible that any American did not know what a bulldozer was.

America must be all bulldozers, for they have seen them rear and roar along in the wake of the armies, filling the bomb holes, in the airports, cleaning away the debris from the streets, mowing down orchards, and pushing aside hills.

A bulldozer at work is an impressive thing and if people of foreign lands have come to interpret the mechanical giant as symbolic of the might and majesty of America, we ourselves may be to blame.

For years we have been telling the world that we have more telephones per capita than any nation on earth, more automobiles, more radios, more electric stoves, more vacuum cleaners, more automatic ice-making boxes, and more bathtubs.

We were the "makingest" people on earth, the greatest gadgeteers in history. Uncle Sam was a physical giant, with the muscles of Sandow and the fist of John L. Sullivan, striding the landscape with a slide rule in his hand, a wrench in his pocket.

We were the land of roaring factories, giant dams, skyscrapers, docks, a countryside tunneled with mines, a countryside crisscrossed with railroads, the cities tall with towers, the shores a forest of masts, the hinterlands under a constant cloud of smoke from the multitudinous chimneys.

WHO KNOWS OF SYMPHONY?

How many of those people would believe that 13,500 Bostonians the other night crowded the Hub's largest sport arena and bought almost $10,000,000 worth of bonds for the privilege of hearing the Boston Symphony Orchestra? Or how many of those people hearing of it would believe that the Boston Symphony Orchestra is the world's greatest?

The music lovers of Europe and Asia know it. The great composers and the great conductors of the world know it. The Europeans and Asians who could afford to travel and toured this land were acquainted with the fact.

But how about the average man in those countries? Does he know it? Does he know that we not only have in Robert Montgomery a celebrated motion-picture actor, but in Robert Frost one of the world's great poets?

Does he know that we not only have the world's largest factory at River Run, in Michigan, but one of the greatest of art museums in Boston and another in New York? Does he know that we not only have a factory at every crossroad but, as one Bostonian put it, "a college under every toadstool"?

It is important that the average man abroad should know it. It is important that he doesn't continue to get his impressions of America solely from a mechanical giant that went to war, or from the thriller-diller produced by Hollywood with their synthetic Indians or drugstore gangsters.

MUST KNOW OF CULTURE

It is not only important that he knows that America is productive of Olympic game winners, but is rich in Nobel prize winners. It is not only important that he hears how many books the Boston Public Library contains, but that there is a book counter now by practically every soda fountain.

Our Nation went out in the last war in a crusading mood to lift the heel on the conqueror from the necks of the little people. Our Nation went forth solely in a spirit of restoring freedom and establishing justice. We asked for nothing for ourselves—nothing physical.

That such a spirit prevailed in the world was to the world's amazement. They had heard of it, but then they saw it borne into battle by young men who died for an unselfish purpose, died feeling that the futures which they gave away would reap a later harvest of goodness for their land and others.

But that was all wiped away a few years later when one of our gallant Allies, nettled because our Government reminded her of a monetary debt, called Uncle Sam "Uncle Shylock" in stentorian tones that rang around the world and revived the old fabrication that gold alone was the aim of our living, inferring thereby we were crass and crude.

It is important that that does not happen again for the sake of our peace and the peace of the world. Such a desire is not born of any inferiority complex or any shame for the fact that occasionally we get mud on our boots or grime on our hands earning a living.

LEISURE FOR FINER THINGS

It is only important as a means to convince the average man of earth that along with a high standard of living we have also a high standard of mind, that our love of freedom does not come from a lathe but from the heart, and that the prosperity born of the burning coals in the shop boiler, gives us the opportunity to devote more time to the finer and cultured things of life.

We have come of age in America. We have pioneered and tamed. The second, third, or fourth generations have college degrees. People stand in long lines for a rush seat at the opera. The radio brings Heifetz into our living room. The sales of nonfiction books often surpass the novels. We enjoy Lippy Durocher, Glen Davis, Abbott and Costello. But we also appreciate the art of Koussevitzky, Grant Wood, Hemingway, and Benet.

Some of us still bridle at calling it culture. We have seen samples of culture wearing a monocle, long hair, a beret or a cloak of smug superiority. We still remember the lecturers who came here and then went home to write books about our rudities and lack of manners.

Only recently we were incensed because an exponent of Old World culture and cafe society sophistication that passes as culture, aroused us because he wrote a book in which appeared a passage to the effect that on his tour of the battlefields he had little pity for little Brooklyn boys crying in hospital cots over mere battle wounds in their arms or legs.

We were incensed at such ingratitude and, in particular, because those little Brooklyn boys perhaps had more formal education than he ever did and that in bleeding on a battlefield for intangible freedom they were probably doing more than he ever did for the world—at least more than thrilling bobby-sockers gathered around a jukebox in the local tonic-parlor to listen to his whispy songs.

PLAN SOMETHING NEW

In another happier, more peaceful day, the foreign writer would have been stoutly de-

fended as merely indulging in a bit of whimsy. But one of America's celebrated book magazines, the Saturday Review of Literature, dissected him like a Johns Hopkins surgeon because the little Brooklyn boys were not some surplus clods in khaki, but intelligent, high-spirited, high-minded young men who could probably argue him into a corner on Socrates, Sibelius, or Picasso, while firing a bazooka or overhauling a B-29.

Now the President and Mr. Stettinius propose, through the medium of something new, novel, and noteworthy, a secretaryship of public information and cultural relations in the State Department, to lift the bushel off the light we have been hiding in the past.

As interpreted, its functions will be twofold. The secretary will direct the spread of information on the policy and doings of the Department to the people at home and overseas.

He will also direct the Department's activities "in connection with the exchange with other countries of scientific, technical, artistic, literary, and professional knowledge."

The Department of Commerce now tells the world how many reindeer are residing in Alaska; how many telephone poles stand in Boise; how much cotton has sailed down the Mississippi; and what is the outlook for the rabbit-skin market in Texas. Now, the State Department will add what new has been discovered at the Mayo Clinic, the latest invention at Tech, how Sinclair Lewis' forthcoming volume measures up; the response to a native American opera, tried out at the Metropolitan, or of Howard Shapley's most recent look at the stars.

SECRET IS DEMOCRACY

It is important. It will be giving the world more than information; it will be selling the average man afar a fact which is vital to him and us that it becomes an idea. It is telling him that the bulldozers which we manufacture and the battles for freedom we are fighting; the automobiles we produce and the books we write; the music of factory whistles, blowing noon, and the concert pianos trying out new symphonies, are made possible by a democratic form of government—the kind of democracy cherished by the sons of men who fled from dictatorships of other lands in order to live as free and independent people, side by side, on a vast continent, happy and continually at peace.

The Crime of Thrift

EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. ELSTON. Mr. Speaker, perhaps no single act of the Roosevelt administration has outraged the American housewife as much as the Christmas cancelation of ration points by O. P. A. The reasons behind this act of political chicanery are well stated in an article by George E. Sokolsky which recently appeared in the Cincinnati Times-Star and other newspapers throughout the United States. This article, under leave to extend my remarks, I include herein:

THE CRIME OF THRIFT

The O. P. A. has again established one fact beyond peradventure: Thrift is immoral in the United States. Honest American citizens who have not hoarded foodstuffs, who use their stamps as they went along, who have not filled their larders with sugar and their refrigerators with butter have been cruelly penalized. The hoarder, the cheat, the marketeer who went from store to store getting a quarter pound of butter here and a half pound there has benefited. The moral of Mr. Chester Bowles' philosophy is that to hoard food is always better than to save stamps in the book.

And remember this also, for it is very important: Whenever an election approaches, the O. P. A., which is a nonpolitical agency of the American people, eases up on whatever it can. When the election is passed, they tighten up so tightly that the squeeze hurts. What does it really matter? You've done your job. You've voted their way.

Now you have to take it. For mind you, it is absolutely impossible that the food statistics of this country changed radically between Election Day and Christmas Day. Mr. Bowles knew before Election Day what his Christmas present for the American people would be. He knew that this country possessed only one food surplus, wheat; that we were short of everything else; that we were, before the war, on balance a food-importing country. Yet, what has happened to Nature's windfall—six bumper crops? What have they done with the largest cattle population this country has ever known? Let them answer; no one else can. For mind you, we have not fed the countries we have liberated. We are not feeding the world. Our troops are not eating luxuriously. Perhaps if O. P. A. were headed by a practical butcher or a grocer instead of an advertising agent as Mr. Bowles was before he got his present job, or a college professor as Mr. Henderson was—we might have a more practical approach to this problem.

Well, there is no use bellyaching. It won't help at all. The thing is to use substitutes. Save every ounce of every kind of fat because fat is tremendously important in your diet. If you have a chicken use the chicken fat; if you manage to get a bit of bacon, use the bacon fat over and over again. But be sure not to deprive your children of fats and use the fat or oil, particularly animal fats, as often as possible, over and over again. Fats are important. And learn to eat fish—all the fish you can. Learn to eat what you do not like. We are in a food crisis and make no mistake about that. Think first of your children. Give them fats—all the fats you can lay your hands on and give them green and yellow vegetables as long as the butter shortage lasts. Take no chances with their health.

Now, you can take the canceled stamps which you so carefully saved for the day that you might need them and frame them. Put them up on the wall where you can see them. Remember that you saved those stamps as Americans in another generation put their dollars in a savings bank or a life-insurance policy for the proverbial rainy day. And now you know that there is no use saving for a rainy day or for a hungry stomach. Mr. Bowles has told you that it is bad economics to be thrifty and bad morals to be honest with yourself or your Government. He has proved to you that if you want to save, don't save stamps, save goods, save canned foods, save butter, save cheese, save jars of things, but do not save stamps. He has proved that profligacy is a virtue and thrift a vice. When you get a chance gorge yourself, because your stamps might be canceled or their values reduced.

Thanks very much for the Christmas present, Mr. Bowles, and for the lesson in morals. That was not the way the greatest of your breed, Samuel Bowles, of the Springfield Republican, taught the American Nation. We remember him kindly as one of the finest products of Yankee civilization. Here's wishing you the same for 1945.

Bill to Repeal the Smith-Connally Act

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. LUDLOW. Mr. Speaker, on the opening day of the Seventy-ninth Congress, I have introduced a bill providing for the outright repeal of the Smith-Connally law.

The Smith-Connally law is not a law in the customary sense of that word. It is a bundle of prejudices with an enacting clause. It has no place on the statute books of a free country. In forcing the enactment of that law, the zeal of labor-baiters overreached itself and exceeded all bounds of propriety.

The enactment of the Smith-Connally law was born of turbulent reactions to the conduct of John L. Lewis nd it was not a calmly considered piece of legislation. To strike at John L. Lewis for his alleged misconduct was one thing. To strike at the great body of devoted, patriotic, well-meaning organized labor because of the alleged derelictions of one man was another thing. The Congress, misled by enemies of labor, sought to make a victim of labor in general and succeeded in humiliating and penalizing all labor, largely because of the acts of one man. A more erratic and unfair basis of legislation could hardly be imagined.

The enactment of the Smith-Connally bill was wrong because it left the implication that great bodies of our working men were brazenly callous to the obligations of patriotism; that they were flouting the Government and the law and were refusing to manufacture the implements needed by our soldiers on the fighting fronts—an indictment that was as untrue as it was black and foul. At the very time that indictment against our workers was made, the docks of our country were piled high with fabricated implements of war that could not be moved because of a lack of transportation facilities. It is time to nolle that indictment as being without truth and substance and the way to nolle it is to repeal the act.

Labor's record of production of the implements of war is perfectly amazing and beyond all expectations, and yet labor has to suffer the stinging rebuke implied in the Smith-Connally Act as long as that ill-fated law remains on the statute books.

Capital and industry, if they have recovered from the psychosis that gripped the country when the Smith-Connally law was enacted, will realize that its repeal is as much in their interest as in the interest of labor, for no totalitarian ruler of Europe or Asia ever had more power over industry than this bill confers on the President of the United States. He can take over plants at will and hold them; his executive instrumentality, the War Labor Board, can write labor contracts all over the United States, and,

worse still, the legislation denies any appeal to the courts.

The extent of totalitarian powers which this law gives to the President, without his asking, was shown when Attorney General Biddle cited the Smith-Connally Act as conferring plenary authority to take over and operate the Montgomery-Ward plant, which means that it could be used as a basis for confiscation of private property anywhere in the land. I do not want any President of the United States to have any such sweeping powers of life and death over industry.

I hope that Members of Congress on both sides of the Chamber will now recognize the wrong and folly of the Smith-Connally Act and that its outright repeal will be one of the early accomplishments of the new Seventy-ninth Congress. I would remind friends on the opposite side of the Chamber of the attitude on this measure of Thomas E. Dewey, the Republican candidate for President in the 1944 election, and at present the titular leader of their party. Speaking at Seattle, Wash., on September 18, 1944, Mr. Dewey said concerning the Smith-Connally Act:

> It has not solved the problem. In the 12 months prior to the passage of the Smith-Connally Act there were 3,359 strikes. In the 12 months following the passage of that act there were 4,443 strikes. In other words, the number of strikes after the Smith-Connally Act was passed increased by one-third. That law—the Smith-Connally Act—will expire with the termination of the war, as it should. The provisions of this law and the other New Deal interferences with free collective bargaining should never be renewed. The right of workers to leave their jobs individually or together—the right to strike—is one of the fundamental rights of free men.

I certainly agree with Governor Dewey that the provisions of this obnoxious law should never be renewed. But I would like to submit this additional thought: It may be years before the end of the war comes and if this law is as bad as Governor Dewey's speech indicates—and I am sure it is worse—why wait until the end of the war to wipe it out? In my opinion, it should not be allowed to remain on the statute books 1 minute longer than it takes to repeal it. As long as it remains a law, it will be a cruel, stinging injustice to organized labor and a festering cause of ill-feeling in our country. In the interest of national unity and well-being, it should be repealed immediately.

Joe's Big Moment

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. SPRINGER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include an article appearing in the Times-Herald, of Washington, D. C., of date December 27, 1944, by Frank C. Waldrop, which article is as follows:

JOE'S BIG MOMENT

(By Frank C. Waldrop)

From the German winter offensive on the western front, please address your thanks to the celebrated authors of the unconditional surrender manifesto. You may also thank their agents such as United States Secretary of the Treasury Henry Morgenthau, who announced that just as soon as Germany surrenders unconditionally, Germany will be reduced to a medieval goat pasture.

NOTE.—It was after the demand for unconditional surrender that the Germans brought out V-1, V-2, and the winter offensive.

It seems weird now, looking backward, but when the term IV campaign was at its height 2 months ago, Hitler was cashing in his chips very soon and it was necessary to keep the Commander in Chief on the job so he could win a victorious peace after having led us through victorious war.

Well, we have no doubt about winning the war on the fighting front, no matter how foggy the situation is at this moment along the Meuse River and elsewhere on the critical northern border of France. The ultimate weight of bombs and artillery is on our side.

But though we shall win, the price paid is now far greater than it was formerly expected to be, thanks to unconditional surrender.

Every day the war in Europe drags on the ruin of Europe is intensified.

If there are little twists of apprehension and foreboding here in Washington—as we tell ourselves that no matter what happens we will win, eventually—what do you think is going on just now in Brussels and Paris?

Those people have been kidded before, and by experts of their own governments. They don't have to theorize about false promising and nutty optimism from abroad. They know. And for misplaced confidence they have paid plenty; far more than we, so far, anyhow.

And so has arrived the perfect moment for J. Stalin to start his celebrated rescue ride as the situation in the west is blackest and everybody, including Roosevelt, is craning his neck toward Moscow.

J. Stalin, you will note from the headlines, is only too pleased to oblige, now that he has the proper cue. He has been waiting outside Budapest for us to get in trouble just as he waited outside Warsaw last summer until the Germans had smashed the Polish resistance force. But yesterday, as General Eisenhower announced the melancholy news that the Germans were just 4 miles from the strategically critical Meuse, what came from Moscow?

Here's Henry Shapiro's United Press dispatch:

Moscow, December 26.—The Red Army stormed into Budapest from the west today, after apparently completing its encirclement in a spectacular flanking sweep that doomed thousands of German and Hungarian troops to death or surrender inside the tottering capital."

If you want to know what kind of victory in peace our peerless Commander in Chief is going to deliver, just think about that United Press dispatch.

We may as well face it, citizens. Stalin is smarter than Roosevelt. This dirty old oriental who sleeps in his underwear and doesn't care who knows it, as somebody once described him, has taken the pants off our Groton-Harvard gentleman in the sport of kings.

Mr. Roosevelt has been indulging himself in happy dreams of triumph over Europe, such as Wilson dreamed in 1918.

When Mr. Wilson got to Europe, Lloyd George, of Britain, and Clemenceau, of France, knocked the dreams of triumph to dust. But history isn't repeating itself this time, for Stalin is not bothering to team up with anybody. He doesn't need Churchill to help him bamboozle the Americans. Nor is he waiting until the peace conference.

Stalin is just moving his armies across Europe with masterful strategy, to put the pressure on when it builds his own prestige to the heights, and to slacken up when he thinks we need to be shot up a bit.

Give him credit. He's the smartest player of them all. Not, of course, that the knowledge of this will console any American mother who gets a War Department telegram this week.

Livestock Price Ceilings

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. CARLSON. Mr. Speaker, during the past 2 weeks the Office of Price Administration has held regional meetings and issued statements on placing a ceiling on live cattle. Rumors are current that a ceiling price of $17.50 per hundredweight of live cattle at Chicago will go into effect immediately. If true—it will be an unfortunate and misguided step on the part of the O. P. A. For the cattle feeders and producers it will mean a serious financial loss. For the consumers it will mean less beef for food. This order on the part of the O. P. A. would strangle production of beef at a time we need more instead of less meat. I think I can discuss this subject with some degree of knowledge. Twenty-five years of experience in feeding cattle has familiarized me with costs of production and the problems of marketing.

During Christmas holidays I visited feed lots on my own farm and several others in my home county. Cattle feeders were never faced with more difficulties. First, the labor shortage has made it impossible to properly handle the feed necessary for feeding cattle, nor has there been sufficient labor to properly feed and care for the cattle. Most of the cattle feeding is being done by older men who feel it a patriotic duty to continue producing beef for our war effort. They are working early and late, and if the O. P. A. places a price ceiling on these cattle it will mean a serious financial loss. Second, weather conditions were never worse for cattle feeding. This means gains are more costly. A good steer on full feed is sensitive to every change in feed, weather, and handling. All of these factors have been hard to deal with this year. Third, cost of production. The cattle feeder must pay wages that will meet the wage levels that have been set by our war industries. He must feed corn that he can sell at $1 or more per bushel. The hay that he feeds can be sold for $20 per ton.

No one should ask the cattle feeder to produce beef under these circumstances at a loss. When the Government lets a contract for production of war goods they insure cost plus a fixed fee. When labor contracts are entered into they are on a basis of a 40-hour week

plus time and one-half. The cattle feeder works 16 hours per day regardless of wind or weather. The cattle producers should be entitled to the same consideration. They are not asking these guaranties. They expect and are entitled to a price in the market place that will pay cost of production plus a small profit.

The O. P. A. price ceiling on cattle in my opinion will mean greatly reduced beef production. We need more beef—not less. It might be well to analyze federally inspected slaughter records to see how rapidly we are reducing our cattle numbers and production of beef by pounds. The November slaughter of cattle was 4 percent larger than in November of 1943 and 34 percent larger than the 1939–43 average slaughter for November. November slaughter of calves was 40 percent higher this year than in November of 1943 and 74 percent above the 5-year average. More than 7,000,000 head of calves were slaughtered at 32 centers under Federal inspection during the period from January through November this year. This was 52 percent more than the number slaughtered during the corresponding period in 1943 and 43 percent more than the average during the 1939–43 period. During the January-through-November period this year more than 12,500,000 beef cattle—excluding calves—were slaughtered under Federal inspection at 32 centers. This total is 28 percent larger than the average for these months in the 1939–43 period. The high rate of slaughter for the first 11 months of 1944 assures a sizable reduction in the number of cattle on January 1, 1945, compared with January 1 of this year.

The consumers want more beef, yet the O. P. A. threatens to reduce present production and greatly reduce the quality of meat for sale. The shortage of pork can be directly traced to bungling by Government agencies. Are we going to duplicate this same result for beef? If we do the blame will fall directly on Federal agencies which are staffed by individuals who either do not understand the problem or do not care.

We the People

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which appeared in the December 31, 1944, issue of the Lawrence (Mass.) Sunday Item:

WE THE PEOPLE

UNIVERSAL MILITARY CONSCRIPTION

The forces both for and against universal military conscription are now engaged in heavy patrol activities, testing each others' lines, probing for strong points and weak spots. The time for the public to become vocal and to enlighten their Senators and Representatives as to their views is right now.

What does universal military conscription mean? In the ordinary understanding of the term it means taking a boy from civilian life at the age of 18, placing him in an Army camp, and subjecting him to military drill and discipline. Every year after his first year he will again leave his civilian life for a period of weeks to resume his military training. The purpose, of course, is to have this country adequately prepared and protected against any future danger.

Now every man, woman, and child in the United States is firmly united on this objective. It is common property of both sides in this objective. It is common property of both sides in this debate. The split comes on the way of achieving the goal.

To us it seems that no truly sound reason has yet been advanced for this radical break with our American tradition. The arguments offered for it are based on half-truths and appeal to wartime fears and hysteria. The only calmly reasoned arguments advanced so far in the controversy have come from the opponents of this European concoction. The proponents of peacetime conscription say that their way is the only way of providing this protection so that we will not get caught again as sadly unprepared for war as we were in 1917 and again in 1939.

Their opponents counter by suggesting a larger number of naval and military academies plus military training in public and parochial schools, Father Michael J. Ahearn, writing in Our Sunday Visitor on November 19, 1944, cites the brilliant accomplishments of the Philippine officers who trained in just such a manner at the Jesuit College in Manila. Perhaps the most brilliant military mind of the war, Gen. George Marshall comes from Virginia Military Institute, a school that produced a galaxy of the old Confederate geniuses. Here is ample proof that universal compulsory peacetime training is not the only way.

Is peacetime conscription the American way? Wartime conscription has been traditionally the American way. As a nation we have always shied off from the spirit of "brass hat" rule. The fruits of that tradition is the magnificent America we have today, a country that twice within a short lifetime has been able to save the world from the fury of the war lords. The military regimentation to which universal conscription will lead is adhorrent to the whole spirit of our national history. Furthermore, in all the world's history it is crystal clear that it is the spirit of freemen, not their physical might alone that counts. From the days of the untrammeled Athenians, who toppled the military might of regimented Sparta, down to the British freemen, "the nation of shopkeepers" who smashed Napoleon's mighty battalions at Waterloo, it has been the flexible, supple, resilient spirit of a free democracy that has always emerged from the hell of war with the laurels of victory. That has been the American tradition. It once was France's tradition. But universal military training turned that spirit into something strange and brittle. Universal military training in France did not achieve what its proponents here say it will. We have no other way of judging the future except by the past. And Europe's past, hag-ridden with universal military training, offers a gruesome rebuttal of the arguments advanced by the militarists in our midst.

Is universal military training expedient? Will it bring any advantages which concomitant advantages will not cancel? American minds unfamiliar with camp life, are not alert to the moral dangers which beset an adolescent boy of 18 in an army camp. At the very time his whole character is beginning to crystalize into the man he will be is the poorest time to plunge the boy into the cynical immorality of an army camp. Too many commanders, as a rule, are notoriously indifferent to moral dangers as long as physical dangers are avoided. The types of shows they countenance and even encourage have drawn choruses of boo's from our boys themselves, who have not as yet been tainted. The home training they received has so far saved them.

The ravages to our school system which this program would work are incalculable. Teachers in high schools today can bear testimony to the demoralizing effects on the 18-year-old students' work of the lengthening shadows of the draft. Our colleges, representing millions of dollars in investment and untold years of sacrifice, stand in awful danger of complete change. This system of conscription would seize a boy at the critical year of graduation, break his stride, which he may never recover, and quite possibly ruin the best and most eager minds of the Nation for the pursuit of higher studies.

And as a final word, be it remembered, this measure is intended for the years of peace. Yet it is being advanced in the years of war when passions of fear, hate, and revenge are abroad. Why do the proponents insist on this measure now? It was during another war hysteria that we were pushed and bludgeoned into adopting a policy for peace. Once before, when the boys were away, somebody sold the Nation a gold brick. It took years to undo the Prohibition Amendment. And even yet we are suffering from its sinister consequences. Are we going to be "fall guys" once more? Any Nation can make an honest mistake once. And it is all to the good if the Nation learns from it. But if within 25 years we repeat the same old mistake, what can history record of us but the dolorous epitaph she pronounced upon the Bourbons of old, "They forget nothing; and they never learned."

Anthony Wayne Bicentennial

EXTENSION OF REMARKS

OF

HON. J. ROLAND KINZER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. KINZER. Mr. Speaker, Under leave to extend my remarks in the RECORD, I include the following article by Harry Emerson Wildes, of Valley Forge, Pa., commemorating the two hundredth anniversary of the birth of Anthony Wayne, that outstanding hero of the Revolutionary War:

ANTHONY WAYNE BICENTENNIAL

Two hundred years ago this month, on New Year's Day 1745, Anthony Wayne, one of Pennsylvania's greatest sons and one of the Nation's topmost military heroes, was born at Waynesborough, near Paoli, in Chester County, Pa.

It is very fitting that this Congress mark the anniversary. Wayne, who with George Gordon Meade, the victor at Gettysburg, stands in the forefront as a soldier, served his Nation well. As warrior and as statesman, as planter and as businessman, as man of letters and as surveyer, he was one of those many-sided geniuses who built America.

He is best known, of course, as a soldier. During the Revolutionary War Anthony Wayne was Washington's chief reliance in time of stress. Washington so relied upon him that Wayne became what would be called

today a trouble-shooter, an officer who was summoned in emergencies to bring order out of chaos, to restore discipline where other men had failed, to perform achievements too great for other men to do.

Thus it was Wayne who rushed to West Point to save that stronghold after Benedict Arnold had almost betrayed it to the enemy, and it was Wayne who rushed to Lafayette's rescue when that able young general was in distress at Green Springs, in Virginia. It was Anthony Wayne who held back the invaders from Ticonderoga in the early stages of the war, nor was it any fault of his that after his departure from that citadel the fort fell to alien hands. By that time Wayne had withdrawn to aid his commander in chief in the Jersies. It was Anthony Wayne who held back Curistersijo when that valiant Creek Indian seemed likely to overrun the Georgia frontier settlements. At Brandywine it was Wayne's brilliance that made possible an orderly and safe withdrawal after Howe and Cornwallis had threatened catastrophe by their pincers movement; at Germantown and, again, at Monmouth, it was Wayne who won the laurels.

Wherever the battle was thickest, there was Anthony Wayne, fighting boldly and with inspiration. Because of his impetuosity he has been dubbed, mistakenly, "Mad Anthony," but Wayne was never reckless nor incautious. In every battle and in each campaign he laid his plans with care; always he insured the safety of his men by taking pains to see that their supplies were ample and that they ran no unnecessary danger. True, he was surprised at Paoli, but there his hands were tied by the necessity of following his general's instructions to lie hidden in the wilderness; he could not dispatch the necessary scouts who could have warned him of the enemy's approach.

Wayne was never properly 'Mad Anthony"; that nickname was thrust upon him by an eccentric private soldier nicknamed by some the "Commodore" and by others "Jemmy the Rover." This fellow, a Chester County neighbor, had been a chronic deserter whose roving temperament had not been curbed by guardhouse or by other punishment. Relying upon Wayne's friendship, Jemmy broke all the rules of discipline.

When, in 1781, "Jemmy the Rover" misbehaved in some minor matter and found himself in a civilian jail, he sent a messenger to Wayne to ask for a release. Wayne, knowing nothing of the circumstances and having no authority to interfere with civilian affairs, refused to intervene. When the envoy returned with the news of Wayne's disinclination, Jemmy could not believe his ears. That Wayne, his protector and his friend, had washed his hands of Jemmy was incredible.

"Anthony is mad," Jemmy the Rover muttered. "He must be mad, or he would get me out. Mad Anthony, that's what he is. Mad Anthony Wayne."

The title stuck. No officer employed it, but soldiers in the ranks, carried away by its rhythm and its euphony, used it as a nickname. The disappointed mumblings of a half-crazed soldier became a nom de guerre.

Years later Washington Irving, wholly misunderstanding the circumstances, jumped to the false conclusion that "Mad Anthony" was so-called because of rashness, recklessness, and unbridled daring; by so doing he not only smirched Wayne's military reputation as a cautious, careful strategist who never took unnecessary chances, but in addition gave him a stigma of mental unbalance which many readers uncritically accepted. The hasty sobriquet, bestowed carelessly by an eccentric private, long detracted from a full recognition of Anthony Wayne's military genius.

But that was only part of the ill luck that dogged Wayne's whole career. For the greater part of the Revolutionary period he was denied the promotion that everyone knew to be his due because, under the quota systems then employed, Pennsylvania already had her share of major generals and there was no vacancy to which he could be named. Not until after his service at Ticonderoga did he win his brigadiership. He did not gain a major generalcy until after the war was won—and then only by brevet, which gave him the rank, to be sure, but which denied him his proper pay.

It is a stronge commentary upon the ways of democracy that Anthony Wayne, master tactician of Stony Point and Fallen Timbers, failed to reap his proper rewards. Partially, of course, that may be attributed to his withdrawal from Pennsylvania to become a rice planter near Savannah, more likely, it is due to the fact that Wayne, as a Federalist and as a staunch opponent of the radicalism that took hold of Pennsylvania after the Revolution, faced powerful political opposition. It is not necessary to rake up old political grievances today—especially as time has shown that Wayne's insistence upon fair play and justice was wholly justified—but the partisan feelings of the period worked as ill upon him as upon his old commander, General Washington.

Then, too, he suffered because his son, Isaac Wayne, later Federalist candidate for Governor in Pennsylvania, shrank from advertising his father's services. Isaac Wayne withheld from the public many of the details of Anthony Wayne's contribution to social development. Thus, not until the publication in 1941 of a new biography of Anthony Wayne, the first full-length biography to include all the available material concerning Wayne's private life and his Georgia plantation career, was the man really seen as a well-rounded personality.

Credit for this achievement belongs to William Wayne, descendant of the general, who then for the first time opened his treasure chest of Anthony Wayne's personal letters, so that his ancestor might receive his proper due. William Wayne still lives at the old Waynesborough mansion built in 1724 and now a shrine which Chester County historians frequently visit to renew their pledges of loyalty to the ideals for which Anthony Wayne always strove.

Those ideals are true Americanism. Wayne believed in liberty, in justice, and in humanity; he stood for the right of each man to develop his talents to the full without interefernce so long as there was no conflict with the equal rights of others. Wayne worked for the future of America; himself a Revolutionary soldier who had spanned more territory in his fighting than any other officer in the war, not even excluding George Washington, he knew the Nation from what he called the "snows of Canada" to the regions he described as "the burning sands of Florida", and from the seaboard to the wilderness of the Indian country on the West. He had the vision of an empire and he labored to make that vision into fact.

Chester County, Wayne's homeland, is very proud indeed of Maj. Gen. Anthony Wayne, the trouble shooter of the Revolution. It admires him because of his achievements; even more, it admires the man because always, in every campaign that he waged, his men loved him devotedly. At Morristown in 1781 and again at York, the Pennsylvania line murmured and revolted but they never lost their confidence in Wayne; when he rushed from his quarters to inquire their grievances, they rallied to his support and they appointed him, their general, to represent them in their suit against the politicians who betrayed them. Common soldiers knew that Wayne always labored in their interests, that he argued and worked to find them food and clothing, to secure them proper pay; subalterns worshipped him because he struggled hard to win promotion for them and to give them opportunity to prove their worth. His fellow generals loved him for his friendliness and for his sociability, for his willingness to work with them for the common welfare and for his tireless devotion.

His example is vivid and alive today. In these hours of tribulation, when the fate of the world again stands at stake, the life of Anthony Wayne shines as a brilliant guide to the Nation. If it is true that liberty can only be preserved by the continuing sacrifice of personal comfort to the greater good, then the example of Anthony Wayne serves today as it served in the dark days of Valley Forge, to remind the people that America cannot fail and that men like Anthony Wayne typify the United States of America at its most glorious best.

Anthony Wayne is 200 years old this month, and though he died, while yet in his prime, at 51, nevertheless he still lives. So long as men live and labor for the Nation, so long as ideals reign supreme and the United States remains great, his name will stand high among our heroes. Chester County counts herself proud to have given the world a giant such as Wayne.

House Bill No. 1—A Bill for the Relief of Veterans

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. LUDLOW. Mr. Speaker, House bill No. 1 of the new Seventy-ninth Congress is a bill introduced by me for the relief of veterans.

I requested and was granted the first place on the House calendar of bills introduced for this measure, which is intended to relieve large numbers of veterans from what may well be described as "unjust discrimination."

The bill provides disability benefits for members of the armed forces who are discharged on account of disabilities which were declared to exist by the draftee or inductee at the induction center or which were revealed by the induction examination.

In my handling of veterans' claims I have encountered many cases of obvious injustice which this bill will correct. Men who are known to have a history of disabilities are taken into the service, nevertheless, and when later they are discharged they are denied disability benefits with the curt explanation that they had the disability before they were taken into the service. This simply is not right. If the induction authorities are given fair notice, either by the inductee's own declaration at the time of his induction, or by the induction examination, that a preinduction disability existed it does not lie in good conscience for the Government to say after the man's disability has grown worse and he is thrown out of the Army, Navy, or Marine Corps:

"You are not entitled to relief because you had the disability before you entered the service." If the Government accepts a man because it regards him as a good physical risk it should stand by its bargain and in all fairness accord to him as generous treatment as it extends to all other men who are taken into the service.

The text of the bill I have introduced is as follows:

Be it enacted etc., That in any case where a member of the armed forces on his induction, enlistment, or commission in any of the armed services notifies the authorities at the induction center that he has had a case history of a certain specified ailment or that he is suffering from a certain specified disability, or when the induction examination reveals that he has such an ailment or disability, and when later, after he has been taken into the service, said ailment or disability or some development or outgrowth of said ailment or disability becomes evident to the extent that it becomes necessary to discharge said member, the said ailment or disability shall be assumed to have been aggravated by service and said member shall be entitled to be paid disability benefits at the usual disability compensation rates.

Burning the Candle at the Wrong End

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. BENNETT of Missouri. Mr. Speaker, many of my constituents have requested that I introduce legislation to abolish Roosevelt's time and restore God's time. I am today, therefore, introducing a concurrent resolution to restore standard time. The daylight saving, war time, fast time or Roosevelt time, which was inflicted upon us has been one of the most ridiculous, infamous, and diabolical of all the curses we have had to bear under the cloak of wartime necessity. It has wasted manpower on the farm. It has encouraged absenteeism in the factory. It has increased consumption of power, light, and fuel in every home and place of business. It has contributed to juvenile delinquency. It has interfered with school attendance. It has increased crime, especially assaults upon women workers who must go forth upon the streets at the unholy hours dictated by daylight-saving time. It has increased traffic accidents on darkened highways and increased the wear on motor vehicles. It has deprived many of needed sleep for nobody wants to go to bed in daylight and get up in the dark. It has increased the death and illness rate due to the exposure it necessitates when laborers, school children, and others must go forth to the day's work long before sunrise and often wait for busses and streetcars on cold and darkened streets and highways. It has added turmoil and distress to the war situation. It has shortened tempers and broken homes. It has added to confusion because many citizens refuse to change their clocks to accord with the mandate from Washington. Some people keep two clocks, one to run the radio by and one to work by. It interferes with evening church services because it forces them to be so early in the day folks won't come or if they are set for an hour after dark they run too late for those who have to get up and off to work early. It is about as sensible as if you wanted to lengthen a skirt and to do so cut off the top and sewed it on the bottom. It has not helped war industries because most of them are on a 24-hour schedule. The cows and chickens on the farm don't understand this new time and do not abide by it, all of which adds to the farmer's woes. In short, except as an aid to golfers, it has failed to accomplish the salutary effects prophesied for it by the Washington bureaucrats who fancy themselves as modern Joshuas. They sit around with their feet in the waste basket, hands in the public trough, and their heads in the clouds trying to dream up new ways to regiment the people, interfere with the laws of nature and the customs of generations.

Taking Over

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a poem entitled "Taking Over," written and set to martial music by two young men from Massachusetts—Alfred Santosuosso, Jr., and W. Andrew Daly. We swell with pride as endless and glowing accounts reach us of the exemplary conduct of our boys who are "taking over" throughout the world. Our pride is pardonable because it is both parental and patriotic. Their excellent behavior is evidence that their home training has stood them in good stead. These clean-cut young men serve as living proof to a disillusioned world that our free American way of life builds character and courage. As our handsome lads march down those famous streets of the old world, the cheering throngs, as they watch them through tear-filled eyes, can see that America still holds to the principle: "A sound mind in a sound body."

To these young warriors, clear-eyed and confident; spirited and sturdy; manly and mannerly; gentlemen, every-one of them, and American to the core; to these liberty-loving and tyranny-hating youngsters, is dedicated the following verse:

TAKING OVER

Taking over, over everywhere,
Fighting Yanks, on land and sea and air
Are out to blaze a trail of glory,
So shout it from shore to shore,
That every nation on this earth of ours,
Will live forevermore,
In a peace that they have never known,
With a freedom like our very own.
A cheering world awaits
Our own United States,
Taking over, over everywhere.

Economy and the Pauper's Oath for Veterans, but Billions for World Boondoggling Projects

EXTENSION OF REMARKS

OF

HON. EARL WILSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Joseph Leib, vice commander, Costello Post, American Legion, Washington, D. C.:

General Hines, Administrator of Veterans' Affairs, finally admitted in a letter dated December 27, 1944, addressed to Representative JAMES MORRISON that economy and lack of adequate facilities are the cause for forcing veterans to swear under oath that they are paupers or could not defray the expenses in order to obtain necessary hospitalization.

Therefore, how in the name of logic can the Government pretend that it gives veterans special benefits when it compels a poverty-stricken statement sworn under oath and flanked by penal provisions before granting them medical attention?

Everyone knows that a veteran can go to a private or charitable hospital and declare that they are without funds, and should there be a bed available, professional attention can be obtained akin to that accorded by a veterans' facility. And there have been occasions when veterans have secured medical benefits at the hands of charitable or local public institutions in a more gracious and humane spirit than have been accorded many former soldiers at veterans hospitals. What's more, they are not obliged to swear to a pauper's oath. So the Veterans Administration claim that they are giving veterans special hospitalization benefits while forcing them to swear to a pauper's oath is hypocrisy.

In another letter to Representative SPRINGER on December 1, 1944, General Hines further revealed that his Administration increased its hospital beds by merely 8,404 since June 30, 1941, or approximately 6 months before Pearl Harbor. Think of it. While over one and one-half million World War No. 2 veterans have been discharged from the armed services for disability reasons, with more than 300,000 drawing health pensions, the Veterans Administration saw fit to add only 8,404 beds to its facilities to date. Ponder, too, that these veterans are all potential hospital cases of this war alone. These figures do not include the veterans or needy hospital cases of other wars.

Why? What's behind this scandalous situation? General Hines is quick to assure us that he is planning and recommending additional beds; but the question remains,

What has been holding them up and on what definite date will these beds be available? We are not interested in promises, but in facts.

Furthermore, it is pertinent to our post-war situation to know what assurances the Congress has, if any, that the armed-service hospitals throughout the United States will not be dismantled or destroyed as they were after the last war, leaving needy veterans to the mercy of charitable organizations.

Let us not dismiss the fact that veterans of the First World War are getting older and will require greater medical attention than in previous years, or that the casualties and the disability cases of this war will be beyond comprehension.

If the Roosevelt administration has the money to waste on boondoggling projects throughout the world, then certainly it should have the funds to provide for the rehabilitation and hospitalization of its own veterans. General Hines is now on record as willing and anxious to economize when it comes to veteran hospitalization, and the shooting is still going on. What can be expected from this official when the war and the hero stuff is over?

Is there anything more important in our post-war problems than to provide for needy and worthy veterans the best of hospital treatment, recreation facilities, adequate and necessary equipment to start them off on civilian life again? A grateful Government would give these benefits to sick and wounded veterans willingly and without red tape, and would not have to be forced or coerced into doing so.

The Relation of the Federal Government to Sovereignty

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. PITTENGER. Mr. Speaker, one of the best discussions of constitutional problems which are now before Congress has recently been written by Charles W. Briggs, a distinguished attorney of St. Paul, Minn. I am sure my colleagues will find this of great interest. It contains not only information but powerful argument in connection with matters that are sure to come before Congress in the not too distant future. He entitles his article of October 1944, as follows: "The Relation of the Federal Government to Sovereignty." It reads:

THE RELATION OF THE FEDERAL GOVERNMENT TO SOVEREIGNTY

(By Charles W. Briggs)

The purpose of this paper is to demonstrate (1) that there does not exist in the Federal Government nor in any branch thereof power to surrender or delegate sovereignty that resides in the people of the United States, and (2) that there is a vital distinction between such a surrender or delegation and agreements by treaty or otherwise by the Federal Government to exercise its power in various ways.

It is the firm belief of the writer that it is the duty of all citizens, and of lawyers in particular, to practice straight, logical, and down-to-earth thinking on these momentous subjects. When we talk about a "reign of law" among the nations, let us remember that some government, duly constituted, has to make the law and enforce it.

At the outset the unique character of the Federal Government must be kept in mind. It is but an instrumentality or agency created by the people to exercise a part only of the total governmental power that resides in the people. In the United States sovereignty does not rest in the Federal Government. It rests in the people. To that agency, in respect of domestic or internal affairs, were delegated expressly or by necessary implication, certain powers, and those only. In respect of foreign or external affairs, the Federal Government possesses powers either delegated to it or inherent in, incident to, or a concomitant of nationality. The exercise of these powers is limited by the express or implied restraints of the Constitution. All Federal powers are held in trust to be exercised consistently with the existence of sovereignty in the people of the United States. All remaining powers reside in the people. The Federal Government has no power to do as it chooses. It cannot act beyond the scope of its authority. If delegated or inherent Federal authority cannot be found, it does not exist. It may seem trite to announce these principles, but even so, a reemphasis is proper in view of wide misconception of our governmental structure. What follows is an application of these principles.

SOVEREIGNTY

What is sovereignty?

It is defined by Mr. John Austin, in his work on jurisprudence, as "the supreme, independent, and undivided power to govern." In this connection, the word "independent" means exemption from external authority.

Our own American scholar, Judge Cooley, defines sovereignty as "the supreme, absolute, uncontrollable power by which a state is governed."

As expressed by a noted French writer: "La souverainté est L'indépendence complète qui peut se manifester à deux points de vie; l'un extérieur, l'autre intérieux." (Sovereignty is complete independence which exhibits itself from two points of view; the one exterior, the other interior.)

Sovereignty embraces power to rule the subjects of a nation and also to deal externally with other nations in the field of international relations. Laws are its precepts.

It is unnecessary here to deal with the origin of sovereignty. In the modern world sovereign nations as above defined do exist, and the United States is without dispute one of them. The concept of sovereignty is real and understandable. The word "sovereignty" has a definite meaning, and is a familiar idea conveyor in the vocabularies of statesmen who are shaping the affairs of the peoples of the world. The meaning and existence of sovereignty is what invites the antinationalists to attack it.

THE FEDERAL GOVERNMENT MAY NOT DELEGATE THE EXERCISE OF ITS POWERS

To Congress is given the following principal powers:

1. To lay and collect taxes.
2. To borrow money on the credit of the United States.
3. To regulate commerce with foreign nations and among the several States.
4. To establish an uniform rule of naturalization.
5. To coin money and regulate the value thereof and of foreign coin.
6. To constitute tribunals inferior to the Supreme Court.
7. To define and punish piracies and felonies committed on the high seas and offenses against the law of nations.
8. To declare war.
9. To raise and support armies.
10. To provide and maintain a navy.
11. To make rules for the government and regulation of the land and naval forces.
12. To make all laws which shall be necessary and proper for carrying into execution the foregoing powers.

The powers of the President are described as follows:

1. The executive power shall be vested in a President of the United States.
2. The President shall be Commander in Chief of the Army and Navy of the United States.
3. The President shall have power by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur.

The powers of the Supreme Court are defined as follows:

1. The judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish.
2. The judicial power shall extend to all cases in law or in equity arising under the Constitution, the laws of the United States, and treaties made or which shall be made under their authority, in all cases of admiralty and maritime jurisdiction or controversies to which the United States shall be a party, etc.

The above powers are all attributes of sovereignty with which the Federal Government is clothed.

Nowhere in the enumeration of the above powers or in any other provision of the Constitution is there found a suggestion that any branch of our Federal Government may confer upon any external tribunal whatsoever the exercise of these powers. One branch may not even delegate its functions to another branch under the established doctrine of the separation of powers.

The very granting of the above expressly enumerated sovereign powers to the Federal Government rebuts any claim that the grantee of these powers may transmit them to another grantee. They are to be exercised by the Federal Government on behalf of the people as principal, and by no one else. Did it ever occur to the framers of our Government that by creating a Federal agency they were giving to that agency or any branch thereof the right of conferring upon any external government power to pledge the credit of the United States for borrowed money; to regulate our commerce between the States and with foreign nations; to say who shall be citizens of this country; to control our monetary system; to declare war in which the United States must participate; to raise and support an army or navy among us or to make rules regulating these forces? Did it occur to them that the same agency could redelegate to some external tribunal judicial power of the United States which they had vested in the Supreme Court and other inferior courts? Did it occur to the framers that they were conferring upon the President power to revest his authority in the President of another state, or constitute some other executive the commander in chief of our Army and Navy? Did it occur to them that by conferring treaty-making power upon the President and the Senate they were providing that the President and the Senate might empower some superstate to make treaties for us, treaties in which sovereign powers delegated to the Federal Government would be redelegated? The answers are certainly "No."

The question now to be further and more meticulously explored is: "Does the treaty-making power lodged in the President and the Senate, or the power over international relations resting in the Federal Government as an incident to nationality, carry with it the power to transfer sovereignty to an external state?"

We answer this question in the negative.

The Constitution imposes no restrictions upon the ultimate sovereignty of the people, neither does it augment that sovereignty. In

recognition of a dual system of government it left with or delegated to the Federal Government the exercise of certain powers only.

The people, possessing complete sovereign power that devolved upon them when separated from Great Britain, may regulate the administration of their external or foreign affairs in any way they see fit, and through whatever agencies they choose. The people did elect by express language in the Constitution to repose in the Congress power to declare war, and in the President and the Senate power to make treaties. It must be assumed, therefore, that the people had in mind what could be done by treaty as that term was ordinarily understood in the parlance of international affairs, subject, however, to limitations naturally arising from the very form and structure of our Government, could be done by the President and the Senate.

We need not take time here to discuss the question of to what extent Congress, with the approval of the President, may provide for the consummation of international agreements which have not the dignity, but the effect of treaties as contractual engagements of the Nation. (See *Altman* v. *United States* (224 U. S. 583, 600–601).)

In the case cited in the note the Supreme Court validated a commercial agreement made by the President under a tariff act as an international compact. The Court said: "While the arrangement technically was not a treaty requiring ratification by the Senate, nevertheless it was a compact authorized by the Congress of the United States, negotiated and proclaimed under the authority of the President." The Court gave the compact the effect of a treaty. If under the treaty-making power possessed by the President and the Senate they may not surrender or delegate sovereignty, then for the same reasons Congress and the President may not.

Admittedly the scope of authority in international relations under the treaty-making power is very broad.

The nature of a treaty must ever be kept in mind. A treaty is a contract between sovereign nations. It sets up no third power of enforcement. It is not a limitation upon sovereignty. The general principle has been recognized since Grotius that a treaty does not detract from sovereignty. A treaty depends for the enforcement of its provisions on the interest and the honor of the governments which are parties to it. A treaty lays no direct obligation upon signatory nations to conform their internal law with its principles. It creates no repository of governmental power to control the peoples of nations that enter into it.

That the United States as a sovereign power may fail to enforce or renounce its treaties and in effect abrogate them as part of the municipal law has long been established. (See *Rainey* v. *United States* (232 U. S. 310); the *Chinese Exclusion Case* (130 U. S. 581); *Whitney* v. *Robertson* (124 U. S. 190); *Head Money Cases* (112 U. S. 580); *Taylor* v. *Morton* (2 Curtis 454).)

In his opinion in *Chew Heong* v. *United States* (112 U. S. 536, 564), Justice Field uses this vigorous language, quoting from an opinion of the Attorney General:

"The 'Constitution does not say that Congress shall pass no law inconsistent with a treaty, and it would have been a strange anomaly if it had imposed any such prohibition. There may be cases of treaties so injurious, or which may become so by change of circumstances, that it may be the right and duty of the Government to renounce or disregard them. Every government must judge and determine for itself the proper occasion for the exercise of such a power; and such a power, I suppose, is impliedly reserved by every party to a treaty, and I hope and believe belongs inalienably to the Government of the United States. It is true that such a power may be abused; so may the treaty-making power and all other powers. But for our security against such abuse we may and must rely on the integrity, wisdom, and good faith of our Government.'"

In his opinion in the *Chinese Exclusion Case* (130 U. S. 581, 600), Justice Field justifies the repealability of a treaty in the following language:

"It will not be presumed that the legislative department of the Government will lightly pass laws which are in conflict with the treaties of the country; but that circumstances may arise which would not only justify the Government in disregarding their stipulations, but demand in the interests of the country that it should do so, there can be no question. Unexpected events may call for a change in the policy of the country. Neglect or violation of stipulations on the part of the other contracting party may require corresponding action on our part. When a reciprocal engagement is not carried out by one of the contracting parties, the other may also decline to keep the corresponding engagement. In 1798 the conduct towards this country of the Government of France was of such a character that Congress declared that the United States were freed and exonerated from the stipulations of previous treaties with that country."

He thus boldly brings out the distinction between a surrender of sovereign power and the nature of a contractual obligation under a treaty to exercise that power in designated instances.

The scope of treaty making is well stated as follows:

"That the treaty power of the United States extends to all proper subjects of negotiation between our Government and the governments of other nations is clear. This power, as expressed in the Constitution, is in terms unlimited except by those restraints which are found in that instrument against the action of the Government or of its departments, and those arising from the nature of the Government itself and of that of the States. It would not be contended that it extends so far as to authorize what the Constitution forbids, or a change in the character of the Government or in that of one of the States, or a cession of any portion of the territory of the latter, without its consent. But with these exceptions, it is not perceived that there is any limit to the questions which can be adjusted touching any matter which is properly the subject of negotiation with a foreign country." (See 15 R. C. L., p. 148, sec. 59.)

The very nature of the Federal Government as an agency of the people repels the thought that any branch of it may commit the people to obedience to an external will, thus impairing the independence of the United States. Witness the following expressions of Justice Field in the Chinese Exclusion case:

"To preserve its independence, and give security against foreign aggression and encroachment, is the highest duty of every nation, and to attain these ends nearly all other considerations are to be subordinated.

* * * * * *

"The power of exclusion of foreigners being an incident of sovereignty belonging to the Government of the United States, as a part of those sovereign powers delegated by the Constitution, the right to its exercise at any time when, in the judgment of the Government, the interests of the country require it, cannot be granted away or restrained on behalf of anyone. The powers of government are delegated in trust to the United States, and are incapable of transfer to any other parties. They cannot be abandoned or surrendered. Nor can their exercise be hampered, when needed for the public good, by any considerations of private interest. The exercise of these public trusts is not the subject of barter or contract" (130 U. S. 581).

If the Federal Government cannot irrevocably bargain away by treaty the right to exercise sovereign power in the matter of controlling the entrance of aliens into this country, how indefensible is the idea that any branch or branches of the Federal Government may surrender that very power to a supernational authority?

If the Federal Government cannot delegate or impair the sovereign power of the people to exclude aliens, then it cannot impair or delegate the sovereign power of the people to control their entry into war, to raise and support an Army and a Navy, and to regulate their use, to regulate their commerce, to regulate their money, or to lay upon and collect taxes from them, nor can the Federal Government invest another with power to dictate the terms of peace between the people of the United States and other nationalities.

It is germane here to consider the doctrine laid down by Justice Sutherland in *United States* v. *Curtiss-Wright Corporation*. (See 299 U. S. 304, and following language of Justice Sutherland's opinion at page 318: "It results that the investment of the Federal Government with the powers of external sovereignty did not depend upon the affirmative grants of the Constitution. The powers to declare and wage war, to conclude peace, to make treaties, to maintain diplomatic relations with other sovereignties, if they had never been mentioned in the Constitution, would have vested in the Federal Government as necessary concomitants of nationality. Neither the Constitution nor the laws passed in pursuance of it have any force in foreign territory unless in respect of our own citizens (see *American Banana Co.* v. *United Fruit Co.* (213 U. S. 347, 356)); and operations of the Nation in such territory must be governed by treaties, international understandings and compacts, and the principles of international law. As a member of the family of nations, the right and power of the United States in the field are equal to the right and power of the other members of the international family. Otherwise, the United States is not completely sovereign. The power to acquire territory by discovery and occupation (*Jones* v. *United States* (137 U. S. 202, 212)), the power to expel undesirable aliens (*Fong Yue Ting* v. *United States* (149 U. S. 698, 705 et seq.)), the power to make such international agreements as do not constitute treaties in the constitutional sense (*Altman & Co.* v. *United States* (224 U. S. 583, 600–601); Crandall, Treaties, Their Making and Enforcement, 2d ed., p. 102 and note 1), none of which is expressly affirmed by the Constitution, nevertheless exist as inherently inseparable from the conception of nationality. This the court recognized, and in each of the cases cited found the warrant for its conclusions not in the provisions of the Constitution, but in the law of nations. In *Burnet* v. *Brooks* (288 U. S. 378, 396), we said 'As a nation with all the attributes of sovereignty, the United States is vested with all the powers of Government necessary to maintain an effective control of international relations.' Cf. *Carter* v. *Carter Coal Co.*, supra, page 295 (298 U. S. 238).")

That there are certain powers vested in the Federal Government as necessary concomitants of nationality not expressly delegated to it in the Constitution there is no doubt. Justice Sutherland mentions or refers to the power to acquire territory by discovery and occupation, the power to make international agreements as do not rise to the dignity of treaties (such as agreements regulating foreign commerce entered into by the President under authority of legislative enactment) and the power to expel undesirable aliens, but none of these incidents involves relinquishment of sovereign power to another nation. On the contrary, each of them amounts to a preservation and exercise of that power in behalf of the people.

It remains to be considered here whether the President as Commander in Chief of the Army and Navy, and the executive head of foreign relations, may by his actions delegate or bargain away to a foreign state the sovereign powers we are talking about.

It is true that a President is in a position by his actions to create incidents which, to all intents and purposes, put the country into a state of belligerency, followed by actual war—a fait accompli. And this has been done. A President on occasion may make commitments and involve the country in situations from which the people cannot retreat without embarrassment. They may ratify his actions through the duly constituted organs of government or merely acquiesce in them. They may, through the same organs, in the exercise of sovereign power, renounce what he has done as they may renounce a treaty. No President has ever undertaken to clothe an external authority with power to do what he may do.

The validity of executive agreements with foreign countries regulating commerce pursuant to congressional enactments is no foundation for the argument that the President has the right, by executive agreement, to entrust another nation with power to control our commercial activities. Whether the presently approved course of action with respect to reciprocal trade agreements constitutes a step to supplant or sidestep the treaty-making power of the President and Senate, we have no concern here. The course has been validated as a proper exercise of Federal power. The same thing could be accomplished by treaties with the several countries involved. The power to regulate commerce with foreign nations is vested in Congress; is held in trust, and cannot be bargained away either by Congress or by the President under agreement made by him pursuant to a declared legislative policy.

The well-known maxim "delegata potestas non potest delegari" applicable to the law of agency in the general and common law, is applicable in the case of the sovereign people who by their actions vest governmental power in a Federal agency. This principle accords with the very spirit of the Constitution, and is inherently necessary to the preservation of an indissoluble and independent union.

THERE IS NO SUPERNATIONAL LAW THAT IS BINDING ON A SOVEREIGNTY WITHOUT ITS CONSENT

International law consists of a body of rules and usages which should be observed by nations in peace and war. It stems from no paramount legislative authority in the society of nations. It has no law giver. There is no common judiciary to interpret it. There is no superpoliceman to enforce it. Its rules are recognized and enforced only by the voluntary submission and compliance of sovereign nations.

International law was never thought of until there were nations. It is the product of their mutual consent. It followed the establishment of sovereignties. If nationalism were destroyed there would be no international law.

It is idle to say that the Constitution recognized a higher secular authority than the people of the United States. If such proposition is maintained, who was that higher authority? It will be remembered that England claimed the right to impress our seamen, and we went to war in 1812 to stop the practice. We took one view of international law, and England took another. In a trial by battle we established the rule that suited our own convenience.

There is no force in international law which vests in the Federal Government power to yield sovereignty to external controls or requires it to recognize any supernational authority vested in a so-called community of nations. The founders had no such idea. In declaring and making good their independence of Great Britain they were not, at the same time acknowledging sovereign control over themselves by Great Britain as one of the members of the family of nations. A curious concept of sovereignty has been developed by one branch of the school of internationalists. It runs this way:

"It may be held that 'national sovereignty,' so called, is merely an honorific term for such power as the family of nations has seen fit from time to time to bestow upon its several members; that in other words, the family of nations is the only real sovereign, and that the so-called sovereign nations are in the contemplation of International law merely its organs and appendages." (See Corwin's "The Constitution and World Organization," 1944, p. 2.)

This is the acme of perversion of the concept of sovereignty. Whence came sovereignty to this family of nations? When and how was this family of nations created? By what governmental process were nations made mere organs or appendages of this family? One cannot imagine the founders setting up the Federal Government as such an appendage.

Lord Chief Justice Coleridge said: "International law is an inexact expression, and it is apt to mislead if its inexactness is not kept in mind. Law implies a law-giver, and a tribunal capable of enforcing it and coercing its transgressors, but there is no common law-giver to sovereign states, and no tribunal has the power to bind them by decrees or coerce them if they transgress."

The framers of the American Constitution and the political writers of their day realized and acknowledged that there was no secular will or body of law superior to the will of the American community or to the internal laws adopted by them. Witness the language of Tom Paine, the philosopher of the Revolution and of the Colonies when they transformed themselves into a sovereign nation: "In republics such as there are established in America, the sovereign power or the power over which there is no control and which controls all others, remains where Nature placed it—in the people."

Whether the positive or naturalistic theory of law is accepted no "brooding omnipresence in the sky" (Justice Holmes) has yet been discovered that bends the sovereignty of the United States to its will. From international law as it existed in 1787 and has existed since can be gleaned nothing that permits, much less requires, our Federal government agency by delegation of its powers to subject us to external rule. In the whole scheme of international law our people have presupposed the sovereignty and independence of the United States.

* * * * *

At this point it may be confidently stated that no branch or branches of the Federal Government may delegate sovereign powers vested in it. It is just as certain that no attempt will be made to do so.

But the picture is not yet complete.

APPROPRIATE BRANCHES OF THE FEDERAL GOVERNMENT HAVE AUTHORITY TO AGREE THAT SOVEREIGNTY WILL BE EXERCISED TO CARRY OUT SPECIFIED TERMS OF A TREATY

There is a probability strong enough to excite the concern of all of us that the Federal Government may in the sphere of action of permissible conduct of international relations create obligations and make commitments of far-reaching significance to us and of serious and unpredictable impact upon our internal affairs. Obligations and commitments may be undertaken for this sovereign power to fulfill and carry out, either the fulfillment or justifiable nonperformance of which will cost us just as much or more trouble than we would have experienced if we had never undertaken them.

It cannot be doubted that the President and the Senate, under the treaty-making power may agree that the United States exercise the powers granted to the Federal Government in certain ways. This, of course, does not amount to a surrender of governmental power to a supernational tribunal.

It is conceivable that a treaty might be entered into which would obligate the United States to declare war or impose sanctions on other nations under certain circumstances; to regulate the commerce of the United States both within and without our boundaries in certain ways, to establish rules of naturalization, to make rules for the government of our land and naval forces, to adopt a money system and regulations of the same, etc. These would be contractual obligations, the performance of which would rest with the sovereign people. Entering into these obligations would not create an external governmental authority, nor would it sanction entry into the United States by governmental officials to carry out the terms of such a treaty. Independence of action on the part of the United States would still be preserved except to the extent that serious embarrassment in foreign affairs and war might result in case the treaty provisions were not fulfilled. Performance of the treaty obligations would remain a matter of internal government by the sovereign people, and they would have on their hands the consequences of nonfulfillment. The future repercussions of such actions it is given to no man to know. Better that we look before we leap.

What, it may be asked, is the difference in practical results between a surrender of sovereignty to a superstate and an agreement to exercise sovereignty in certain designated ways?

By the latter is obviated the necessity of even attempting to solve the following problems:

1. The structure of a superstate, and representation therein by member nations.

2. The enumeration and fixing of its powers, legislative, judicial, and executive.

3. The establishment of an international military, naval, and air force, and providing for its constituent elements and their allocation, command, and employment.

4. Allocation of the burdens of maintaining a superstate and providing it with necessary financial support.

By the latter the dubiousness and dangers of reliance upon collective security are avoided.

Let us suppose that a superstate is created and discretionary power is lodged in it to take possession of all strategic or critical areas for the good order of the world. Let us suppose that the superstate decrees that its forces shall take possession of the Panama Canal, and they do so. We must assume that these forces would be much superior to ours, otherwise they would be useless. And we must not assume that these forces would never be used against the very member nations that create them, including the United States. What then would be the position of the United States? If it chose to resist it would face a war of insurrection against the superstate with its strategic line of attack and defense strangulated. We would face the necessity of military preparation as we were faced with it in 1941, this time with a superior antagonist in our front yard.

On the other hand, let us suppose that the United States enters into an agreement with other nations, that the Panama Canal will be controlled by the United States in certain ways for the benefit of other nations. We have now a limited type of such an international agreement in the Clayton-Bulwer and Hay-Pauncefote treaties, under which we guarantee the use of the Panama Canal to the commerce of the world on equal terms. Under such an arrangement governmental control (which is sovereignty) remains in

our hands, and it may be assumed that we will maintain adequate and flexible forces of our own to defend ourselves in case we are attacked because of nonfulfillment of the treaty. Justifiable reasons may make nonfulfillment necessary.

The situations are obviously different in their practical aspects.

We have every reason to believe that the United States will act in good faith and without sinister motives. Unless other nations are willing to cooperate with us in the same vein in opposition to aggression, any concert of action is apt to prove a snare and a delusion.

WHAT WORLD PLAN DO THE OPPONENTS OF NATIONALISM PROPOSE?

In the first place, those who would subvert nationalism—those who would be wreckers of actually existing sovereignty by the simple device of calling it a "rubber word" or a mere verbal concept—seem to treat a world organization as an entity separated from the everyday life of the citizens of this country. There is some disposition to picture such an organization as some sort of "New Atlantis" of whose presence the good people need not be aware except when blessings are showered upon them. What the people are to pay and do for these blessings is glossed over. But this divorcement cannot be accomplished. Whatever is done by an international organization to which the United States is made a party will have a direct impact upon the affairs of every citizen in this country. We now well know the bearing of Federal controls upon every individual citizen. So the people have a right to be informed, or at least given an inkling of what the impacts of a world plan are going to be. Unless they are thus treated, no plan has a chance of ultimate success.

The statesmen who are to shape the destiny of our people should have a 20/20 vision. Many who now attempt to do this shaping are so farsighted as to see only objects on the blurred horizon of distant hope. Matter of fact things close at hand escape their attention. One of these things is the human being and his make-up, to which all plans must be accommodated. Many planners even positively abhor taking a look backward along the paths of human progress and reflecting upon what human beings have done in spite of lofty ideals readily accepted. Furthermore, our world planners will not succeed by polarizing the light they shed so as to make their proposals seem what they are not. If our world planners are proposing a superstate, then it behooves them to tell us how the Federal Government as now constituted may validly surrender our sovereignty, or any part of it, to such a state. It is no answer to say that the sovereign people themselves may surrender their sovereignty. If they were consulted within the constitutional processes of our system they would not set up a superstate to rule over them if they knew what they were doing.

If we are to have a supernational government to which the United States is to be a party, it is fair to ask what powers do the United States propose to grant to that government—legislative, judicial, and executive. It would be absurd to suppose that the United States or any other nation would endow such a government with power to do anything it liked just to have peace. It would be just as hopeless to advocate that such a government be endowed with power to do anything within the discretion of its officers for the general welfare of nations. What then are the powers to be conferred?

We should never lose sight of the eternal argument about the limits of enumerated federal powers, and the restraints on the same. We should note the recent expansion of those powers by interpretations unforeseen by previous generations.

If the United States is to be incorporated into a superstate, then it becomes the business of every citizen of every other member state to participate in governing us, and the business of every American to take part in governing the people of other member states. But where is there any indication that other nations are advocating any such an arrangement? China, for instance, has staged a bitter contest for generations to eliminate foreign controls and extraterritorial rights, and that contest now has an increased tempo. Russia is developing an intense nationalism, and even in the hour of her greatest peril she balks at any semblance of external domination. Mixed controls for military purposes among allies in time of immediate common danger to their national existence constitute no ground for thinking that these controls can be perpetuated after that danger has passed.

It is not conceivable that a fully panoplied supergovernment could be instituted. It took centuries to translate a growing concept of Republican or Democratic government into successful action. The most successful attempt has occurred in the United States. But it is still in an experimental stage. To extend this principle to the world through a workable system will take generations of development, education, and gradual adaptation, if such an effort ever comes to fruition.

All through the life of our dual system of government there has been the struggle between autonomy of the States and power centralized in the National Government. That contest is still going on. A superstate would in turn impair the autonomy of the United States and further magnify the difficulties and evils of remoteness of control over the life our our citizens.

THE DIFFICULTIES OF FORMULATING A DESIGN FOR A WORLD ORGANIZATION ARE APPARENT

The most significant thing about propcsals for a world organization is the total absence of designs on the trestle board. This organization is sometimes spoken of as a family or community or society of nations, a world state, a security council, or such like. No plan has been blueprinted or even sketched. It cannot be. Powers to be granted have not been delineated. An architect of a building can give no idea of its structure or utility without drawings and specifications. No more can the architect of world peace present as a supergovernment structure resolutions, preambles, postulates, or principles containing only a statement of general objectives. A preamble to a constitution embodies no framework of government nor machinery to carry it out. It is easy to advocate the creation of a security council to maintain peace. But who has said how that force is to be organized, who is to govern and command it, or on what occasion it shall be applied? Who shall have power to name the aggressor against whom the force is to be put in motion, or kept in motion.

Suppose the members of a prospective body politic would assemble and resolve that an organization be set up to prevent sin and crime, or to accomplish justice under a reign of law. That is about as far from accomplishment as anything could be imagined. A government is not instituted by a resolution that there be one to eliminate war and the causes of war any more than a proposed new game of football to eliminate roughness could be played without established rules. Certainly a world umpire would have his hands full controlling the plays and the players by improvisations on the field.

It is common to speak of a world organization in terms of our own Federal Constitution. Can it be envisioned that other nations would surrender governmental power to a framework with which they have had no experience? Would our separation of executive, legislative, and judicial powers be accepted? Would our judicial veto on unconstitutional legislative action be accepted? Such notions are not practiced even in England, let alone other countries who are expected to be cooperators in a supernational undertaking.

A good example of nebulous thinking concerning international organizations for the accomplishment of idealistic aims is the convention known as the Holy Alliance. This alliance illustrates the futility of mere generalization in international affairs, and is satisfactory proof that intentions verbally declared are not tantamount to accomplished facts in the field of such affairs.

The sovereigns of Prussia, Austria, and Russia became, in 1815 parties signatory to a document containing among others the following solemn declarations and covenants:

"They solemnly declare that the present act has no other object than to publish in the face of the whole world their fixed resolutions both in the administration of their respective states and in their political relations with every other government, to take for their sole guide the precepts of that holy religion, namely, the precepts of justice, Christian charity, and peace, which far from being applicable only to private concerns, cannot have an immediate influence on the councils of princes, and guide all their steps, as being the only means of consolidating business institutions and remedying their imperfections. In consequence, their majesties have agreed on the following articles:

"PRINCIPLES OF THE CHRISTIAN RELIGION

"Article I. Conformable to the words of the Holy Scriptures which command all men to consider each other as brethren, the three contracting monarchs will remain united by the bonds of a true and indissoluble fraternity, and, considering each other as fellow countrymen, they will on all occasions and in all places lend each other aid and assistance; and regarding themselves toward their subjects as fathers of families, they will lead them in the same spirit of fraternity with which they are animated, to protect religion, peace, and justice.

"FRATERNITY AND AFFECTION

"Article II. In consequence, the sole principle of force, whether between the said governments or between their subjects, shall be that of doing each other reciprocal service, and of testifying by unalterable good will the mutual affection with which they ought to be animated, to consider themselves all as members of one and the same Christian nation."

The practical Metternich of Austria immediately characterized these lofty generalizations and commitments as "a loud-sounding nothing." The vigorous Castelreagh of England described them as "a piece of sublime mysticism and nonsense." Both of these eminent diplomats continued to conduct the foreign affairs of their respective countries on an understandable and realistic basis, despite the attempt of Czar Alexander to make these vague principles the basis of an universal union or a general confederation of Europe. Noble as these pious aspirations were, they were not and could not be carried out. There was no workable machinery by which they could be translated into action. The concrete but sinister manifestation of the Holy Alliance was an attempt to preserve monarchial power and extend it to the Western Hemisphere. This was met by the equally concrete Monroe Doctrine as a counteraction by the United States and Great Britain.

In the very nature of things, no generation and no Congress can bind future generations and future Congresses to the laws and institutions of today. As Justice Sutherland puts it: "Rulers come and go, government ends and forms of government change; but sovereignty survives." (See *United States*

v. *Curtiss-Wright Corporation* (299 U. S. 304, 316).) It hardly need be mentioned that we have departed from the ways and reactions of our forefathers and the generations that followed them. The people are not static in their make-up. They change in their ideas of governments and social and political institutions and Congresses change with them. It would be quite impossible now to set up an international organization with discretionary governmental powers that would be acceptable to future generations.

Hardly less nebulous than the Holy Alliance is a resolution endorsing as a primary objective "establishment and maintenance at the earliest possible moment of an effective international order among all nations based on law and the orderly administration of justice." What is to be the law, and what is to be the administration of justice upon which such an order is to be based? Who is to make the law, and who is to administer it? Are we to have a world bureaucracy making law by administrative processes? How would the people of the United States be represented in the lawmaking body? Remember that the problem of representation of the States in the Federal Government was the rock upon which the formation of the Union nearly foundered. The generic terms "law" and "justice" standing alone convey nothing. Law is the mandate of a sovereign in action. Until we know what the international order is to be, how can we envision what the laws will be? Would anyone recommend that the United States invest a supernational order with power to run our domestic and international affairs as justice may require? Justice means many things to many people. It envisages no concrete action in world affairs. No lawyer could find the principles that apply to the problems of his client by looking in a digest under the heading of "Law" or "Justice."

Without doubt, realizing all of these things, high authority has recently outlined the only sensible course that presents possibilities of success in the field of our international relations:

1. No surrender of sovereignty.
2. No world government.
3. No world police force.
4. Individual national military and naval forces adequate to the needs of preventing war and of making impossible deliberate preparation for war.
5. A council of nations for the purpose of working out through international cooperation the problems of world relations.
6. An international court of justice to deal with justiciable disputes.

Well is it appreciated, from the field of diplomatic relations and from experience with the causes of war and international disagreements, that the disputes that give rise to war are political in their nature and not subject to judicial determination.

No more clear-cut and definite statement can be made today. Furthermore nothing is therein proposed that transcends the powers of the Federal Government as now constituted.

Within the ambit of the international policy as so outlined we may cooperate with foreign nations to the fullest practicable extent in making use of the power of this country, military and otherwise, to prevent future wars and aggressions, by treaties, alliances, or other agreements, formal or informal. There is in it no suggestion that any government external to our own shall have power to plunge this country into war. At the same time our independence and opportunity to weigh decisions as they may affect our security will be preserved as they should be. Solutions will have to be worked out in the light of the interests and dispositions of nations at the time. Cooperation and the results thereof can rise no higher than the real desire of the most powerful nations to get along together translated into action.

The above attitude, adopted after mature deliberation, reenforces the conclusion that cooperation between nations will be cast in the form of treaties or other agreements, and that no commitments will be made until they have been carefully considered as to their character, definiteness, and consequences, and their effect upon the security, institutions, and liberties of the American people. It is only fair to presume that no plan will be effective unless approved by the people in complete observance of constitutional processes.

Well may profound minds that have pondered the problems of international policy in all their ramifications pause before recommending a pattern for a world organization to eliminate the causes of war. These causes run deep in human backgrounds—commercial rivalries, crowded populations seeking expansion of their territories, racial antipathies and philosophies, religious differences, social ideologies, disparities in respect of wealth, position, and territory, downright jealousy, and lust for power. Nations, so minded, can cooperate to minimize the threats that lurk in these causes. They can also, with force as the ultimate sanction, cooperate to prevent wars. But the causes will persist to an undetermined degree. There is no basis for a conclusion that nations will cease to be self-interested; but enlightened self-interest should dictate that nations be disposed and prepared to curb world-menacing aggression at the threshold. In the attainment of the desired end of peace we are not yet ready to submit this country to the uncertain and dangerous course of domination by a superpower. To say that the United States will abide by decisions, legislative, executive, or judicial, without its consent, that affect its very security and existence, is expressing a pious hope and nothing more.

What Shall We Believe—Truth, Half Truth, Rumor, Propaganda?

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks, I include a speech delivered by United States Attorney Alexander M. Campbell before the Kiwanis and Quest Clubs of Fort Wayne, Ind.

During these days when it is of the utmost importance to the war effort that we give careful judgment to the rumors and propaganda to which we are constantly being subjected, I believe we might all consider with profit this excellent address. I believe it to be an effective guide and admonition to all of us in our search for the truth.

The address follows:

Since man first became cognizant of the mental processes of reasoning, assimilation of facts, understanding, and imagination, all of which eventually gave dignity to human intelligence, man has been in the constant search of truth. The most imaginative story of man's conquest of truth is, I believe, the story of Sir Galahad and the Holy Grail. You will recall that the gallant knight of old searched throughout the then known world for the Holy Grail. It was to reveal to its finder the perfect way of life. It revealed itself only to those pure of heart.

History is replete with the adventures of men striking out in search of truth, crusading, fighting, praying in order that they might find the ultimate truth to life. Each pagan war lord felt that he was on the road of right—Alexander, Charlemagne, Caesar, Napoleon, Confucius, Lamarck and Diogenes, Sun Yat Sen, and scores of others too numerous to mention have left their mark on the historic pages of human progress by persevering toward an ultimate goal which to them represented truth. Modern man continues the search. The less we talk about it and the more we live up to it, the greater will be our influence. There is no propaganda, there is no advertising, that compares with conduct. Somewhere it has been written, "To this end I was born and for this cause came I into the world, that I should bear witness unto the truth." Ultimate truth has never been revealed to mankind, possibly because the search for it is more necessary to man's development than the knowledge of it.

The problem of what to believe has always been intriguing to me. The idea of evaluating many-sided concepts of various problems originated quite naturally throughout the course of handling several thousand cases in the past 9 years as a Federal prosecutor and public defender in our Federal courts. Especially during this wartime period, when the case load is extra heavy, and when the atmosphere at time became filled with goblins, half-truths, rumors, and propaganda, the acumen by which we judge who is guilty and who is not, who should be prosecuted and who not, of necessity required a daily sharpening. Reports come to the F. B. I., United States attorney, and other governmental agencies daily and for a time after Pearl Harbor, hourly, with respect to the personal or so-called political conduct of persons among us in the northern district of Indiana. "He is a Nazi sympathizer, he has been listening to the short-wave radio from Berlin, Tokyo, or Hamburg. He is for Hitler. The man in the third house from the corner is dangerous to the internal security of the Nation. There are many cars gathering at the rear of the saloon each Friday night and all the occupants go down in the basement; it should be investigated." These reports, all of them which came to us, have been investigated and 95 percent of them have been unfounded.

The test we use in determining what we shall believe is whether or not we can prove it. When the Government investigators bring us a case, we examine the facts and say, "Can you prove it beyond a reasonable doubt?" We have interned some people in northern Indiana for the duration of the war. We have sent others to prisons for violating the war laws but only after a thorough examination of the evidence and a sincere conviction that we believed and that we had evidence to prove that we believed concerning the violations of law.

I do not suggest this rigid test in our every-day walk of life because the average person is too busy to prove everything he says. However, much misunderstanding would be avoided in our daily affairs if we uncocked our verbal gun concerning those around us. We are all given to pronouncing half-truths without knowing for certain if what we say or what we charge is something we really believe. Again we are perhaps given to the human frailties of passing on rumors which is one of the most thoughtless and can be one of the most dangerous proclivities of human conduct. The best example which I can cite to you is the erstwhile rumor which permeated every home in Fort Wayne with respect to the last of the three unsolved murders in our city. (Within recent months three Fort Wayne young women have been murdered. Their assailant has not been appre-

hended.) Persons of fine stature, reputation, and standing in the community called me and stopped me on the street to tell me who had committed the atrocious crime. The example just cited is a severe one but it serves well and brings us up short and aware of the tremendous harm which can come about as a result of the passing of idle rumors, unchecked and unproved.

Many persons have stopped your United States Attorney on the street to inquire when we are going to do something about the three unsolved murders in our midst and then, of course, we must explain that they are violations of State law and not of Federal law and that only in instances where there is murder on Federal property or where a Federal agent is killed does the United States court assume jurisdiction of murder cases "We heard that you were investigating the cases or we heard that the F. B. I. was on the trail is the usual reply."

Again we see where loose talk has resulted in the misunderstanding with respect to the jurisdiction of the respective courts of the land.

Propaganda, its composition, transmission, and dissemination has taken a great deal of our time and interest. Many of us could well admit that at times we are often bewildered. However, there never was a time when it is more important for us to know what we think and what we believe than this very hour.

Since January 30, 1933, when Hitler came into power, the world has been filled with propaganda. Foreign agents have been within our shores as a matter of actual proof in our own Federal courts since 1926 disseminating the propaganda of the Nazi Party, of the Hitler youth movement, of the Nazi Women's Auxiliary, of the German-American Bund, and of the Nipponese as well. In this country, yes, in the northern district of Indiana, where we have a large colored populace, the Japanese agents have been very active. I refer, of course, particularly to Lake County, Ind. The Japanese propagandists have been somewhat effective among our colored people here and elsewhere throughout the Nation. We have had to investigate these activities with respect to the formation of subversive organizations in Gary and Indiana Harbor particularly, where our colored people have been meeting in both public and private assembly to both hear and read propaganda emanating from Tokyo sources. These meetings, usually in a private home, have been attended by from 10 to 200 colored people. This matter has been investigated by a Federal grand jury and we have determined that the Japanese Government sent to this country in 1934 an organizer by the name of Naka Nakane. This man has appeared in Gary, Chicago, Detroit, and throughout the country addressing the various colored groups. He is now serving a prison term, but not until he had well-organized groups throughout the United States among the colored people and disseminated dangerous propaganda which had as its fundamental purpose the creation of race hatred, misunderstanding, and intolerance. The Japanese propagandists preach race equality, that Japan will win the war, and they encourage willful noncompliance with the Selective Service Act.

Quoting from page 16 of the Federal grand jury investigation, which we conducted, one of the witnesses testified that at such a meeting the listeners were advised as follows:

"When the Japs come to invade this country, you are giving in to them and surrendering to them, without resisting them, and you will gain the freedom and possessions they have for you and others that obey this order."

On page 17 of the investigation, we find evidence that at the opening and closing of the meetings those in attendance would stand up, face the east, and repeat the guiding principles of the organization. That there was usually a discussion of the then Japanese advances and victories and they all seemed elated when advances were made by the Japanese. Further, that these meetings were particularly enthusiastic about the time the Japanese landed on the Aleutian Islands. The testimony is to the effect that "now the Japs have gained a foothold on the American Continent—it would not be long until they would be in the United States itself."

These colored persons in attendance at these meetings were told that the Japanese and Negroes are colored people and therefore they must stick together.

At page 23 of the investigation there appears the testimony of a young colored woman who said at one of these meetings:

"The Japanese will come over here before you know it, and it will be too bad for the whites. You whites have kept us down too long. The Japanese will come over here and get the whole bunch of you."

The investigation also revealed that at these meetings the Negro men were advised when any of these men are drafted in the Army and come in contact with any Japanese armed forces they are to lay down their arms and go over with the Japanese and fight with them.

One of the subjects of our investigation revealed that he had received his instructions from his parents at home when we interviewed him with respect to spreading anti-American propaganda among pupils in one of the Lake County schools.

We have testimony to the effect that two boys named Ned and Jesse were at kindergarten when the students pledged allegiance to the flag. The younger boy refused to stand up and the teacher asked him if he was going to pledge allegiance to the flag of the United States. The young colored boy at kindergarten said, according to the testimony, "No; my mother tells me I don't have to pledge allegiance to the American flag."

When a boy by the name of Haile stood up in front of his class and stated that he wanted the Japanese to win; when the teacher said, "You have evidently made a mistake, haven't you?" Haile said, "No; my mother tells me the Japanese are friends of the colored people, and when they come over here they are going to treat us right, and they are going to give us the jobs of mayor, and chief of police, and chief of the fire department."

The teacher testified that further interrogation of the lad after school revealed that the boy's parents had been attending the meetings heretofore referred to.

A certain colored woman whose first name is Bessie has been telling white people with whom she works that "Hitler and the Japs would be over here, and you whites will take dictation from them instead of us taking it from you. The colored people and the Japs, along with Hitler, will tell you what to do."

This type of propaganda is, of course, greatly injurious to the national welfare, to our internal security, to the future of our people, and to national unity.

In view of the fact that this is election week, I should like to refer to another type of propaganda which, of course, is in a much lighter vein, but, nevertheless, which many of our fellow citizens believe. In 1940 national leaders proclaimed that if a certain candidate was elected or reelected to the Presidency of this great Nation that representative government would vanish from our way of life. That there would never be another election in the history of America and that we would no longer be freemen. The proof of that ridiculous propaganda is the fact that we have had two national elections since—the recent one in the midst of the greatest war in the history of civilization. We are still free. We still may vote for whom we please. Whether or not the candidate of our choice was elected and is to lead us for the next 4 years, I think we can all believe that so long as we maintain faith in ourselves and in our religious education and political institutions, representative government will endure forever. Yes; there will be an election for the Presidency of the United States every 4 years for generations long to come.

It is our considered judgment that the propaganda which has done the most harm in this country is that which has emanated from Berlin. A well-conceived and highly organized propaganda campaign has been coming from Nazi sources for many years. It has come through the short-wave radio, through the magazines and newspapers edited by the Nazi hierarchy, the leading one of which is the Free American, the official publication of the German-American Bund. In these periodicals no opportunity has been missed to undermine our faith in democracy. In addition to the printed propaganda the organization of the bund has sponsored speakers throughout the country who have flooded their listeners with the Nazi aims and purposes. Some of our citizens have unwittingly believed some of this propaganda. I have had responsible people say to me, "Well, maybe Hitler was right with respect to the Jews, or we did not give Germany a just peace in the last war or the treaty of Versailles was too severe." These bits of propaganda are picked out, retained, and believed from the mass of untruths sponsored by the Nazi leaders who believe themselves to be supermen.

In our work in attempting to ferret out the truth and to see that the innocent are saved from prosecution and that the guilty are convicted, we have examined volumes of periodicals printed and distributed by the Nazis in this country. From these issues I have chosen a few choice excerpts of the Hitler propaganda.

For example, on June 23, 1934, there appeared in the Deutsche Zeitung on page 6 the following:

"Nobody can force us to give our soul to America, as many of our countrymen have done. No one can demand that we become German-American mongrels (translators note: alternative translations are 'bastards,' 'cross-breeds'), who do not know where they belong. We are and we remain Germans, Germans in America."

In Deutscher Weckruf appeared an article quoting an address by Josef Schuster on August 9, 1935, in which he said, referreing to the bund members in America:

"Adolf Hitler, remain firm. * * * You will find in us a defender at an advanced post, of whom you can be proud."

In Deutscher Weckruf on October 10, 1935, there appeared the following:

"We are in politics in this land of freedom, but not trivial party politics. Our goals are higher. The goal of German policy in this country will be reached when at some future time a German man in Washington conveys his thoughts from a German heart to the public."

In Deutscher Weckruf on July 23, 1935, appeared an article by Carl Nicolay, the German-American Bund organizational leader for the "Gau East."

"(We must) strengthen our sacred homeland, the Third Reich, by constructing a mighty phalanx of German blood in the American body politic, so that it becomes impossible for all time to ever again involve Americans in a war * * * against Germany."

On April 22, 1937, there appeared an article by Fritz Kuhn, in the Deutscher Weckruf:

"Consequently, the community of our German destiny, out, over, and beyond all national borders, is expressed. We may have various citizenship papers lying in the closet

and yet we are all German people and members of one great racial community (Volksgomeinschaft), of one hundred million which has branched out and extended itself from the German ancestral homeland out over the seas and continents."

As free people and as Christian gentlemen it seems to me that we have inherited a duty to conduct the long search for ultimate truth. We have an obligation to resist and to cast aside the half truths, rumors, and propaganda. It may become laborious at times to separate the chaff from the wheat. Talk is cheap, yet sacred. Words, conversation, speech, those are the means of intercommunication among men. They are the priceless gifts. Men think by means of words and communicate with each other through this medium. This most noble and profitable invention of speech is man's proudest triumph over nature, without it among men there would be neither commonwealth, nor society, nor contract, nor war, nor peace. Stanley Baldwin once said:

"Words are the currency of love and friendship, of making and marketing, of peace and war. Nations are bound and loosed by them."

When ideas, statements, or principles conflict only the most careful weighing of pros and cons will yield the real choice. The ability to decide such matters wisely is not easily attained. Yet it is the wisdom of truth that can in the end set us and our children free from the tyranny of falsehood and establish more securely the thing called truth.

Preaching is not enough. Somehow we must plant the ideal of truth in the very marrow of our children's bones, in their habits and conduct, in their way of thinking, in their attitudes toward other children, so they become deeply honest.

Today democracy is at stake on the five continents and seven seas and one part of our job of defending and developing it must be the directing of our children and the rededication of ourselves to the highest principles of action, the highest goals of human fulfillment. Together with the knowledge to find and the ingenuity to apply the truth can only we insure a world that is worth living for and worth fighting for. You need the habit of truth. It is our greatest national asset. The undergirding truisms of American life today—the four pillars of our organized society—are the home, the church, the school, and the state. An enduring civilization requires that these four concepts of truth must stand forever. Truth will keep us free.

Social Security

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. JUDD. Mr. Speaker, under permission to extend my remarks in the RECORD, I desire to include a recent statement on social security by the Northwestern National Life Insurance Co., of Minneapolis. It presents so concisely and cogently the truly American way to build together both private and public enterprise, each in its proper sphere, for the greater good of all.

In January 1937 this company, in its national advertising, welcomed social security to the American scene. We felt then, as now, that through this law the Nation had struck a telling blow at an age-old and dangerous enemy—destitution.

Social security is not yet a perfect instrument, but the ingenuity and common sense of the American people should steadily improve it. We look forward to the day when a blanket of basic protection will cover every American family.

This will cost money. For social security is paid for by taxes, which do not themselves create wealth, but come from wealth created by the people. Only the savings and labor, the ingenuity and enterprise of an energetic, productive nation make social security possible. But such a nation can gladly assume its cost, in the conviction that a decent country must somehow maintain minimum living standards for all its people.

As we see it, social security is a proper instrument of a democratic society, by which it protects itself against the destructive effects of poverty.

Life insurance, on the other hand, is an instrument of the individual, by which he lifts his family as far above society's minimum standard as his own industry, intelligence, and enterprise permit.

This is in the American tradition: For all the people, the things the Nation needs—broader education, growing vision and understanding, assurance of the basic essentials of decent living. For the individual, the thing the individual needs—freedom to learn and earn as much, to go as far and as fast as he can and will.

Remove Joker From Maloney-Monroney Resolution

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. COCHRAN. Mr. Speaker, legislation will soon be considered by the Seventy-ninth Congress which will extend the time of the joint committee created by the Maloney-Monroney resolution which provides for study and to recommend changes with a view to improving the legislative machinery.

There has not been the least opposition to this movement, the press, radio commentators, columnists, as well as the public, agree it has been too long delayed.

Mr. Speaker, by reason of my experience in serving on several committees charged with reporting legislation providing for the reorganization of the executive branch of the Government, I fully realize the difficult task that confronts this committee.

I want to express the hope that the resolution that passed several weeks ago be amended so that the committee be given power not only to recommend changes but also to report resolutions to carry out their recommendations and to give such resolutions a privileged status. As I see it, this committee is responsible to the House and Senate and not to a standing committee. If the power I suggest is not in the resolution, then standing committees of the House will hold the veto power. If the committee is given this authority, then Members of the House and Senate will have the authority individually or collectively as the case may be to approve or disapprove the recommendations.

While I feel this is very important, still there is another matter I desire to discuss. Section 2 of the resolution adopted December 15 reads as follows:

SEC. 2. The committee shall make a full and complete study of the organization and operation of the Congress of the United States and shall recommend improvements in such organization and operation with a view toward strengthening the Congress, simplifying its operations, improving its relationships with oter branches of the United States Government and enabling it better to meet its responsibilities under the Constitution. This study shall include, but shall not be limited to, the organization and operation of each House of the Congress; the relationship between the two Houses; the relationships between the Congress and other branches of the Government; the employment and remuneration of personnel by the Members and the committees of the Congress; and the structure of, and the relationships between, the various standing, special, and select committees of the Congress: *Provided*, That nothing in this concurrent resolution shall be construed to authorize the committee to recommend any amendment to or change in the parliamentary rules governing proceedings in either House.

I ask you to analyze this section. In one sentence you direct the committee what to do then you come to the proviso that absolutely nullifies the directorate because you say:

Provided, That nothing in this concurrent resolution shall be construed to authorize the committee to recommend any amendment to or change in the parliamentary rules governing proceedings in either House.

How can this committee to the job under the proviso?

No matter which way you turn you run into the words I quoted.

We either want to improve the machinery under which we operate or we do not.

One thing is absolutely certain, if this committee is restricted to creating jobs and increasing salaries we will be ridiculed throughout the country by those who are now supporting the movement.

Rule X found in the House Manual creates the standing committees. Rule XI defines jurisdiction. Therefore, the minute the committee thinks of standing committees it is restricted by the proviso. Committees are certainly part of the parliamentary procedure of the House, and an outstanding part. Our parliamentary laws provide when a bill is introduced it is referred by the Speaker to the standing committee having jurisdiction, the Parliamentarian advising the Speaker as to where the bill should be referred.

If the committee feels there should be a reduction in the number of standing committees it cannot even so recommend due to this proviso. It is foolish on the face of it to instruct in one sentence and nullify the instructions in the next.

It might be the committee could recommend an increase in the Legislative Drafting Service, set up a research division either separately or under the Drafting Service, also to provide for a congressional fiscal investigating division but beyond that it could hardly go other than to increase salaries and create additional jobs.

Ratification of treaties by a majority vote of both Houses, the Kefauver suggestion to have Cabinet Officers attend sessions to be questioned, create joint committees and other suggestions, all having to do with parliamentary procedure and are affected by the proviso.

A study of the resolution adopted December 15 will convince anyone my argument cannot be assailed.

Much as I am in favor of this meritorious movement I would rather see the study delayed than to hamstring the committee as does the original resolution.

The proviso was added to the original resolution. Why, I do not know, and we certainly are entitled to some information before we are asked to vote for it again.

The Congressional Front

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. DIRKSEN. Mr. Speaker, under leave to revise and extend my remarks, I include therein certain excerpts:

THE CONGRESSIONAL FRONT

(By Congressman EVERETT M. DIRKSEN, of Illinois)

WHERE DO YOU WORK-A JOHN (ON THE DELAWARE LACKAWANN')

Do you recall that old ditty about "Where do you work-a John, on the Delaware Lackawann'." It comes to mind as more and more is said and written about 60,000,000 jobs. Haven't you wondered perhaps how many people out of the entire population do work—and where they work—and what they did before the war—and during the war—and what they may do after the war. If we knew how many would be available for work after the war—and the kind of work that should be done to keep up the high standard of living, it might save many headaches and vain speculations. And for that matter, it might save us from certain delusions.

BACK TO 1940

When the Census Bureau finished counting noses in 1940, here's what they reported. There were 45,166,000 persons working. Where? Well, roughly there were about 10,500,000 working in factories, about 3,000,000 in mining and construction. Those two classifications account for about 30 percent or slightly less than 1 out of every 3 persons then working. Another 12,500,000 were working at the business of running stores, working on railroads, selling insurance, practicing law, working in banks, selling real estate, running garages and beauty parlors, etc. This is essentially service work. The remaining 19,500,000 were working on farms or operating farms, engaged in fishing as an industry or working for some branch of government whether National, State, or local. So, about 30 out of every 100 workers were in industry, mining, or construction, 28 out of every 100 in service trades, and the remaining 42 out of each hundred on farms, fishing, or government work.

HOW MANY WANT WORK AFTER V-DAY?

Will a larger or smaller number want jobs when the war is over—or the same number? Here we must move into the field of estimating. By 1946 or 1947 let us say, if population continues at a normal increase, we should have about 140,000,000 people in the continental United States. Let's divide them up into groups. About thirty-three and one-third million will be under 14 and of school age, about eleven and one-fifth million from 14 to 24 will be in schools and colleges, an estimated two and two-fifths million may be in the Army and Navy, about eight and four-fifths million will be retired at 65 or over, about one and four-fifths million will be in jails, asylums, and other institutions, about two and one-half million will be in the fringe group (folks who go for easy money and live by their wits) leaving about forty-nine and three-fifths million who are working or who seek work. Let's call it 50,000,000. It would be about 4,000,000 more than the number working in 1940. But it would be far short of the 60,000,000.

AREAS OF EXPANSION OF JOBS

To get a proper viewpoint, it is necessary to get over the idea that all jobs were found in factories. The 1940 census figures easily dispel the idea. We can then better examine the areas where jobs may best be found. Obviously the number of construction workers will increase in the post-war period. So will service industries such as garages and air lines. The G. I. Act, enacted by Congress, should swell educational ranks. In all this is real hope that the job can be done.

THE CONGRESSIONAL FRONT

(By Congressman EVERETT M. DIRKSEN, of Illinois)

WHAT SHALL WE DO WITH COTTON?

If you live in a section of the country where they grow corn or wheat or fruit or soybeans or some other crop besides cotton, cotton may not mean much. And yet it does. It is the cash crop for a substantial area and a large number of farmers. How much cotton they produce, and what they get for it, determines what and how much they buy of the goods and commodities produced in other sections. But the cotton business is sick. The soil in the deep South is getting thin from overusage. Fertilizers must be used constantly. The quality is not what it should be if it must compete against cotton grown on better and newer soils. It is still a one-mule crop and costs are high. The outlet for our cotton in world markets is not too bright. There is the usual mass inertia about changing to other crops. The effort to hold up the price, by artificial methods is of only temporary effect and is a bit dangerous when considered from the standpoint of our future.

SOME SIGNIFICANT FIGURES

Thirty years ago—and that's not so long ago—the United States produced 64 percent of the world's cotton. Now it produces 40 percent. That's a pretty substantial decline. Thirty years ago 32,000,000 spindles were spinning cotton into cloth in this country. Today there are only 25,000,000 spindles. That's quite a drop. It's even more significant if you consider that the number of spindles for the world increased from 143,000,000 to 146,000,000. That means keener competition from other countries with cheaper labor. In other words, the cotton business is losing ground in the world market.

PRODUCTION AND USE

Now look at our production and use of cotton. Roughly, we produce about 12,000,000 bales a year and use about seven and one-fifth million bales. The cotton we do not use must be sold in world markets or must go into warehouses and be held. If world production continues to come up our production must go down or provide an excess which we cannot sell unless we subsidize the sale to the tune of 5 or 6 cents a pound with money out of the public Treasury. Of the seven and one-fifth million bales we use every year, about two and seven-tenths million bales go into clothes, about one and eight-tenths million go into household uses such as gauze, quilting, and what not, and the other two and seven-tenths million go into industrial uses such as cord for making tires. But look. Rayon is getting cheaper and becomes a vigorous competitor for cotton. That's not only true of clothing uses such as women's hose but industrial uses also. The War Department made some tests and issued a report saying that cord for tires which is made of rayon is better than cord made from cotton. That's not so good for cotton. Think also of how paper has come to displace cotton for towels, napkins, and a lot of other uses. So what? Uses for cotton decrease and we don't need as much cotton. But what about that host of one-crop cotton farmers who depend on it for cash.

COMES NOW THE SECRETARY OF AGRICULTURE

Recently Secretary of Agriculture Wickard suggested to Congress that the subsidies and supports on cotton prices be withdrawn and that subsidies be paid to cotton farmers direct if they would gradually switch from cotton to other crops, and if the production of cotton would be mechanized so more could be produced at lower cost. Of course, this is a program that will take time, but it would result in cheaper cotton that could compete with paper and rayon and also in world markets. Now why is this so important? Well, you can see from the figures quoted above that if production drops, if consumption drops, if this trend continues, and if spinning spindles decrease, it also means that jobs will disappear. And then what about the 60,000,000 job program you've heard so much about? Funny how you get back to that old admonition in the Scripture, "No man liveth unto himself alone." Nor does any section or any country live unto itself alone.

THE CONGRESSIONAL FRONT

(By Congressman EVERETT M. DIRKSEN, of Illinois)

MEN MAY COME AND MEN MAY GO

The records of the Civil Service Commission indicate that there is a constant shift of people in government. In July 144,000 quit and 177,000 new placements were made. In October 150,000 quit and 148,000 new persons came in. Such is the fluidity of people in government. But we want to tell you about a particular person who is leaving and before we do, you may want to know a bit about him. His name is Ernest I. Olrich. He is the president of the Munsingwear Co., one of the Nation's largest manufacturers of undergarments. He is an expert merchandiser and was brought into government as an assistant to the Secretary of the Treasury to look after the disposition of surplus war goods.

INTERESTING JOB

It was a job that offered a variety of experience. Mr. Olrich's job was to sell surplus stuff at a rate of about $15,000,000 per month, get top prices for it, and also protect the market and the dealers against heavy and hurtful competition. The types and kinds of goods he was called upon to sell would have taxed the capacity of the most ingenious salesman in all the world. For instance, where would you sell 2,800,000 gas masks? or 39,000 pairs of women's white, low-cut shoes? or 16,000,000 square feet of sheepskin? These are but a few of his items of merchandise. Others include a million used mattresses, 954,000 used pillows, 27 tons of fruit jar rings, 623 collapsible rubber rafts, 667,000 pairs of antigas rubber gloves, 10,000 carrier pigeons, 5 live monkeys, 59,000 shotguns, 22,000,000 flashlight batteries. One interesting item was 15,000,000 catgut sutures. These are those special threads used in sewing wounds. If they were dumped on

the market, it wouldn't be necessary to produce a single suture in the next 6 or 7 years.

WHERE DOES IT COME FROM?

Where and why do they have such items of surplus? An illustration will make it clear. Soldiers' and sailors' clothing of certain types came equipped with zippers. These were made of metal which contained zinc. Out in the Pacific area as a result of the effect of salt water and salty air, these zippers soon corroded. So plastic zippers had to be supplied. Consequently there were some 10,000,000 of these metal zippers that couldn't be used and could therefore be sold as surplus.

BUT BACK TO OUR MAN

But now, back to the man whose job it was to sell this stuff. In selling Government property, he operated under the ceiling prices established by the O. P. A. In that capacity therefore, he supported O. P. A. and the O. P. A. policies. But on the other hand, he was in difficulties with O. P. A. because that agency had filed a suit against the firm of which Mr. Olrich was the president. He believed he was in the right and his conscience dictated that he should resist any O. P. A. policy that he considered wrong. Thus, he found himself on both sides of the O. P. A. fence and he felt in honor bound to resign. Thus does a good man go out of Government. He is but one of many as the Civil Service figures so well indicate.

THE CONGRESSIONAL FRONT

(By Congressman EVERETT M. DIRKSEN, of Illinois)

SOCIAL SECURITY IN REVIEW

Socias security is in the air. It has been much discussed. Both political parties declared for its expansion in the last campaign. That means the inclusion of new groups such as seamen, maritime workers, farmers, farm hands, State and local employees, domestics, and others. It means a reappraisal of the purposes and objectives of social security. Thus a brief review of the present program and its achievements might be timely.

OLD-AGE ASSISTANCE

This function is commonly known as old-age pensions. For the fiscal year which will end in June of 1945, it is estimated that 1,968,000 persons, age 65 or over, will be receiving old-age pensions. The average monthly payment is estimated at $28. Some get more, some get less. In Mississippi the average is $9.40 per month. In California, it's $47.75. Total cost of this program is $696,000,000, of which the Federal Government pays $339,000,000. Operating cost of the program is about $33,000,000. Largest number of recipients of old-age assistance is in Texas. It has 181,000. Delaware is lowest with 1,000.

AID TO DEPENDENT CHILDREN

The Federal Government pays about one-half the cost of this program. For this fiscal year, 613,000 children in 248,000 families will receive this aid. Total cost is $142,000,000, of which the Federal Government will pay $55,000,000. The operating cost is about $12,000,000 per year. This aid averages $43.18 per family for the whole country, which means about $17.74 per child.

AID TO THE BLIND

About 55,000 blind persons will receive this aid in the present fiscal year at a total cost of about $20,000,000, of which the Federal Government pays about $10,000,000. The various States pay the rest. It averages about $27.49 per person for the whole country. Largest number of blind beneficiaries is in Illinois, where 5,000 persons share in the program. Several of the smaller States have 100 persons or less. The three foregoing programs, namely, old-age pensions, aid to children, and aid to the blind, are paid by means of direct appropriations out of the United States Treasury.

UNEMPLOYMENT COMPENSATION GRANTS

Each State now has a system under which weekly benefits are paid to persons who have worked and who then become unemployed. Funds to pay unemployment benefits are derived from a Federal tax on all employers of 8 or more persons. If the State in which the employer does business has a satisfactory unemployment-compensation law, not to exceed nine-tenths of the tax which is levied is returned to the State with which to pay such benefits. In some States benefits begin when a man has been out of work for a week. In some States it is 2 weeks. The amounts paid per week vary with the different States. In 1944 weekly benefits were paid to an average of 104,000 persons every week. New York leads with an average of about 16,000 persons. Wyoming was lowest with only 6 persons receiving average weekly benefits. The operating cost of this program is about $31,000,000 per year.

OLD-AGE AND SURVIVORS INSURANCE

About 40,000,000 persons, which represents just about two-thirds of all people over school age in the country, are covered by the social insurance program. Workers and employers each pay a pay-roll tax of 1 percent which goes into a trust account, one of which benefits are paid. There are now about 900,000 retired workers, wives, widows, children of deceased workers, and aged parents who enjoy these benefits. These benefits are available to workers and employers; was graduated to begin at 1 percent in 1937 and to reach 3 percent on each, or a total of 6 percent by 1949. However, the tax has been frozen at 1 percent and an effort is presently being made to freeze it for another year. This part of the program is essentially an insurance project and is expected to be self-sustaining. Here then is a broad outline of the present security program, and in due time legislation will be offered to extend it to classes not now covered and to include certain health insurance features.

Lower the Voting Age Now

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial dated December 23, 1944, which appeared in the monthly news of the Automotive Workers Industrial Union, Inc., Chicago, Ill.:

LOWER THE VOTING AGE NOW

Political scientists will generally agree that democracy works best when the greatest possible number participate in the selection of the leaders.

The Australian ballot, which is used throughout the United States, guarantees to every voter secrecy of the ballot. However, the secret ballot is not enough to insure us democratic principles of life unless everyone with a mature sense of reasoning is allowed to participate in the selection of the administrative, executive, and legislative representatives in our various governments. Up to this year the right to participate in elections was limited to those persons who had at least attained their twenty-first year. The State of Georgia broke this tradition and allowed its sons and daughters who had attained their eighteenth birthday to participate in the local, State, and National balloting conducted in November. A survey of the results indicates that a greater number participated in the election than at any time heretofore, and as a result the expression of the electorate was more representative of the will of the majority than at any other time. No basis of criticism has yet been found to indicate that the persons between the ages of 18 and 21 years who participated in the election did not exercise sound discretion, and it is generally agreed that most of those physically able in that age bracket did participate. Certainly if it has proved successful in Georgia there is no fundamental reason why it should not produce the same result in all of the other States of our great Nation.

In January of 1945 a new Congress will convene in Washington, and in practically every State capital throughout the country new legislatures will assemble for the purpose of drafting legislative measures to meet existing conditions in their respective jurisdictions. No more beneficial legislation could be drafted and enacted by these bodies to bring about a greater participation in government than the lowering of the age requirement to 18 for the purpose of voting.

During the past few weeks we have had expressions from the Secretary of War to the effect that members of the military forces from 18 years up will be sent into the front lines for immediate action. Certainly, if these gallant fighters are old enough to participate in the defense of their country, and yes; even to give their lives for their country, there is no further reason why they should be denied the privilege of fully participating in that government.

Those of us at home have seen male and female workers from 18 years upwards on the production line turning out the materials of war. All of these young people between the ages of 18 and 21 have given a marvelous account of their ability to be absorbed in the industrial life of our Nation, and apparently age has not been a handicap to their efficiency. Again, if these young people are old enough to toil in the production of the necessary materials for war in defense of our country, is there any basic reason why they should be further denied the right to vote?

There is no great mystery in the exercise of the voting privilege, and no one has yet contended that our citizens between the ages of 18 and 21 years do not possess sufficient intelligence to exercise their right to vote properly. On the other hand, it is generally admitted that the minimum age of 21 is archaic, and some State legislatures have heretofore enacted laws in which they have lowered the age at which both males, and especially females, attain majority status for legal purposes.

This minimum age requirement is a matter which should be adjusted now, while we are at war, and should not be allowed to wait until our gallant sons and daughters are returned from battle and production lines to their normal mode of living. We cannot impress too strongly upon the State and National legislators who will be meeting in the next month or so that this is a precedent which should be set aside, and that all States follow the example of Georgia and adopt voting-age requirements that are more consistent with the spirit of Democracy and modern life.

AUTOMOTIVE WORKERS INDUSTRIAL UNION, INC.,
By THOMAS M. LAW, *President*.

How Can We Best Implement Dumbarton Oaks?

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following proceedings from the Forum for Democracy entitled "How Can We Best Implement Dumbarton Oaks?" November 30, 1944, Times Hall, New York City:

The second session, How Can We Best Implement Dumbarton Oaks? convened at 8:45 p. m., in Times Hall, Mr. Samuel L. M. Barlow presiding.

Dr. M. SHERMAN. Friends of the Forum for Democracy, this is the regular second session of our forum, the first having been devoted to the question, "If I were at the peace table."

During the interim of these two sessions a national election took place, as you know, and it was a great indication of the fact that an informed public opinion usually acts rationally in accordance with that information, and that is one of the fundamental reasons why the Forum for Democracy is in existence: to give you those facts, so that you can act rationally.

Tonight we have a second question which is very vital at this moment. Everybody's thinking about it. A great many people do not know too much about it, but we hope before the evening is over that you will not only learn a great deal about it but that you will do something in regard to the question itself.

The chairman of tonight's meeting, Mr. Samuel Barlow, has just returned from lecturing at the University of Puerto Rico, and before that he was on a tour of South America with a Carnegie endowment. He is an internationally known artist. I think most of you know him very well as a student and traveler, and that being the case Mr. Barlow usually has an international point of view.

It gives me great pleasure to introduce the chairman of the evening, Mr. Samuel Barlow.

Chairman SAMUEL BARLOW. Apparently, ladies and gentlemen, we are going to have to catch up a little bit on time, because we were a little late in starting.

World peace has been the object of speculation and aspiration for centuries. By the year A. D. 32 it was the promised goal of the religion most of us profess.

Whenever in history it was partially achieved, it was done under the leadership of some one empire, like the Roman, and sustained by coercion, tyranny, and annihilation.

Later, the notion of a peaceful federation of Europe was cherished in France; and Pierre Dubois in the fourteenth century published a working plan for it. Henry IV took the matter up; and Victor Hugo, Comte, and Renan and Briand only rekindled an old fire. Then the League of Nations, lopsided and unimplemented, came into existence.

To those who say world federation will not work because it never has worked, I would answer that Leonardo da Vinci made drawing for an airplane. Yet, it has taken 400 years to get the darned thing off the ground. And I thought we in America prided ourselves on our ability, our desire to make things work—as Edison did—after countless trials and failures. What great and desirable end—like perfect health or Christianity or a real knowledge of electricity—does work 100 percent? Nothing does.

Now we are at a precise moment, with the preliminary canters over. The promising hurdles of the Atlantic Charter, of Casablanca, Moscow, Cairo, Teheran lie behind us. These were taken when the war was going against us, mind you; when the military exigencies conditioned all our thoughts. Now we face a proposal—and remember one thing, that it is but a proposal; the Dumbarton Oaks is but a proposal, but for all that it is something that can collapse for want of understanding and support. Now we face a proposal, not in defeat today but with a certainty of victory before us. It is no longer a proposal how to win the war, it is a proposal how to win the peace. Here we have a plan for international cooperation—for purely preventive measures, as I read it—against aggressors, and for the maintenance of that understanding, good will and liberal growth, without which a lasting peace has no chance whatever.

Now, I presume no sane voice can be raised agaist proposals to establish world peace. And the Dumbarton Oaks proposals are just such proposals. But the carpers are carping, in the usual frog ponds, forgetful that if you carp and nibble away the foundations of the future the future falls, not on us but on our children.

Recently, from the anvil chorus, came the voice of John T. Flynn, arguing that our Congress and the governments of our allies would never permit their representatives on some world council to launch their respective countries into war by using force against aggressors. But it is an odd suggestion, is it not, that a policeman can do nothing until the thug has hit him on the head with a blackjack; and then he has to call up the board of aldermen and find out whether he can make an arrest? On the contrary, if the United Nations Council is implemented to stop aggression—not stop war, only aggression—only so can we be kept out of war. Here, the only possible question would be one concerning the definition of aggression, which you will doubtless have before the evening is over. But as far as an armed police is concerned, there would seem to be but one statement: aggressors make war. Stop aggressors and you stop war making. And aggressors recognize force and force alone—and I don't mean moral force.

Mr. John Foster Dulles, addressing a group of clergymen, and probably swathed in a surplice and chasuble "d'occasion," also raised his voice against an international police force. He hoped that moral force would suffice.

Now, moral force, alone with a great many admonitory outcries—so many, in fact, that some people thought we were selling our birthright for a pot of message, if I may so express it, and a few sanctions—did not prevent the invasions of Manchuria, Ethiopia, Czechoslovakia, or Poland.

This is indeed, I will admit, a real and realistic world, and I agree with Mr. Dulles that moral force is as real as armed force. But moral force back of armed force is very different from gangster morality back of armed force. And gangster morality must never again be allowed to arm itself.

So let us here tonight consider the implications of Dumbarton Oaks and note and discuss those questions that were left for future settlement; so that we here, and our friends, your friends, my friends, and the future audience on the air tonight, and all who cling to liberality and justice and to reality, can think clearly upon these questions, and then raise our voices and push our pens, and clamor for the liberal realization and implementation in morality of the United Nations Charter.

To remain mute, my friends, to remain mute is the curse of the timidly fair-minded. Mutely, they slip into the easy corruptions of silence. We have got to work and work hard to get the kind of a peace we want. Rather let us note what St. Augustine says and said beautifully: "The desirable treasure resteth in the mouth of the wise; the fool swalloweth it down."

So let us speak up, and so that we may forever hold our peace. [Applause.]

Now, with that introduction over, I am going to introduce three speakers. We are, by the way, extremely fortunate tonight. To whet our knowledge, we have for you the sharpest brains.

First I want to introduce to you Congressman CELLER. He is the ranking member of the Committee on the Judiciary, a Member of Congress for 22 years, and a consistent supporter by the organized international police organization. He has been on the liberal side, and a great comfort to us regularly. He is a great thinker and a gifted speaker. Congressman CELLER. [Applause.]

Congressman EMANUEL CELLER. I heard with a glow of pride that very flattering introduction, but as I sort of walk around myself and survey myself, I fear I cannot live up to all those high-sounding phrases. But being a good businessman, I will settle for half. [Laughter.]

DUMBARTON OAKS PLAN

Congressman CELLER. Molotov, Eden, Hull, and Foo Ping-Sheung jointly declared for their governments at Moscow on October 30, 1943, that "they recognize the necessity of establishing at the earliest practicable date a joint international organization for the maintenance of international peace and security."

This principle was overwhelmingly adopted by the House in the passage of the Fulbright resolution by a vote of 360 to 29 and adopted by the Senate in the passage of the Connally resolution by a vote of 85 to 5. Both the President and his opposing candidate, Governor Dewey, in the recent election campaign, voiced strong sentiments in favor of the establishment of an international structure to maintain peace and for the invocation of sanctions against offending nations.

But as far as China, Russia, England, and even France are concerned, and many other nations, there is sufficient evidence that we are in the rear of the procession for some sort of comity of nations.

Recently, representatives of four great nations: United States, the United Kingdom, Soviet Russia, and China, met at Dumbarton Oaks and formulated broad, tentative proposals for the maintenance of peace and security and "to that end to take effective collective measures for the prevention and removal of threats to the peace and the suppression of acts of aggression or other breaches of the peace."

These proposals are most laudable. They will, however, become as worthless as rain water in an umbrella stand unless backed and abetted by an informed, enlightened, and militant public opinion. Otherwise, we shall have a return to the tragedy of "power politics," "balance of power," "triple alliance," "triple entente," which divided nations and sowed seeds of dissension and war.

The efforts at formulating an international community failed before. It should not fail again. Once bitten, twice shy. But some of the enlightened, selfish, reactionary, chauvinistic groups that knifed the League in the back still stalk the land brandishing these weapons. Lodge, Borah, and company have been replaced by a new battalion of death. An American Axis press screeches its stuff. It yells for sovereignty and all the other cliches, little realizing that bitter experience has taught us that the price of complete sovereignty is nothing less than recurrent wars.

Rabid isolationists in and out of Congress have not yet been consumed by the poison of their own mouths. The Ananias Club still has a full roster. The recent election did not free us of enough of those who still scoff at the Atlantic Charter and a comity of nations as a pipe dream, and who, again, if given the opportunity, will scuttle the ideas formulated at Dumbarton Oaks. The answer is: such opportunity must not be given and the opportunity will not be given if an aroused public opinion makes its wishes known.

The Dumbarton Oaks plans, as unfolded, are not perfect. The plans are man-made. It would be the height of folly to demand perfection. Even the sun has its spots. As Secretary Hull said, the Dumbarton Oaks proposals are "neither complete nor final." They are offered as a basis of discussion at a conference soon to be called. Meanwhile, the public must carry the ball. Its opinions must be molded; its voice must be made articulate. Senator BURTON K. WHEELER, of Montana, has already served notice that no commitment by the United States with respect to plans for such an organization will be ratified prior to the cessation of hostilities. Like those who scuttled the League in 1919, he and those like-minded want the treaty of peace together with a new charter for a comity of nations to be in one document. The treaty of peace should be considered separate and distinct from any such charter. The combination of the two was the fatal mistake of the last time. The United States had to take the charter together with the treaty or leave it. It simply gave the traducers of the last peace more to shoot at.

It is pertinent to ask, if they don't want the Dumbarton Oaks proposals, what do they offer? What proposals have they made? Apparently, the present 30-year war has failed to instill in their minds and hearts the need for some antidote against war. They still fail to realize that the internal structure of America is just as much affected by a Mussolini invading Ethiopia or a Hirohito seizing Manchuria as an attack upon the coast lines of the United States. They fail to realize that facism or nazi-ism is a cancer that cannot be confined to its place of origin. To change the metaphor, if such a flame flourishes anywhere in the world, it sears us as well.

The four Republican ranking members of the Foreign Relations Committee of the Senate are HIRAM W. JOHNSON, of California, ARTHUR CAPPER, of Kansas, ROBERT M. LA FOLLETTE, of Wisconsin, and ARTHUR H. VANDENBERG, of Michigan. The only ray of light I can see on the Republican side of the committee is WARREN R. AUSTIN, of Vermont.

In addition to the those isolationists so powerfully placed in the Senate, we have Senators WILEY, of Wisconsin; WHEELER, of Montana; CLYDE REED, of Kansas; GEORGE AIKEN, of Vermont; STYLES BRIDGES, of New Hampshire; C. WAYLAND BROOKS, of Illinois; HUGH BUTLER, of Nebraska; TAFT, of Ohio; TOBEY, of New Hampshire; HARLAN J. BUSHFIELD, of South Dakota. The roll is incomplete. Remember, a treaty of peace or any league of nations must be ratified by a two-thirds vote of a quorum. That does not mean two-thirds of the 96 Senators. A quorum is one more than a majority. This means that a mere handful, 17, willful, obstructionist Senators can ditch a new league.

Urgently needed is a constitutional amendment providing for a ratification by a majority of both Houses. Such a measure is now being considered by the House Judiciary Committee, of which I am ranking member.

Approval of a constitutional amendment must be ratified by three-fourths of the State legislatures. Forty-four of the State legislatures meet in 1945, but that remedy may be abortive, since it is doubtful whether the Senate, jealous of its rights, would yield its power in this regard and concur in the proposal of such a constitutional amendment. Remember, power is never surrendered.

Of course, there is another way open to amend the Constitution, and that is through a petition by the legislatures of two-thirds of the States petitioning Congress to call a convention to consider amendments, in which event there would be no need for the Senators to act. This method has never been used and would offer insuperable obstacles. At such convention the entire Constitution might be open to amendment.

Thus, we are confronted with the anachronism of some 17 Senators who have it within their power to break the will of our own people and the backs of the world. These willful men can utterly disregard the mandate of the people as expressed in the recent election.

This cabal of Senators are sharpening their axes. They hack away at one provision in order to topple the whole structure. They already tell us that they will not write out a blank check for the use of our armed forces to any superpower.

Frankly, any effort to set up a comity of nations without approved use of force to invoke sanctions and prevent aggressions would be like making bricks without straw. It just cannot be done. Furthermore, this cabal will refuse to entrust to the designated representative of the United States to the Security Council the power to use demonstrations, blockade, and other operations by air, sea, or land of the United States armed forces in concert with the other members, without reference to an act of Congress relative to each specific instance. Only Congress, they maintain, can declare war. Of course, to my mind, their arguments are so much gibberish. The representatives of other nations will have such power. The United States cannot limp behind, for if it does, the other nations cannot march. And there go the hopes of the world again.

A declaration of war requires congressional action, but the Constitution also places the responsibility for prompt action upon the President in the protection of national interests, and the President has a right to delegate that authority. He has the right, as Commander in Chief and head of the executive department, under the Constitution, to employ our armed forces for the protection of United States citizens or agencies abroad, for the defense of the territory of the United States and for the prevention of offenses against the laws of nations or violations of treaties. This power is supplemental to and not in derogation to the power of Congress to declare war. There was no declaration of war on France in 1798 or on Tripoli in 1801, or Algiers in 1815, nor was war declared in the matter of the Mexican border in 1913.

Some of these situations have been called mere fracases and others have been called wars. The Civil War began when President Lincoln called forth the militia and proclaimed a blockade to suppress insurrection.

I admit it is difficult to define where the President can act alone and where he cannot. In other words, it is not easy to determine when hostilities and war begins. Nonetheless, there is ample constitutional authority for the United States to arrange for the use of force to be immediately available to the international council for acts against aggression without the need for congressional action. [Applause.]

Chairman BARLOW. Ladies and gentlemen, we have with us tonight a notably lovely voice, a voice to which it is usually a pleasure to listen over the air. Tonight we are doubly privileged in being able to use our eyes, too. I wouldn't go so far as to say that the eyes have it [laughter]. However, I introduce to you Europe's first woman commentator. She is now on the Blue Network and is a brilliant analyst. Miss Lisa Sergio. [Applause.]

Miss LISA SERGIO. Thank you, Mr. Barlow, for that introduction. I will see you later outside. Probably Mr. CELLER will also see you later for his. [Laughter.]

We were asked to come here tonight to try to answer the question of how we could implement Dumbarton Oaks. Congressman CELLER has told you something which is the profound truth of the matter; that for the first time the four representatives of the four great powers which gathered at Dumbarton Oaks arrived at the tentative outline of the machinery which could preserve the peace.

Congressman CELLER also showed you, however, that while the United States is a vital part in that force to preserve the peace, there are within the United States other forces that might try to keep us out of that international organization. I think we are all agreed—and it is perhaps useless even to insist on this point—that unless this unity is preserved for the common purpose of preventing other wars; unless, in other words, the great nations which are now able to speak more or less decisively of the victory to come, can preserve their joint force to prevent other such wars, we cannot prevent those wars.

And just to illustrate briefly how great is the danger of another war, let me just ask you to look toward South America. It was not later than last week that we heard that the Government of Argentina had set up a program for so-called health training for all the schools of Argentina. In reality, military training for all the children of Argentina.

We have been learning in the course of the last several weeks that many of Germany's top-notch industrialists in the war industries have been reaching Argentina; that a great deal of their money has been brought over to Argentina, not only for safety but also as a good investment.

Now what is the way in which you can make a good investment pay interest when that investment is in war industries? Obviously, by starting a war. Agentina is building up very definitely and unquestionably an enormous machine for war. It is not able to build it up with the speed, I presume, that it would like to use, because the materials are not available to her in sufficiently large quantities, but the idea is there. This indicates also to us, therefore, that the occasion to prevent an aggression is going to be there sooner than we think, and that therefore the necessity of implementing Dumbarton Oaks is vital, is urgent, is stringent.

I think that if you look back in history and try to wonder why it is that every war has been followed by something that we called a peace, but in reality had only been followed by an armistice—because another war always followed—you would find that the reason was that the people, as a whole, never were behind the peace as they had to be, whether they liked it or not, behind the war. For the first time, I am sure, in the history of mankind, nations that are getting together to plan a peace are asking the people to analyze those plans and to discuss them. You know perfectly well that the Department of State has circulated—and I believe you in this particular hall have received copies—of the text of the tentative plan drawn up at Dumbarton Oaks. You are being given home work to do. I wish we had all been given home work to do after the other war. Maybe we wouldn't be fighting this one. It is home work in which you have to read what this tentative plan means, and see whether you are going to be willing to stay behind it.

One of the essential points of discussion is going to be whether we are going to agree with Mr. Dulles that moral force is enough, or whether we are going to agree with this plan—that you need military force to back up the moral principles. Naturally, it is essen-

tial that we also should have a moral force. But a moral force is only an effective weapon when we all think of morals in the same terms. You never heard a Nazi say that they had no morals. You heard them say that their morals were so much better than ours, that they were going to impose them on us. It is just a question of what you think are morals.

Now, we are looking at the world today on the eve, perhaps, of the end of the war; protracted eve, you might say, if the war is going to last well into 1945. But we are looking upon many problems derived from the fact that even among the Allies we do not have the same notion of moral values. I would like to quote to you just one instance; the instance of the Italian situation.

We have a nation there that, supposedly, was an enemy, in reality was an enemy; that accepted unconditional surrender; was made a cobelligerent in a moment of love and enthusiasm on the part of the Allies; was given promises which today, well over 1 year after Italy's invasion and surrender and cobelligerency, are not only not being fulfilled but are being destroyed, being negated.

We said to the Italian people: If you will throw out the Fascists, we will no longer consider you enemies. We will come to your rescue. Throw out the Germans, and then you will fight with us. We arrived in there, and we found that the Italians were much closer to our conception of democracy and liberalism than we imagined. They had very definite ideas about what to do the moment they threw out the Fascists. For 20 years they have been mulling them over in their minds; finally they had an opportunity, and they were going to do something about them. And their notions were entirely different and very far removed from all the crazy concepts of politics and economy and social legislation that they had in 1920, at the end of the other war, and very far even from some of those same concepts as they obtain today in the minds of a few gentlemen maybe in our own Government and maybe in the British Government.

The result has been that immediately in the Italian situation there has been created a moral conflict which is losing for us as Allies, and which would be losing for us tomorrow as an international organization, the support of one people. No organization such as the one we contemplate at Dumbarton Oaks is going to survive if the nations that are part of it, little nations or large nations, gradually drop out of it because their people do not support it. Having one representative in an organization is going to do no good, because, unless that representative stands there to impersonate the full strength of all the millions of people which constitute his country, he might as well go for a walk and not be there.

No individual who sat in the League of Nations represented the people of his country. They represented ideas of their own, interests of their own. The fact was, that when some of those delegates enforced the sanctions on Italy, all of the miners in England, who didn't understand the moral implications of the Italian aggression in Ethiopia, got up and said, "We are not going to stand by the sanctions imposed on Italy by the League of Nations, because we don't want to lose our jobs by not sending coal to Italy."

And so it was with all the rest of the working and producing people of Europe who refused to back up the sanctions; who refused to accept the disturbance that was going to be created by enforcing the economic sanctions. They repudiated the pledge made by the representatives, and the result was that the sanctions might as well have not been enforced, because Italy walked away with everything she wanted in Abyssinia, and paved the way for the war which we are now fighting.

Now, we can create a very good organization at Dumbarton Oaks, patterned on the plan we read of today, which can mean absolutely nothing if every individual who sits at that table isn't absolutely convinced that all of the people in his own country are going to be behind him to the last drop of blood, to support the principles that he is going to fight for. Otherwise, you will never have a working organization.

Today we are already seeing that there is a discrepancy between the things we promise and the things we do. There is a discrepancy between everything we have said in the Atlantic Charter and the political policy we are practicing in every one of the liberated countries. This goes for Italy, Greece, Belgium, and it went for France, which, in its perennial stubbornness got itself where it wanted to be and where it should have been all the time.

Now, if this discrepancy continues between the things we promise today and the things we do tomorrow, before Dumbarton Oaks becomes a reality, we are already demolishing the strength and faith and support of Dumbarton Oaks, which we are going to need tomorrow.

Now, you and I, as people, have a tremendous role to play both in implementing Dumbarton Oaks and in seeing that today we build up the foundations on which that structure can be erected. Remember, all we are looking at today is a blueprint. We haven't even cleared the ground on which the structure is going to be erected, let alone sink the foundation into the soil. That hasn't been done yet. That will happen when the various governments get together and discuss the plan and accept it. But before that takes place there comes your role and mine. We have got to, as Americans, do one most important thing. We have got to see that we can coordinate our public opinion behind the acceptance of the tentative outline of Dumbarton Oaks, to such an extent that it will be stronger than the voice of those 17—if they are only going to be 17—isolationist Senators who could ruin the whole plant. Those 17 gentlemen—and maybe Congressman CELLER is an optimist when he thinks that only 17 are going to show up; maybe 23 are going to show up that day, so you will have more than one-third—their opinion has got to be counteracted; has got to be offset by something stronger.

What can that be? It can only be a violent wave of public opinion that will push the other Senators, the other 60 Senators, the other 67 or 68 Senators, some of whom never show up, to go into the Senate and vote. The trouble with the Senate always is that a lot of them never know what their mind is, and therefore haven't the energy—most of them are perhaps too old to have the energy—to make up their minds. But at any rate, if they have a mind to make up, they don't make it up. Those gentlemen don't even show up at the meeting, and that leaves the situation Congressman CELLER presents, that 17 individuals are enough to wreck the plan.

Now, we cannot change the figures, but we can compel all of the Senators to think that they've got a mind, and that their minds work like yours and mine. We've got to do this act of telepathy. Let's use our sixth sense, for mercy's sake. Even if we don't believe in it, let's develop it if that's the only way we can put over this thing. We've got to compel those Senators to go in there and vote for the plan.

But that is not all. That is going to take some organization, I tell you. We've got to, each of us, belong to some already organized group, whether it is the League of Women Voters, or some league of women's clubs, or any one of 20 organizations that I could name that are working for just this thing. Let's get into them; let's get behind them and let's add our signatures to theirs and let's (at the final hour when the Dumbarton Oaks plan, more complete than it is today, comes into the Senate)—let us have the whole American public opinion standing as if behind one man to push those gentlemen to say "Yes." That is our first job, and we've got to begin to organize today.

Secondly, we've another job to do. We've got to use our same influence of public opinion on our own Government today to see that we abandon our hands-off policy in Europe, where our keeping our hands off means allowing some one of our Allied powers to practice a policy that is not democratic and that is opposed to the Atlantic Charter.

You know there is nothing worse than standing by and doing nothing. If a man breaks into a house and commits burglary and you were just standing at the door to see that the policeman isn't coming, when that burglar is caught you will also go to court for trial because you were an accomplice, although you didn't touch the material that was stolen. If you stood at the door, you were an accomplice.

We are, in that way and to that extent, accomplices of any policy that is practiced that antagonizes the people of Europe, because we are in Europe in such a magnificent way—with a magnificent fighting army, bringing relief, bringing liberation—that it cannot be said that our voice cannot be heard in political matters. In Greece today there is one great cry rising everywhere, "Where is America?" They don't like the policy that is being practiced at the moment by our allies, the British. They are turning to us because they know that we have no ax to grind, no territorial aims, and no power politics to play. They want to have us as an active participant today in making real the things that we promised in the Atlantic Charter.

Remember that if our participation in Dumbarton Oaks is going really to mean that we are going to have peace, we must today prove to the world that, as an international power, we are willing to stand by every promise we make. And it is today, in carrying out the policy of liberation and democratization of Europe, that we prove to the world whether or not we are fit as international leaders in any organization such as Dumbarton Oaks. Remember, there may come a day in which we may carry out a policy so untrue to the Atlantic Charter, before Dumbarton Oaks is set up, that the world might think our contribution to Dumbarton Oaks not any good because we were not willing to stick up for the principles we expressed there.

The test of our value as a moral presence in any international organization is taking place today. So, as people, I think we have a double job to do—organize ourselves at home to see that we do participate in Dumbarton Oaks and break down the isolationism that would keep us out. And, above all, show ourselves to be so thoroughly awake to the moral issues involved in the whole question of what we mean by bringing people liberation and democracy that we will guide our own Government to instill in the people of the world faith in the word we pledge.

The two things cannot be separated. What we do today in Europe, among people who want democracy, is going to be the proof of what we will be able to do tomorrow, when we become one of the most important elements in an international organization. And I think it is a job that we must begin to think of and to do right now. Thank you. [Applause.]

Chairman BARLOW. Thank you, Miss Sergio. Ladies and gentlemen, I have to watch the time, and I know that one of the most brilliant speakers here is Dr. Arthur Upham Pope, and I am going to ask him to cut his time a little bit so we can have our question period. Because I think that is probably the most valuable part of the evening.

Dr. Pope is the director of the Iranian Institute; chairman of the Committee for National Morale, which published the two valuable books, German Psychological Warfare,

and Axis Grand Strategy, which were used, and still are used, by our military and Navy. His latest biography, of Maxim Litvinov, has been a best seller. Long an advocate of American-Soviet friendship, he is now an outstanding authority on Soviet Russia. He is now doing a work, at the request of our Government, for our men and women overseas, on international peace organization. Therefore, I call upon him with great pleasure. Dr. Arthur Upham Pope. [Applause.]

Dr. ARTHUR UPHAM POPE. You have heard the principal character of the project of Dumbarton Oaks. You have heard an impassioned and valid plea to implement that by moral force. Those are the two most important things.

One or two random comments I might make—that we shall implement Dumbarton Oaks best first by having a vivid and precise knowledge of what the alternatives are.

Peace has always been desirable. Now it is a necessity. The last war was bad enough; the next war will consume our children and what is left of civilization and initiate an era of a thousand years of barbarism. We've got to face that. The development of weapons since the last war is ferocious and terrifying. They are going to be able to use solar energy; various kinds of electronics. They have speeded up the splitting of the atom. The next cataclysm will sweep away the accumulated 6,000 years of suffering, travail, imagination, love, and hope. That is the inevitable outcome unless we take the Dumbarton Oaks plan and infuse it with moral fervor and make it work.

There are some practical things which you can do. First of all you will hear, as I heard from a good many people in the Army, "It's no use. History proves that man is incorrigible, and innately belligerent, and that human nature does not change, and that inevitably we will have war in the future, and so we had better not try to spend any time trying to prevent it. It is fatal."

But there is no blind fate that pushes man into mutual slaughter, and the archeologist, the psychologist and the social scientist are technicians. They know their stuff. They say that's only a superficial and clumsy generalization from a badly misunderstood history. Man has no innate necessity to battle. The archeologists show that in the earliest communities of men they had neither the weapons not the intent for mutual destruction. It came later, in competition, perhaps, for food. But there is nothing fundamental about it. The necessity is that man shall learn to live together or else perish.

Another thing, very practical and very urgent, is that we shall maintain trust and confidence in our allies, and that does not mean excuse them for any shenanigans behind the scenes.

It is a very obvious fact to us all that by sacrifice, by gallantry, by common danger, by tears and bloodshed in floods, that the Allied Nations are bound together by a great common interest and the people of these common nations that have suffered so much together have a great stake in the future. And unless we can see that that stake is made clear and vivid and compelling, then there will be malign forces that will be active in promoting dissension.

And so, we need knowledge—knowledge and faith and courage. And if we have knowledge we will not be subject to every little whim of propaganda. We will not be the credulous dupes of malign forces, and they are at work all the time.

A new campaign, a hate campaign, has been spreading in the country for 6 months against Russia and taking in thousands of serious and able people, normally sensible people, by means of artful calumny. Watch out for it. See how it is done and do not allow yourselves any longer to be, in this great emergency of mankind, thinking in terms of slogans and talking in terms of headlines.

Now, it is true that some of our allies have been doing things that we do not approve of. The pressure that Great Britain has brought to bear upon Italy, the veto of Count Sforza, is not in accordance with the nature of our common understanding, our common purposes, or our common obligations.

Russia has been accused of bringing unfair pressure on Iran. Are our records clear? Are we doing any sharp practice behind the scenes? Were there any of our oil men who tried to beat the gun in Iran and grab off concessions contrary to their general agreement? That is quite possible.

So before we believe the things that are said about our allies let us be informed and let us be sure, and then we can bring pressure to bear upon them when their conduct has not been in accordance with the necessities of the situation. And their conduct will not be in accordance with the necessities of the situation unless they can trust us. Unless they can be sure that these 17 capricious men in the Senate—or 23, or whatever it is—unless they can be sure that the public of America will roll them down and declare and make triumphant the deep conviction of this country—unless our allies know that—they are going to protect themselves.

Russia has a vast and dreadful problem of reconstruction with probably twenty million dead and devastation as big as the eastern third of America. How is she going to do it? She's got to be sure that there is going to be a genuine organization of peace before she will give up the ways of securing her own safety.

Great Britain faces a terrible problem. She's got to double her trade of 1938 or take her place among the derelict nations. She knows that she doesn't want to spend money on armaments; wasting her substance; frustrating all kinds of social progress, but if we are not going to play ball Britain had better know and had better mend her fences and look out.

The responsibility rests clearly and squarely upon the shoulders of America. No such responsibility and no such opportunity was ever given to any generation of any people at any time. And if you will organize; if you will set fire to our purposes so they will consume meanness and dishonesty and obstruction, then America will play her role, our allies will trust us, and we can build that international organization of security which will make possible for the first time for man to live the distinctly human life in all its unfathomable, infinite possibility for happiness and well-being. The issue is squarely up to the American people. [Applause.]

Chairman BARLOW. Thank you, Dr. Pope, for your eloquence and your brevity. [Laughter.]

Now, ladies and gentlemen, we only have, before we go on the air, a short 20 minutes for questions. I think the best way to conduct this would be if you will raise your hands, and as I see them, if you will then rise so I can hear you. It is a little easier if you rise. I see here that the questioner is to name himself. Does that mean he is to say "My name is Tom Jones?" Do you like that idea? All right, he is to name himself. Then he is to ask his question. Or perhaps better still, just rise, say his name, and say, "I would like to ask"—any one of our three solons. Name which one, and tell us what the question is. I will take it down, I trust; meanwhile, if I slip, you can correct me on that. But I will try to get the question straight and repeat. Do I see any hands?

Question. I would like to ask the question whether it isn't important here to discuss the definition of aggression, which was mentioned by all of the speakers. So I would like to dump the question in the laps of all of them.

Chairman BARLOW. It makes it easier if you will designate; or do you want to ask me that? Because I happen to have the answer to that. I have the official Geneva Protocol right in my hand, because I knew somebody would ask it. Now, this may not be the real answer to your question.

Question. May I say, in regard to that, I would like to hear your answer, and ask if the others want to volunteer after you.

Chairman BARLOW. According to the Geneva Protocol an aggressor is "the nation refusing to settle a dispute by any of the various means offered and threatens or breaks the peace."

Is there any better answer than that?

Congressman CELLER. That is an excellent answer, in my estimation. The definition of aggression is not in the Dumbarton Oaks proposal. I presume that later on there will be included in the proposal something that was in the Geneva Conference, as was just read to us. I think the definition read meets every situation as far as I can envisage it.

Dr. POPE. If the learned Congressman would forgive me, I would like to enter a dissent. I do not regard that as a proper definition. That definition was formed long before psychological warfare was fashioned as one of the most evil instruments of destruction. To take an actual case, take the case of Finland.

If a small country does not resort to arms, but makes entirely improper arrangements with an aggressor power like the Nazis; that makes all kinds of intrigues; that allows its land to be made as a springboard of all kinds of attacks upon a neighbor, but does not take arms; yet refuses to adjust the complaints of other countries—that nation is an aggressor.

It is laying the foundations of war and general public disaster. And the fact that it did not shoot does not excuse it. You may be arrested for assault and battery for merely making a gesture against another person, just as you can be held, as Miss Sergio says, as an accessory after the fact in murder for just standing by.

Now the technique of aggression today, that Hitler has defined and beautifully elaborated on in Mein Kampf, is to take small nations and to buy their precious sovereignty, and to develop in there by various well-known means of intrigue and of planning for trouble, to make of that nation a danger spot to all of its enemies. That nation is an aggressor. [Applause.]

Congressman CELLER. Dr. Pope, the Dumbarton Oaks proposal provides for a set-up of an international court of justice, and that court undoubtedly would define what aggression would be. And I am quite sure that the cases that you cite will come within the embrace of the word "aggression," as would be determined by an international court of justice.

Dr. POPE. I agree.

Miss SERGIO. I would like to add one point. I think that the Kilgore report in the United States Senate on the question of cartels was very definitely designed to prevent a certain type of the most dangerous aggression; that is, the creation of the cartel, which, though it does not consist of shooting or any other tangible aggressive measures, has certainly been the means whereby countries that even saw aggression coming no longer had the power nor the strength to prevent aggression because they had been made economically so weak by the cartel system.

Chairman BARLOW. Yes. I suppose the definition of that is that we might change the word agression to coercion, because as a matter of fact, as you know, economic coercion is one of the most pregnant and fertile of wars, and it is also the one that slips by most easily.

Congressman CELLER. Well, let's assume there wasn't an aggression within the confines of what you read. But there was something that might tend to disturb the peace

of the nations or the economic peace of the nations, and then the Security Council, or the assembly of the proposed charter would state that there should be economic sanctions imposed; and if the economic sanctions are imposed and the culprits still persist, that certainly would be aggression. And then there could be invoked the force that is contemplated by the proposal.

Chairman BARLOW. Any other question?

Question. Under chapter 8, section A, paragraph 7, it says that the foregoing "should not apply to situations or disputes arising out of matters which by international law are solely within the domestic jurisdiction of the State concerned."

Well, under that you couldn't intefere with any domestic problem, and even if fascism were arising within a state you would have no means of preventing it or doing anything, because as such it would be only within a state, and you can't interfere with domestic problems.

Congressman CELLER. I admit that. I agree with the young lady. I should want even to interfere on occasions in domestic affairs. For example, if the Falange in Argentina or the Fascist government in Spain so conducts itself whereby it sends emissaries abroad to proselyte other nations, as Argentina does, and Spain does through the Falange, I think that the security council or the assembly should take heed of that and endeavor to bring Argentina or Franco Spain back into line.

Under the present wording I do not think this international set-up would have that power to interfere domestically. I think that is a mistake, and I do hope that the wise minds that will continue to work on these proposals will see that error.

Chairman BARLOW. But, of course, you have got to be very careful that we are not interfering in local matters, because we wouldn't like it if any power came here and said, "obviously the future of the world depended upon Mr. So-and-so being elected in this country," or had done anything like that. That obviously cannot be done. But I am sure that some way will be found whereby, if the people of a country rise and, through their elected houses or their king or whatever they may have, protest that they are being encroached upon and coerced, they would be heard. I think it is implied in the Dumbarton Oaks plan now, that they can protest. They have a law court through which they can protest. They can go to a perfectly good law court. Incidentally, that is one of the things that you can point out to people that object to the armed power clause; protests go to the court first.

Congressman CELLER. Take immigration. We have tremendous masses of land still not settled with any appreciable degree of population. Take the land masses of Africa controlled by Belgium, France, and England. They have set up immigration bars to preclude the entrance into the confines of those lands. We have other nations which are overcrowded; Belgium, for example; Italy, for example. There should be some mechanism by which those nations which are thus selfishly inclined with reference to their huge land masses could be at least sharply advised and brought back into line. I do not thereby suggest undue interference into domestic affairs but on occasion advice might effectively be given.

Now, that may be interfering domestically; nevertheless the evil aimed at may have international implications.

Question. Mr. Chairman, I would like to ask Miss Sergio a question. I would like to know, with the contribution that the Negro people of the world are contributing toward the war and their sacrifices, what acknowledgement has the Dumbarton Oaks Conference given to their sacrifices, if any?

Miss SERGIO. I do not think that the Dumbarton Oaks plan takes into account anything quite as specific as the contribution of any one race or people. It isn't intended to. It is intended to provide a machinery whereby the nations that have the power to preserve the peace will preserve it for all of the nations that desire the peace.

I do not think that you would find, if you read this, which contains the whole of the text of the proposals, any reference to any one people or race; not even any reference to any one of the major countries involved. I think that where, perhaps, you begin to enter into that problem would be where there is discussion here of setting up councils that have to do with social or economic problems, and when those councils are set up they would have to then take care so that complete recognition were given to the contribution, say, of the Negro race, or of any other races to the common effort of the peace.

But I don't think the Dumbarton Oaks proposal was ever set up to deal with any such specific matter. I mean, it is too vast to come down to any such detail.

Chairman BARLOW. There is a proposal that would cover that. You see, in this, the Dumbarton Oaks plan, there are going to be a great many commissions, and one of them is right in front of me, which would cover it perfectly: the establishment of a commission to study the organization of peace has suggested a United Nations' Commission on human rights as one of the agencies of the international organization. It would be the duty of this organization to advance the basic freedoms of the individual. Which is the only time, I think, in the whole pamphlet or in the whole Dumbarton Oaks proposal that the word "individual" is used, because they are dealing with relations between countries and not between races, quite properly. It will be the duty of this organization to advance the basic freedoms of the individual, including his freedom of communication of religion throughout the world, and so forth from there on. That is definitely part of the plan.

Congressman CELLER. Of course we must be careful in the way the word "international" is used. It is "international economic, social, and other humanitarian problems" with respect to human rights and freedoms. But it is the international aspect.

Chairman BARLOW. Yes, international aspect. We cannot go into that further now, but that is the kind of thing you have to get your people to ask for and to implement it in the expanding of the United Nations' charter. Because, after all, we are only dealing with proposals now.

Mr. BROOKS. I want to address this question to Congressman CELLER, because I think he would be best able to answer it. I am sure he is used to pressure groups, being a national legislator. I want to know exactly and specifically: What can people do to implement the principle of Dumbarton Oaks or any similar plan like that? I imagine that the State Department sent the pamphlet out as a feeler, to see what the public reaction is.

What should they do? That is, should they join some existing organization? Should they write letters? Should they see their Congressman? What are the processes you would recommend?

Congressman CELLER. Your question involves really the answer. An enlightened public opinion is very essential; a militant public opinion is very essential. It is an old adage and a true one, that the wheel that squeaks the most gets the most grease. Importune your Representative.

Chairman BARLOW. Can I cut off that question now? Because we only have about 3 minutes more and I want to put that question on the air, and I shall address it to Congressman CELLER later on.

Any other question?

Question. May I ask, inasmuch as the Dumbarton Oaks proposals suggest forceful measures to keep the peace, why should they invite the nations to join? Why don't they force all the nations to join in the beginning and then conduct democratically from then on?

Chairman BARLOW. That would be like forcing people to join a police force, which has never been done. I really believe that is a perfectly good answer.

Question. Dr. Pope, please. What do you think is the attitude of the peoples of the participating nations toward these Dumbarton Oaks Proposals?

Dr. POPE. I don't know as there has been a very clear expression of popular will. So far as I have been able to follow reports, the Dumbarton Oaks Conference has been received in general with warm approval everywhere. And the fact that, at this first and most difficult conference, there was complete agreement by the representatives of the great powers on all except one or two small points was, it seems to me, proof that the plan is a practical one; at least the beginning of a practical one, and so accepted.

Chairman BARLOW. Now I am going to ask Miss Ragonetti to come up here, if she will be so kind. She is with the Commission to Study the Organization of Peace, of which Mr. Clark Eichelberg is the Chairman. I want her to say, if she wants to, a word or two; if not, I will ask her to come in and join the round table.

Miss RAGONETTI. I would like to say a word or two.

There is lots that individuals can do by joining organizations, both on the educational level and on the political level. You can help to understand; you can help to serve as speakers, as discussion leaders, and when the time comes, you can work politically for it. And I do hope that you will join with organizations. [Applause.]

Chairman BARLOW. Now I am going to ask Professor Handler also to join us, but not to speak at the present time. He was special counsel for the Foreign Economic Organization and an associate public member of the War Labor Board, and is professor of Columbia University Law School—and there he is. [Applause.]

Question. Mr. Chairman, I would like to ask Miss Sergio a question, if I may. This is to Miss Sergio. If I understood correctly, you said—or I inferred from what you said—that when fascism fell, with our aid, in Italy, that democratic manifestations were apparent, and that the Allies had promised to promote democracy when they entered Italy, and that they haven't been fulfilling their promise.

If that is so, I would like you to clarify it just a little bit, if you will.

Miss SERGIO. Well, yes; that is precisely what I said, because that is precisely what has happened. I think we have a very clear instance of our failure to fulfill that promise. In the case of the election of the mayor of Naples, we asked the people of Naples to elect their mayor, because we know that that is the democratic process, and when they came and submitted the nominees for that job we turned every one of them down and didn't permit them to elect them. We turned them down for no reason except that, politically, their views were slightly too much to the left.

Now, it would have been much better then to say that we want democracies that are entirely reactionary, if such things can exist, because every one of the people that we have supported have been people with reactionary social and economic views in Italy. We have supported men like Badoglio and Prince Humbert, who is, of course, not to the left, in spite of Mr. Matthews. [Laughter.] Prince Humbert can waver when he is in the middle, but he can never fall to the left, because there is nothing that can possibly be strong enough to attract him there.

I happen to know him very well, so I know what I am saying.

When we tell people they must apply the democratic process of election, then we must take the risk that they will elect the people they want, and we have then no right to prevent that choice.

That is where I say we have not fulfilled our promise. And there are many others such as this. [Applause.]

Chairman BARLOW. Now I am going to ask Dr. Sherman to take the floor until we go on the air.

Dr. SHERMAN. You have all noticed tonight—I am going to make it very brief, because we haven't much time that we are doing the thing we set out to do; we are trying to create an enlightened public opinon through the Forum for Democracy; and we are trying, secondly, to move public opinion to act in accordance with this enlightenment.

The speakers here this evening have pointed to the necessity of everybody here—everybody in the country who will listen to us tonight over the air—participating, actually participating in the events that surround us, in the vital things that affect us in our day-to-day living. And we hope that out of this meeting such design for action will actually eventuate.

Now, the next meeting of the Forum is planned for January 4 in this hall. We are going to have—we—hope Senator KILGORE, Henry Kaiser, and perhaps Mayor LaGuardia. They have all been invited to appear on this program. The subject will be Reconversion Problems Towards Full Employment.

On January 25, also a Thursday, the subject will be Antidiscriminatory Legislation, present legislation, and the kind of legislation that we need to effect equal opportunity for all Americans. On that program we are inviting Dr. Channing Tobias, Malcolm Ross, the Chairman of the F. E. P. C., Lillian Smith and Howard Fast, authors.

The meeting in February will be devoted to the role of labor unions and management in a changing world. We hope at that meeting to have present with us Senator PEPPER and J. Raymond Walsh, the educational director of the C. I. O.

But you see, it is totally up to you to support these programs. We depend upon you, as subscribers to the forum, as participants, perhaps tonight for the first time, and for subsequent meetings, to help us put these programs over. As you leave the hall tonight there will be two nice young ladies on the outside who will try to sell you the idea of becoming a part of our forum—those of you who are not already. The subscription price of $4 is all that you will need to pay, because this meeting already is deducted from the original price of $5, and will include the next five meetings which will be held.

So we urge you all to join with us; we urge you all to be a part of us. And those of you who would like to have transcripts of the previous meeting, and of this meeting—they are all being taken down word for word—and if you feel we should publish these transcripts (they are expensive, you know), please let us know by sending in a little notation and your comments on the meetings. We would like to have your comments anyway. Send them to our central office at 15 East Fortieth Street, as printed on the program.

You will notice that we try to give you as much information as possible about the particular subject that we are covering, and that is why we handed to you, as you walked in tonight, this Dumbarton Oaks document on international organization, so that you could be prepared, at least, on the basic elements.

Any other suggestions that you have, please send them in to us. Primarily, the first thing to do is to join with us; support this organization. It is an organization that will be unique in American life. We expect to put this on a national hook-up. We are laying plans now with one of our members on the advisory council, Norman Corwin. It is solely up to you, so let us know whether you want it. And that will be determined by how many suggestions and subscriptions we get from you tonight and in the next couple of weeks. Thank you, very much. [Applause.]

[On the air.]

Chairman BARLOW. Good evening. Before we begin the round-table discussion it might be well to tell you what we have been doing here. We have had three very brilliant speeches by Dr. Pope, Congressman Celler, Miss Lisa Sergio, and then we had a question period. The questions about how to implement Dumbarton Oaks, the proposals, have been extremely interesting. The question of what is aggression was brought up. The question of the contribution of Negroes to the war was asked. We decided that was to specific, too individual, to be answered as yet by any great international council. We had the question, What can people do to help establish these proposals as something concrete, as something that will save peace in the world? And we have heard about what you can all do, what we all must do, in order to see that we get a just and lasting peace. We have heard also a question on what is the attitude today of other nations across the waters to Dumbarton Oaks, and Professor Pope allowed as how he felt that they were very much in favor of it. And we have heard about fascism and moral force from Miss Lisa Sergio.

Now, to begin this discussion here, which will be quite informal, I would like to ask a question of Congressman CELLER, and that is, if he will speak to us briefly about the question of mandates?

Congressman CELLER. I believe that is a very, very important and vital question. Under the mandated system, or the mandate system of the League of Nations, France and England and Japan were entrusted with certain territories. For example, England was given Palestine, Japan was given the Marianas and the Gilbert Islands and other Pacific islands. France was given Lebanon and Syria. But unfortunately those nations used those possessions as though they were their own. They did not exercise stewardship or trusteeship over those lands. They, in common parlance, believed they had those territories in their vest pocket and could do with the lands and their peoples whatever they saw fit to do with them, and for their own selfish purposes.

Now, I am firmly of the conviction that there must be a decided change. Possibly there might be set up a condominium of nations—say three nations—to act as trustees of Palestine, of the mandated islands in the Pacific, of the former German territories in Africa, so that one nation could not indulge in a sort of imperialism against the inhabitants of the country mandated to the offending nation. Either or both of the other trustee nations would forbid.

In that way, I think, with, say, three nations operating as trustees, we could have some elements of justice and equity meted out to the peoples of those mandated countries.

Chairman BARLOW. That would, I take it, go for air bases and everything else that would then become wardships under the United Nations Council.

Congressman CELLER. That observation is very sound. I agree with you.

Chairman BARLOW. Now, I want very much to know, for my own benefit, about the great powers and the satellite states, and I believe this comes under the term of "regionalism." It has been one of the great stumbling blocks in the thoughts of a great many people, and a great howl has gone up about it. I cannot find it objectionably stated in reading the document, and I have seen interpretations of it which do not seem to me to tally with the document. I would like to ask Professor Handler if he will tell me.

Dr. HANDLER. I find nothing objectionable in the documents about regionalism. The documents proceed upon the assumption that very frequently quarrels that occur in localities can be best handled by those in the localities that are familiar with the causes of the dispute, rather than by those situated at a great distance from the scene of potential conflict.

The doctrine of regionalism is entirely sound. It may be perverted into a doctrine or theory of local power politics, where the world is divided into power zones. And I am afraid that those who are fearful of post-war power politics are reading a great deal into the regionalism provisions of the document which actually are not there.

Chairman BARLOW. Thank you, sir. I seem to be the only person asking questions here, and I had hoped that the five astute brains——

Congressman CELLER. Can we vouchsafe some information on that? Of course, the success of the Dumbarton Oaks proposal depends upon the bona fides of the nations involved. If they have good intentions, why, everything will work out well. We have, for example, our Monroe Doctrine, which provides for a sort of bloc of nations in North and South America. Russia rebelled against the so-called cordon sanitaire, which was her negative Monroe Doctrine. She wants to be certain that there will be friendly nations in the Baltic and in the Balkans and in Central Europe.

England has her Commonwealths, her British Empire, which is a sort of a bloc also. Now, if England, for example, wants to extend her bloc so as to include the Low Countries and other nations, and balance her power against the Russian power, which will include the Baltic and the Balkan states, such manipulation and maneuvers would breed jealousies and trouble and economic and political disturbances and aggressions, then you will have the Dumbarton Oaks plan scuttled.

I repeat that it all depends upon the good intentions of the nations involved, particularly the United States, Russia, and Great Britain. Of course, we could, in the event of imperialism on the part of Russia or Great Britain, exercise our great moral influence, I think we would. Perhaps we wouldn't have to do so. If those nations mentioned mean to do the right thing, then we have nothing to worry about, nothing to fear, and it would be well to have minor difficulties and differences within certain spheres, regions, and territories with their orbits settled by either Great Britain or Russia or the United States.

Chairman BARLOW. While we are on that I think it would be pertinent to ask Dr. Pope if he feels that Russia intends to dominate eastern Europe.

Dr. POPE. It all depends on what you mean by dominate. I think it is very clear that Russia has no intention, nor is it to her interest, to exercise over the states of eastern Europe anything like a military or political hegemony. They are not trying to bolshevize or communize Europe, as the Russian haters here are trying to make us believe. The reason being, for one thing, that it is not for Russian interest. If the states like Poland, Rumania, Bulgaria, Jugoslavia, and the others remain free, independent, and democratic, as Russia has repeatedly declared it is her intention and wish they should be, then Russia is protected by other nations on her borders against the resurgent and vengeful Germany, which she deeply fears. She is afraid we are toying with a soft peace; she hears of the forces in England that are really puttering along with this problem, and she wants assurance.

Now, the best assurance is that, between her and Germany, there are some real states, but she will not tolerate on her borders (what would be, in a sense, a kind of aggression), the cabinets or the governments of those powers that do not represent the people; gov-

ernments that are themselves subject to Fascist and Nazi influence; that are manned by those who have a long record of hatred and intrigue against Russia.

She would not allow it any more than we would allow the same thing to happen in Cuba, nor would we allow it to happen in the vicinity of the Panama Canal. No nation can tolerate dynamite and disease lying at her doorstep, and Russia will not. But she wants strong, free, independent, and genuinely democratic countries there. And if they will set them up, they will have Russian protection. If they will not, if they intend to go on with the old way of bending their sovereignty to the first criminal nation that will bribe or coerce it, then Russia will have to protect herself.

Once more it depends upon America. If America clearly and forcibly and unanimously, and with a deep passion of meaning, affirms its membership in an international security organization, then Russia will not be hard-pressed to defend herself by such means. [Applause.]

Chairman BARLOW. Since we are on the regional, or rather, from the mandate to the regional thing, I would like to ask Professor Handler a question which touches us very nearly, and that is the powers of the delegates under the Dumbarton Oaks proposals. When it comes to the regional use of force, or at least the use of interference in regional matters, we might interfere as we have at the present moment in spots in Europe. Later on, when this thing is implemented and working, the delegates may advise us, perhaps too nearly shall we say, in South America——

Dr. HANDLER. During the last campaign the President took the position that the delegate representing the United States on the United Nations Council should have power to act, without coming back to Congress at each turn to obtain specific congressional approval for the actions which the United Nations Council decides must be taken to quell aggression. There isn't any question that under the Constitution there are various methods by which our delegate can be given the power to act in concert with the other nations to preserve the peace. That would not constitute a declaration of war and it would be simple police action to prevent war. If that action proved unsuccessful and war had to be declared, Congress then would have the opportunity under the Constitution to decide whether or not to declare war.

Chairman BARLOW. In that case, will you go further and tell us the answer to that double question about the President's power to declare war, and in what manner our delegate can assume it?

Dr. HANDLER. The President has no power to declare war. That is a responsibility imposed upon the Congress by our Constitution, but, as Congressman CELLER already pointed out in his prepared address before, there are innumerable instances in our history when force has been used by the Executive without congressional consent and approval or without any declaration of war. It is a very difficult thing to draw the line between the force that the Constitution permits the President to use and the force which constitutes war. The point, however, is that not all use of national force is the equivalent of war and Congress by proper action, whether it would take the form of treaty or statute or resolution, can delegate the powers which it has under the Constitution to the President, and through the President to the American representative on the United Nations Council.

Congressman CELLER. I want to say before there can be any settlement of a dispute in a region by one of the members of, say, the Security Council, knowledge thereof and authorization must be had from the Security Council as a whole and that Council must act by unanimous consent. With reference to the granting of authority to use force under direction of, say, the representative of the United States Government, I would say that it would be utterly ridiculous to handicap our representative to require congressional debate before any action would be taken. You would have a congressional field day, a sort of Donnybrook Fair for the amusement of the partisans, and we compromise the Council immediately. I think the whole business would die a-borning if we would require congressional consent before any action could be taken in the way of sanctions involving the use of our air, land, and sea force. The British Parliament wouldn't have to be consulted; the Soviet wouldn't have to be consulted, and the Kuomintang wouldn't have to be consulted; but our own Congress would have to be consulted. We then would have a very anomalous situation.

Chairman BARLOW. I am glad it is you, Congressman CELLER, that made those comments upon our Congress and not we.

There are some questions that come up. I would like to go back for a moment to what Congressman CELLER said a little while ago when he used the words "good intentions." We all agree that that is the basis of any settlement we can possibly have for any duration. The moral force that must be behind any act, whether it is the armed force or the judicial end of the Dumbarton Oaks plan—the moral force is supreme. I want to ask Miss Sergio to say a word about it.

Miss SERGIO. I think you could translate your words "good intentions" into "real sincerity." I think that it is tremendously important—and this occurred to me when Dr. Pope was speaking a moment ago about Russia and her need for friendly powers on her borders—that we should really know whether we have the same scale of moral values. That is the whole point. I think that even in the League of Nations there were some elements that could have made for peace and organization had it not been for the fact that some member nations thought of their own interests before anybody else's. They didn't live by a scale of values that was common to all of us.

"Good intentions" is a very good phrase but what I think we need most is the sincerity—the absolute conviction—that everybody who pledges himself to keep certain promises within the Dumbarton Oaks plan has the same kind of sincerity about them. I think that is why the Dumbarton Oaks plan, if it has one failure, one lack is that it doesn't say enough about moral principles. It only speaks about peace-loving nations. If you listen to the Germans, they are a peace-loving nation; we pushed them into war, they never wanted such a thing. They told us that a thousand times. The question of calling people peace-loving nations as being the only ones that can enter that assembly, that committee, is ridiculous. I think that we ought to demand that in the Dumbarton Oaks plan—whatever name it will have later—there is something more specific said about what we call the democratic system under which the world is going to live. Because, unless we are all agreed as to human rights, as to economic rights, and so forth, as being the bases of a democratic world, when the disputes come we will find ourselves at loggerheads even on the system for solving them.

We need more than good intentions. We need sincerity and a moral basis that is accepted equally by all of us.

Chairman BARLOW. I quite agree with you and I think there is an analogy there. Dumbarton Oaks is a mechanism at the moment. Quite frequently we realize that other nations admire us. If you go to South America, you will find that they are mostly impressed with our machines. One of them once asked me about one of our machines and said, "Wasn't that the greatest thing ever done?" And I said, "No, I didn't think it was. It isn't anybody that could learn to drive that machine. The important thing is, if you drive that great tractor, it only has value to civilization if you have the Gettysburg Address in one pocket and the Declaration of Independence in the other." I really think that is true. Look what has happened to the world, to Japan and Germany, because they drove our tractors and they didn't have the documents that go with them and the minds that go with them, and they have used them for death instead of fertility and life. And I think that is exactly the same thing with the Dumbarton Oaks plan—it is a machine we can breathe a soul into, and the soul that goes into it should have the Declaration of Independence, the Gettysburg Address, and any other address you want, and I'd throw the Bible in for good measure. [Applause.]

Miss SERGIO. I would like, Mr. Chairman, to ask, don't you think tonight we have failed to discuss one of the most important things in this whole plan? That is the fact that, when they met at Dumbarton Oaks, they were not able to decide what procedure they were going to adopt to vote in the Security Council, to define whether or not, in a certain case, the time had come to take measures to prevent aggression. You know the famous question—whether the vote should be unanimous or not. I think probably the audience would be interested in hearing the opinion of such gentlemen as Congressman CELLER or what he thinks will be the final result of that undecided issue.

Congressman CELLER. From a practical standpoint, I don't see how we could compel a unanimous vote in the Security Council; compel Russia and China and Great Britain and the United States, for example—the four larger powers, and subsequently France—to act exactly alike. If Russia does not want it, I don't see how—because of the greatness of Russia—the other nations could coerce her or force her to bend her knee by the use of economic or military sanctions. A global war would result. And the same would hold for the United States. So, for practical purposes, I think it should not be essential to have a unanimous vote of all the members of the Security Council. To say that a majority vote or a two-thirds vote should bind all members of the Security Council would get us nowhere, except into trouble. The Council, say, by a vote of 4 to 1, could not successfully coerce the United States or Great Britain. I for one don't feel there need be a unanimous vote. From a democratic standpoint, possibly, the majority vote should generally prevail in the assembly. With the exception of the two-thirds-vote requirement, in the case of matters impinging upon international security, I believe it would be better in the assembly to have the majority vote, but we may have no choice as to the controlling vote in the Council. I don't think it would necessarily militate against the success of the entire project to comply with Russia's insistence that no summary action be taken against her.

Chairman BARLOW. Mr. CELLER, if a judge is impeached, doesn't he have to leave the bench during the proceedings?

Congressman CELLER. That is true, but the cases are not comparable. I say I would prefer that the offending member refrain from voting, but I don't think it would cause the scuttling of the whole plan, if action against any member of the security council is precluded without its consent. Theoretically, of course, that is not a democratic procedure, but we must be practical. We are facing conditions not theories. If Russia will not subscribe to the charter unless it contains the provision that definite action cannot be taken against her without her consent, what choice have we? That may be part of the price that must be paid for a charter of nations. Better that than nothing at all.

Dr. POPE. As I understand the arrangement, it is not that the demand was that one power should have a veto over the decision of the security council but that all the members of the security council should be allowed to be

present and vote on a case that concerned them. And for that there is a good reason—not a very agreeable one—but I think it is useful for us to look squarely at the facts. The only power that was a member of the League of Nations that was dramatically and swiftly punished was Russia. She was expelled from the League of Nations in a matter of almost minutes of discussion without any hearing or examination of her case when the Finnish-Russian War broke out. The western nations took no account of the fact that Finland had planned with the Nazis to attack Russia; were ignorant of the fact that Finland had made great air bases and great runway strips for big bombers to be used; were unaware of the fact that there were secret agreements between the Fascist minority and the Finnish Government or National Party; or that Hitler's portrait was to be found on every ship; or that officers of the army were entirely pro-Hitler or pro-Nazi; or that there had been established in Finland a veritable Gestapo, a Nazi machine, and all the paraphernalia that went with it.

We didn't care. We weren't interested. We didn't find the facts. Gamelin reported in the spring of 1940 that he had made the plans and was ready to attack the Baku oil fields and completely obliterate them, but the operation would take until July 1. On the 5th of February 1940 Daladier said in the Chamber of Deputies that the troops were ready to march and the English troops were also ready to march at the same time. In short, the allies were ready to make war on Russia as late as the spring of 1940.

Now, that means that Russia, looking around and remembering some of the very savage things that Winston Churchill said the same year, found the western allies ready to take judgment; ready to take severe and drastic action without a proper hearing; without knowledge, and without sympathy, and Russia wants to know: Have the western nations really reformed in their attitude? Are they willing to treat Russia as a coequal member? And will they take as much care to see that Russia gets justice, and that Spain and Italy are let off easily from the penalties they so richly deserve? That is back of this question and we've got to find an answer to it. [Applause.]

Dr. HANDLER. As the Moderator pointed out before, dealing with the matter of mechanics rather than with the spirit of the Dumbarton Oaks plan, if the five great powers begin to fight among themselves the Dumbarton Oaks plan becomes a scrap of paper, whatever its provisions may be.

Chairman BARLOW. Certainly we've got to hold together under any circumstances at the moment. My feeling is that, the sooner the Dumbarton Oaks plan gets implemented the better, because I feel myself it should be co-equal with the peace, not a child of the peace, a parent preparing the peace because it is simply our earnest, our good will to run the world as carefully in peacetime as we have been running it together faithfully during war. We have United Nations for war; it must not break up for peace. Because peace can only happen if there is unanimity and cooperation. I think cooperation is the word, the best word, to use, cooperation between nations.

Now, I am going to ask Miss Ragonetti to give us one or two words. She is with the Commission to Study the Organization of Peace, of which Clark Eichelberger is the chairman. I want her to tell us what we can do about it.

Miss RAGONETTI. The Commission is one of the many groups that endorsed the Dumbarton Oaks plan as a framework in which both great and small powers can work together for the maintenance of peace, to promote economic and social welfare and also justice.

The question most people ask is, What can I do to help promote the acceptance of the Dumbarton Oaks proposals? We feel that the first thing is to really understand what the proposals provide for. Read the document. Know what the purposes are. Understand the machinery that it sets up. Once you understand that, help your friends understand it. There is a tremendous amount of educational work that must be done throughout the country. If we win the peace this time, it will be done because of the efforts on Main Street; people everywhere helping to promote an understanding of the agreement. Later, when the question comes before America to accept or reject the charter, there again the American people can fulfill a big job. I urge all of you to join with organizations both in the field of education, such as ours, and in the field of political activity. If Dumbarton Oaks is translated from a charter on paper to a working mechanism, it will be done because the people want it to be done. You can have a perfect constitution, but it won't work unless it has understanding and the will of peoples. [Applause.]

Chairman BARLOW. Thank you.

Now, in summing up the round-table discussion held tonight by the Forum for Democracy in the Times Hall, New York City, a discussion of the Dumbarton Oaks proposals for a United Nations charter, namely, a cooperative federation to maintain peace—we have all agreed that some such council must exist, and the sooner the better; and that the Dumbarton Oaks proposals are an excellent springboard.

But you, each and every one of us, must keep track of it, must urge it, must fight for it, to put the moral force into it that will be the real excuse for its living and the means of its success. For in Dumbarton Oaks we deal with the future, and the future does not belong to us with our temporary prejudices and private aberrations. The future belongs to our children. What they do with it depends on what we have prepared for them, done for them. They cannot reap better than we sow. They will support democracy if democracy has brought them peace. They will support and prolong our liberal theories in economics, religion, ethics, and government only if those theories have brought them comfort of spirit, security of opportunity, and the possibility of growth and vigorous living. We owe them at least the foundations of peace.

Thank you and good night.

Farms for Returning Veterans

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. LUDLOW. Mr. Speaker, that the Farm Security Administration is alert in making provisions to enable returning veterans to obtain farms on reasonable and satisfactory terms is indicated by the following article in the Indianapolis Star, written by Maurice Early, a distinguished staff writer:

There will be approximately 25,000 Indiana veterans of this war who will want farms—something that is guaranteed by the G. I. law to those who are qualified to make a living in agriculture. But the big question is where will they find the farms at reasonable prices? Government agencies do not want to see the veteran doomed to ultimate failure on the land by purchasing a farm at present inflated land values.

In an effort to crack this nut all the regional heads of the Farm Security Administration for the eastern part of the United States met in Indianapolis yesterday with Frank Hancock, National Administrator of the F. S. A.

This special meeting is part of a national survey ordered by President Roosevelt to make certain that machinery will be in motion to care for the returning veterans who want to farm. Of course, many veterans who are experienced farmers with some capital will not need to seek farm ownership through the F. S. A., the organization designed primarily to aid those who have little or no capital and cannot obtain credit from other lending institutions.

Mr. Hancock explains that F. S. A., in its two programs—one to lend money to purchase farms and the other to make short-term loans to stock a farm with machinery, seed, and livestock—is more than a lending institution. Borrowers are given guidance by county supervisors in order to develop crop plans and management which will give reasonable assurance of success.

As far as F. S. A. is concerned, all the machinery is set up to aid the returning veteran and the war-plant workers who want to return to the land, Mr. Hancock said. But there are two big obstacles. First is the need of appropriations by Congress to keep the program in operation. The other is finding farms at reasonable prices.

There will be some Government land in Indiana to sell to the veterans. But it will be only a drop in the bucket. This is the farm land purchased in excess of needs at such vast munition plants as the ones at Kingsbury, Charlestown, and Terre Haute. But Mr. Hancock gives assurance the first to be served by F. S. A. will be the returning G. I.'s.

Dr. Ira N. Gabrielson's Contribution to the Conservation of Fish and Wildlife Resources

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. ANGELL. Mr. Speaker, Dr. Ira N. Gabrielson has made an outstanding contribution to the fish and wildlife resources of our Nation. He is a resident of my district and I have had occasion to know his effective work in this important field for many years before he became the Director of the United States Fish and Wildlife Service. Richard L. Neuberger has recently written an interesting and instructive article on Dr. Gabrielson's life and work which appeared in the magazine section of many of our newspapers. I include the article as a part of these remarks:

MODERN NOAH

(By Richard L. Neuberger)

Chubby-faced Ira N. Gabrielson is a twentieth-century Noah. As Director of the United States Fish and Wildlife Service, he watches protectively over America's wild creatures. Animals are his life.

Where animals are concerned this No. 1 guardian of the Nation's wildlife has a sixth sense.

Once I was walking with Gabe along a woodland path in Oregon when he stopped

and motioned for silence. "I heard a winter wren chirp," Gabe whispered.

He tiptoed up the trail, peering carefully through the trees. Then he pointed to a birch 2 or 3 rods away, where a little bird sat. "I thought so," said Gabe as he swung along the path once more.

Gabe lives, breathes, and talks wildlife. He manages 275 wildlife refuges, with a total area larger than the State of West Virginia. Gabe knows that such refuges, affording animals protected places in which to breed, increase our big-game population. So he takes a real interest in them and roams this vast domain with the enthusiasm of a small boy looking after his house pets. Canadian mounties know him from his trips to the Arctic, and Mexicans game wardens recognize his fat form and short legs from pilgrimages to winter feeding grounds of birds.

They all call him "Gabe," although he holds a doctor of science degree from Oregon State College and heads one of the largest permanent agencies of the Interior Department. When hunters in Missouri shoot down a bird they can't identify they say, "Let's send the skin to Gabe. He'll know." When anglers on a California river pull out a rare trout they have never seen before one of them is certain to suggest, "Better send this to Gabe. He'll know."

And sure enough Gabe always does know.

YOU CAN'T STUMP HIM

No question on wildlife ever stumps Gabe. On a field trip to Wyoming with a group of stockmen he looked at a paw mark in the snow. "Timber wolf," one grizzled rancher ventured. The others agreed. Gabe shook his head. "Coyote," he insisted.

"Betcha," said the rancher.

"Betcha," said Gabe.

Dogs tracked the maker of the paw mark to earth. "Gabe," said the grizzled rancher apologetically, "I oughta known better than to argue with you."

An Idaho trapper once remarked to me, "That fellow Gabe may be built like Santa Claus, but he's got more information about wild critters than anyone I ever did meet up with."

The bulk of this information has been collected on the spot. Gabe is no library biologist. He gets too much pleasure and satisfaction from watching animals, fish and birds in the flesh. A fawn licking salt off his hand, a friendly black bear nudging his pockets for sugar—these are experiences which stir and excite Gabe.

Nearly 10 years ago Gabe became custodian of America's wild creatures. The men of the Fish and Wildlife Service discovered immediately that the new boss was "some sort of cross between Noah and Daniel Boone."

On Gabe's first voyage to Alaska, field men planned to "stretch the chief's short legs a bit." A hiking trip was arranged into the mountains back of Juneau. As they wound up the steep ramparts of the Coast Range the Alaskans waited for their fat superior to tire.

The going got tougher. Finally one of the Alaskans dropped beside the trail and lay gasping on the ground. "What's the trouble?" Gabe inquired. "Sick?" The played-out Alaskan shook his head. "Well, I'll go on ahead then," said Gabe. "I don't want to waste any time."

The Director of the Fish and Wildlife Service moved on up the mountainside. "He must have an electric motor in him," one Alaskan said. "I didn't think anyone, fat or thin, could climb this range like that." When at last the exhausted Alaskans struggled up to the first night's camp they found a roaring fire built, spruce boughs laid out for beds, and their chief talking enthusiastically about a "dickie bird" he had been photographing on a near-by crag.

"Gabe is so engrossed in wildlife that he never knows he is tired," says Charley Jackson, his assistant. "When we visited the great seal rookeries of the Pribilof Islands in the Bering Sea, Gabe didn't close his eyes for nearly 60 hours. He roved around the island with a lantern studying the habits of the seals. He sat up another night writing notes on birds which live among the seal herds."

Ira Gabrielson's interest in wildlife goes back to his boyhood in Sioux Rapids, Iowa. His mother had a garden full of yellow currants and jacks-in-the-box, and Ira took pictures of these with a box camera that had been a present on his tenth birthday. At Morningside College he majored in biology and read about the slaughter carried on by white men in a frantic search for furs and hides. He decided that his career would be spent trying to save the wildlife which had survived.

In 1912, when he was 23, Gabe married his college sweetheart, Clara Speer, and then went to work for the old United States Biological Survey. He was sent to Oregon, where much of the country's big game was making its final stand. In Oregon he became a woodsman as well as a biologist.

He followed the Columbia to its distant headwaters and clipped the fins of fingerling salmon, so he could tell whether Chinooks actually returned to their birthplace to spawn. He banded ducks and shot such animal marauders as coyotes, lynxes, and cougars. And he begged the public to stop stream pollution, wasteful lumbering, soil erosion, forest fires, and reckless hunting and fishing.

"Otherwise," he warned, "we are going to discover this great land of ours bare of the wildlife responsible for much of our character, traditions, and wealth."

BIRD SKINS EVERYWHERE

Gabe and his family now reside in a suburb of Washington, D. C., and one look inside the door will indicate Gabe's preoccupation. Bird skins hang everywhere, part of Gabe's collection of 5,000, all treated by himself. Etchings of birds and fish cover the walls. Above the davenport is a painting of antlered elk in the Jackson Hole country of Wyoming. Books on wildlife weigh down the tables.

The Gabrielsons have four daughters. "Yes, we're all wildlife fans, too," comments Mrs. Gabrielson with a smile. "Who wouldn't be, around Gabe? Right around Washington he shows us birds and plants and animals we never had known before."

Gabe conducts a census each year of all the wild creatures in the United States. He likes to get out in the field, gathering the data, talking to farmers, trappers, ranchers, and forest rangers. His gray eyes shine when he finds that some particular species has survived hunters' guns or polluted water to register a gain.

Gabe is particularly proud that there now are 4,487 buffalo in the United States. "This animal is deep in our consciousness," he points out. "It is on our nickel coins. It is on the great seal of the Department of the Interior. It is on the official crest of Canada's famous force of Mounted Police. Once 16,000,000 buffalo mantled the Great Plains. Then a fearful slaughter reduced them to only 800. I am glad we have built them back so that a few still graze in Montana, Wyoming, South Dakota, and Oklahoma."

People are always surprised, says Gabe, at the results of the annual animal inventory. Everyone expects the wide open spaces of the far West to lead in deer, but actually the industrial State of Pennsylvania, where 775,000 white-tails forage, tops them all. Arkansas, often known as the "Bear State," can boast a mere 30 black bears while California has 17,020 and the State of Washington 12,840.

In his office in the Interior Department at Washington, Gabe mulls over the census figures. When certain statistics alarm him, he sends for his assistants. Often he packs his boots and old plaid mackinaw and goes out to Oregon or Arizona or Nebraska to see for himself. "Gabe knows how to handle animals," comments Charley Jackson. "When he bands a mallard or pintail, that old duck sits in his hand as cozylike as if he were in his favorite marsh. And he's the best fisherman between Maine and Puget Sound."

Gabe is a zealous defender of America's remaining big game. Once Gabe was confronted in his office by a delegation of ranchers who wanted to wipe out a herd of elk which they claimed were eating their crops. "Now, now, gentlemen, take it easy," cautioned Gabe. "After all, you know that the little old molly cottontail does more crop damage than all other species of game combined."

GABE STALKS A BIRD

The enemies of the elk could think of nothing to say; you can't get very angry at a little cottontail rabbit.

When Gabe thinks he spies a new species of beast or bird he forgets everything else. In Alaska last summer Gabe was patiently stalking a white-splotched "dickie bird." The bird had stopped on a little hummock of ground. Gabe crawled forward on his hands and knees, taking care not to rustle the leaves and twigs. Suddenly the "dickie bird" gave a frightened chirp, flew straight into the air, and Gabe found himself staring down the long snout of a gigantic Alaskan brown bear.

The bear had been stalking the same bird from the opposite side of the hummock.

For a split second the rotund Director of the United States Fish and Wildlife Service and the huge Alaskan carnivore eyed each other surprisedly. Then both wheeled and ran pell-mell in opopsite directions, until even the tireless Gabe was out of breath.

"Golly, Gabe," said Charley Jackson, who had seen it all. "You're sure lucky that big brown bear was as frightened as you were."

"Darn that bear," panted Gabe. "He scared away my 'dickie bird.' I think it was a rare species, too."

Henry Clay and Thomas Jefferson Advocated and Built National Highways

---

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a certain article taken from a Boston newspaper pertaining to the Federal Government participating in the building of national roads and national highways.

On several occasions in the last 8 years, I have called attention to the fact that as far back as 1806, Thomas Jefferson advocated the building of public highways.

In fact, it was in 1806 that at his request Congress appropriated the first $30,000 to start work on the Old National Pike or the Old National Highway, now Route No. 40, running from Baltimore

west through Hagerstown, Cumberland, Uniontown, Columbus, and St. Louis.

The article I here include emphasizes the fact that Henry Clay, after riding over this road in a stagecoach, said:

This is more like a city avenue than a mountain road. I remember when I was returning home over this road only a few years ago it took almost a whole day to travel a distance of 9 miles from Uniontown to the top of the Laurel Hill. Now, you see, we have done 70 miles in the same time.

The article follows:

HENRY CLAY WAS AN ADVOCATE OF "INTERNAL IMPROVEMENTS"

The stagecoach Washington, carrying Henry Clay westward, rolled smoothly and briskly along the Maryland uplands. The soft spring sunshine glinted on the backs of its four swift horses, on the whip, and the horn of the driver, and on its side panels gaily painted with a crude picture of General Washington. Within the body of the coach, which was shaped like a football and hung from the wheels by heavy leather straps, were three crossways seats accommodating three persons each, nine passengers in all. On this day those who had been lucky enough to obtain seats on the end were craning eagerly from the windows, regardless of the fresh breeze that endangered the gentlemen's hats and blew the ladies' veils back in their faces.

For the coach was entering the Cumberland Road, the new highway built by the Federal Government to span the Allegheny Mountains between Cumberland, Md., and Wheeling on the Ohio.

Strange as it may seem to us now, there had been much opposition to this enterprise. Many thought that the Constitution did no give the Government the power to construct roads. But Henry Clay and other advocates of internal improvements thought otherwise, and thanks to their efforts in Congress the great road linking East and West had just been completed.

Our first national highway was 80 feet wide, with a 30-foot strip through the center packed down hard with fine gravel. At intervals there were iron mileposts and solid, handsome stone bridges. Henry Clay, pleasantly conscious of the smoothly rolling wheels under him, thought of the narrow, muddy trails and rushing streams he had struggled through on his first trip west, and smiled with satisfaction.

The amount of traffic already showed how much the Cumberland Road meant to both Easterners and Westerners. The Washington passed lumbering, canvas-topped Conestoga wagons laden with West-bound goods from Philadelphia or Baltimore; it encountered droves of cattle, sheep, and hogs being driven to eastern markets. Every mile or so the three blasts of the driver's horn meaning "Make way for the stage," echoed through the mountains.

"Why, this is more like a city avenue than a mountain road" exclaimed one of the lady passengers.

With miraculous ease the stagecoach ascended Laurel Hill, the highest mountain on the road.

"We used to dread this mountain," said Henry. "A stagecoach couldn't reach the top unless some of the passengers got out and pushed. Sometimes we were stuck in the mud for hours. I remember when I was returning home only a few years ago it took almost a whole day to travel the distance of 9 miles from Uniontown to the top of Laurel Hill. Now, as you see, we have done 79 miles in the same time."

"Hurrah for internal improvements!" cried a gentleman on the back seat. "Hurrah for Henry Clay!"—From Henry Clay, by Barbara Mayo. (New York: Farrar & Rinehart, 1943.)

Palestine—Hope Deferred

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over Station WNYC, the Municipal Broadcasting Co., Friday, December 22, 1944:

The Palestine resolution in the United States Congress has again been scuttled. The administration has again insisted upon deferring consideration thereof. In doing so, it has balked the will of the American people, seeking earnestly to find a haven and a home for the helpless and the hopeless Jews attempting to escape the Nazi scourge. The action of our President and of Secretary of State Stettinius is past understanding. It is with extreme regret that I voice such criticism.

The purpose of the resolution was to express the deep resentment of the American people agains tthe nefarious British white paper that slams with a bang the doors of Palestine to Jews. The Jews may no longer enter except by the will of an Arab majority. And, as we all know, that majority will never give consent.

I need not dwell upon the repudiation thereby of the Balfour Declaration of 1917 wherein "His Majesty's Government view with favor the establishment in Palestine of a national home for the Jewish people." Nor need I point out the unilateral infraction of the Anglo-American Treaty of 1924 wherein England agreed that no one shall be excluded from Palestine on the ground of race or religion. The same white paper was submitted to the Permanent Mandates Commission of the League of Nations. That entity not only refused to approve but unanimously rejected and condemned it. You know well the betrayal by the British who made a mighty promise to the Jews of the world and to the members of the League. Relying on that promise, the lowly and the powerful, the worker and the pioneer, throughout all of world Jewry, labored to reclaim Palestine, and as a result, from the dessert had blossomed the most successful colonization in the history of the modern world.

I need not emphasize here—to you the story is a familiar one—how the Palestine administration manipulated and maneuvered to defeat the sacred trust of the mandate—a mandate approved by 52 nations, including our own.

Remember Palestine is not the property of Britain. She was entrusted with the Palestine mandate to administer it in such a manner as to develop eventually an independent Jewish homeland and commonwealth. She has abused her trust. She has acted as though Palestine were in the pocket of her voluminous apron. Forsaking her role of stewardship, she has closed the doors to Jewish immigration and has precluded any further land purchase by Jews. She has done all this at a time when the driven Jew seeks vainly for a land that might give him succor and make him welcome. Some have described cruelty as comparable to taking candy from a baby. Putting a padlock on the gates of Palestine could be compared to whipping the proverbial straw from the reach of a drowning man.

Britain has defaulted miserably at a time when the fate of the Jew seems like a sea without a shore. It is our immediate and urgent concern to reopen the doors of Palestine to mass Jewish immigration.

The economy of a war-torn, hatred-seared Europe will not welcome the returning Jew en masse. In not a few exceptions, the deported Jew will not want to return to the scenes of horror and tragedy. Immigration bars all over the world will not be lowered. There is as yet only one place of hope—Palestine. But the light over the gate of Palestine has been dimmed well-nigh unto darkness.

It is significant that at the Evian Conference on Refugees in 1938, to which over 50 nations sent representatives, havens of refuge for Jews and other minorities were sought. Significant, too, that the Australian delegate arose in his seat and tersely and tragically utter the conclusion in the minds of all the delegates. "We in Australia," said he, "have no racial problem, thank God, and don't intend to have one started." The conviction seems inescapable. There is no place in the whole wide world where the Jew is wanted—save by his fellow Jews in Palestine.

All decent Jews deplored the assassination of Lord Moyne, late High Commissioner for Palestine. The cause of Palestine was seriously wounded by that unhappy event, just when it needed all the strength it could muster. Opponents of the establishment of a Jewish homeland are using this as a pretext to topple over the whole Jewish structure in Palestine. Even Winston Churchill, professed friend of a Jewish national homeland, made it an occasion for some very deprecating remarks that, unfortunately, contained a veiled threat. But Mr. Churchill neglected to state that, so long as the Jews themselves are not allowed to bear arms to defend themselves, their task to bring down the elements of terrorism and gangsterism is made more difficult. As the Jews are not allowed to bear arms to defend themselves, the Jewish community cannot be held responsible for maintaining order or be blamed for the acts of any criminals such as members of the Stern gang.

If anybody is to blame, it is the British Colonial Office for its perfidy and faithlessness to a solemn trust. There would be no Stern gang if the British had honored their Balfour pledge, their League Mandate, their 1924 Treaty with the United States. The cause of the Sternite assassination must be laid at the door of 10 Downing Street, London.

Colonial Secretary Oliver Stanley declared recently in the House of Commons that the current events in Palestine would affect unfavorably the application of the Mauritius internees for certificates of entrance into Palestine, as if one had anything to do with the other. The cruel vindictiveness of the colonial secretary is almost heartbreaking, especially when we recall to mind the plight of these poor Jews now interned on the Island of Mauritius in the Indian Ocean.

I remember the steamship *Struma* and the steamship *Patria*, the two ships which were carrying the fleeing refugees to Palestine. The *Struma* carried about 750. It sank in the Black Sea as a result of a Nazi bomb and only one was saved, after the ship had been denied the right to dock in Palestine. The *Patria*, carrying some 1,700 Jewish refugees banned from Palestine, was waiting at Haifa with its cargo of deportees. It was rocked by an explosion and 200 were killed. The survivors were then admitted, but to undo the extreme generosity of the Palestine government, the officials promptly deported 2,000 refugees who had previously been in Palestine, held in a concentration camp. These men, women, and children were taken from the cots at night and shipped to the malaria-infested of Mauritius where they still remain, half clothed and half fed. Like Moses of old, they saw the promised land

but were denied entrance. These poor victims must remain in Mauritius because of a stony-hearted colonial secretary and a wretched white paper.

How can anyone in his right senses regard the British administration in Palestine as anything but hostile?

Indeed, there would be no assassination of a Lord Moyne if there had been no Malcolm MacDonald White Paper, which caused Churchill to state, when he was in the opposition benches: "I could not stand by and see solemn engagements into which Britain has entered before the world set aside * * * what is the white paper but the destruction of the Balfour Declaration? What is that but a breach of faith?"

He continued by calling the white paper a filing of a petition in moral bankruptcy. I am sure that those words, in contemplation, must often stick in his throat. Anthony Eden may use the tragic event of assassination to set up a cloud of dust to hide the real issues. He may seek to conceal the white paper and the problems of Palestine behind the shroud of Lord Moyne just as he used the bugaboo of possible Arab disturbances.

The British Government has stayed the hand of the American Congress in the passage of the Wright-Compton resolution, which approves and urges untrammeled Jewish immigration into Palestine and applauds the setting up by Jews of a commonwealth in the home land.

The House Foreign Affairs Committee approved the resolution but strange things happened behind the scenes. Approval by the Rules Committee to bring the resolution before the House was imminent but English gremlins with Oxonian accents began pulling the resolution off beam. Secretary of State Stettinius, in a new abasement to Britain, killed the resolution before the Rules Committee of the House. This disservice to the Jews was repeated before the Senate Foreign Relations Committee. That committee shelved an identical resolution. Following its deferment, it is significant that 12 Senators of this important committee—two-thirds of the total of 18 members—made the following declaration:

"Although the Senate Foreign Relations Committee, at the request of the State Department, postponed action for the time being on the Palestine resolution, we wish to record our own personal approval of the resolution which calls for the free entry of Jews into Palestine and full opportunity for colonization, so that the Jewish people may as soon as practicable reconstitute Palestine as a free and democratic commonwealth"

Be it remembered that both political parties, during the recent Presidential campaign, came out in favor of the resolution. Is a political platform something to stand upon or merely something to get in on? Seventy-eight Senators, 318 Representatives, a total of 396 Members of Congress from 48 States, in writing, approved the resolution. That betokens an overwhelming public sentiment in favor thereof.

Why did the distinguished new Secretary of State allow himself to be used as a broomstick to be put between the legs of the members of the House Rules Committee and the Senate Foreign Relations Committee? Can the President of the United States forget so soon his statement of October 15, 1944, as on record? He wrote, "* * * in accord with the traditional American policy and in keeping with the spirit of the "four freedoms," the Democratic Party, at its July convention this year, included the following plank in its platform:

"We favor the opening of Palestine to unrestricted Jewish immigration and colonization and such a policy as to result in the establishment there of a free and democratic Jewish commonwealth."

"Efforts will be made to find appropriate ways and means of effectuating this policy as soon as practicable. I know how long and ardently the Jewish people have worked and prayed for the establishment of Palestine as a free and democratic Jewish commonwealth. I am convinced that the American people give their support to this aim and if reelected I shall help to bring about its realization."

Incidentally, as a member of the committee on platform and resolutions at the Democratic Convention in Chicago, I helped draft the plank in the Democratic platform on Palestine.

Well may we ask for how long, Mr. President. Alas, too long. As the White Queen said to Alice at the tea party, "The rule is: Jam tomorrow and jam yesterday, but never jam today." When the Jews ask for aid they are told, "Yes; you may have havens tomorrow, you might have had havens yesterday, but you cannot have them today."

Secretary of War Stimson recently said: "* * * I do feel that the military considerations which led to my previous action in opposing the passage of this resolution are not as strong a fact now as they were then. In my judgment, political considerations now outweigh the military, and the issue should be determined upon the political rather than the military basis."

Back in March, when favorable action was about to be taken on the aforesaid resolutions, Secretary of War Stimson had sought to draw a military red herring across the trail. So strong was the sentiment for the resolution that he was compelled to bring up his heaviest battalion. Chief of Staff Marshall appeared at a hastily called session of the Senate Foreign Relations Committee and asked that action be deferred. No one questioned his integrity nor the accuracy of his statement, yet by that time Rommel had been eliminated, our lines of communication were no longer crossing Palestine, and the Levant was no longer a logistics problem. The Senators sharply questioned Chief of Staff Marshall, and, while they all differed with him, they felt they could do nothing and bowed in silence. Two days after the statement of the Chief of Staff the President made a pronouncement indicating utmost sympathy with the Jewish problems in Palestine and with reference to the white paper promised that justice would be done. Many newspaper columnists, including Arthur Krock, distinguished writer on the New York Times, contrasted the President's statement with that of the Chief of Staff. They pointed out the utter inconsistency. Many Members of the House and Senate offered angry comment and indicated that they had "been taken for a ride." Thus the matter stood until the announcements of the Republican and Democratic platforms and the statement of Candidate Dewey and the pronouncement of President Roosevelt as aforesaid.

The whole question was lifted out of the realm of politics and the majority leader of the House, Representative JOHN W. MCCORMACK, of Massachusetts, and House minority leader, JOSEPH W. MARTIN, Jr., of Massachusetts; majority leader of the Senate, ALBEN W. BARKLEY, of Kentucky; and minority leader, WALLACE H. WHITE, Jr., of Maine, all enthusiastically supported the respective resolutions.

Popular fervor for the enactment of these bills took on the aspect of a holy crusade. Jews and non-Jews throughout the Nation advocated passage thereof and it was felt that the prophecy of Isaiah would be fulfilled and the Jews could again "go rejoicing into Zion."

Winston Churchill was reported by Dr. Chaim Weizman, great Zionist leader, to have recently stated: "America ought to take a hand in the solution of the problems [of Palestine]. It would make everything much easier." He went on to say that he welcomed an expression on Palestine from the Congress of the United States and that such an expression would strengthen his hand.

In the name of common sense and logic then, why this deeply laid scheme to vitiate the resolution?

The Secretary of State's observations concerning deferment before the Senate Foreign Relations Committee was as "ghastly as a laugh in hell." Now, by negation, and failure of action, the Arabs for example may assume, the imprimatur of approval has been placed on the outrageous white paper.

It should be obvious that a Jew who has drowned in the Mediterranean because of the policy of the Palestine administration refusing him entry is just as dead as a dead Greek soldier on the streets of Athens. It is as violent a betrayal. Yet, our State Department has protested British action in Greece and Italy. This protest was a straightforward denunciation of high principle but that consistency, applied to Greece and Italy, suddenly becomes all knotted and entangled when confronted with Palestine. We are bold with reference to Greece and Italy. We challenge British imperial maneuvering but we cringe before the Palestine question.

I shall not remain indifferent. I shall not permit Palestine to be sold down the river. I shall do my utmost to prevent Palestine from being transformed into an Arab British state with a Jewish ghetto.

We are told that it would be unpatriotic to speak up now in the midst of world turmoil, that the peace conference will settle the vexing question. But when the hostilities cease the peoples who are now silenced will be presented with a fait accompli. Palestine will be closed to the Jewish people, the Jew will continue his 2,000-year-old trek while rehabilitation committees seek for havens everywhere but in the one place where the Jew would be welcome, Palestine. Heed now must be given to the words of David ben Gurion, Palestinian Zionist leader, who, in hard-hitting words, reaches the crux of the situation. He said:

"It is through our blind assumption that what happened once will happen again, that we talk today about a peace conference after the war. One can say indeed that a peace conference is already taking place, while the war is still going on. When Churchill met Roosevelt at Casablanca that meeting was part of the peace conference. When Eden, together with Halifax, held discussions with Cordell Hull in Washington, that was one of the sessions of the peace conference. When one of the representatives of the Anglo-Saxon world meets representatives of Soviet Russia this, too, is part of the peace conference. The provisions of the post-war settlement are being planned now, not only in Washington, London, and Moscow, but also in Cairo, Baghdad, Jidda, and Jerusalem. And we forget," he added, "that in fact the new order to be introduced in Palestine is absolutely ready."

It is not my purpose to create disunity among the Allies. I yield to no man in my admiration for the British men and women and their magnificent efforts in this tremendous crisis. The common man in England has performed heroically the superhuman tasks occasioned by this greatest scourge in civilized history. I repeat my avowal of admiration for England's saintly sacrifices that have saved us and the world. But how reconcile that with her attitude toward Palestine? "Honest and sincere criticism among the Allies," said Brendan Bracken, British Minister of Information, "even during the heat of war is not out of place. Fair criticism is the life of democracy."

The MacDonald White Paper must be set aside. Palestine must be opened to mass Jewish immigration at once, otherwise Festung Europa will continue to be a massive Jewish sepulcher.

Brotherhood Week

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the President of the United States:

THE WHITE HOUSE,
Washington.

It is highly fitting that in the midst of the world struggle for liberty we should remind ourselves of the spiritual realities by which the ideals of freedom are nourished. The principle of human brotherhood is the source of our political democracy and this principle is rooted in the faith which our fathers knew and which we have lived by. One God is our Father and all of us are brothers and sisters in His family. We worship at different altars and express this faith in many ways. But deeper than the differences is the spiritual unity that makes us one people.

On battlefields throughout the world Americans of many cultural backgrounds stand together in one fighting force that presents an unbroken front against the enemies of freedom. We move forward to victory—one people dedicated to one flag in the service of justice and peace for all. As these men and women of the fighting forces carry on their struggle against tyranny overseas they dream of the homeland in which equal opportunity for the good life is open to all. It is, therefore, a solemn duty for us to live and work in the United States to keep our country free of prejudice and bigotry so that when our fighting men return they may find us living by the freedom for which they are ready to give the full measure of devotion.

The United States is the greatest team of free men and women that the world has ever seen. This is the hour for us to decide that our determination shall be in peace, as in war—teamwork. I am happy, therefore, to welcome the twelfth anniversary of Brotherhood Week, February 18-25, 1945, under the auspices of the National Conference of Christians and Jews. I hope that our people will come together this week to renew and strengthen their determination to serve the high principles of liberty through spiritual unity.

FRANKLIN D. ROOSEVELT.

Patton Should Have Four Stars

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. McKENZIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the Shreveport Times, Shreveport, La., under date of December 31, 1944.

Time and experience have not only proven that Lt. Gen. George S. Patton, Jr., is one of our most colorful generals but also one of our very best generals. In fact, I am sure that history will record him as one of the great generals of all times. His ability as a tactician, his daring, courage, and leadership are an inspiration to his men, who dearly love him, and to the entire Allied world. We of the United States can thank God for George S. Patton, Jr. He is entitled to our eternal thanks and should have our full moral and material support.

The editorial follows:

PATTON SHOULD HAVE FOUR STARS

If there is any man who deserves promotion in the United States Army to the rank of four-star general, it is Three-Star Lt. Gen. George S. Patton, Jr.

In five critical and tragic moments in this war, Patton has stood forth as strategist, tactician, and leader of men to victory against odds that often seemed overwhelming. He has had a larger number of really tough field campaigns than any of our generals, with the possible exception of Five-Star MacArthur, and has smashed his way to victory for his men, his country, and himself every time.

In the invasion of north Africa, Patton was given the one truly tough task—invasion from sea, with armored forces, of Casablanca, where resistance was sure to be great, where tides were so rough and tricky that only for a few hours each day could men or equipment be put ashore to overcome powerful and fixed defenses. He did the job, magnificently, commanding both Army and Navy invasion forces. His tactics have been cited by Army men as saving thousands of American lives in that combat.

When Rommel tore up an American Army corps at Kasserine Pass, Patton was called to stem the German onslaught. He did it, rallied faltering troops, reorganized them, and pointed the way to final victory in Africa.

In Sicily he completed conquest of the island in 39 days when all experts expected at least 90 to 100 days to be consumed. He did it by magnificent strategy and tactics, despite the flop of the British Eighth Army in a critical stage of the campaign. He organized the Army that carried out this invasion, planned the strategy, directed the tactics.

After the invasion of northern Europe, his Third American Army made a drive from Normandy to Paris that still has tacticians gasping at its speed and efficiency. With hardly a breath of time for reorganization he led this same army in an equally spectacular drive to the German border. This drive was stopped not by the enemy, but by inability of those in the rear to keep Patton's forces supplied with gasoline for his vehicles and ammunition for his guns. If he had been given both, no one knows where he might have gone.

And now, in the past 2 weeks, when the Germans ripped through the American First Army and drove to the shores of the Meuse and almost within shelling distance of Sedan, it was Patton and his Third Army again that saved the day with a magnificent drive of 22 miles into the tough side of the seemingly invincible German forces. There's no telling where that Nazi break-through would be today but for Patton and the Third Army.

Retired Gen. Peyton C. March, World War No. 1 Chief of Staff, bluntly charged a few days ago that the American and Allied High Commands in Europe had failed to "punch the enemy on the nose" when real slugging might have been decisive. Patton always has punched the enemy on the nose—with both fists, regardless of the opposing odds, with no quarter asked and none given. It is worthy of thought that in every campaign from Africa to the German border, except one, the American forces have met at least one tragic and unexpected debacle at the hands of a supposedly routed enemy. The one exception was Patton's campaign in Sicily, which military experts say will be a basis of our military textbooks of the future.

General Patton merited four stars long ago. Just about everyone in the Army knows that he would have had them but for the wild, exaggerated, overplayed, and partly false versions given to the utterly unimportant incident when he followed a rather well-established and recognized course of slapping a soldier, in Sicily, in an effort to see if he was really battle fatigued or just "dogging it."

The United States has many fine generals from one star to five star. Perhaps many of them are fully comparable in leadership, strategic ability, and tactical ability to Patton. However, it would be hard to find any, unless it be MacArthur, who has done more under tougher conditions. He deserves four stars—and more.

Christmas Day Address

EXTENSION OF REMARKS

OF

HON. PAUL H. MALONEY

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. MALONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a radio address I made on Christmas Day over WNOE in New Orleans, La.:

Ladies and gentlemen, I wish for you and your loved ones near and far a happy day.

My hope, my prayer, and my effort, like yours, is for a quick return to normalcy and a fireside at every home where everyone of the family can be present.

No power possessed by man, no genius born or yet to come into creation, can take precedence over the power of belief in the Prince of Peace.

It is, in a sense, a mockery by the hand of mankind to find this world torn apart for the fifth consecutive Christmas by men killing men and nations attempting to destroy other nations.

It is indeed a pathetic plight.

Lives are being cast away each moment. Physical and mental impairment take place each second.

Homes, families, towns, States, and nations are torn from their moorings of centuries past.

I ask you upon this day of reverence, What sadder plight could befall us? And may I answer my own question by saying mankind could face nothing worse than the present predicament thrust upon us by the savage, un-Christian villains who originated this bloody, world-wide conflict.

It has not been my practice in the 12 years I have served in the Congress of the United States, nor in my life for that matter, to cast my lot with the group or the individual who cries loud at each opportunity.

I have observed life, both private and public, closely, and, in my opinion, it is hard work, a humble attitude, the refrainment from careless and unfounded talk, the open belief in one's fellowman, and the attitude of tolerance that makes America what it is.

It is those characteristics, plus the unconquerable spirit of our fighting forces, that eventually will bring victory to our side, which is the cause of true righteousness.

I hold in thorough contempt the man or the agency that would wittingly or otherwise misrepresent the facts as they relate to the progress of the war.

There are few homes in our fair land that will not have one or more vacant chairs at the dinner table on this feast day.

All of our homes are eagerly scanning every report on the progress of the war, but my good friends, I have said before and I repeat now, it never was a normal attitude to believe that today, this Christmas, would find the war in Europe ended.

Such estimates of the past, and I care not from whom they came, raised false hopes in the breasts of mothers, wives, and loved ones.

I claim no power of the prophet, nor do I possess a technical knowledge of warfare, but I say in all candor to everyone of you, all utterances and all writings that trifle with the prophecy of the time our boys and girls will be home are mere expressions of unthinking individuals who have grown careless with words, and further they are devoid of feeling for the loved ones of our fighting forces.

I decry with all power of my body and soul these malicious, loose-talking and loose-writing individuals.

There can be no question but that the price yet to pay is high—extremely high.

Need I tell you this?

I say no, for the thoughtful among you never have assumed for a moment that our task was anywhere near accomplished.

If you have believed to the contrary, I invite a fair and intelligent perusal of the facts at hand at this moment.

No, we are not going to lose the war. That I definitely say.

We are going to win.

Of that result I am convinced, but my good friends, we will have to pay a tremendous price in lives and every other conceivable way.

Let no one tell you to the contrary.

If he does, seek from him the record thus far, and ask him to estimate the possible turn of events.

It is utter folly to think this war, the most gigantic undertaking thrust upon mankind in the history of the world, can be settled as quickly and as inexpensively as some would attempt to have us believe.

I repeat, we will win.

Yes, we cannot fail with our power of determination and resources, but right now, unfortunately, we are drifting rapidly into a spirit of optimism that can and will mean one thing—namely, lengthening the war and adding to the cost of lives and destruction of property.

In my estimation we have drifted, and are continuing to drift from the task at hand.

It is not a pleasant picture to unfold before our eyes that our European commander has to appeal to and press us for more ammunition. None of us is proud of this condition, yet it is a fact.

The Nazis have counterattacked. We don't like that. But it is also a fact that cannot be denied.

Chaos has beset many of the small and even large nations that we have liberated, and what do we see and hear daily?

How to make the peace. Peace at this price. Peace at that price.

Well, let me tell you, my good friends, how to get peace, and you won't misunderstand me, I hope.

There is only one way to get a peace, and that is by whipping daylights out of the enemy on the field of battle.

Only then can we have peace. Don't let anyone tell you different.

All effort, all talk, and all of these resolutions are so much wasted effort when we attempt to write the peace before the curtain has fallen on the act of war.

I sincerely appeal to you to concentrate on winning the war and not on arguments as to the peace.

Our job is to back up the battle fronts so that we can win the war.

Our men of state affairs are alert to the phase of peace that should be apparent at this stage of the war.

Talk optimism down.

It is a sad commentary, indeed, when our American boys are shedding their blood and giving their lives in this death struggle and talk of dividing the spoils of war becomes a dominant subject. That is a significant reason for much of this overoptimism that can only hinder our fighting forces.

Victory is not ours until the enemy has laid down his weapons or until we have beaten him to absolute submission.

Neither of these conditions now prevails, and until one or the other does prevail it must be war to the hilt.

Accordingly I humbly ask your recognition of facts as they exist.

I shall return to Washington at the end of this month for the convening of the new Congress and shall dedicate my best efforts to bringing this world-wide war to a victorious end for our country and our allies.

It has been a pleasure to speak as a guest of this fine station WNOE today.

Now, in conclusion I wish you a most pleasant day, and may the coming year hold much for all of us—particularly for our fighting forces, who are spread over this world in the defense of you and me and our great Nation. Thank you.

Hitler's Speech Seen as Significant News

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of January 2, 1945:

HITLER'S SPEECH SEEN AS SIGNIFICANT NEWS—PETTY QUARRELS BETWEEN ALLIES WILL PROLONG WAR, WRITER SAYS

(By David Lawrence)

Hitler's speech can be dismissed as the effusions of an egotist who is desperately trying to bolster the morale of the German people, but there is nevertheless in his New Year's broadcast some significant news.

Undoubtedly Hitler prepared the address with an idea of what arguments would appeal most effectively to the German nation, and it is interesting to note what extensive use he made of the petty quarrels among the Allies, and especially of their plans to dismember German territory.

It is to be noted, too, that he spoke scornfully of the tendency of the Allied statesmen to count their chickens before they are hatched, and especially did he seem to gloat over the delays that frustrated the Allied plans for victory in 1943 and then in 1944. Persons who are given to overconfidence and wishful thinking can ignore these comments of Hitler as inconsequential, but a careful reading of what he said ought to be made by those who are responsible for our so-called psychological warfare.

It is commonly assumed that psychological warfare is the routine business of some underling in a Government agency or of some subordinate unit in the Office of War Information. But the persons who really conduct psychological warfare for the Allies are Messrs. Roosevelt, Stalin, and Churchill and that group of apologists in our midst who have begun already to belittle the democratic process by arguing that anything which the Big Three may say or do is right or is above criticism.

HITLER'S OPPORTUNITY

Hitler's opportunity to keep his nation fighting frantically will grow rather than diminish and the war will be prolonged exactly as many months or years as the Governments in power at Washington, London, and Moscow are indifferent to the things that can make a lasting peace as distinguished from the things that keep enmities alive and hatreds perennial.

There must be candor and frankness in discussing international affairs today. The world must be delivered from the so-called experts who come from that practical group of Chauvinists and reactionaries who tell us now that ideals must be abandoned because ideals are an evidence of lack of imagination and practicality.

Such outbursts, for instance, as that which came from the London Economist the other day are a natural consequence of the diplomacy of today which believes in hush-hush and official camouflage of real points of difference among allies. The British people have evidently never been told how strong isolationism has been in the United States and how dangerously Mr. Roosevelt had to stretch the statutes to come to the rescue of the British with destroyers in 1940.

British publicists, now that Britain has been saved by American help once more, must not assume that they can do again as they did after the last war, namely, brush aside American idealism and expect America always to come to the rescue when power politics and spheres of influence bring on European wars. Maybe the next time the British really will misfire and forfeit American aid through sheer stupidity.

In Britain, fortunately, however, there is a growing liberalism which frowns on the materialistic ruling classes who think more of monarchies and class distinctions than they do of ideals. The imperialists have already begun to carve up not only Germany but the whole world, and the sad part of it is that they have American influences allied with them which echo that same selfishness and narrowness of view.

STEP TO TOTALITARIANISM

When we begin to read that ideals are worthless, we must be prepared to hear that the might-makes-right doctrine is best, after all. This is but a short step to the philosophy of the exponents of totalitarianism.

One would think from reading recent comments from the British experts and some of their American brethren that the truths in the Atlantic Charter are of no binding importance at all and that the parents of the young men who have made the supreme sacrifice can be bluntly told that their sons were killed in order that imperialism may live on. For it looks as if we already are being given the same anesthetic that was administered when Lloyd George and Clemenceau carved up Wilson idealism at Paris after the last war.

Ideals, if sincerely and honestly expressed, can end this war where swashbuckling boasts and threats have failed. But men who have themselves compromised with truth and principle cannot speak with conviction. The Allied cause needs a new leadership and new spokesmen, because its premiers and presidents have proved themselves lacking in idealism. Maybe the national legislatures can supply the missing soul.

The hope of the world perhaps lies in a few men of vision in the British Parliament and the American Congress who are not afraid to insist on ideals, even though inconvenient to tradition, unpalatable to pride, or expensive to someone's post-war pocketbook.

Extemporaneous Remarks Made by His Holiness Pope Pius XII in His Private Study on December 15, 1944, to the Members of the Military Affairs Committee of the United States House of Representatives Who Were Introduced to the Holy Father by the Honorable Myron C. Taylor, Personal Representative of the President of the United States to His Holiness

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. ROONEY. Mr. Speaker, during the course of the visit of the House Committee on Military Affairs to the western and Italian fronts and to a number of countries in Europe we were privileged in being introduced on December 15 last to His Holiness Pope Pius XII by the Honorable Myron C. Taylor, personal representative of the President of the United States to His Holiness. The following remarks of the Holy Father on this occasion are of inestimable importance not only to the members of the Military Affairs Committee who had the pleasure of an interesting audience with him on that occasion but to every Member of this House of Representatives:

Honorable Members of Congress, when His Excellency, the personal representative of your President, asked us to receive the congressional committee now visiting Europe, we at once assured him that it would give us real pleasure to do so; we wish to repeat the assurance of that pleasure now to you, honorable Members here present. To one and all, our heartfelt welcome.

At this critical moment in human history the legislators of the nations of the world carry a particularly grave responsibility. The questions that they are called on to decide have more than a passing political significance. They reach down to the roots of human society, to the inviolability of the human person, to those inalienable, God-given rights that are antecedent to the state and that no state dare infringe without jeopardizing its own existence. Foremost among those rights is the freedom to practice religion founded on faith in God and His revelation. To the legislators of today and tomorrow has been confided the noble task to insure that those rights shall not perish but shall be protected, defended, and held in honor among all peoples.

Oh, how earnestly we pray to God every day, that His grace may illumine the minds of lawgivers and heads of states to see and give them the courage to choose the path that leads to the peace that their hearts crave for. The master mind of Augustine came to realize that the human heart can never rest unless it rest in God; and what is true of the individual, is true of the multitude which forms our human society. This war will end; but the peace that men will clutch at, will crumble in their hands, unless God has first place in the councils of nations, unless His Ten Commandments and the truths given to men by Christ are at the foundations of the new world that all men of good will are hoping to see erected for the betterment of mankind.

That that new world may also bring an increase of glory to God, We pray heaven's blessings on those who chiefly have its making in their hands, and in particular upon you, honorable Members of Congress. God bless you, your families, all your dear ones at home, and your beloved country.

Progress Made Against Our Enemies in 1944

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. LUTHER A. JOHNSON. Mr. Speaker, our failure to defeat Germany in 1944, as had been predicted by many, and the unexpected German counter-offensive which began on December 16, causing heavy American casualties, made the ending of 1944 one of gloom and pessimism.

A brief recapitulation of what was accomplished by the Allies against the Axis powers in 1944 is contained in an editorial entitled "Year's End," appearing in the New York Times on December 31, 1944. This article shows that we have much to be grateful for and that considerable progress was made on all fronts in 1944. I think it is worthy of reproduction, and under leave granted, same is presented herewith.

I agree with the statement therein that for the progress we have made during the past 12 months we have paid a great price—thousands of our boys have given their lives and the casualty list lengthens daily.

May we not forget the sentiment expressed in the last sentence of this editorial, which would be an appropriate New Year's resolution for the American people, "Let us pledge ourselves to build on the sacrifices they have made for us a peace strong enough to do them honor."

The editorial follows:

YEAR'S END

If the old year ends on the somber note of the losses we have suffered in a savage, unexpected German drive, and on the further losses we must take to nullify these German gains, we should be unfair to 1944 if we did not try to set the present battles in perspective, and if we failed thereby to realize how far these last 12 months have brought us toward the achievement of our goals. Let us think back a bit.

When 1944 began, not a single Allied soldier stood at any point on the soil of Europe north of the Gulf of Gaeta or west of the Pripet Marshes. Hitler still dominated the Continent. The great Anglo-American invasion from the west was still an unattempted feat, a task formidable in its proportions, terrifying in its risks. The Russians still fought deep in their own territory. Odessa and Minsk and the Crimea were still in German hands. In Italy Allied troops still fought on the unyielding Cassino line. Rome was German territory. Whether it could be liberated without heavy casualties to its civilian population and vast destruction of its architectural treasures was a deeply troubling question. Paris was in Hitler's hands. Over all Belgium and all Holland, all Finland and all Greece, all the Balkan States from the upper Danube to the Aegean Sea marched the hobnailed boots of the German soldier.

In the Pacific the distances which separated us from the other citadel of Axis power were immensely great. We held Guadalcanal. We had taken Tarawa with heavy losses. We were fighting successfully in New Guinea. But much more than a thousand miles of blue water lay between us and the Philippines. The Japanese Fleet was still formidable. Truk stood as an apparently irreducible Gibraltar in the pathway of our progress. An island base so near Japan as Saipan seemed a distant dream. And no American airmen had ever carried the war to the enemy on the broad wings of a B–29.

For the progress we have made in these 12 months we have paid a great price. The lengthening casualty lists tell the story of young lives lost, bodies maimed, the heartbreak of those for whom there will be no homecoming soldier. But that progress has been made, vast obstacles overcome, and the force of avenging justice brought far closer to the evil men who made this war is manifest on the record. We can look back on 1944 with deep pride in the young men who went to battle for us, profound humility in the face of their great heroism, thankfulness for what they have accomplished, and a firm resolve to give them in the new year the full support to which they are entitled. Let us pledge ourselves to build on the sacrifices they have made for us a peace strong enough to do them honor.

Flood Control

EXTENSION OF REMARKS

OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a communication received by me from Maj. Gen. E. Reybold, Chief of Engineers, War Department, under date of December 28, 1944, containing information regarding the advancement of flood protection on the lower Mississippi River.

Many of you will recall the provisions of a bill which was introduced in the Senate by Senator JOHN OVERTON and by me in the House, providing for the abolition of what was then known as the Eudora spillway and the construction of the levees in Arkansas and Louisiana up to a height and grade considered sufficient to control the waters of the Mississippi River during any flood stage within the leveed walls of that river. This bill finally became law through the efforts of the Members of Congress from Arkansas, Louisiana, and Mississippi, and because of the favorable consideration by the Congress and the President.

The Office of the Chief of Engineers has done a magnificent job under the provisions of this law, as will be shown by the communication from Major General Reybold, which is as follows:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, December 28, 1944.

Hon. W. F. NORRELL,
House of Representatives,
Washington, D. C.

DEAR MR. NORRELL: Reference is made to your recent request for information concerning the advancement of flood protection on the Lower Mississippi River.

I am pleased to be able to inform you that the so-called Boeuf fuse plug levee extending from Yancopin, Ark., to the vicinity of Vaucluse, Ark., has now been brought to the 1941 revised levee grade and cross section. The 1941 enlargement required between Vaucluse and Lakeport is now completed or under construction. Upon the completion of this latter work, the controlling levee between Red Fork and the Arkansas-Louisiana State line will be at least as high as the 1941 revised net grade. In addition to this work, the levees on the south bank of the Arkansas River above Red Fork have been strengthened and maintained by the construction of seepage berms, and levee setbacks.

The enlargement of these levees now completed or under contract for completion will require the placement of approximately 22,000,000 cubic yards of material at an estimated cost of $5,500,000. The seepage berms, dikes, and four levee setbacks made necessary by the 1943 and 1944 floods on the Arkansas River required the placement of approximately 5,000,000 cubic yards of earthwork at an estimated cost of $1,700,000. All of this maintenance work is now completed except for one setback (at Adkins Lake) which is under construction.

The enlargement of the levees above Red Fork to the 1941 grade will require the placement of about 14,000,000 cubic yards at an estimated cost of $5,000,000. The strengthening of the levee cross section between Lakeport and the State line will require the placement of about 1,200,000 cubic yards at an estimated cost of $500,000. This work will be placed under contract as rapidly as future appropriations and available equipment will permit.

Between Pine Bluff and the Arkansas-Louisiana State line we have completed 62 miles of levee and have 19 miles under contract. The completion of the Boeuf-Eudora fuse-plug section provides flood protection for all the alluvial valley lands in Arkansas lying below the latitude of Red Fork, aggregating about 700,000 acres, which is equal to or better than that previously assured other lands protected by levees constructed to the 1928 project net grade and cross section. The construction of the Boeuf floodway would have dedicated 362,000 acres in Arkansas to occasional flooding. The construction of the Eudora floodway and its extension would have dedicated 190,000 acres to occasional flooding.

This progress in flood protection could not have been made without the abandonment of the Boeuf-Eudora floodway as authorized by the Flood Control Act approved August 18, 1941, and the subsequent appropriation acts providing funds for the work. All this legislation was obtained through the tireless effort and cooperation of the legislators representing the States of Arkansas, Louisiana, and Mississippi; certainly it could never have been possible without their very able assistance.

Very truly yours,

E. REYBOLD,
Major General,
Chief of Engineers.

Mobilization of Manpower

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. SCRIVNER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include the following letter from the vice president and general manager of the Beech Aircraft Corporation of Wichita, Kans., relating to the manpower situation, which, in my opinion, presents a realistic logical view from a vital war plant which it is hoped will be heeded by the governmental agencies dealing with this subject:

BEECH AIRCRAFT CORPORATION,
Wichita, Kans., January 2, 1945.

The Honorable ERRETT P. SCRIVNER,
The House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE SCRIVNER: We again see discussions in the public print about war manpower mobilization by directive or executive decrees, or even by possible congressional action. Because there seems to be a school of thought in certain circles in Washington which contends that war production would be benefited by forced recruitment of war workers, we wish to respectfully submit our opinions based upon practical experience.

During the months of October and the early part of November, we experienced great difficulty in retaining our working force at a constant level. Terminations increased far beyond previous levels, and an analysis of these terminations indicated that many of them were for the purpose of taking post-war jobs. We consider that this was an entirely natural development which was caused directly by the overoptimistic statements made by many of the most prominent individuals in positions of high authority among the Allied Nations, with regard to the anticipated early termination of the European war. The public press at that time carried almost nothing but statements about post-war reconversion, cancellation of contracts, termination, cutbacks, and post-war planning. The Government officially acted through its various agencies to continually warn the manufacturer of these factors, and to prepare him for these anticipated events.

It is no wonder that this strong emphasis on the early termination of hostilities should have produced the result which it did produce, that of inducing people to leave war industries to seek peacetime jobs. The reaction was entirely normal for people with American traditions of self-reliance. Our people felt that they could look out for themselves better than any Government agency could look out for them, and, therefore, they took it upon themselves to find new post-war jobs, even though such jobs paid much less income than the jobs that they were leaving. Anyone who admires the spirit of self-reliance must admit that the action of these people was reasonable and correct under the circumstances then existing.

It was impossible for us to controvert the statements which were published in the newspapers and which were attributed to such persons as General Eisenhower, Winston Churchill, and others of comparable rank, regarding the early termination of hostilities. There was too much weight of reputation behind these statements to permit any counterstatement to carry any important weight in the minds of our employees. Although we stated that our war contracts were of such a nature that they would continue without interruption, our people simply did not believe that we knew what we were talking about.

The recent reverses in Europe have entirely changed public psychology among war workers. They now know that the former optimistic statements were mistaken, and the problem of personnel terminations has been reduced correspondingly. It is our opinion that no drastic manpower controls are necessary under present circumstances, and that the invocation of such drastic controls would do more harm than good.

It should be remembered that there is a certain inertia to governmental opinion and action. It always follows the event by a considerable period of time. This fact is caused by the necessary delay in collecting and correlating statistics, and the development of opinion based upon such statistics. In other words, the Washington opinion of today is based upon the events of October and November, which, in turn, were caused by unwise public statements made by impressively prominent individuals. We feel that it would be unwise to take action upon the question of drastic manpower controls until a sufficient time has elapsed to actually study the situation which exists at this time and which is steadily improving. On the other hand, we approve of the restrictions which have been put upon nonessential and nonproductive activities, such as race tracks and dog tracks and other activities which produce nothing and which are for amusement only.

It is our opinion that voluntary effort and voluntary cooperation is always far more effective than any form of coerced effort or activity. This was proved in an interesting way about a year ago, when we found considerable dissatisfaction among our working force with the regulations concerning the necessity for a formal release from the employer for anyone who wished to take another job. Because we felt that an unwilling employee was not worth keeping, we published a policy statement on all bulletin boards that anyone who did not wish to work for us could obtain a release at once after an interview to determine the causes of his or her dissatisfaction, if any. The percentage of voluntary terminations of employment decreased instead of increased after the publication of this statement; which has been in effect ever since.

We wish to thank you for the opportunity of bringing our opinions to your attention and hope that they will be of some value to you in connection with consideration of these matters at the Washington level.

With warmest personal regards,

Sincerely yours,

BEECH AIRCRAFT CORPORATION,
JOHN P. GATY,
Vice President-General Manager.

Unhappy Augury

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of January 2, 1945:

It is scarcely to be doubted that the Lublin Poles, in declaring themselves to be the Polish provisional government, have Moscow's full approval. In view of the recent collapse in negotiations between Russia and the Poles in London, the development is not surprising, but it is discouraging nevertheless, since it brings nearer the time when we shall probably see what Prime Minister Churchill has called "the unhappy spectacle" of the Big Three openly divided on the question of which group legitimately represents Poland.

The general assumption is that the Soviet Union will soon extend recognition to the Lublin Poles, but it is considered doubtful that Britain will and it seems almost certain that the United States will not. Both the Churchill government and our own have consistently recognized the Poles in London as the sole existing Polish authority, and even though that authority may have some serious shortcomings, there is little likelihood that it will suddenly lose Anglo-American support merely because of what the Soviet-sponsored Lublin group has done. So the prospect is that as far as the political status of Poland is concerned, Moscow, London, and Washington are about to follow different paths.

This is an extremely unfortunate situation, not only because it may encourage civil strife among the Poles themselves inside Poland, but also because it will place the Big Three in the position of having failed to act in unison in the first important test of allied cooperation outside the military sphere. Whatever may be the merits of the Lublin group's arguments and of Russia's claims, the fact remains that the problem has so far been worked out in a unilateral manner and that the impression is growing—rightly or wrongly—that the Stalin Government is more interested in setting up a puppet regime in Warsaw than in establishing a truly strong and independent Poland.

This impression, together with the unilateral character of the proceedings, can hardly be said to augur well for the idea of genuine post-war collaboration among the United Nations. In this instance the idea just simply does not seem to be working out, and there is no use trying to blink that fact. Coupled with other events elsewhere, it clearly indicates that when they meet again, President Roosevelt, Prime Minister Churchill, and Premier Stalin will have a very delicate and very serious job to do if the current allied political deterioration is to be checked. For the sake of the next peace we must hope and pray that every effort they make to this end will bear rich fruit.

Pay Increases for Congress

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. DONDERO. Mr. Speaker, under leave granted by the House of Representatives, I offer for the CONGRESSIONAL RECORD an editorial from the Pontiac Daily Press of December 15, 1944, Pontiac, Mich., on the proposal to increase the salaries of Members of Congress.

I believe the sentiment and opinion expressed in the editorial reflects the views of a vast majority of the people of the United States.

PAY INCREASES FOR CONGRESS

Labor—and that means everyone that draws a pay envelope—has been frozen at a 15-percent increase over 1941. Probably this has been the main cause in checking uncontrolled inflation. Thus, the bulk of Americans are better off financially than they would have been otherwise.

However, we now are confronted by the amazing spectacle of Government itself suggesting much bigger pay increases for the President, Senators, and Congressmen.

Apparently 15 percent is good enough for you and me, but Senators and Representatives would receive a modest boost of 50 percent. Members of Congress now draw $10,000 a year and the proposal would add a mere 50 percent to their annual stipend, or $5,000 a year in place of the $1,500 which represents the 15 percent that suffices for the rest of us.

When the suggestion reached the Presidency, it proposed a $25,000-a-year increase, raising the annual award from $75,000 to $100,000. One of the arguments for upping Mr. Roosevelt cited the fact that Frankie Sinatra gets even more than this, and surely Frankie R. must be worth as much to the Nation as Frankie S.

This we grant.

In fact we go further and contend that the newest colored sweeper in the South, starting at the lowest wage paid, is worth more than Frankie. (Frankie S.)

Hence this argument collapses.

Furthermore, it was Mr. Roosevelt who advocated a top "take-home pay" of $25,000 a year for anyone, so he would undoubtedly oppose the step himself.

The Press believes the Senators and Representatives deserve more. However, we would like to see them cheerfully follow the War Labor Board measures they have placed over the rest of us. Before their pay is increased 15 percent (perish the thought of 50 percent) we believe they should fill out form 10 and send it to the nearest regional office and go through the same machinery as the millions and millions of civilian employees.

We especially invite their attention to the clause which suggests that this increase in pay will not be used as a means of justifying the increase in the price of the commodities they handle.

That means the cost of government.

A 15 percent increase in Federal pay rolls in these circumstances would be the cheapest step the taxpayers ever took.

Also, we should like to suggest that the full 15 percent is not for executives according to Government edicts. Those above $5,000 in back-home life must be satisfied with lesser increases—so we propose 6 percent for Senators and Representatives, and 2 percent for the President.

Conditions in Europe Today

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. HÉBERT. Mr. Speaker, recently one of the publishers of the New Orleans newspapers, Mr. Ralph Nicholson, of the New Orleans Item, made a trip to Europe at the invitation of the British Government. His observations during this tour are most interesting and I believe worthy to be called to the attention of this body.

These observations appeal to me not as the observations of a newspaper reporter but appeal to me as the warm, down to earth expressions and reactions of an American citizen, the man on the street, who has been given an opportunity of seeing at first hand conditions as they are in Europe today.

May I offer them to you for examination in the exact manner in which they were presented to the readers of the New Orleans Item:

HOME'S BEST

The very best thing about my recent trip to Great Britain and France was getting back to New Orleans. Home never looked better to me than it did a few days ago, when I returned. That doesn't mean that I regretted having made the trip. The contrary is true. The reason I accepted the invitation of the British Ministry of Information was that I hoped it would result in increased knowledge and a better understanding on my part of what is happening now in Europe and what might be expected to occur in the future.

No specific discernible effort was made while I was in England on the part of anyone there to sell me on any particular point of view. I couldn't help, however, absorbing some new ideas or modifying others that I previously had.

One of the many things that impressed me in England was the almost unfailing courtesy and good humor of the people that I met. Five years of war had not given them the jitters, worn their nerves ragged, and made them ill-tempered. I scarcely heard a raised voice from anybody any place. That goes for taxi drivers, and cabinet ministers, and the host of people in between those stations of life.

Some of the little things were as outstanding as comparatively large ones. The taxicabs in London, for example, were bright and shiny, neat, and clean outside and in. There was very little horn blowing and no arguments. The attitude of the drivers toward their passengers and drivers of other vehicles was in sharp contrast with that observed daily in New Orleans.

The streets of London, Paris, and of the cities in Scotland I visited, were almost spotless. The citizens of those cities didn't throw their refuse in the street, and whatever got there that was out of place was quickly removed. Street cleaners worked continuously on the job with gratifying results.

So many of the people that I met were completely fascinated with New Orleans. They considered it the one city in the United States they wanted to visit. The British Army doctor on the ship on which I returned, planned to come down here during the next few days, just to see New Orleans. He don't care, he said, if he got a Pullman reservation; he would gladly sit up both ways just to be able to spend a few days in this city.

Dozens of people had read books about New Orleans. The one most prominently mentioned was Crescent Carnival by Frances Parkinson Keyes. If persons to whom I listened are typical of Britain's 45,000,000, we are going to have a great influx of visitors from across the Atlantic when the war is over.

ROBOMBS AND ROCKETS

Friends with whom I talked here since my return early in December from Great Britain and France have expressed considerable interest in the robot bombs reported in the newspapers to be falling in southern England.

I would not be telling the truth if I did not admit that this subject interested me considerably, too, while I was in southern England. I heard a few of the first type of flying bombs. They were called robots, flying

bombs, and doodle bugs. They were described to me as looking somewhat like a small airplane with wings, and propelled by a small motor. They make a noise like an airplane and travel at a moderate rate of speed. Many were shot down by ack ack and airplanes. Others arrived at their destination. When the fuel is exhausted the motor cuts off. Sometimes the bombs drop precipitously and other times they glide for a considerable distance before hitting the ground and exploding. I saw some of the places where such bombs had fallen. The devastation was terrific.

The V–2, or rocket bomb, is another kind of death-dealing missile. I was told that one of these bombs weighs about 7 tons, 5 or 6 tons of fuel, and metal and explosives weighing about 1 ton. These are launched from various sites on the continent, said to be in Holland and Germany. The rocket goes nearly straight up at the outset and then levels off at a height of about 60 miles. When the fuel is exhausted, or nearly so, it descends at the estimated speed of 10,000 miles an hour. This is faster than sound. The first knowledge that anyone in the vicinity usually has of the arrival of the rocket bomb is a terrific explosion which sounds like very loud thunder or a big gun being fired. Then there is a second noise made by the passage of the rocket through the air which arrives after the explosion. The rocket penetrates the building that it hits and makes a deep crater many feet in diameter, which is usually partly filled with the debris of wrecked buildings falling into the cavity.

The people of southern England go about their business apparently without paying much attention to these bombs. I was told that if one fell far enough from where I was, so that I could hear it, I had nothing to worry about. And that if it was so close that I didn't hear it, I felt no pain. That seemed to be an accurate appraisal of the situation.

I concluded that one reason the people there were no more concerned over these bombs than they appeared to be was that it was a matter of comparison. There were fewer bombs now than there were last summer, and those that fell last summer were in many respects not as bad as the blitz of 1940. In their experience the situation was improving.

London was not, at first glance, as badly wrecked and scarred as I had anticipated. The principal reason for this was that the wrecked buildings and debris were cleared away in remarkably short time. A good many of the holes in the ground where buildings had stood were filled with water as an added precaution against fire.

BRITAIN AT WAR

Sometimes in New Orleans we are inclined to complain about shortages of food, beverages of various kinds, cigarettes, houses and apartments, and many other things. Compared with the people of England, however, we are living in a land of luxury and go our accustomed way without hindrance or restrictions.

Life in Great Britain for the residents and for the visitors is regimented almost beyond belief. An alien needs many kinds of identification papers and moves from one place to another under scrutiny and restrictions. This is particularly the case when one is about to leave the country.

Nearly everything in Great Britain seems to be rationed. Scarcely any article of clothing can be purchased without coupons. As I recall, a man could buy about one suit a year if he didn't purchase anything else in the way of apparel during that period.

Food seemed to be sufficient in quantity to feed the people, but substitutes or processed concoctions seemed to be the order of the day. Sugar, like butter and other fats, is very scarce. So is fuel. Some of the hotels in which I stayed, and private homes that I visited, were very cold. At the home of newspaper friends in the country near London, where I spent the night, the central heating system was not used because no fuel was available. People seemed to get used to this, however, and didn't do much complaining.

Food at the hotel restaurants looked attractive, but to me was almost tasteless. It seemed that they could have done as well by taking compressed air, extracting its flavor, if any, and mixing it with equal parts of flannel finely chopped, and served with some kind of colorless and tasteless sauce.

I read one story in a London paper to the effect that infant mortality is now lower than before the war, because of the better distribution of milk under the Government program of subsidy and rationing, than had been the case before the war.

There was a conspicuous absence of fresh fruits, both in restaurants and in food stores. There were some apples and some fancy grapes, the latter being very expensive. There were no oranges, lemons, grapefruit, or bananas, although some citrus fruits were promised from Spain in time for Christmas. That announcement made front-page news in the London newspapers.

Brussel sprouts, cabbage, and potatoes were ever present. I saw few other vegetables. The coffee was surprisingly good, and the tea up to pre-war standards in quantity and quality. The milk supply was so limited, however, that one family, as I recall, was restricted to 3 pints a week.

In Paris the situation seemed to be worse. I was told that food was abundant in Normandy, but the transportation facilities were inadequate as yet to supply Paris.

I ate at the Army mess provided for war correspondents while in Paris, and visited no French homes and can give no first-hand report of how bad their conditions really are. I am convinced, however, that the shortages were acute.

YANKS SAY "ALL O. K."

One of the questions frequently asked me by friends here since I returned a few days ago from a visit to Great Britain and France concerns the opinions there about how long the war will last. I regret that I cannot give any consensus of opinions on this subject. I have been trying to remember what people said about the date when the German war would be finished and can't recall very much conversation on this subject.

In both London and Paris the English and Americans—civilians and those in uniform—with whom I talked seemed to have settled down to making the war their primary business, doing today what was required, and not paying very much attention to the question of how long it was going to last.

Of course, both the men and women in uniform, and the civilians, have greater reason than most Americans to be concerned over the duration. All reports that I received indicated that the going was very tough and the hardships indescribable all along the western front.

The American soldiers on the streets of Paris, however, were magnificently dressed, particularly in comparison with the shabby Parisians. They looked well and strong. They were ruddy-faced and cheerful, even those that had just come in after weeks and weeks at the front. I talked to many of them. Their attitude was that everything was O. K. I heard no gripes. I saw no misconduct on the part of any American in uniform. They made me proud of them and of my country.

Another evidence of the great might of America was the big trucks filled with war materials that I saw on the streets.

One hardship that our men in uniform are experiencing in France, which seems to me to be unnecessary, is the unfavorable rate of exchange officially established of 50 francs to the dollar. I heard of instances of civilians exchanging dollars for francs for as many as 200 to the dollar. This makes buying anything in France very expensive for our troops. Perhaps there are important reasons why this official exchange rate is necessary. The rate of sterling is at the same scale—the franc being worth 2 cents. I was told that it was a court-martial offense for Army personnel to exchange American or British currency at any rate other than the official one.

Cigarettes, as scarce as they are, prove to be a very useful medium of exchange in a barter transaction. I have forgotten how many packages of cigarettes it reputedly took for a bottle of perfume. But the G. I.'s I talked to were very suspicious of the quality of the perfume offered when it seemed too cheap in terms of cigarettes. They were not suckers by any means.

THE PRICE WE PAY

Since returning last week from a short visit to Great Britain and France I have been trying to determine the effects of the trip on my own thinking. I believe that I have become more tolerant of persons and things that I disagreed with and disapproved of in this country. These differences do not seem as important as they did previously, particularly in comparison with the war and the task of maintaining peace after it is won.

Here at home I found much to criticize in the way our Federal Government functions. I am still convinced those criticisms are justified. On the other hand, however, I saw so much evidence abroad of successful management of the war that I have a better opinion of our over-all effort than previously. It may well be that we couldn't have everything and that the price we are paying in inefficiency and corruption within the country is not too high for the successful conduct of the war. I would like to have both, but if it is a matter of alternatives, I prefer the latter. I hope that the internal management of the country during the next 4 years, however, will more closely approximate the efficiency of the war program.

I believe that the closer a person gets to the actual battle fronts and the more he sees of war's destruction of lives and property the more he fears and hates war and the more interested he becomes in trying to prevent its recurrence.

We cannot expect perfect harmony among the Allies. There will always be differences of opinion. One of these will doubtless concern the number of men and the volume of material contributed by each. Some of our allies may not be doing their just and proportionate share. We may be doing more than ours. I am convinced that we have at least twice as many men on the western front as all of the other allies put together. Our percentage may even be higher than that. I don't know whether or not that is more than our fair share. I don't know how many troops the other allies have in the other theaters of war. There may be inequities and injustices.

Be that as it may, I am convinced that every effort should be made to keep the total price, particularly in lives, at a minimum; but it is certainly essential to our existence to win this war.

Our relations are closer with England and her Dominions than with any other peoples. Therein lies opportunity for friction. Regardless of what we dislike about the English, we would find more to dislike in other peoples. We can get along better with the English than with anybody else. We have more in common with them. It is essential that we work closely during and after the war with the British.

I don't mean that we should give them everything they want. On the contrary, I am

convinced we should try to be as good traders as they are.

Great Britain and the United States can prevent another war if the peoples of these two countries make up their mind to do it. There have always been wars in Europe. That situation will not change without our active participation in maintaining the peace. Even throwing in our full intelligence and power may not accomplish the objective.

I am convinced it will never be achieved without us however. The chances of success are better if we are eternally vigilant. We must contribute to the cause of peace whatever is required to maintain it. As I see it, we cannot afford to do otherwise. I am convinced that the Germans will make another attempt to conquer the world if given an opportunity to do so. They have the ambition, the scientific genius, and perhaps the resources to make this possible. If they are let alone they will devise war machines that will lay waste the cities on this continent, in my opinion. The safety of ourselves, of our children and grandchildren in this country depends on our taking whatever action is required to prevent the Germans from preparing for and launching another attempt to conquer the world.

What Does America Want?

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. MASON. Mr. Speaker, because the following two paragraphs, taken from an editorial entitled "What Does America Want?" by James H. McGraw, Jr., expresses my convictions better than I can express them in words; I include them in my remarks for the consideration of my colleagues, and also as a declaration concerning my own feelings and convictions:

Within the past few weeks there has been a wakening conviction in this country that the determination of international arrangements cannot safely be put aside until victory has been won. For we have seen actions taken in Europe seemingly without full consultation and agreement of the Allied Powers, which may profoundly affect the design of the post-war world.

A declaration of American policy is needed, and it should be accompanied by a statement of our firm intention to exert full effort to procure its acceptance and furtherance. Emphatically, this does not mean that an American platform should be put forth as an ultimatum, which other nations must accept totally, or reject at the cost of having the United States withdraw from collaborative participation in, world agreements and organization. On the contrary, the first plank in such an American platform should be a firm commitment on our part to participate with our associate nations in building a general system of world security and order. By definition, this requires that each participant be willing to accommodate its purely national interests to a program that can be accepted as fairly representing the interests of all. But equally, there is imposed on each participant an obligation to state honestly and openly what it conceives its individual interest to be, as well as its concept of what measures will best serve the general interest.

Christmas Greetings

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, under leave to extend my remarks, I wish to include the following Christmas greetings:

GREETINGS

God grant you peace within your heart
  This time of Holy Birth.
May the Prince of Peace declare his might,
  And bring to all the earth
The balm that He alone can give
  To nations far and wide.
To every lonely, longing soul
  At this the Christmastide.

May the richness of His blessings
  Be yours throughout the years;
May the presence of His guiding hand
  Obliterate your fears;
May your fondest aspirations,
  Your hopes and dreams come true,
And all that's fine and beautiful
  Have a rendezvous with you.

—*Jenette Doughty Van Raalte.*

The author of this poem is one of the outstanding young women of my home community. Her great grandparents were some of the early settlers in our section of Wisconsin. The families have always been and are now among the leaders in the civic, religious, and educational life of the community.

Mrs. Van Raalte has been a very successful school teacher. She is now carrying on while her husband is in some foreign country with the armed forces. Her Christmas message is particularly appropriate at this time in the history of our country.

Post-War Transport and the Bronx

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. LYNCH. Mr. Speaker, under leave to extend my remarks, I am inserting herewith in the CONGRESSIONAL RECORD copy of an address delivered by Mr. Walter P. Hedden, director of port development of the New York Port Authority at the fifty-first annual meeting of the Bronx Board of Trade on December 21, 1944, in New York:

This Nation is still deep in a war within the borders of Germany and the borders of Japan. All of our production and transport activity must continue to be oriented toward the winning of this war. However, the time is coming, and I hope not too far distant, when more ships and planes can be diverted to overseas peacetime commerce; when railroad cars will be available for carrying weapons of construction instead of destruction; when tires and trucks can be put back into civilian use; and when steel and wood and concrete can be made available for construction of highways, bridges, terminals, and other transportation necessities for an expanding and prosperous America.

The Bronx is part of the great metropolitan community whose very lifeblood is efficient transportation. It enjoys rail service from great trunk-line railroads. It is traversed by some of the primary highways into New England and the Hudson Valley. It has great connecting bridges south, east, and west. It has water-front and potential airport space.

In any appraisal of the post-war future of the Bronx, and of the port district of which it is a part, it may be well to pause and see what added transport service and facilities are needed.

For over a year the Port Authority has been engaged in surveying some of the transportation and terminal features of the metropolitan area which seems vital in the post-war picture. In the limited time which we have, I can mention only a few that may interest you.

It is obvious that our future depends upon retaining a position as the crossroads of transportation, whether by sea, air, or land. There is no doubt that we face a vast increase in transport of passengers, mails, and high-value freight by air in the decade following this war. The pattern of this air service overseas, and to important points in North America, is now being established by the recommendations of the Civil Aeronautics Board and the international negotiations that flow from it.

During the past year the Port Authority has taken an active part in five leading cases before the Civil Aeronautical Board by presenting facts and recommendations in regard to the post-war air service pattern. Our witnesses have emphasized the fact that nearly two-thirds of the overseas travelers come from a territory within 300 miles of the port of New York, and 40 percent of them from the States of New York and New Jersey alone. Also, that 50 percent of the international air express shipments, and an equal portion of the mails originate in this area. In cases involving the establishment of routes between the port of New York and the Pacific Northwest; between the port of New York and Latin America; between the port of New York and Europe and Africa, we have stressed that there exists a demonstrated need for the most direct, one-carrier service which will give the businessman of this community contact with these other important trade areas without delay, without changing plans, without circuitous detours.

When we realize that service can be made available which will put mails and business executives in South Africa in 3 days instead of 22 days as at present, and in South America in 2 instead of 14 days, and in Europe in a matter of hours, we begin to understand why a network of crossroads service of this type is essential to the future of the port district.

And highways for motor traffic too. A greatly expanded new network of arterial systems for both passenger cars and motortrucks is in the making. The port authority, operating, as it does, the great bridges and tunnels which are essential links in the highway connections between territory east and west of the Hudson River, is vitally interested in this matter and cooperated in the successful campaign to have an equitable portion of Federal funds allotted to New York and New Jersey for post-war urban-highway improvements.

One of the most recent fields of activity in which we are engaged, which will interest you, is that of carrying forward a terminal unification program particularly in the field of mixed-load package freight. As you know, over 10 years ago the port authority constructed the first union railroad less-carload freight station. More recently announcement was made of the acquisition of property

for a union motortruck terminal. Few of us, I believe, realize the extent to which the handling of freight by over-the-road motortruck has increased in recent years. Counts show a daily movement in each direction of over a thousand over-the-road carriers during every 24 hours on the Boston Post Road. From all directions the daily number of inbound trucks reaches 5,000. Many of these are common carriers, and half of their traffic is mixed loads which must be delivered to or picked up from not 1 but many shippers. The operations of these motor carriers in making terminal deliveries in the city streets presents a serious problem in cost and congestion.

This matter strikes home to the Bronx businessman. His ability to manufacture and distribute his products and to draw his raw materials in competition with merchants and manufacturers in other centers depends in large part on the freight-rate situation. For some months, with the cooperation of Mr. Matthews and others of your organization, together with the commercial groups from Queens, Brooklyn, Manhattan, and northern New Jersey, we have been negotiating with motor-carrier conferences and even participating in proceedings before the I. C. C. in an endeavor to eliminate excess charges which are made in this area as compared to others.

It might astound you to know that a shipment of 500 pounds of third-class freight moving north-bound from Greensboro, N. C., is subject to a higher charge for delivery in the Bronx than to Boston, Mass. The basic rate per 100 pounds to the Bronx is 95 cents and to Boston $1.16, but an extra delivery charge is assessed—40 cents—in the Bronx, bringing the total charge on Bronx deliveries to $1.35 per 100 pounds, or 19 cents more than the rate to Boston. A similar shipment from Boston to the Bronx costs 6 cents more per 100 pounds than a shipment to lower Manhattan.

As part of our activity in protecting the commerce of the port, these matters are being continually checked and followed up with the regulatory bodies, but the motor carriers continually point to their high terminal costs in justification. Hence the port authority, in accordance with the principles laid down by the two States to govern a better development of the port, is seeking to unify operations wherever practicable and provide for elimination of duplication of effort and inefficiencies which result from the present lack of unification. Adequate union facilities should be established at strategic points which will keep the large trucks out of narrow streets and congested areas, permit efficient platform handling and organized zone deliveries to and from the shipper's door by consolidated route trucks.

Since the port authority operates, as you know, without burdening the taxpayers, it is necessary to progress this program in accordance with a program which will make the terminal self-supporting, and at the same time bring about a saving to the business community by removing the excuse for higher charges in this area.

Our plans for the first unit in lower Manhattan are well advanced. Our surveys show a need for and a willingness on the part of the carriers, to cooperate also in a terminal in northern New Jersey. There is a substantial quantity of freight delivered or picked up in the Bronx, but today only two comparatively small individual terminals are functioning in this borough, and most of the freight is handled to Manhattan and retrucked.

Our staff believes that the long-run picture will show the need for union terminals of this character in several sections of the port. The Bronx, as a great traffic-producing center and a gateway for service to and from New England and upper New York State, is one of the logical areas for consideration. In our surveys we will attempt, with the cooperation of shippers and carriers, to ascertain how much of the freight actually originates or is destined to the Bronx so that we may determine whether there is a concentration sufficient to justify from an economic standpoint a separate station in this borough. We will welcome the assistance of the business community and organizations such as the Bronx Board of Trade in this activity.

Looking further ahead it would appear that the establishment of a concentrating point for all types of mixed merchandise freight should follow, a place where air freight, steamship freight, and rail freight, as well as truck freight of this character, could be assembled and dispatched either direct to destination by over-the-road trucks or transferred by truck to airports, to rail loading terminals, and to steamship piers for loading into planes, cars, and ships.

The problem of bringing such projects from a planning stage to actuality requires a thorough and sound knowledge of the situation because of the necessity that these projects be of a self-supporting type. It is interesting that editorials have recently appeared in a number of metropolitan newspapers, all the way from Boston, Mass., to Topeka, Kans., pointing to the value of having an authority set up for this type of public work. However, we find that many representatives of these other communities who come to us, fail to realize that the mere legal creation of an authority waves no magic wand of self-support, and that the ability to establish a credit for financing projects depends upon sound planning and sound execution, plus the wholehearted cooperation of the business community.

I welcome this opportunity to talk with you about some of the problems which face us after the war, and I hope that we may continue to have the cooperation of the Bronx Board of Trade in the field of developing, protecting, and maintaining the commerce of the district, and in carrying forward such plans for physical improvement as fall within the scope of our legal and financial powers.

H. R. 674: A Civil Aviation Bill

EXTENSION OF REMARKS

OF

HON. CLARENCE F. LEA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. LEA. Mr. Speaker, today I introduced a bill, H. R. 674, providing for extensive amendments to the Civil Aeronautics Act of 1938, amendments which are greatly needed if civil aeronautics is to progress in this country in the future as it should.

The Civil Aeronautics Act of 1938, which was enacted by the Congress in approximately the same form as it was originally reported from the Interstate and Foreign Commerce Committee of the House, was passed at a time when the aeronautical interests of this country were at a very low ebb. Our air lines with few exceptions were in financial difficulties. Private flying was extremely limited, and our airport system had reached its then very limited capacity by reason of work-relief appropriations. Under the provisions of that act, as administered by the Civil Aeronautics Board and the Administrator of Civil Aeronautics, enormous strides have been made in the development of civil aeronautics in this country. Our air lines and civilian flyers were placed in a position where they could be of maximum aid in the prosecution of the war when the need for their assistance arose. Our aeronautical training facilities contributed heavily to the training of wartime pilots. Our airways system made possible an enormous amount of military and civilian flying essential to the war effort.

Notwithstanding the great strides which have been made under the Civil Aeronautics Act, experience has shown that in numerous instances modernization of that statute is necessary to provide an adequate statutory foundation for the new era of aeronautics which will be ushered in by the restoration of peace.

Many of the provisions of the bill are similar to provisions of the bill I sponsored during the last session, H. R. 3420, but the latter bill has been substantially revised in order to cure defects found to exist in that bill and to provide solutions for new problems which have come up since that bill was written. I will urge the committee to hold hearings on this new bill as soon as those interested in the legislation have had an opportunity to study it and formulate their comments. I hope that all interested in aviation legislation will examine this proposed legislation with care and give the committee the benefit of their constructive criticisms. The future problems of aviation are difficult and their proper solution is important to our national interest. All those who can contribute to such a solution should do so.

I will outline briefly the principal provisions of the bill.

AIRPORTS

Everyone recognizes that a most essential need for proper aviation development is the establishment and maintenance of an adequate system of public airports. I emphasize the fact that it is a system of airports that is needed; not just many scattered landing fields placed here and there without proper consideration of their size and location. A substantial amount of public funds—Federal, State, and municipal—has been and will continue to be spent for the construction and maintenance of airports. We should make certain this money is spent in the places where needed and for airports so located and developed as to provide their maximum usefulness.

In the last session of Congress the Interstate and Foreign Commerce Committee reported and passed House Resolution 598 requesting the Administrator of Civil Aeronautics to submit to the House a report upon the establishment of a system of airports and landing areas throughout the United States. On November 28, 1944, the Acting Secretary of Commerce forwarded the Administrator's report submitted in accordance with this resolution. This is a very extensive report and specifies in detail what now appears to be necessary in order to establish an adequate system of airports throughout the United States. The Administrator recommended that the Congress provide for a program of airport

construction and improvement extending over a 5- or 10-year period.

H. R. 674 provides for the establishment of such a program. It authorizes appropriations during the first 10 postwar years of not to exceed $550,000,000 for the construction and improvement of airports. This appropriation would be used by the Administrator of Civil Aeronautics, under general regulations issued by the Civil Aeronautics Commission, to make contributions for airports sponsored by public agencies. The contribution of the United States would be limited to not more than 50 percent of the total cost of the project. In order that the maximum usefulness can be secured from airport development performed under this statute, the Administrator is required to prepare and currently maintain a national airport plan. All projects to be eligible for a Federal contribution would have to be in accordance with this plan.

It should be understood that the House Interstate and Foreign Commerce Committee is not committed to the detailed provisions of this bill. Hearings will be held and the committee will welcome suggestions or information from anyone interested which may aid the committee in bringing to this House a constructive piece of legislation dealing with this important subject. We are expecting to find a rightful bill after the hearings.

INDEPENDENT STATUS FOR CIVIL AERONAUTICS

The bill also provides for the restoration of the independent status of the Civil Aeronautics Board and the Administrator of Civil Aeronautics. In the Civil Aeronautics Act of 1938 the Congress established an independent agency, the Civil Aeronautics Authority, to provide for the regulation and promotion of civil aeronautics. Through a reorganization order issued in 1940 the Civil Aeronautics Authority was transferred to the Department of Commerce. It placed the functions of the Administrator under the general supervision of the Secretary of Commerce, changed the name of the Civil Aeronautics Authority to the Civil Aeronautics Board, and placed it under the jurisdiction of the Department for certain purposes. The House by a large majority voted in favor of a resolution disapproving this reorganization order, but it failed to pass the Senate.

The problem here is not of personalities, but a problem of proper organization of a commission which is a creature of Congress set up to perform its delegated functions. Of the six great legislative commissions, this is the only one that is placed under an executive head. Complete in itself for efficient administration, it has a superimposed executive department which necessarily created duplication and delay in the performance of its functions. This bill provides for an independent Civil Aeronautics Commission to eliminate the present duplication.

The 1938 act provided for an independent investigation of aircraft accidents by an Air Safety Board. This Board was abolished by the 1940 reorganization order and its functions transferred to the Civil Aeronautics Board. Independence of accident investigation has such an important bearing upon safety in civil aeronautics that it seems clear the principle originally established in the 1938 act should be restored. This bill creates the Office of Director of Safety, which officer will be independent of both the Commission and the Administrator, and will be solely responsible for the investigation of aircraft accidents and the reporting of the causes thereof.

STATE AND FEDERAL JURISDICTION OVER AERONAUTICS

The bill provides for a clarification of the jurisdiction of the States and the Federal Government in the regulation and promotion of civil aeronautics. Its purpose is to eliminate conflicts between State and Federal agencies which necessarily result in detriment to the development of the industry and to eliminate duplication of effort between State and Federal agencies. Such conflicts, where unnecessary, result in needless expenditures of public funds and harassment of the persons regulated. The bill attempts to preserve constitutional distinctions between State and Federal jurisdiction as to matters affecting interstate and intrastate commerce. The bill attempts to leave with each agency of Government those activities which it is best equipped to perform.

In view of the inherently interstate character of civil aeronautics and the vital necessity of uniformity in regulation, this bill provides for the issuance of safety regulations by a single Federal agency, but permits the enforcement thereof by State agencies. This provision follows the bill the House passed in 1925 which, after amendment in the Senate, became the Air Commerce Act of 1926.

The bill also provides for economic regulation by the Federal Government of all air carriers and air contractors who carry interstate traffic. This includes the issuance of certificates of convenience and necessity, the establishment of rates, and similar functions. The economic regulation of air carriers and air contractors who do not participate in interstate traffic is left completely to State regulation.

This proposed division of functions between State and Federal Government is substantially different from that which was proposed in H. R. 3420, in that it leaves more jurisdiction to the States.

REGULATION OF CONTRACT CARRIERS

H. R. 674 provides for limited regulation of contract carriers by air. The present law does not provide in any respect for the regulation of such carriers except as to certain general safety standards.

The contract carrier, without any economic regulation, is under no obligation to the public to perform its service. He can confine his transportation to those cases that suit his convenience as to weather, time, place, and load. He can skim the cream off the available traffic and leave the less desirable to the common carrier. Without some regulation, he has an unfair relation to the common carrier with whom he may compete. Regulation would afford a more just relation to common carriers and maintain and promote the welfare of contract carriers.

The proposed regulation of contract carriers does not apply to them when they do not participate in the interstate traffic. This bill would authorize appropriations for the maintenance of civil-pilot training. The existing authorization of this service will expire this year on June 30, 1945.

AERONAUTICAL TRAINING AND EDUCATION

The original Pilot Training Act of 1939 contributed enormously to the creation of our air forces in all theaters of the war. There may be no immediate need for this activity, but it is believed that the authority for it should be maintained in permanent law and available whenever a backlog of pilots and aeronautical technicians are required.

It is provided that the Administrator of Civil Aeronautics shall foster the development of aviation education. As we enter the air age it seems essential that the youth of the Nation be made thoroughly familiar with basic aeronautical principles. Just as the mechanical experience of our youth has stood us in good stead during the present war, aeronautical experience will stand us in good stead in any future war.

AIRPORT ZONING

One of the prime essentials to the maintenance of a system of airports is the elimination and prevention of hazards such as surrounding trees and buildings. The value of an investment in an airport can be impaired or completely lost if hazards are permitted to grow up around it and destroy its safe use. Consequently, in order to protect our investment in airports, it is essential to have zone protection.

State and local governments can best perform this service. Federal legislation can and should aid them, however, through the establishment of uniform zoning standards and providing methods to aid them in the acquisition of land and rights of air space.

This bill I have just introduced requires the Administrator of Civil Aeronautics to establish uniform zoning standards throughout the United States and authorizes him to aid the local governments if such aid is requested through the use of the Federal power of condemnation of land and air-space rights. This zoning authority, of course, permits requirements to be adapted to the various physical conditions where airports may be located.

INTERNATIONAL AVIATION

The bill also directs the Commission to report to the Congress with respect to the development of this Nation's international air transportation. No effort has been made in the bill to deal extensively with the problems arising out of this phase of air transportation. The relation of our air navigation to international air service is not yet sufficiently developed to determine the extent to which legislation is necessary. The Civil Aeronautics Board is making progress with the hearings of cases involving international routes. It appears that sev-

eral of these cases will probably be brought to a conclusion before the end of the war in Europe. In view of the present uncertainties as to the effect of international arrangements on this commerce, the provisions of the bill dealing with international aviation are limited to a request for a report from the Commission for its information and appraisal of our international aviation problems and its suggestion as to legislation that it deems necessary to meet the needs of the situation.

TRANSPORTATION OF MAIL BY AIR

The Commission and the Postmaster General are required to report to Congress with respect to the carriage of various classes of mail by air in order that the Congress can determine the extent to which air-mail service may be expanded for speedier delivery and the economic benefit of the country.

ESTABLISHMENT OF LOCAL SERVICE

This bill includes provisions designed to aid the Civil Aeronautics Board in developing local air service. Under the present law as interpreted by the Civil Aeronautics Board, it is required to take up feeder line applications case by case. That requirement is a handicap to the efforts of the Board to coordinate these local services throughout the country into the national system of air transportation. The bill would permit the Commission to decide tentatively where interstate feeder lines should go, thus facilitating the proper adjustment of local services on a national basis. The Board's tentative findings would then be subjected to a hearing by all interested parties before a final approval would be made.

Other technical amendments made would facilitate the issuance of certificates for feeder service.

MISCELLANEOUS CHANGES IN EXISTING LAW

In addition to those changes specifically discussed above, the bill includes many others which experience under the Civil Aeronautics Act of 1938 has shown to be necessary.

The bill provides for the codification of all civil aviation law into one statute, the Civil Aeronautics Act of 1938, in order to eliminate confusion due to the fragmentary aviation legislation on the statute books at the present time.

It proposes that the Weather Bureau have greater power to provide international meteorological service and otherwise perfects the aviation law dealing with the Weather Bureau.

Pilots and their crew members on air carrier aircraft are authorized to exercise the control necessary to prevent breaches of the peace similar to that possessed by the master of a vessel in water navigation.

The administrative procedure of the Civil Aeronautics Board is proposed to be amended to facilitate the performance of its work during the crucial period into which we are now entering.

Outside of military pilots, the largest group of operators of airplanes is now the private flyer group. The numbers of this are exceeded by the military only on account of the war emergency.

Permanently, the private flyers will constitute the largest group of users of the airplane; in relative importance, it will be the greatest group.

This proposed bill will accomplish, among other things, three outstanding ones for the private flyer:

First. It will make it easier for the private citizens to acquire his license to fly and operate his machine;

Second. His one license will give him a right to operate in every State and under uniform regulatory provisions; and

Third. The adoption of a national system of airports, including numerous fields—coordinated as to location and provided with uniform navigation facilities—will in effect give the private flyer a new air age in which to operate his plane, both for utility and pleasure purposes.

The provisions of this bill are designed to aid the private flyer and the commercial operator alike.

The general purpose of this bill is to give air navigation and its related industries their just place in our transportation system and consistently with the economic welfare of the Nation.

Radio Talk by Chester Bowles Concerning Pressure Tactics on O. P. A.

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks, I am inserting herewith a recent radio talk by Mr. Chester Bowles, O. P. A. Administrator, relative to pressure groups and lobbyists. It is as follows:

Hello everybody, from time to time we all hear talk about pressure groups and lobbyists, and their efforts to influence Government actions. We in O. P. A. have often been the particular object of pressure attacks, as selfish groups attempt to secure the advantage of higher prices.

Recently a pressure-group plan was brought to my attention which illustrates vividly some of our problems in holding the line against inflationary price increases. If only one group were involved, I should let it go as another misguided, unfortunate effort on the part of a minority group, not worthy of your time or my time, once it had been detected.

But evidence has come to me that other groups are considering the same type of activity, to bring pressures on our Congress and to break down O. P. A. price regulations.

So, after a lot of thought, I've decided to talk to you about it this week. I'm going to show you just how this pressure-group machinery works—so that we can all be on our guard to distinguish real from synthetic public opinion.

Like almost all such pressure group activities, this latest case is the work of a misguided minority. They are a small group of manufacturers from an industry which is on the whole one of the most patriotic and forward-looking business groups in this country. I refer to the stove industry.

Many members of the stove industry, shocked by the efforts of some of their associates, have already called to assure us that the plan in no way represented the desires or the viewpoint of the stove industry as a whole.

Now I am going to start this pressure group story from the outside looking in. I'd like to show you how you as an ordinary citizen might have come across it yourself.

One morning recently, let us assume that you opened one of the leading newspapers in the country. You saw this headline: "Economists assail O. P. A. price policies." You might have found this same story also repeated in another leading paper devoted primarily to business and financial news. The gist of the story you read was that O. P. A. price ceilings prevent the stove industry in particular from making a profit. This statement was signed by a substantial group of economists, with their university connections mentioned.

It certainly looked genuine.

Actually, however, this genuine-looking story is a news counterfeit. It was only one of a series of many steps deliberately planned to influence your opinion and the clear thinking of your Congressmen. It was only one of many steps planned by a publicity firm specifically employed by a minority group in the stove industry to help raise prices for their already profitable industry.

As I speak to you from the radio studio here in Washington, I have in my hand the papers and letters issued confidentially by this publicity firm to their little group of clients in the stove industry. These papers and letters show the steps that led up not only to this single article in the press but to the whole series of carefully laid plans to influence your thinking and that of Congress in favor of higher prices for stoves. I am going to tell you, step for step, what these plans are. But before we start you might ask: Mr. Bowles, how did you get hold of these confidential papers and letters? The answer is simple—simpler, perhaps, than you think. These papers didn't come into the hands of O. P. A. by any devious gestapo method. They were given to us by several members of the stove industry itself.

These men sent the confidential papers to us because they resented the effort by a small minority to involve the stove industry as a whole in counterfeiting public opinion for selfish purposes.

Now for the story of the pressure groups' plans. It is easy and interesting to reconstruct them.

As long ago as last May a gentleman came into touch with certain members of the stove industry. He represented a publicity firm, the name of which is not important to my story. He saw that this little group of manufacturers wanted higher profits. He offered his services to get those profits for them. He outlined for them a plan by which he felt Congress and the O. P. A. could be bulldozed or intimidated into granting higher stove prices.

It is that plan which I now have in my hands. Let me read parts of this plan to you to show how he and his clients expected to operate.

On page 5 of his plan he says that: "For background editorial use," copies of the presentation urging higher prices are to be "sent to some 700 newspapers as well as to all leading business editors, financial writers, economists, and radio commentators."

Further, he says—let me quote—"We have prepared several editorials on the * * * situation high-lighting the industry's viewpoint for publication in small papers throughout the country. The first two of these," the plan goes on to say, "have been sent out to several hundred papers and probably will * * * be published in many of them."

I am sure the alert and public-spirited newspaper editors in this country will be interested to know that such editorials are headed their way.

Also, on page 5 of this publicity plan we find this interesting clue: "We have also prepared a statement" to be made by certain economists. He then names the economists whom he is going to get to lend their reputations to his words. They are the same economists who later appeared in print uttering the very words prepared for them.

The plan in my hands also states that one of these same economists is preparing a special article on the stove industry's need for higher prices and expects publication soon in one of the leading financial papers. We at O. P. A. were very interested to see that this article did appear only a few days ago in the leading financial paper named in the report in my hands.

The report goes on to say that by personal contact with influential men in business, in radio, in civic, and labor groups, it is hoped that interest will be aroused for the cause of higher stove prices and result in—let me quote—"an increasing mass of public opinion to which Congress and even the O. P. A. are susceptible."

The publicity firm and their clients also plan, according to the report in my hands, to appeal in a skillful way to all of you who are waiting to buy stoves. Magazines and newspaper articles are planned which will play on your need for a new stove and apparently will state that higher prices to the industry would somehow mysteriously produce them. As all of you know, the reason we do not have enough stoves now is the fact that the materials and manpower which are ordinarily used to make stoves are now going into the production of tanks, machine guns, and battleships.

Another and very important part of the high-pressure plan is a widespread appeal to all members of the stove industry to join in this campaign for higher prices and to put pressure on Congress.

One letter addressed to a member of the stove industry, and signed by the publicity man who invented this plan, contains this ominous suggestion:

"I will give you the signal and furnish the working material when the time is indicated for you to go to work on your own Congressman."

I am very happy to tell you that as far as we know only 14 stove manufacturers—only 14 out of the several hundred in the whole industry—have written their Representatives in Congress in the manner suggested.

I believe that this is a great tribute to the fine judgment and honest above-board business practices of the stove industry as a whole, and a testimonial to their generally excellent relationship with O. P. A.

Now, before I get to the final and important point of this talk, I think you may be curious as to what the facts really are about profits in the stove industry.

We have recently surveyed the wartime earnings of a substantial group in the stove industry. We have found that the firms largely continuing in stove production—and selling their stoves at O. P. A. ceiling prices—made three times as much profits before taxes, in the first half of this year, as they averaged in a similar period before the war. The firms concentrating largely on war work averaged four times as much profits.

In a handful of cases, however, a few stove manufacturers have really been squeezed by rising costs. In most of these cases, special price adjustments have been made by O. P. A.

These adjustments were arrived at according to our usual O. P. A. procedure. We studied each case individually, discussed it thoroughly, and then made our decision, based on these facts.

One small group in the stove industry, however, lacked confidence in the fairness of this essentially American and democratic way of doing business in wartime.

I have described the unfortunate methods into which misguided advice took them. What happened to their plan to counterfeit public opinion you now know.

If this selfish effort had succeeded, and if stove prices were increased—only by as little as 10 percent—the industry as a whole stood to gain—and the public to lose—twenty-two to twenty-five million dollars.

Now I come to the important point—the reason I have told this unpleasant story. I believe it illustrates vividly a danger, not only to our economy and our efforts to hold prices and rent from going upward, but to our whole system of democratic government. Friendly and honest discussion is the basis of our democracy. Differences of opinion are not only inevitable, but they are a healthy proof of our democracy.

But when behind closed doors public opinion is counterfeited, it is time, I believe, particularly during this war period, that all of you should know about it.

I am told that other such plans are in preparation by other small minority groups in some industries. Already sincere and honest businessmen have warned us of three of them. We are watching these developments with interest.

Let me make this point emphatically clear: Businessmen from one end of the country to the other, with relatively few exceptions, have played fair with O. P. A. They have not always agreed with the way we have gone about our job of holding down prices and rents. But as a rule they have played their cards on top of the table. They have known that price control is a national wartime protection for all groups—businessmen, workers, farmers, consumers.

As long as we pursue a policy of full, frank, open discussion, I am sure the great bulk of our people will remain solidly behind their Congress, and behind the O. P. A., in resisting any pressure group methods. I'm sure you will support us in the big democratic job of protecting all of us against inflationary increases in wartime costs, wartime prices, and wartime rents.

Next week I shall not be on the air. So let me wish you now the very happiest Christmas that we can expect, until this great war has been finally won.

Mr. Bowles, in commenting on this speech, stated:

This speech was based on a plan developed by a public relations firm at the request of a minority group in the stove industry. This plan was sent to us by a group of people in the industry who resented these pressure tactics. The plan was complete in all its detail, including copies of the "canned" editorials and careful instructions on just what everyone concerned was expected to do.

The purpose of this program was to increase stove prices, which, for the great majority of the industry, are certainly ample at their present levels. For the few who have been threatened with hardship, we have made special price adjustments.

Of course, we all know that these pressure group programs exist, but this is the first time I have had an opportunity actually to see one in all its detail.

The stove industry as a whole is an unusually fine group and one which has cooperated fully with us from the beginning. For this reason I hesitated for some time to publish the facts about the plan developed by a small minority among them. However, I decided to go ahead because rumors have come to us about several other such plans which seem to be in the early stages of development.

We have, as you know, established methods of working very closely with industry. We have nearly 500 industry advisory groups, most of which hold frequent and regular meetings. In addition, there are hundreds of informal groups in each industry which are working closely with us at all times. It does seem that these meetings offer industry a means of free, frank, open discussion without the need for developing synthetic public opinion as proposed by the stove group plan.

I am hopeful that this speech will have a quieting effect on many of these underground efforts. We will, of course, take every step to make it emphatically clear that this plan is in no sense typical of industry's attitude as a whole.

Increase of Pay of Postal Employees

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. ROONEY. Mr. Speaker, while I was overseas last month with the House Committee on Military Affairs this House of Representatives, with only one dissenting vote, passed H. R. 4715 which provided a permanent increase of $400 per annum to the postal employees of the United States. I had actively campaigned in behalf of this meritorious and deserving legislation and was quite disappointed when I learned that a point of order against it was raised and sustained in the Senate.

I trust that this body will immediately pass a bill similar to H. R. 4715 so that our deserving public servants in the post office may immediately obtain an increase in wages which will permit them to meet the increased cost of living.

The following editorial from the Brooklyn Eagle of December 28 last accurately presents the views not only of all the constituents in my congressional district but the thoughts and convictions of the entire population of the Borough of Brooklyn:

NEW CONGRESS SHOULD PROMPTLY VOTE PAY RAISE TO UNITED STATES POSTAL WORKERS

With its dying breath, the recent Congress denied to the postal employees of the United States a request for a raise in wages to meet the upped cost of living. These valiant public servants have not had a lift in their salaries for over a quarter of a century. Yet Senator BAILEY called the plea the first step on the road to inflation.

There are many ways to kill a cat, the saying goes. These are, evidently, a variety of methods to bypass the Little Steel formula, but not for the weather-beaten veterans of the postal routes. Here is a deserving case. In sleet, in snow, in torrid temperatures, the mails go through. At holiday times when the rest of us look forward to a bit of relaxation, the burdened pack-bearers of greetings to all trudge along their weary ways in faithful, undeviating service.

Thousands and thousands of these employees are family men. They are the kind of governmental workers who have cast their life's work with the system and are at the mercy of the Congress for a fair return for their labors. No giant national affiliated unions rush to their defense. They are on their own and their own is not enough.

We suggest that public-spirited citizens add one little extra burden to the mailmen's already overweighted pack by dropping a note to Members of Congress asking a better break for these faithful workers. That is one letter any one of them would be delighted to deliver.

This Changing World

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of January 2, 1945:

THIS CHANGING WORLD

(By Constantine Brown)

Since the return of Gen. Charles de Gaulle from Moscow, where he signed an all-out treaty of alliance with Russia, the French press has taken an even more critical tone toward the United States than formerly.

This is regarded as an interesting indication of the shape of things to come. When newspapers in the United States or Great Britain carry unpleasant or antagonistic stories or editorials concerning other nations, they represent the views of the writers or possibly of the newspapers themselves. But articles published in the press of countries where there is a strict political censorship and where the writers are confined to expressing only the views of the government, have a totally different significance.

It has been known in Washington for some time that a strong anti-American propaganda was started in France even before the invasion of Normandy. And it was not the Nazis and the Vichy government alone which were responsible for such a propaganda. Certain sections of the underground movement, those which were more political than militarily minded, had received instructions from their chiefs outside of France to criticize severely the American policies and their authors.

It was believed, however, that after the liberation of France, accomplished principally through the efforts of the American forces, there might be a change of heart as far as the "inspirers" of the censored French press were concerned. But nothing of the sort has happened.

On Christmas Day three important Paris newspapers, Ce Soir, Combat, and France-Tireur, celebrated editorially the assassination of Admiral Jean Francois Darlan, whose collaboration with the allied forces which landed in North Africa on November 7, 1942, had been accepted by the American Government for reasons of military expediency. These newspapers, representing the new political forces of France, which are centered around the FFI, charged that the Anglo-Saxons have not abandoned the Darlanist policies and are trying to place, by force if necessary, other Darlans in key positions in the very country they are liberating. The Paris press insisted that the crises which exist today in Belgium, Italy, and Greece are the result of "bourgeois" control of policies in Washington and London.

Obviously, because of the new treaty of alliance with the U. S. S. R., the French writers or the political censors who are turning on the green or red lights did not mention the fact that in the countries liberated by the Red armies no government can exist unless it is fully approved and installed by the Russian military commander and unless it is following the policies ordered by Moscow.

American diplomats who wish to minimize these trends and still believe that eventually the old close relationship with France will be reestablished say that such outbursts as those in the Paris press are natural. The French are now fighting principally a political war. Less than 50,000 soldiers are actually at the front fighting the common enemy. Since their government is satisfied that Germany is going to be defeated by the other Allies and France will receive a large share of German territory, the main preoccupation of the French people should be the reorganization of the world along new lines.

After the 1940 disaster and the subsequent years of servitude to the Germans, the French feel that their previous political systems—monarchy and democratic republic—have failed and something else must be tried. The inspiration for the new experiment comes from Moscow. This the Government of France has shown not only by signing a very comprehensive defensive-offensive treaty of alliance with Russia, but also by its refusal to negotiate a similar pact with the British, who were more responsible than any other government for the establishment of General De Gaulle as head of the French Government.

Recently returned Americans say that France, like the rest of the countries which we are now liberating, is bound to be antagonistic to the "bourgeois" American Government for a while at least.

Address by Hon. Robert F. Wagner, of New York, at National Lawyers' Guild Dinner

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Saturday, January 6, 1945

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from New York [Mr. WAGNER], on December 13, 1944, at a dinner meeting of the National Lawyers' Guild, in New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the Lawyers Guild, and friends, I am very happy to be here tonight—happy to be among so many of my old friends—even happier to be among those who one and all have been the friends of the same liberal causes that I have. These are indeed the times that try men's souls, when every personal interest must be submerged in the great issues which affect all mankind. And that is why I am glad this meeting was postponed until after the recent election, so that no flavor of personal candidacy would be present on this occasion.

With singular consistency, the National Lawyers Guild has enlisted in its membership those who are acutely aware of the new world and the critical age in which we are living. The guild's action on public questions has made it clear that it looks upon law as a living and growing institution. To all of you, precedents are but the lampposts along the path we have traveled, rather than Chinese walls to imprison our future course. Tonight, I am here to summon your ever-increasing interest in a great cause, to ask you to embrace a historic opportunity—the opportunity of contributing a share, great or modest, in the establishment of law and order among nations.

There is no problem of defining the objectives for which mankind is yearning. Mankind craves peace and tranquillity, the reign of law and justice in international conduct, coupled with freedom from fear of external aggression. This generation has been given the task of realizing this goal. Toward this end the blood and treasure of all civilized communities are being poured forth, conscious that if we miss this great chance now it may never come again.

What are the obstacles to success? It is not the unwillingness of the plain people anywhere. It is not their resistance which might cause us to fail as we failed once before. The obstacles exist rather in the voluntary subservience of many of our statesmen to the slavery of words. They are fettered by words like "sovereignty." They are shackled by phrases like "liberty of action." They would hesitate to enter the Garden of Eden until they knew the name of every tree that grew therein. And as usual, there are those who have uncanny capacity to find in our Constitution the letter that killeth instead of the spirit that giveth light.

I suppose that the quibblers and the doubters have always been with us. Beyond question, among the great throng that stood at the base of Mount Sinai to receive the Ten Commandments, there were some who were ready with amendments and reservations.

But we must always remember that the history of our law and the history of our Nation—in fact, the whole history of Anglo-American institutions—have subordinated logic to experience and have fashioned new ideas to meet new facts. Consider the inventive resourcefulness which entered into the development of equity alongside the vastly more rigid common law. Reflect on the genius which, unguided by a written constitution, fashioned a modern democracy out of a once feudal kingdom like England. I have no doubt that, in 1789, there must have been legalists who said that the concept of a sovereign nation composed of many sovereign states was logically impossible. But the great lawyers who sketched the outlines of our Federal Union were not legalists.

It is astounding to contemplate how much progress we have made in our system of common law, in our legislation, and in our practice of national government, while by contrast in international relations we are still veritably in the horse-and-buggy age. The ethical concepts, the moral concepts, the practical concepts, which have thus far prevailed in our international thinking are extraordinarily primitive. When we speak of personal honor, we think of obligations and not of rights. But when we speak of national honor, we think solely of some right that might be affronted. When we speak of a great citizen, we mean one who has labored for the common weal. But when we speak of a great power, we think only of its strength and armaments. When we think of individual liberty, we realize that it is attainable only under a uniform and democratic system of law. But when it is suggested that a sovereign nation subscribe to similarly established international law, a shudder goes through the starched shirts of the junior clerks in every state department and foreign office.

The twentieth century cries out for a newer and richer concept of the place of a nation in the family of nations. We must reach for practical devices that balance obligations with power, that place justice above self-will, and that replace isolationism with responsibility. The people are more than ready for such a concept. The lawyers must not stand in the way. The lawyers must not even be neutral. The lawyers must invent the symbol for the concept, and the practical machinery for its effective application.

In the light of these considerations, we may well reflect on the current hotly debated constitutional issue; whether the American representative to the council of the proposed international security organization should

have power to commit a predetermined contingent of our armed forces for use in restraining aggression? This is not the time to enter upon a complete discussion of this question. But I believe that such a provision in the constitution of the new international security organization is crucial to the success of the enterprise. It is crucial because of the very fact that the democratic nations are also peace-loving nations. They are not ready to declare war on slight provocation. They move only when it is manifest that there is no course other than war. They act only when the danger is clear, imminent, and overwhelming. But by that time, the little aggression has become a major aggression; the little conflict has become a great war. What might have been prevented by prompt show of force must be undone at the price of wholesale slaughter.

Thus no action was taken when Manchuria was attacked. Thus no effective action was taken when Ethiopia was trampled underfoot. Thus we find the world in the midst of its present agony and tragedy.

No one seriously disputes the proposition that an international security organization must, beyond all else, have the military means at its disposal for prompt application. But we are told that this is unattainable because the Constitution vests the war-making power exclusively in Congress. We are told—and how many times have we not been told before—that we cannot attain a supremely important objective because the Constitution forbids it.

Let me not be misunderstood. I am familiar with the long struggle of the people to curb the war-making propensities of their self-appointed kings and rulers, by forbidding them to make war without the consent of the people's representatives. That long struggle is one of the noble chapters in the march of human freedom. I would not impair one iota of that progress. The authority to declare war and the power to make war must remain in the hands of the Congress. On that issue, our Constitution is eternally right and eternally clear.

But the plan now under discussion does not propose that the President or the American delegate should possess authority to declare war.

It does not propose that any individual shall have power to appropriate funds or mobilize American manpower or resources for war making. The plan proposes merely that the President and the delegate shall have available the use of a police force—a police force constituted initially, so far as this Nation is concerned, by Congress—and operating ab initio so far as this Nation is concerned, for purposes defined in general by act of law.

This proposition is not shocking, or even novel. In Tripoli in 1801, in Algiers in 1815, in China in 1900, in Mexico, Nicaragua, and Haiti, Presidents of the United States have used force without congressional declarations of war. They have used only such force as Congress, and only Congress, had made and could make available for the purpose. The question of whether, in the particular instances I have cited, the decision to use force was wise or unwise is beside the point—for that same question of wisdom in the light of history might be raised with respect to some of the wars which Congress declared. The only significance of the illustrations is this: Throughout our history, the use of a police force to enforce the laws and treaties of the United States has not been regarded as war. This distinction has been recognized and lived by. Its success in practical application is the best evidence that our Chief Executives, as well as our judges, have given that living construction to our Constitution which is the essential spirit of that great charter of our liberties.

Let us not be disturbed by the difficulties of formulating some pretty definition, which would distinguish between war making and international policing, in a manner to satisfy the most critical of textbook legalists. Nobody has ever had written a final definition of interstate commerce, or of the respective powers of our Nation and our States. Through more than 150 years of our constitutional history, we have been weaving that definition into the pattern of our national existence by deciding cases as they arise.

Year by year, necessity has supplied refinements in the definition to meet new cases and new controversies. It is incomprehensible to me that we, who have accepted this pragmatic philosophy in dealing with the relatively smaller matters of the daily business of our courts should reject this pragmatic philosophy in dealing with the supreme problems of world peace.

The lay public, I am profoundly convinced, has a deep understanding of the fundamental issue here involved. It is our task, as lawyers, to prevent public opinion from being dazzled or dissuaded by any false show of legalism, emanating from skilled obstructionists. You, ladies and gentlemen, as members of a profession learned in the Constitution and its history, have a high and solemn duty to perform.

Charge yourselves, therefore, with the obligation to relieve any public concern—so that this Nation may speak with a united voice in the councils of the world—and so that America may discharge fully its obligation for the maintenance of an honorable peace throughout this one world in which we live.

Christmas Address by the President of the United States

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Saturday, January 6, 1945

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the Christmas address by the President, broadcast to the people of the United States on Christmas Eve last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is not easy to say "Merry Christmas" to you, my fellow Americans, in this time of destructive war. Nor can one lightly say "Merry Christmas" tonight to our armed forces at their battle stations all over the world—or to our allies who fight by their side.

Here, at home, we will celebrate this Christmas Day in our traditional American way—because of its deep spiritual meaning to us; because the teaching of Christ are fundamental in our lives; and because we want our youngest generation to grow up knowing the significance of this tradition and the story of the coming of the immortal Prince of Peace and good will. But, in perhaps every home in the United States sad and anxious thoughts will be continually with the millions of our loved ones who are suffering hardships and misery, and who are risking their very lives to preserve for us and for all mankind, the fruits of His teachings and the foundations of civilization itself.

The Christmas spirit lives tonight in the bitter cold of the front lines in Europe and in the heat of the jungles and swamps of Burma and the Pacific islands. Even the roar of our bombers and fighters in the air and the guns of our ships at sea will not drown out the messages of Christmas which come to the hearts of our fighting men. The thoughts of these men tonight will turn to us here at home around our Christmas trees, surrounded by our children and grandchildren and their Christmas stockings and gifts—just as our own thoughts go out to them, tonight and every night, in their distant places.

We all know how anxious they are to be home with us, and they know how anxious we are to have them—and how determined every one of us is to make their day of homecoming as early as possible. And—above all—they know the determination of all right-thinking people and nations, that Christmases such as those that we have known in these years of world tragedy shall not come again to beset the souls of the children of God.

This generation has passed through many recent years of deep darkness, watching the spread of the poison of Hitlerism and fascism in Europe—the growth of imperialism and militarism in Japan—the final clash of war all over the world. Then came the dark days of the fall of France, and the ruthless bombing of England, and the desperate Battle of the Atlantic, and of Pearl Harbor and Corregidor and Singapore.

Since then the prayers of good men and women and children the world over have been answered. The tide of battle has turned, slowly but inexorably, against those who sought to destroy civilization.

On this Christmas Day, we cannot yet say when our victory will come. Our enemies still fight fanatically. They still have reserves of men and military power. But, they themselves know that they and their evil works are doomed. We may hasten the day of that doom if we here at home continue to do our full share.

We pray that that day may come soon. We pray that until then, God will protect our gallant men and women in the uniforms of the United Nations—that He will receive into His infinite grace those who make their supreme sacrifice in the cause of righteousness and love of Him and His teachings.

We pray that with victory will come a new day of peace on earth in which all the nations of the earth will join together for all time. That is the spirit of Christmas, the holy day. May that spirit live and grow throughout the world in all the years to come.

The Use of Statistics in the Formulation of a National Full Employment Policy

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, January 6, 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Honorable HENRY A. WALLACE, Vice President of the United States, before a meeting of the American Statistical Association, held at the Willard Hotel, in Washington, D. C., on December 27 last. The address is entitled "The Use of Statistics in the Formulation of a National Full Employment Policy."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE HENRY A. WALLACE

Each statistician can well remember when he or she first began definitely to use statis-

tics for a specific purpose. I, myself, first became intrigued with statistics in the calculation of corn-hog price ratios back in 1915. A little later the problem of using multiple correlation coefficients to determine the relationship between summer rainfall and temperature, on the one hand, and corn yields on the other hand, resulted in a paper which the Weather Bureau was kind enough to publish in 1920. In December 1923 I presented a paper before this association on the determination of hog prices by hog supplies and business activity. The statistical aspects of Fisher's quantitative theory of money intrigued me and in 1920 I became one of the vice presidents of the Stable Money League. This brought me into contact with Carl Snyder and Randolph Burgess, of the New York Federal Reserve Bank. Carl Snyder strongly believed in aristocratic capitalism and endeavored to prove in every field of human activity that the dispersal of human ability followed the Pareto distribution curve. I believed in both economic and genetic democracy, and therefore Carl Snyder and I would have many a long argument whenever we got together at the time of these annual statistical and economic gatherings.

I have also found myself interested in the quantitative approach in political analysis. About 1928 Carl Snyder began to develop his statistical method of forecasting elections. In 1936 Louis Bean, working independently, developed his method, and I followed the analyses of both very closely in comparison with the sampling surveys that Gallup and Roper started.

In the election campaign this year I had an opportunity to merge economic forecasting with political forecasting. The evening of October 28 I heard over the radio the President's Chicago campaign speech and immediately sent him a wire saying: "Your goal of 60,000,000 jobs is perhaps high, but I glory in your daring, and, as you say, America can do the seemingly impossible. We are predicting you will carry 36 States and have a 3,000,000 popular majority."

The President wired back on November 1 that he was glad I liked the Chicago show and that he promised to make good on the 60,000,000 jobs if I would do the same with regard to my predictions concerning the 36 States and the 3,000,000 popular majority.

History will record that something was done toward the formulation of economic policy for this country in that interchange of statistical wires. In practically every campaign speech I made from November 1 onward I would tell my audience about this interchange of wires and then say, "The President has put me on the spot. I've got to make good on this election prediction and I want you to help me." In some of the extemporaneous speeches I think I even went so far as to say, "If you will vote for Roosevelt you help get me off the spot and put him on." The people smiled at the joke. Seriously speaking, the President in his address to Congress last January 11 and again in his Chicago October 28 campaign speech, referred to his economic bill of rights. This bill of rights must be translated into legislative action. That's what the vote meant on November 7. Item No. 1 on the economic bill of rights is "the right to a useful and remunerative job in the industries or shops or farms or mines of the Nation."

Full employment in the United States is the first step on the road to permanent world-wide peace. Other nations look at the tremendous economic power of the United States, at the violent fluctuations in the American business cycle, at the previously demonstrated ineptitude of the American Government in dealing with the problem—and, after seeing all this and looking toward the future, they shudder and pray. They pray for full employment in the United States, not because they love the United States, but because they know that without full employment here there is a world-wide trouble.

Without full employment here we undermine world price levels and world trade, the results of which reach into the economic and political fabric of every other country. Without full employment we cannot have a successful foreign economic policy of reduced trade barriers and a high volume of both exports and imports.

In the next session of Congress one of the first bills to be introduced will no doubt be the full employment bill of 1945, designed to carry out item No. 1 on the economic bill of rights. This bill or some other bill dealing with full employment will, in my opinion, become even more significant for the future than the agricultural bills which Congress wrestled with in the twenties. "Equality for agriculture" was the farmers' battle cry beginning in 1924. That which gave definitive striking power to the phrase, "Equality for agriculture," was a statistical price concept worked out by Hugh Johnson and George Peek back in 1921. They presented this concept to Harding's agricultural conference in January of 1922 but it was not put in legislative form until 1924.

The abstract concept of justice in terms of prices was given a mathematical formulation by the young economic statisticians in the Department of Agriculture in the middle 1920's. As the years went on, the idea of parity price more and more gripped the imagination of farm leaders. I well remember the exultation in the voice of George Peek when the concept of justice for agriculture was written into the preamble of the farm legislation back in May of 1933.

For worker, businessman, farmer, and, above all, for the statesman interested in preventing the hardships which create revolution in other countries, the concept of jobs for all is even more important than price equality for agriculture. Farmers are much better off with price equality and full employment than they are with price equality and unemployment. In other words, a medium piece out of a big pie of consumer purchasing power may be a whole lot larger than a large piece out of a small pie. What the economic statesman wants is the biggest possible pie for the whole world in order that all the nations, all the regions, and all the groups may have a good slice.

Jobs for all should and will be the economic battle cry of all the peoples of the world for the next 20 years. A phrase of this sort is good as a political slogan, but if it is ever really to amount to anything in the life of the Nation it must have a statistical formulation of some kind. Somebody must do for the economy as a whole what General Johnson and George Peek did for agriculture when they worked out the underlying statistics of the phrase "equality for agriculture."

Impetus recently was given to the coming battle for full employment by Jim Patton, president of the Farmers' Union. I didn't learn the story from Jim Patton or from any Farmers' Union member. A Government statistician told me how Patton, pondering on the role of investment for a post-war gross national output of $200,000,000,000, was impressed by the Simon Kuznets national-income data. Here he found that over any 10-year period about 20 percent of the total volume of goods and services produced in this country was represented by so-called capital formation. As I understand it, gross capital formation as used by the statisticians in the Department of Commerce and the National Bureau of Economic Research consists of new construction of all kinds, including buildings, roads, and plant and equipment, for both replacement and expansion. In 1929, when there was substantially full employment, these items amounted to around $20,000,000,000 and the total national product of goods and services was around a hundred billion dollars.

In order to have full employment after the war, Jim Patton reasoned that it would be necessary to have a total product of $200,000,000,000 at present prices and wages, and therefore an annual expenditure on capital goods amounting to around $40,000,000,000. He was anxious to stimulate discussion and hoped the $40,000,000,000 figure would serve that purpose. Patton was a friend of Senator MURRAY, of Montana, who also was chairman of the War Contracts Subcommittee. He therefore submitted to this subcommittee a rough draft of a legislative measure designed to have the Government provide for a forty-billion-dollar level of capital investment every year. The subcommittee forwarded this proposal to the various Government agencies. Some of them assumed that Patton meant to rely on the generating power of capital investment as the sole source of economic activity. Others felt the forty-billion figure did not necessarily represent the precisely correct amount of investment which might be necessary to secure full employment in any given year, and some felt that fiscal policy, wage levels, foreign trade, and other matters should also be dealt with. As a result of these criticisms the original draft was broadened.

Its present form is the proposed full employment bill which was brought forcibly to public attention by newspaper stories on December 18. When both the New York Times and PM give a bill a big front page play on the same day, there must be something to it. The President's figure of 60,000,000 jobs and Senator MURRAY's full employment bill of 1945 have in them great thought-provoking power. I am sure there are many improvements which must be made in the phraseology and content of the proposal but the Murray bill does have the supreme merit of focusing attention on the key spot.

I know many of the statisticians and economists here in the various agencies who have in recent years developed the basic data on the national income and have been drawing up patterns of national expenditure and income for full employment. This bill capitalizes on this constructive work.

This is not the occasion for any detailed discussion of the legislative, administrative, and economic features of this bill. In brief, the bill declares it to be the national policy to secure as much employment as possible through private enterprise and in addition provide for sufficient desirable Government programs to insure the jobs necessary for all who want to work. It calls for setting up an annual Nation's budget for jobs in addition to the annual Federal Budget. It calls for estimating the number of jobs needed during the ensuing year or years to provide full employment, and for estimating the gross national product or total expenditures at the expected level of prices by business, consumers, and Government required to provide that total number of jobs. It further calls for estimating the prospective volume of investment and other expenditures by business, consumers, and Government including expenditures in foreign trade. In case the prospective expenditures are likely to fall short, Government is directed first to encourage increased private employment, and then, if necessary, a general program of increased Federal expenditures to make up the difference, these expenditures to include assistance to business, useful public works, public services for health, education, slum clearance, conservation, and development of natural resources and other programs.

I find in this proposed bill something that has hitherto been lacking in most of our post-war planning, namely, a clear understanding of the necessity for active interplay between the executive and the legislative branches of our Government. The bill recognizes the key role of the Congress in determining our basic national policies. At the

same time it provides a method of dramatizing economic programs, of raising to the level of high politics the economic deliberations of our President and of the Members of our Senate and House of Representatives. Under this bill, there would inevitably be basic disagreements between various political groups as to how much emphasis should be put upon measures to stimulate private enterprise and how much emphasis upon direct Federal investment. There would inevitably be conflicts between the President and many vocal groups in the Congress. In actuality, the common man would have no guaranty of his right to a job unless he were politically organized to see to it that his President and his Congress adopted those specific policies and those specific programs that would actually assure full employment. Which is just as it should be.

Under the bill, however, if the wrong policies are adopted, it would be infinitely easier for the average man and the average woman to point the finger at the political leader or the political group responsible for those policies. In short, the proposed national production and employment budget would provide a method of political accountability to the people of our country, a yardstick by which the common man could measure the extent to which he has been properly served by his representatives in the Government.

With the bill in operation, both Government and business would be under the necessity of informing the public much more promptly of forthcoming fiscal policy. Business, for its sake, needs prompt information as to Government policies. Likewise Government needs prompt information as to future investment plans of business. The bookkeeping of future investment in both fields can be of the greatest value in molding Government policies and removing business uncertainty. Specifically, I think that the full employment bill might well be amended to provide that tax measures are always to be enacted by June 30 of each year, so that business can know in advance what the fiscal policy of the Government is really going to be.

If the President, as the proposal provides, were to set up a nation's budget along these logical lines, and if, as the proposal further provides, this budget were to be submitted for detailed study by a new Joint Congressional Committee on the Budget, I can foresee considerable extension in the use of the national statistics now available, and the development of a great deal more information on production, employment, incomes, and consumption by regions and by industrial and occupational groups. In a hasty survey of Government statistics required and available for estimating requirements of the proposed full employment bill, made for me by Dr. Stuart Rice, I find that a bill of this sort would lead to filling up certain statistical gaps which must be filled up if unemployment is to be anticipated and prevented. Above everything we must have a more adequate basis for estimating in advance the volume of investments, current and prospective by business, by consumers and by governments.

These inadequacies and gaps in our statistical information should not deter us from making full use of what we have in relation to emerging economic policy. I have always been a believer in exact and complete data, but much progress in policymaking can be made by the use of statistics for operating purposes that may be only 80 to 90 percent complete.

Statisticians and economists, working on national income and national expenditures, seem to be moving in the same direction in various parts of the world. For example, the same line of thought contained in the full employment bill, is emerging also in both England and Australia. In both these countries we find the same emphasis on the public responsibility for maintaining a high level of general purchasing power, and the same concern with the three chief sources of expenditures for funds and services—namely, the consuming public, private business, and government. There is even emerging a common pattern in the statistical lingo and in the handling of the basic facts with regard to consumers' purchases, business investment in plant and equipment, and Government expenditures for ordinary administrative purposes, for war purposes, and for developmental purposes.

Sir William Beveridge has just published a report on Full Employment in a Free Society which I think transcends in importance his masterpiece on social security 2 years ago. Social-security programs, desirable as they are, constitute a minor part of the total stream of purchasing power required to sustain a high level of production and employment. I quote two paragraphs from Beveridge's new book. The first deals with responsibility, the other with the means through a new type of budget.

Bear in mind that this report is based on long study of British prewar and war experience. With regard to state responsibility Beveridge says:

"Employment depends on outlay. Full employment cannot be attained unless outlay in total is sufficient to set up a demand for the whole of the labor that is available for employment. * * * During war a large part of the total outlay is undertaken directly by the State. During peace the bulk of the outlay can, and in a free society will, continue to be private. But the ultimate responsibility for seeing that outlay as a whole, taking public and private outlay together, is sufficient to set up a demand for all the labor seeking employment must be taken by the State, because no other authority or person has the requisite powers. No private enterprise can survey the whole field of industry or insure at all times a demand for all that industry can produce at a price covering its costs. No private enterprise can make finance its servant rather than its master. The outlay of every person or authority other than the state is limited rigidly by the financial resources of that person or authority. The central proposition of this report is that the responsibility of insuring at all times outlay sufficient in total to employ all the available manpower in Britain should formally be placed by the people of Britain upon the state. That first and foremost is what is meant by adopting a national policy of full employment." So much for the Beveridge ideas on governmental responsibility.

With regard to the new type of budget, he says the following:

"The instrument by which the state has influenced outlay in the past has been the annual budget presented, usually about April of each year, by the Chancelor of the Exchequer. This budget has determined directly the sale of public outlay undertaken by the central government; it has to a very large extent determined the outlay of local authorities; by the taxation proposed it has influenced both the extent and the direction of outlay by private citizens. It is through the same instrument of public outlay and of taxation that the state in future must pursue its new objective of adequate total outlay. Adoption of a national policy of full employment means a revolution in national finance—a new type of budget introduced by a minister who, whether or not he continues to be called Chancelor of the Exchequer, is a minister of national finance."

In Australia the head of their Ministry of Post-war Reconstruction, Dr. H. C. Coombs, has adopted very much the same approach. In a recent lecture on "Problems of a High Employment Economy" he states that "The appropriate policy of Government would appear to be as follows:

"(a) To determine a basic public investment program, including all works which it considers of sufficient urgency to be undertaken whatever the level of private investment;

"(b) To discover from private enterprise the scope of their plans;

"(c) If these two programs are judged insufficient, to supplement them by—

"(i) Further investment by private enterprise prepared at the request of and perhaps assisted by the government; and/or

"(ii) The inclusion of projects for public investment of lesser urgency than the basic program already included;

"(d) To have ready numbers of emergency works which could be readily put into operation to supplement the planned program if it proves insufficient."

As the common man, the statistician and the statesman look toward the future, they know that supreme emphasis must be placed on full use of all resources of man, nature, and technology to raise the standard of living of all the world. Both the scientist and the statistician know the productive potentialities are enormous. And this knowledge must make for daring economic projections and bold statesmanship to bring them about. On the statistical side we must have the courage of certain governmental economists who, back in 1940, when most of us thought a 100-billion-dollar output of goods and services was beyond the realm of the probable, cited a firm statistical base for thinking that within 2 years it was physically and technologically possible to raise our annual output to the present equivalent of nearly $200,000,000,000.

Almost no one believed them. The war has proved them right. Contrast their imaginative daring with the fearful, halting attitude of certain nostalgic editorial writers or with those who would have us wait until unemployment is upon us before taking coordinated, preventive measures. Not in such a spirit shall we solve the very great problems of the post-war years.

The war in Europe and in the Pacific has yet to be won and that task must continue as the first preoccupation of our hands, hearts, and minds. Nevertheless, the Seventy-ninth Congress will undoubtedly carry on its shoulders full responsibility for devising full employment legislation. Looking ahead to the day when Congress sees definite signs of peace, the statisticians must anticipate the types of statistics which will inevitably be required. To anticipate the congressional need accurately the statisticians must be necessity acquaint themselves with all that the economists of the Anglo-Saxon and European world have learned as a result of World War No. 2 and the depression following World War No. 1. They must meet with forward-looking Congressmen who are anxious to move with speed when the time comes. They must meet with those business, farm, and labor leaders who are eager to see the United States go ahead with full steam. In the economy of the future the only true national deficit will be labor unemployed and statistical terminology will be more and more concerned with the full use of our resources.

I have given you examples of very specific policy proposals made here and abroad for achieving full employment. As I have said, I am not here concerned with the administrative mechanics of a full employment policy, but rather with the principles it should follow. Whether or not we formalize the Nation's Budget, we must adopt the idea it represents. The essential idea is that the Federal Government is ultimately responsible for full employment and can discharge its responsibility only by planning in advance to synchronize all of its programs with the programs of private enterprise so that the whole national income will be maintained at the full employment level.

Fraternalism, a Source of Adequacy

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, January 6, 1945

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Fraternalism, a Source of Adequacy," delivered by me before the Grand Lodge of Maryland, Independent Order of Odd Fellows, at the Maryland Casualty Co. auditorium, Baltimore, Md., on December 11, 1944.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am very happy to be with you this evening. When I was asked to speak, my only problem was what the subject should be.

In this fast-changing world, it is well sometimes that we briefly turn away from the immediate problems and refresh ourselves in talking and thinking about great ideas and great principles.

We hear so much about post-war problems—national and international. We read in the paper how in Greece, Greeks are fighting Greeks. We read of the vast difficulties encountered by the liberated peoples in Belgium, France, Poland, and elsewhere.

In this country, too, we hear a great deal of talk on the weighty subject of international collaboration and cooperation—so much talk, in fact, that many people fail to remember the lesson of history. Bluntly, that lesson is this: No agreement between nations will be of any effect no matter how solemnly signed or undertaken unless there is back of the promised and written word the integrity of purpose, the mutuality of interest, the sense of sanctity of international promises.

But tonight, I shall not speak to you on these problems.

I have chosen, rather, the subject Fraternalism—A Source of Adequacy, a subject which is just as shallow as each of us may make it, or just as deep as the infinite spaces. When we plumb its depths, we find adequacy. And is not that what each of us owes his day and his generation—to be individually adequate?

I hope that this will not be simply a common occasion, but a great one. Would it not be wonderful if we could start some dormant human being this evening up Jacob's ladder? Would it not be a rich experience to plant in the mind of some listener a seed that would bear fruit, making him or her a great living force for good in this community and Nation? It would not be the first time that a common man has seized a common occasion and made it great.

Before a man can lift himself he must live his thoughts. He must keep his mind open to the great truths that constantly seek to enter into his portals. Then, once they have entered, he must act upon them.

The world recognizes that ideas are power. It knows that in every life "As a man thinketh in his heart, so is he." It knows that throughout history, the great man and woman has been he or she who has become possessed of and by some great forward-moving idea.

Let us turn, then, to our immediate subject, fraternalism.

First, we need here what Goethe asked for with his dying breath, "more light." Fraternalism is one of the three great ideas presented by Rousseau before the birth of our Republic. The other two ideas were liberty and equality. The dictionary defines "fraternity" as a gathering together of folks for the purpose of exemplifying brotherhood. Fraternalism radiates friendliness. There can be no brotherhood or fraternalism without those qualities known as friendship, charitableness, fellowship, love, and truth.

Mere words, you say. Yes; to some—to others they are filled with the light of life; they are aflame with inner meaning. Life has meaning.

Having this in mind, let us see some examples of true fraternalism.

1. I know an individual who had not awakened to the thought that it was her duty to expect great things of herself. One day a man, exemplifying the spirit of fraternity, brought home the great truth that this was a duty of each individual. He said:

"It doesn't matter what other people think. If your plans and your aims are right, no matter if they call you a crank or a dreamer, just believe in yourself."

The result of his action was that woman's dedication of her life to service.

It was Marie Corelli who said:

"If we choose to be no more than clods of clay, then we shall be used as clods of clay for braver feet to tread on. If you want to paralyze your own future, think of yourself as a weakling, not as good as others."

You remember the story of the eagle which had been chained. It was captured as a young bird, and it could never get away. It used to march out to the end of the chain and back again. One day a link in the chain broke, and the eagle marched out beyond its former limits, spread its wings and flew. A man who is self-reliant, positive, optimistic, and has faith in himself, begets poise, assurance, and confidence. The churchman quotes, "According to your faith, be it unto you."

There is a difference between mere egotism and the faith that comes from consciousnees of being one with the Infinite, and possessing, therefore, the necessary ability to go ahead.

Today, civilization needs this mental poise, this confidence, this faith in self. Paul had it when he said, "Now are we the sons of God." Through this powerful statement, he secured the might of the Infinite behind all his endeavor. Always, he lived so close to the Divine Presence that he drew forth almost limitless power to move forward.

Was it not faith that maintained the spirit of Columbus when he was jeered at, and Fulton when he attempted his first trip on the *Clairmont* up the Hudson?

Now, please understand me, I am not asking you to believe in your mortal bigness. I am asking you to believe in the grandeur that is you—the Divine within.

2. "The next time the thought comes that you are a failure, kick the intruder out." This is the remark I heard a man say once to a fellow who was discouraged and needed a warm manifestation of fraternalism.

Some years ago I saw many men who had lost money and property and position, and in spite of the loss, had come through with a smile. These men had learned it didn't pay to drag the ghost of yesterday along with them into the present or into the tomorrow. They had found out that if they did a lot of foolish things, made a lot of imprudent investments, lost their money, that they still had no right to destroy their happiness by bringing up these phantoms of the past. They had found they had no right to waste their energy worrying over the dead. "Let the dead past bury its dead." They had found that there is one way, and only one way, to carry on with bitter experiences and blunders and mistakes, and that is to bury them. They had left "their low-vaulted pasts" and "were building more stately mansions for their soul."

3. If we really want to be fraternal in our actions, we must transmit a feeling for beauty to our fellows. Why are so many folks unhappy, soured on the world, pessimistic? Because they do not appreciate the beauty that is around them—the entrancing sunset, the starlit night, the falling leaves—the beauty in Nature, in human beings, in music, in art, in literature, in religion.

The Great Teacher said:

"Consider the lilies of the field; they toil not, neither do they spin, yet Solomon in all his glory was not arrayed like one of these."

One of the great experiences of life is to become a lover of the beautiful. The star that twinkles at night, the running brook, the budding flower, all bid us to look for the Author of the beautiful. Without an appreciation of the riches of beauty, no life can be poised or symmetrical.

Read the story, The Green Light, and see how the dean eradicated the drabness in human lives and replaced it with the love of beauty, the love of man, the love of service.

Remember in Hawthorne's story of the Stone Face, the lad who looked at the benign countenance until in old age he himself reflected all the virtue of that face.

Several years ago, standing at the edge of the great canyon, there was revealed a picture of such beauty and majesty, that my whole soul thrilled with the sense of sublimity and grandeur.

A contemplation of the subject of beauty has transformed many a plain face. It has done away prejudice, selfishness, envy, and anxiety. It has beautified the countenance more than cosmetics or massage will.

4. The main function of brotherhood is to be a discriminate giver. Do you realize the importance not only to yourself but to others of carrying pleasant news?

It is a medical fact that mental discord saps vitality, lessens courage, and shortens life. Someone has said that for every living creature a bath of love and good will is more important than a water bath. Therefore every individual must realize that in being good unto others he is being good unto himself.

The greatest giver is not he who doles out he most money. It is he who, like the Master, brings to the lives of all whom he contacts the great ideas of strength, courage, and love which remake their spiritual desert into a fertile orchard.

Tolstoi had the idea when he was approached for alms by a palsied beggar on the street of Moscow. Tolstoi gave him instead an idea. That afternoon the beggar was no longer palsied. With starry eyes he repeated, "He called me 'friend.'"

I wonder if I am conveying the full import of my message? We may discuss this matter of "fraternalism" very glibly, failing to recognize that within it can be found the solution of many of our problems, social, economic, and political. In addition, it can be the deciding factor in our entire personal happiness. There is something wrong when we become so worried and absorbed in making a living that we cannot make a life. We were made to express joy and prosperity, gladness and pleasure. We were made to believe in ourselves.

When two workmen were helping Sir Christopher Wren build St. Paul's Cathedral in London, and one was asked what he was doing, he replied he was hammering out rock; the other, "I am helping Sir Christopher build a cathedral."

It was Arnold, of Rugby, who saw in the English brats "a spark of the divine." And it was this insight that changed the course of English history.

When I think of the great "brothers" of the world, those men who demonstrated best what we mean by fraternity, I do not call to my mind men like Carnegie and Rockefeller,

fine as their gifts may be; for they bestowed treasures of worldly wealth.

But there comes to my mind those great givers who gave eternal truths that cleared the beclouded intellects of men. I think of those who inspired others as did the lowly Nazarene who taught man that he was not mere mud, but a spark of the Infinite; the Nazarene who taught also that man's conception of himself and of Diety were erroneous, that instead of a vengeful God, Deity was Love; who taught that the real man never stops existing, and that no matter what his earthly vicissitudes, man in the spirit is one with God.

I have spoken seriously. I have not interspersed my remarks with any jokes. For I deeply feel that it is time that leaders like you men and women resolve to accept the great challenge of adequacy.

We must advance from our state of arrested development. We must awaken from this dream existence, and in the solution of our daily problems we must discover within ourselves and display unto others more vision, more fraternity.

I repeat, then, my message: Be ye adequate.

Tribute to Edwin A. Halsey by Gould Lincoln

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, January 6, 1945

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a tribute paid by Mr. Gould Lincoln and published in the Washington Star, to the very capable and popular Secretary of the Senate, Mr. Edwin A. Halsey.

Mr. McKELLAR. Mr. President, a few days ago, Mr. Gould Lincoln, one of the leading columnists of the city, wrote a very fine article about Col. Edwin A. Halsey, Secretary of the Senate, which my distinguished colleague the Senator from Virginia [Mr. BYRD] has asked to have printed in the RECORD.

I endorse all that Mr. Lincoln says about Colonel Halsey, whom I have known intimately for a period of more than 30 years. He is not only one of the best of men but a most efficient and excellent official of the Government. I do not suppose the Senate ever had a better Secretary. He is popular with all Senators and does a good job in a most pleasant and gracious manner. I take great pleasure in paying this tribute to him.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

THE POLITICAL MILL

(By Gould Lincoln)

The Senate is about to do honor to the ninety-seventh Senator—and at the same time honor itself. It will reelect, at the opening of the new Congress, Col. Edwin A. Halsey, of Virginia, secretary of the Senate—the highest office at its command.

For 12 years Colonel Halsey has served in this capacity. His total service with and for the Senate, however, covers a period of nearly 48 years. From his home, Fern Moss, Tye River, Va., in 1897, he came with his uncle, the late Senator John W. Daniel, to be a page in the Senate.

The office of secretary of the Senate is a proud one. Samuel A. Otis, of Massachusetts, the first to hold it, came to the First Congress from the Continental Congress—and he was retained for a quarter of a century. Party lines were not so closely drawn in those days. Colonel Halsey has been continuously secretary far longer than any others in the last 50 years.

He has, indeed, become an institution at the Capitol, a friend and confidant of Senators and others high in the Government. It was written of him several years ago; "Behind the fanfare, oratory, and glamour of senatorial prestige, a clock works to keep the Senators running. The man who winds the clock is Colonel Halsey." Always he is the right-hand man of the Senate leader—on and off the floor—in the routine work of the Upper House. His spacious offices just across the corridor from the Senate Chamber are the meeting place of Senators, a refuge, and the scene of many luncheons, at which Cabinet officers, members of the Supreme Court, and the great and near great in and out of public service are frequently entertained. It is there that party policy is discussed informally and far reaching decisions are sometimes made.

The colonel, as he is known, by virtue of appointment to the staffs of two former Virginia Governors, is a Democrat by choice and inheritance. His service to his party has been almost as extensive as his service to the Senate. For years he served as sergeant at arms of the Democratic National Committee and as sergeant at arms of the Democratic National Conventions. He has been chosen time and again to be secretary of the Democratic Senatorial Campaign Committee. Time and again he has compiled the records of achievement of the Democratic Congress and of the administration for inclusion in the CONGRESSIONAL RECORD. Under his direction the Senate has published many pamphlets dealing with political campaigns for both primary and general elections.

Despite his devotion to the Democratic Party, Colonel Halsey has many friends among the Republicans of the Senate to whom he has been universally fair in his dealings. He is a friendly man, a big man with a broad outlook. His many kindnesses are not confined to Members of the Senate—they go to his many subordinates in the big force of Senate employees.

The duties of the Secretary of the Senate are many. Under his direction are handled the financial affairs of the Senate, and all the clerical work is done. He signs all bills and resolutions which are adopted by the Senate. On occasion it has been his duty to call the Senate into session and to preside for a brief moment over the body. Visiting royalty, kings and queens, have passed through his office when they have been guests of the Senate.

Colonel Halsey has seen history in the making, and many historic events, in the course of his nearly 50 years' service with the Senate—and in more recent years he has played his part in that making. Years ago as a page he was on hand to see the Senate rise and cheer when word came that Admiral Dewey had bottled up and defeated the Spanish Fleet at Manila. When President Woodrow Wilson delivered his epochal address, calling for a declaration of war against Germany, and later the Senate adopted the war resolution, he was there—as he was when this country declared war on the Axis Powers in 1941.

Service is Colonel Halsey's middle name. But of no service of his own is he as proud as that of his son, Lt. Edwin A. Halsey, Jr., United States Navy, who has been with the American naval forces in the South Pacific.

Commercial Rent Control

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Saturday, January 6, 1945

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dealing with the subject of commercial rent control, which I sent to Gov. Thomas E. Dewey, and in which the junior Senator from New York [Mr. MEAD] joined.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Hon. THOMAS E. DEWEY,
The Governor, Albany, N. Y.

DEAR GOVERNOR DEWEY: I have read with interest the text of your message to the legislature and was pleased to find that a portion of your message was devoted to the commercial rent situation and that you have recommended the enactment of appropriate legislation.

For some time I have been deeply concerned with the seriousness of the situation which has developed in New York City. As you may know, I introduced a bill in November which would have authorized the Office of Price Administration to halt the inflationary rise in the rents of business properties. The Senate Committee on Banking and Currency, of which I am chairman, held public hearings on that measure in the course of which a considerable number of interested organizations, including proponents and opponents of the legislation, appeared. In the hope that the record of the hearing will prove helpful to you, I have sent you, under separate cover, three copies of the transcript.

The record shows that a serious situation already has developed in New York, and there is every indication that it will grow worse unless prompt and effective governmental action is taken. Rents have already increased in unwarranted amounts. Many more extreme and widespread increases will undoubtedly be demanded at the end of January 1945, when a substantial number of leases of commercial property will expire.

The city of New York has attempted to prevent such rent increases through a rent mediation board, but this board lacks power to enforce its recommendations. It recognizes that more effective action is required, and officials of the city have requested that either the State or Federal Government take such action.

In your message to the legislature you expressed a preference for Federal action, in the following words:

"It would have been better had the Federal Government procured from the Congress additional powers so as to extend its existing control over dwelling rentals to commercial rentals. The Federal Government did not do so, however, and the State must, and I am sure it will, act."

Among the witnesses who testified during the hearing on my bill were Senator JAMES M. MEAD and Mr. Chester Bowles, Administrator of the Office of Price Administration. Senator MEAD, as a member of the Senate Special Committee to Study and Survey Problems of Small Business Enterprise, testified in support of the legislation on behalf of himself and Senator MURRAY, the chairman of the Small Business Committee. Mr. Bowles expressed great concern over the effect of the commercial rent situation on the

stabilization program and urged the enactment of appropriate legislation by the Congress.

At the close of the hearing, I moved for a favorable report but the motion was defeated by a vote of 11 to 7, the 9 Republican members of the committee voting solidly against the legislation.

In connection with the preference for Federal action which you expressed in your message on Wednesday, it is significant that those who voted against such action did so on the ground that the problem is centered primarily in New York and shou'd, therefore, be handled by the government of New York State. The result might have been different if you had indicated your interest in this matter in November and had transmitted your views to the Senate Banking and Currency Committee at that time.

However, that may be, I agree with you that the situation can be corrected by the State of New York and that it is the duty of the government of the State to act promptly.

Complaint is sometimes made that the Federal Government is encroaching on the power of the States. In a situation which calls imperatively for governmental action, I can see no legitimate basis for complaint if the Federal Government acts after the State has failed to do so. It is a function of government to protect its people, and if State governments will not assume the responsibility, the Federal Government must.

If prompt and effective action is taken by the State of New York, it will eliminate a very serious inflationary threat. Such action would also have a salutary effect upon the tendency to inflationary rent increases in other parts of the country and, thus, may eliminate the need for additional action by the Federal Government.

Senator MEAD has authorized me to state that he agrees with the views set forth in this letter and he joins me in urging you to use your good offices to the end that legislation may be promptly enacted which will deal effectively with the commercial rent situation in our State.

Sincerely yours,

ROBERT F. WAGNER.

The Renegotiation Act

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Saturday, January 6, 1945

Mr. WILLIS. Mr. President, I have in my hand a letter from a manufacturer of tools and equipment for the war effort, in which he sets forth in factual terms his experience with the Renegotiation Act, and his conclusions with reference thereto. I believe that, as a matter of national interest, each one of us might well take the time to read it. Therefore I ask unanimous consent that the letter of Mr. R. E. Werner, manager of the Equipment Co., Detroit, Mich., be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

We understand that a bill will be presented promptly to renew the Renegotiation Act of 1943, Section 403 of the Sixth Supplemental National Defense Appropriation Act (Public Law 528, 77th Cong.), for an additional year or for a longer period.

We wish to stress reasons why this act should not be renewed and suggestions for correction if it is renewed.

1. Without considering armament work done for other countries prior to 1942, the procurement agencies have had 3 years in which to establish sources at favorable prices. They have more than ample field forces to do this.

2. The fact that a manufacturer of standard catalog items for the war effort maintains October 1, 1941, prices or lower does not permit him to effect any gain through the vitally necessary maintaining of production regardless of how badly the war effort has cut into his working forces.

3. An enormous part of the war effort, particularly in subcontracts, is borne by companies doing less than $1,000,000 per year in war work and perhaps more than $300,000. These companies will be consistently better off if they produce less than $500,000 and avoid renegotiation. Bear in mind that labor has continually had endless strikes throughout the country which have been highly publicized and which are certainly unpatriotic; much of management in the class of companies mentioned above feel that it is perhaps not quite fair to ask them to be greater patriots than labor, and to use their best abilities at a lower rate.

4. The depreciation on machinery and equipment allowed by the Internal Revenue Division does not cover, in a majority of cases, the actual wear out and replacement of machinery and with earnings limited by renegotiation, as well as exceedingly high taxes, independent industry feels that it cannot come out even no matter how it operates.

Naturally, machines working less hours and producing less do not wear out as fast as machines operating 20 to 24 hours a day. Also, by running the machines less, a greater net profit may be retained if it results in bringing the total volume under $500,000 per year and out of renegotiation.

5. The interpretation of the renegotiation law has been left to various offices in many instances. We have a case, for instance, where a company owned by an individual and doing less than $500,000 per year business has been declared under "common control" of another company owned by another individual from whom the first company received most of their subcontracts, and has been renegotiated for the year 1943. Due to the combined 1942 and 1943 income-tax set-up, this company being renegotiated on a total volume of business of less than $500,000 actually has to pay out in cash in income-tax and renegotiation charges for the year 1943 approximately 20 percent more than their total net profits. Bear in mind that 1942 was not renegotiable. The renegotiator merely told the company they were lucky that they were not renegotiated in 1942. The loss sustained was due to the enormous reduction in 1943 income through renegotiation which made 1943 the lower of the 2-year net income and allowed extremely little tax forgiveness. Yet this company operating in 1943 at a loss of their total net income plus 20 percent was rated as the most efficient company in production of any cases handled by the renegotiator who handled this case. Also, the company had made price reductions in 1943 and again in 1944, of their own accord and were given clearance on future pricing, or approval of their current prices. We consider this a vicious socialization policy and yet it was carried out under the renegotiation law and settlement is being approved at the recommendation of a leading legal firm rather than take the risk of carrying it through the courts where precedent on renegotiation has not been established.

We can readily see that on new items brought out in large quantities for the armed services pricing might be difficult, particularly if the procurement agencies have not firmly established evaluations. We therefore recommend, if the act is renewed, that the following changes be made:

1. That any manufacturer of standard catalog items selling at October 1, 1941, prices or lower be eliminated from renegotiation. This does not refer to direct armament work, which is entirely to blueprints, etc., and is not standard, but must be estimated.

2. That manufacturers doing less than $1,000,000 per year business be eliminated from renegotiation as there are a much greater number of shops in this category than those doing over $1,000,000 per year business and this would tend to secure their maximum production.

3. That in paragraph 6, the words "or controlling or under common control with the contractor or subcontractor" be either defined or eliminated. We have a case mentioned above, and evidently an unjust one, where the legal division of the Renegotiation Board have interpreted the words "common control" to include two entirely separate companies under entirely separate ownership for renegotiation. "Control" or "common control" certainly should be defined as having something to do with ownership, as it is very evident that an individual owning a company must control it. Under any known legal definition the two above companies could not possibly be declared under common control. We, therefore, stress that this section of paragraph 6 must be removed from the law or else there must be included a definition of exactly what Congress intends these words to mean, or further injustices will be perpetrated on countless industries.

The big prime contractors cannot run their assembly lines unless these lines are fed by the thousands of smaller subcontractors and cases like the above certainly do not offer any inducement to the smaller subcontractors.

While the above injustice is due to a legal interpretation by a Renegotiation Board, and certainly not due to intention of Congress, we feel that the future should certainly eliminate such possibilities insofar as they can be eliminated.

THE EQUIPMENT CO.,
R. E. WERNER, *Manager.*

The New World of Business

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, January 6, 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a condensation of an address entitled "The New World of Business," delivered by the Vice President, Hon. HENRY A. WALLACE, before a meeting of the Progressive Businessmen, Inc., in New York City, on November 2, 1944.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Full steam ahead is just a way of saying that this great country has the ships, the machine tools, the modern factories, the forward-looking businessmen and the present manpower to build in our America the greatest prosperity ever known.

The war has demonstrated that unemployment does not exist when people have the will and the need to work. There are more needs in peace than there are in war. Certain gentlemen of the large banking houses will deny this. Certain gentlemen of the counting houses who respond only to immediate red and black ink will tell you that war makes full employment but that peace cannot provide full employment. But in this brave new world ahead, it will be known by all men that full employment is not a monopoly of war. Full employment can and must be the business of peaceful men guaranteed in liberty and security, in religion and home. We shall build upon the political freedoms of America—a new economic freedom unbound as we throw off the fetters of those who would make servants of us all.

I do not doubt that our American system of free enterprise may provide adequate jobs, if there is sufficient imagination and confidence among business leaders and their bankers.

As we move ahead, there will be a friendly government for those who serve the public welfare, but a most unfriendly and determined government watching those who would seek abnormal profit through artificial scarcity. The unpoliced private cartellist, the patent monopolist, the money man of figures planning artificial profits through price fixing will find himself scorned, as a busy people march on toward the horizons of economic freedom.

There should be provided a clear road ahead for inventive genius and enterprise, wherever found, which is willing to devote itself to enriching the world with goods and services. Specifically, any business, old and new, seeking to expand should have tax incentive to accomplish its purpose.

All capital invested in genuine new enterprise should be income tax free for a period of 5 years or until the owner of such capital has received his investment back in the form of profit, either through income or sale, provided the investment is one in which two-thirds of the capital is spent on labor or materials. Business should be permitted to write off up to 20 percent in any 1 year its investment in machinery or buildings, provided these amounts shall be spent within a specified time for new facilities. Railroads should be given tax incentives to modernize. For the sake of young and growing businesses the excess-profits tax should be eliminated as soon as possible.

Many a small business, honestly capitalized, cannot expand because the tax gatherer hurts the little man with a big idea more than a big man with no idea. There are thousands of cases where small businessmen have had to pay up to 95 percent of their annual profits in taxation. They do so gladly in war, but in time of peace such men want to go ahead. They have proven their effectiveness. They want to grow. A wise government will stimulate by taxation the sluggish and the miserly, big or little, so that risk capital can be gotten back into productivity and growth before the tax gatherer takes it all. In the long run under such policies the tax gatherer will get more, not less.

(At the C.I. O. annual convention in Chicago November 21, 1944, Mr. WALLACE said: "Some type of Government pay-roll insurance must be found to tide sound, young businesses over temporary depressions. Possibly a modification in tax laws will serve the purpose. Large, old concerns must be prevented from increasing already overlarge pools of dead capital. Vital, young concerns must be given an incentive to employ more people. Little men with big ideas must be given a chance to employ labor. To meet this problem means that post-war, daring over-all concepts must be put promptly to work. Without such concepts vigorously carried out some form of Government socialism is a certainty.")

Wherever the normal banking system cannot provide, because of the length of the loan, an adequate credit for sound proposals, there should be a modern, realistic R. F. C. We have made a wonderful start under the R. F. C. and taken care of the railroads, the large corporations, building war plants, the insurance companies, the bond and mortgage people, but we must now adequately take care of the little men with big ideas—the future Kaisers and future Higgins of a peacetime world—if we are to reap the harvest of activity and full employment in the days to come.

It is most urgent that we modernize our patent laws so that all patents applied for and granted are available to all industry under proper rental provisions. The present practice of trading patents between corporations for exclusive use, the practice of pigeonholing, the practice of charging exorbitant rentals which favor the big and block the little must go. There must be a patent court and proper executive machinery in the Patent Office to police the evils out of our present system and provide for full use. Otherwise the job production itself is stymied; otherwise old and doddering capital structure will fight for profit and greed against a modern world of full production and full employment.

There can be no permanent prosperity in American heavy industry unless the world is the market. American heavy industry is the backbone of the consumer goods industry. The two together constitute jobs for all.

There are more than 2,000,000,000 people in this world. Some economists would have them eke out a bare existence and not compete with a highly-industrialized country. They would have us make things for a China or a Mexico which has not the living standard to pay for the goods. They fear competition. They seek monopoly of the American market by refusing industrial credit to the development of the backward areas of the world. America must export great quantities of credit to modernize this world.

The main picture which we must see is that 2,000,000,000 foreign customers need the things that our American industrial machine makes. To get these things and to pay for them is a job of very great magnitude. Either an international R. F. C. or American Government agencies supporting self-liquidating industrial and construction loans abroad must be provided at low interest and long term, if the Brazils and the Mexicos and the Chinas are to raise their standard of living sufficiently to buy American autos, American machine tools, and American permanent capital goods and know-how.

You can't have your cake and eat it too. You cannot live forever in a world of greedy capital, overinsistent labor with the strike as the only weapon, and a prostrate consuming public. Civil war in industry must go. The right to strike must be maintained as long as and until labor itself is satisfied that work and free citizenship without preference is guaranteed as firmly as our civil rights under the Constitution. Congress and a wise Executive leadership will be backed by all citizens in the battle against idleness both voluntary and involuntary.

The Sixth War Christmas

IN THE HOUSE OF REPRESENTATIVES

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of an official English translation of Pope Pius XII's Christmas message today entitled "The Sixth War Christmas." It begins citing the Epistle of Titus iii: 4: "The goodness and kindness of God our Saviour appeared":

For the sixth time since the opening of the dreadful war, the Christmas liturgy again hails with these words, redolent of peaceful serenity, the coming into our midst of God our Saviour.

The humble, mean cradle of Bethlehem, by its wonderful charm focuses the attention of all believers. Deep into the hearts of those in darkness, affliction, and depression there sinks and pervades a great flood of light and joy.

Heads that were bowed lift again serenely, for Christmas is the feast of human dignity, "the wonderful exchange by which the creator of human race, taking a living body, deigned to be born of a virgin, and by His coming bestowed on us His divinity" (First Antiphon of First Vespers for the Feast of the Circumcision).

But our gaze turns quickly from the base of the crib to the world around us, and the sorrowful sign of John the Evangelist comes to our lips: "And the light shines in darkness, and the darkness did not comprehend it" (John 1:5).

For alas, for the sixth time, the Christmas dawn breaks again on battlefields spreading ever wider on graveyards where are gathered the remains of victims in ever-increasing numbers, on desert lands where a few tottering towers tell with silent pathos the story of cities once flourishing and prosperous, and where bells fallen or carried off no longer awaken the inhabitants with their jubilant Christmas chimes.

They are so many silent witnesses to denounce this blot on the story of mankind which, deliberately blind to the brilliance of Him who is the splendor and light of the Father, deliberately straying from Christ, has descended and fallen into chaos and into the denial of its own dignity.

Even the little lamp is out in many majestic temples, in many modest chapels, where before the tabernacle it had shared the watches of the divine guest over a world asleep. What desolation. What contrast. Can there then be still hope for mankind?

DAWN OF HOPE

Blessed be the Lord. Out from the mournful groans of sorrow, from the very depths of the heart-rending anguish of oppressed individuals and countries there arises an aura of hope. To an ever-increasing number of noble souls there comes the thought, the will ever cleared and stronger, to make of this world, this universal upheaval a starting point for a new era of far-reaching renovation, the complete reorganization of the world, thus while the armed forces continue to engage in murderous battles with weapons ever more deadly, the statesmen, responsible leaders of nations, meet for talks, for conferences to determine the fundamental rights and duties on which should be built a community of states, and to blaze the trail toward a better future, more secure and more worthy of mankind.

A strange paradox this, of a war whose bitterness bids to reach the limits of paroxysm, and of the notable progress made in aspirations and proposals for a solid and lasting peace; undoubtedly one may well discuss the worth, the feasibility, the efficacy of this or that proposal; judgment may well be suspended in their regard, but it remains nonetheless true that the process has begun.

THE PROBLEM OF DEMOCRACY

Moreover—and this is perhaps the most important point—beneath the sinister lightning of the war that encompasses them, in the blazing heat of the furnace that imprisons them, the peoples have, as it were,

awakened from a long torpor. They have assumed, in relation to the State and those who govern, a new attitude—one that questions, criticizes, distrusts.

Taught by bitter experience, they are more aggressive in opposing the concentration of dictatorial power that cannot be censured or touched, and call for a system of government more in keeping with the dignity and liberty of the citizens. These multitudes, uneasy, stirred by the war to their innermost depths, are today firmly convinced—at first perhaps in a vague and confused way but already unyieldingly—that had there been the possibility of censuring and correcting the actions of public authority the world would not have been dragged into the vortex of a disastrous war, and that to avoid for the future the repetition of such a catastrophe we must vest efficient guaranties in the people itself.

In such a psychological atmosphere is it to be wondered at if the tendency toward democracy is capturing the peoples and winning a large measure of consent and support from those who hope to play a more efficient part in the destinies of individuals and of society?

It is scarcely necessary to recall that, according to the teaching of the church, "it is not forbidden to prefer temperate, popular forms of government, without prejudice, however, to Catholic teaching on the origin and use of authority," and that "the church does not disapprove of any of the various forms of government, provided they be per se capable of securing the good of the citizens" (Leo XIII: Encyclical "Libertas," June 20, 1888).

If, then, on this feast day which commemorates both the benignity of the incarnate word and the dignity of man (both in its personal and social aspects), we direct our attention to the problem of democracy, examining the forms by which it should be directed if it is to be a true, healthy democracy answering the needs of the moment, our action shows clearly that the interest and solicitude of the church looks not so much to its external structure and organization—which depend on the special aspirations of each people—as to the individual himself, who, so far from being the object and as it were a merely passive element in the social order, is in fact, and must be and continue to be its subject, its foundation, and its end.

Given that democracy, taken in the broad sense, admits of various forms, and can be realized in monarchies as well as in republics, two questions come up for our consideration: First, what characteristics should distinguish the men who live under democracy and a democratic regime? Second, what characterization should distinguish the men who hold the reins of government in a democracy?

I

CHARACTERISTICS PROPER TO CITIZENS IN A DEMOCRATIC REGIME

To express his own views of the duties and sacrifices that are imposed on him, not compelled to obey without being heard, these are the rights of the citizen which find in democracy, as its name implies, their expression.

From the solidity, harmony and good results produced by this between the citizens and the government one may decide which democracy is really healthy and well balanced, and what is its life energy and power of expansion.

If then we consider the extent and nature of the sacrifices demanded of all the citizens, especially in our day when the activity of the state is so vast and decisive, the democratic form of government appears to many as a postulate of nature imposed by reason itself.

When, however, people call for "democracy and better democracy" such a demand cannot have any other meaning than to place the citizen ever more in the position to hold his own personal opinion, to express it and to make it prevail in a fashion conducive to common good.

PEOPLE AND "THE MASSES"

Hence follows a first conclusion with its practical consequence. The state does not contain in itself and does not mechanically bring together in a given territory a shapeless mass of individuals.

It is and should in practice be the organic and organizing unity of a real people. The people and a shapeless multitude (or as it is called "the masses") are two distinct concepts.

The people lives and moves by its own life energy; the masses are inert of themselves and can only be moved from outside. The people lives by the fullness of life in the men that compose it, each of whom—at his proper place and in his own way—is a person conscious of his own responsibility and of his own views.

The masses on the contrary wait for the impulse from outside, an easy plaything in the hands of anyone who exploits their instincts and impressions; ready to follow in turn today this flag, tomorrow another.

From the exuberant life of a true people an abundant rich life is diffused in the state and all its organs, instilling into them, with a vigor that is always renewing itself, the consciousness of their own responsibility, the true instinct for the common good.

The elementary power of the masses, deftly managed and employed, the state also can utilize. In the ambitious hands of one or of several who have been artificially brought together for selfish aims the state itself, with the support of the masses, reduced to the minimum status of a mere machine, can impose its whims on the better part of the real people. The common interest remains seriously and for a long time injured by this process, and the injury is very often hard to heal.

Hence follows clearly another conclusion: the masses—as we have just defined them—are the capital enemy of true democracy and of its ideal of liberty and equality.

In a people worthy of the name the citizen feels within him the consciousness of his personality, of his duties and rights, of his own freedom joined to respect for the freedom and dignity of others.

In a people worthy of the name all inequalities based not on whim but on the nature of things, inequalities of culture, possessions, social standing—without, of course, prejudice to a justice and mutual charity—do not constitute any obstacle to the existence and the prevalence of a true spirit of union and brotherhood.

On the contrary, so far from impairing civil equality in any way, they give it its true meaning, namely that, before the state, everyone has the right to live honorably his own personal life in the place and under the conditions in which the designs and dispositions of Providence have placed him.

As against this picture of the democratic ideal of liberty and equality in a people's government by honest and far-seeing men, what a spectacle is that of a democratic state left to the whims of the masses.

Liberty from being a moral duty of the individual becomes a tyrannous claim to give free rein to a man's impulses and appetities to the detriment of others.

Equality degenerates to a mechanical level, a colorless uniformity. The sense of true honor, of personal activity or respect for tradition, of dignity—in a word all that gives life its worth—gradually fades away and disappears.

And the only survivors are, on the one hand, the victims deluded by the specious mirage of democracy, naively taken for the genuine spirit of democracy with its liberty and equality; and on the other the more or less numerous exploiters who have known how to use the power of money and of organization in order to secure a privileged position above the others, and have gained power.

II

CHARACTERISTICS OF MEN HOLDING POWER IN A DEMOCRATIC STATE?

The democratic state, whether it be monarchical or republican, should like any other form of government be entrusted with the power to command with real and effective authority.

The absolute order itself of beings and purposes, which shows that man is an independent person, namely, the subject of inviolable duties and rights, who is the source and end of his own social life, comprises the state also as a necessary society endowed with authority, without which it could neither exist nor live.

And if men, using their personal liberty, were to deny all dependence on a superior authority possessing coercive power, they could by this very fact cut the ground from under their own dignity and liberty, by violating, that is, the absolute order of beings and purposes.

As they are established on this same foundation, the person, the state, the government, with their respective rights, are so bound together that they stand or fall together.

And since that absolute order, in the light of right, reason, and in particular of the Christian faith, cannot have any other origin than in a personal God, our Creator, it follows that the dignity of man is the dignity of the moral community willed by God, the dignity of political authority is the dignity deriving from its sharing in the authority of God.

No form of state can avoid taking cognizance of this intimate and indissoluble connection—least of all a democracy. Accordingly if those in power do not see it, or more or less discount it, their own authority is shaken and social morality and that specious appearance of a purely formal democracy may often serve as a mark for all that is in reality least democratic.

Only a clear appreciation of the purposes assigned by God to every human society, joined to a deep sense of the exalted duties of social activity, can put those in power in a position to fulfill their own obligations in the legislative, judicial, and executive order with that objectivity, impartiality, loyalty, generosity, and integrity without which a democratic government would find it hard to command the respect and the support of the better section of the people.

The deep sense of the principles underlying a political and social order that is sound and conforms to the norms of right and justice is of special importance in those who in any kind of democratic regime have, as the people's delegates, in whole or part, the power to legislate.

And since the center of gravity of a democracy normally set up resides in this popular assembly from which political currents radiate into every field of public life—for good or ill—the question of the high moral standards, practical ability, and intellectual capacity of parliamentary deputies is for every people living under a democratic regime a question of life and death, of prosperity and decadence, of soundness or perpetual unrest.

To secure effective action, to win esteem and trust, every legislative body should—as experience shows, beyond doubt—gather within it a group of select men, spiritually eminent and of strong character, who shall look upon themselves as the representatives of the entire people and not the mandatories of a mob, whose interests are often unfortunately made to prevail over the true needs of the common good—a select group of men not restricted to any profession or social

standing but reflecting every phase of the people's life; men chosen for their solid Christian convictions, straight and steady judgment, with a sense of the practical and equitable, true to themselves in all circumstances; men of clear and sound principles, with sound and clear-cut proposals to make; men above all capable, in virtue of the authority that emanates from their untarnished consciences and radiates widely from them, to be leaders and heads especially in times when the pressing needs of the moment excite the people's impressionability unduly, and render it more liable to be led astray and get lost; men who in periods of transition, generally stormy and disturbed by passion, by divergent opinions and opposing programs, feel themselves doubly under the obligation to send circulating through the veins of the people and of the state, burning with a thousand fevers, the spiritual antidote of clear views, kindly interest, a justice equally sympathetic to all, and a bias toward national unity and concord in a sincere spirit of brotherhood.

Peoples whose spiritual and moral temperament is sufficiently sound and fecund find it themselves and can produce the heralds and implements of democracy who live in such dispositions and know how effectively to put them into practice.

But where such men are lacking, others come to take their places in order to make politics serve their ambition and be a quick road to profit for themselves, their caste, and their class, while the race after private interests makes them lose sight of completely and jeopardize the true common good.

STATE ABSOLUTISM

A sound democracy, based on the immutable principles of the natural law and revealed truth, will resolutely turn its back on such corruption as gives to the state legislature an unchecked and unlimited power, and moreover, makes of the democratic regime, notwithstanding an outward show to the contrary, purely and simply a form of absolutism.

State absolutism—not to be confused, as such, with absolute monarchy, of which we are not treating here—consists in fact in the false principle that the authority of the State is unlimited and that in face of it—even when it gives free rein to its despotic aims going beyond the confines between good and evil—to appeal to a higher law obliging in conscience is not admitted.

A man penetrated with right ideas about the state, and authority, and the power that he wields as guardian of social order will never think of derogating the majesty of the positive law within the ambit of its natural competence. But this majesty of positive law is only inviolable when it conforms—or at least is not opposed—to the absolute order set up by the Creator and placed in a new light by the revelation of the gospel.

It cannot subsist except insofar as it respects the foundations on which human personality rests no less than the state and the government. This is the fundamental criterion of every healthy form of government, including democracy. It is the criterion by which the moral value of every particular law should be judged.

III

NATURE AND CONDITIONS OF AN EFFECTIVE PEACE SETTLEMENT, UNITY OF MANKIND AND SOCIETY OF PEOPLES

We were anxious, beloved sons and daughters, to take the occasion of Christmastide to point out along what lines a democracy befitting human dignity can, in harmony with the law of nature and the designs of God as manifested in revelation, secure happy results. Indeed we are deeply convinced of the supreme importance of this problem for the peaceful progress of mankind.

But we also realize the exalted claims that this form of government makes on the moral maturity of the individual citizen; a moral maturity to which he could never hope to attain fully and securely if the light from the cave of Bethlehem did not illumine the dark path along which the peoples are going forward through the stormy present toward a future which they hope will be more serene.

But how far will the representatives and pioneers of democracy be inspired in their deliberations by the conviction that the absolute order of beings and purposes, of which we have repeatedly spoken, comprises also, as a moral necessity and the crowning of social development, the unity of mankind and of the family of peoples?

On the recognition of this principle hangs the future of the peace.

No world reform, no peace guaranty can abstract upon it without being weakened and without being untrue to itself.

If, on the other hand, this same moral necessity were to find its realization in a society of peoples which succeeded in eliminating the structural defects and shortcomings of former systems, then the majesty of that order would regulate and inspire equally the deliberations of that society and the use of its instruments of sanction.

For this reason, too, one understands why the authority of such a society must be real and effective over the member states, in suchwise, however, that each of them retain an equal right to its own sovereignty.

Only thus will the spirit of sane democracy be able to pervade the vast and thorny ground of foreign relations.

AGAINST WARS OF AGGRESSION AS SOLUTION OF INTERNATIONAL DISPUTES

There is a duty, besides, imposed on all, a duty which brooks no delay, no procrastination, no hesitation, no subterfuge; it is the duty to do everything to ban once and for all wars of aggression as legitimate solution of international disputes and as a means toward realizing national aspirations.

Many attempts in this direction have been seen in the past. They all failed. And they will all fail always, until the saner section of mankind has the firm determination, the holy obstinacy like an obligation in conscience, to fulfill the mission which past ages have not undertaken with sufficient gravity and resolution.

If ever a generation has had to apreciate in the depths of its conscience the call: "War on war," it is certainly the present generation.

Having passed, as it has, through an ocean of blood and tears in a form perhaps never experienced in past ages, it has lived through the indescribable atrocities with an intensity such that the recollection of so many horrors must remain stamped in its memory, and even in the deepest recesses of its soul like a picture of a hell against which anyone who cherishes a sense of humanity desires more than anything else to close the door forever.

FORMATION OF A COMMON MEANS TO MAINTAIN PEACE

The decisions already published by international commissions permit one to conclude that an essential point in any future international arrangement would be the formation of an organ for the maintenance of peace, of an organ invested by common consent with supreme power to whose office it would also pertain to smother in its germinal state any threat of isolated or collective aggression.

No one could hail this development with greater joy than he who has long upheld the principle that the idea of war as an apt and proportionate means of solving international conflicts is now out of date.

No one could wish success to this common effort, to be undertaken with a seriousness of purpose never before known, with greater enthusiasm than he who has conscientiously striven to make the Christian and religious mentality reject modern war with its monstrous means of conducting hostilities.

MONSTROUS MEANS OF CONDUCTING HOSTILITIES

Unquestionably the progress of man's inventions, which should have heralded the realization of greater well-being for all mankind, has instead been employed to destroy all that had been built up through the ages.

But by that very fact the immorality of the war of aggression has been made ever more evident. And if now, to the recognition of this immorality there is to be added the threat of a judicial intervention by the nations and of chastisement inflicted on the aggressor by the society of states, so that war will always be subject to the stigma of proscription, always under surveillance and liable to preventive measures, then mankind, as it emerges from the dark night in which it has been so long submerged, will be able to hail the dawn of a new and better era of its history.

ITS CONSTITUTION EXCLUDING UNJUST IMPOSITION

But only on one condition, namely, that the peace settlement which should be strengthened and made more stable by mutual guaranties, and, where necessary, economic sanctions, and even armed intervention, should not give definite countenance to any injustice, does not imply any derogation of any right to the detriment of any nation (whether it be on the side of the victors, the vanquished, or the neutrals), and does not impose any perpetual burden, which can only be allowed for a time as reparation for war damage.

That any peoples, to whose government—or perhaps even partially to themselves—the responsibility for the war is attributed, should have for a time to undergo the rigors of security measures until the bonds of mutual trust, violently broken, should be gradually welded together again, is quite understandable from a human point of view, and in practice will in all probability be inevitable.

Nevertheless, even these peoples must have a well-founded hope—commensurate to their effective collaboration in the work of reconstruction—of being able, together with the other States with equal consideration and with the same rights, to be associated with the great community of nations.

To deny them that hope would be the reverse of far-seeing wisdom, it would be to assume the grave responsibility of barring the way to a general liberation from all the disastrous consequences material, moral, and political, of the gigantic cataclysm which has shaken the poor human family to its very foundations, but which, at the same time, has shown it the road to new goals.

THE STERN LESSONS OF SUFFERING

We will not renounce our confidence that the peoples, who have all passed through the school of suffering, will be able to retain the stern lessons learned.

And in this hope we are strengthened by the words of men who have had a greater share in the sufferings of the war and who have found generous words to express, together with the insistence on their own need of security against any future aggression, their respect for the vital rights of other peoples and their aversion to any usurping of those rights.

It would be vain to expect that this sage judgment, dictated by the experience of history and a high political sense should be—while men's spirits are still burning white-hot—generally accepted by public opinion, or even by the majority.

Hatred and the impossibility of mutual understanding have given rise in peoples that have fought against each other to a mist too dense to hope that the hour has already come when a ray of light may shine out to clear

the tragic panorama on either side of its dark wall.

But one thing we know: that the moment will come, perhaps sooner than the people think, when both sides realize that, all things considered, there is only one way of getting out of the meshes in which war and hate have wrapped the world, namely, a return to the solidarity, too long forgotten, a solidarity not restricted to these or those peoples, but universal, founded on the intimate connection of their destiny and rights which belong equally to both.

THE PUNISHMENT OF CRIMES

No one certainly thinks of disarming justice in its relations to those who have exploited the war situation in order to commit real and proved crimes against the common law, and for whom supposed military necessity could at most have offered a pretext, but never a justification.

But if justice presumed to judge and punish not merely individuals but even whole communities together, who could not see in such a procedure a violation of the norms which guide every human trial?

IV

THE CHURCH AS GUARDIAN OF MAN'S TRUE DIGNITY AND LIBERTY

At a time when the peoples find themselves with duties such as perhaps they have never met before in the course of their history, they feel deeply in their tortured hearts the desire, impatient and almost instinctive, to take the reins of their destiny in their own hands with more independence than heretofore, hoping that thus they will find it easier to defend themselves from the periodic invasions of violence which, like a boiling lava torrent, spares nothing of all that they hold sacred and dear.

Thank God, one may believe the time has passed when the call to moral and Gospel principles to guide the life of states and peoples was disdainfully thrust aside as unreal.

The events of these war years have given ample evidence to confute, in a harder way than one could ever have imagined, those who spread such doctrines.

The disdain that they affected toward this supposed unreality has been changed into stark reality; brutality, iniquity, destruction, annihilation.

If the future is to belong to democracy, an essential part in its achievement will have to belong to the religion of Christ and to the church, the messenger of our Redeemer's word, which is to continue His mission of saving men. For she teaches and defends supernatural truths and communicates the supernatural helps of grace in order to actuate the divinely established order of beings and ends which is the ultimate foundation and directive norm of every democracy.

By her very existence the church rises before the world as a shining beacon to remind it constantly of that divine order. Her history reflects clearly her providential mission. The struggles, which coerced by the abuse of power, she has had to sustain in defense of the liberty given her by God, were at the same time struggles for man's true liberty.

The church has the mission to announce to the world, which is looking for better and more perfect forms of democracy, the highest and most needed message that there can be: The dignity of man, the call to be sons of God. It is the powerful cry which from the manger of Bethlehem to the farthest confines of the earth resounds in the ears of men at a time when that dignity is tragically low.

The holy story of Christmas proclaims this inviolable dignity of man with a vigor and authority that cannot be gainsaid—an authority and vigor that infinitely transcends that which all possible declarations of the rights of man could achieve.

Christmas, the great feast of the son of God who appeared in human flesh, the feast in which heaven stoops down to earth with ineffable grace and benevolence, is also the day on which Christianity and mankind, before the crib, contemplating the "goodness and kindness of God our Saviour" becomes more deeply conscious of the intimate unity that God has established between them.

The birth of the Saviour of the world, of the restorer of human dignity in all its fullness, is the moment characterized by the alliance of all men of good will. There to the poor world, torn by discord, divided by selfishness, poisoned by hate, love will be restored and it will be allowed to march forward in cordial harmony, toward the common goal, to find at last the cure for its wounds in the peace of Christ.

V

CRUSADE FOR CHARITY

We do not want to close this Christmas message without addressing a word of heartfelt gratitude to all those—states, governments, bishops, and peoples—who at this time of untold misfortunes have lent us valiant aid as we hearken to the cry of suffering which reaches us from so many parts of the world and give a helping hand to so many of our beloved sons and daughters whom the misfortunes of war have reduced to extreme poverty and misery.

And in the first place it is but just to record the immense work of assistance achieved in spite of the extraordinary difficulties of transport, by the United States of America, with regard to Italy in particular, by his excellency the personal representative of the President of the Union.

It is a pleasure for us to express equal praise and gratitude for the generosity of the head of the State, the Government, and people of Spain, and the Governments of Ireland, Argentina, Australia, Bolivia, Brazil, Canada, Chile, Italy, Lithuania, Peru, Poland, Rumania, Slovakia, Hungary, and Uruguay who have vied with one another in noble rivalry of brotherly love and charity, of which the echo will not resound in vain through the world.

While men of good will are endeavoring to bridge the gulf and bring the peoples together, this purely disinterested act of charity assumes an aspect and a value of unique importance.

When—as we all wish—the dissonance of hate and discord that dominates the present moment will be but a tragic memory, the good effects of this victory of active and magnanimous charity over the poison of selfishness and enmity will ripen into even a larger harvest of good.

May all who have had a share in this crusade of charity receive as an incentive and a token of gratitude our apostolic benediction and the thought that on the feast of love from numberless hearts in anguish, but not forgetful in their anguish, there rises to heaven the grateful prayer for them: Deign to reward, O Lord, all those who do good to us for Your name's sake with eternal life.

How Now, England?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. REED of New York. Mr. Speaker, I for one, am very tired of British criticism of the part the United States is taking in this war. Do the British critics of our contribution in men and material to the war believe that the United States is furnishing its fine young men to be slaughtered, maimed, blinded, and imprisoned for any other purpose than to help win the war? I challenge the British critics to show anything more heroic on the western European front than the "Conquer or die, but never yield" spirit of those who steadfastly stood, fought, and died to stop Marshal Von Runstedt's hordes at La Gleize, Belgium. These smug British critics would be singing a different tune had not our heroic lads gone gloriously to death and to immortal fame by holding out against the Hun horde headed toward either Antwerp or to a channel port from which to strike at England with robot bomb and long-range guns.

There has been an infiltration of English propagandists into this country who seem to think that their arrogant criticism will be tolerated by Americans with the same abject spirit of servitude which is so evident in the caste system of England and in some of her possessions.

This war is not so far won that the British will find it to their interests to now charge the United States with plotting to grab some portions of the British Empire after the war. The people were told that there was an Atlantic Charter and that it was for the ideals expressed therein that our boys were to fight, not for a territorial grab.

Under leave to extend an editorial I here insert one from the Washington Times-Herald under date of January 5, 1945, as follows:

HOW NOW, ENGLAND?

On December 29, the London Economist denounced the United States as hypocritical, preachy, and entirely too vague about its foreign policy, especially its post-war intentions. Maybe, hinted the Economist, Britain after the war had better team up with Russia.

We didn't pay much attention to the British weekly's blast at the time; thought it might have resulted from some editor's consuming either too much or too little Scotch at Christmas.

On January 2, however, the Yorkshire Post, owned by Mrs. Anthony Eden's family, chimed in with an editorial entitled, "Will America Kindly Say?" endorsing the Economist's blast, and adding that the United States seems to be plotting to grab some pieces of the British Empire after the war "such as bases the United States would like."

ATTACKS FROM BRITISH PRESS

The next day, the London Times, looked on as virtually the press mouthpiece of the British Government, crashed through with an editorial, saying that the United States shows an ingrained "unwillingness to accept political responsibilities in Europe." The Yorkshire Post, the same day, took exception to "silly (American) press sneers at Field Marshal (Sir Bernard L.) Montgomery, one of the greatest of soldiers."

We'll agree on that estimate of Marshal Montgomery. But we read numerous newspapers, and we'll add that we have never yet seen or heard of a sneer at Montgomery in an American newspaper. The American press and public generally, we are convinced, admire Montgomery as a soldier as much as do the British people.

Replying to these concerted British complaints that we aren't holding up our end in the war and don't intend to do so afterward, we'd like to point out first that Von Rundstedt did indeed break through American troops in his December 16 counteroffensive, but that he was also stopped by American troops. There weren't any British troops in that part of the line.

We'd like to point out further that an estimated 75 percent to 80 percent of all Allied troops on the western front are American troops.

BRITAIN AND RUSSIA VERSUS UNITED STATES?

As to the reasons why our men are in western Europe, it can no longer be argued sanely that they are defending us against German attack—or England against German conquest. Germany can neither defeat England nor invade us in this war.

Our official position is that we are fighting in Europe to defend the future, by making it impossible for Germany to start another war. In addition, it would seem that we are now fighting in Europe to bolster up Britain's power to influence western European affairs after this war, so that Russian power and influence may not flood all Europe.

The British and the Russians are playing power politics against each other in the middle of this war, while we, at least at this moment, do most of the fighting.

If Britain feels like teaming up with Russia after the war and leaving us out in the cold, the United States can get along all right—if necessary, against England and Russia at the same time. That is, of course, if we keep on the defensive and don't go over to Europe to fight them. Our productive and military achievements in this war forecast that. And if things should regrettably come to such a show-down, there are several potential British hostages in this hemisphere.

All this is said without any animosity toward Great Britain. We admire the British people for their historic achievements; and Great Britain is mama to the United States, even if mama has grown a bit querulous in her maturer years.

TALKING BACK TO BRITAIN

We made these frank remarks because we are aware that the British do not respect people who do not talk back to them. Whether that attitude is wise or unwise is not for us to opine. But that is the British attitude by and large.

The Churchill government, for reasons best known to itself, has opened a barrage of anti-American propaganda via British publications which work hand in glove with the Churchill government. If Americans take this British scolding meekly and without retorting to it, there will be more of the same, and the consequences can be most unpleasant, if nothing worse, for all concerned.

We'll get along much better with our British allies and friends, both during and after the war, if Americans will take to retorting frankly (though politely, of course), whenever influential Britons talk out of turn about us.

Vivisection—Progress in the Art of Saving Human Life

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, through letters coming to me from various sections of my district it is apparent that many of our citizens are becoming greatly disturbed by the practice of vivisection in our medical and surgical centers. Evidently there has been much misinformation given to the public regarding this practice.

The dictionary tells us that vivisection—as it is practiced in these centers—is operation on a living animal for physiological or pathological investigation and information. This work is largely done on dogs. Strange as it may seem to the laity, the anatomy of the dog and human being is exactly alike. Except that dogs walk "on all fours," the functions are the same. Structurally and organically, including the nervous and circulatory systems, there is no difference. This being true, the purpose of vivisection is to give to the surgeons of the world the opportunities for experimentation from which much of the progress that has been made in surgery down the years has resulted. Obviously there is one purpose and one purpose only in this activity, and that is to secure knowledge which will enable the scientists to save human life. If experiments were not made on the lower animals, they would necessarily have to be made on human beings. Obviously the former is desirable.

Recently there was introduced in the House of Representatives a bill providing for the extension of general and scientific laboratory facilities at the great Naval Medical Center, at Bethesda, Md. Most of this extension is designed to house physical, chemical, pathological, bacteriological, and similar laboratories, a diving tank and facilities for studies on the effects of environment in which human volunteers are used to gain data as to their efficiency and general well-being under conditions of service.

Animal quarters are included in the plans, but only for the purpose of improving the housing of animals by providing them with more comfortable and healthful living conditions.

I have made it my business to investigate the conditions surrounding vivisection, and I have learned that in no case are there practices which could possibly be described as torturing or even pain producing.

The members of the staff at the Medical Center, many of whom are as fond of dogs as anyone can possibly be, and all of whom are certainly persons who take a much greater interest in their patients than is generally supposed, are all humane individuals and of the highest character. Even the simplest procedure involving animals is undertaken with the sole purpose of securing information which will result in the saving of human life, and is conducted with the utmost consideration. If progress is to be made in the art of saving human life and suffering, experiments are necessary. It must be agreed that those experiments be made on the lower animals rather than on humans.

The whole structure of medicine and surgery, and the measures now being employed in our armed services, and generally throughout the country, which are so successful in saving the lives of hundreds of thousands of our soldiers and sailors and the the public generally, are recorded in observations and information made possible only by utilization of the lower animals. There are millions of people alive today, who a long time ago would have passed on had it not been for the information our scientists have secured through the medium of vivisection. I feel certain if all our people could know of the benefits which in the past have come to us in this way they would realize that the practice of vivisection cannot be stopped without jeopardizing the lives of future generations.

Warren Points the Way

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. BONNER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the News and Observer of Raleigh, N. C.:

WARREN POINTS THE WAY

It is good to see that Thomas L. Stokes is exposing the "influence boys" in Washington and their part in sneak legislation. Their successful lobbying is a disgrace to them and also to public officials in the legislative and executive departments of Government. In 1943 a provision slipped into the revenue act which specifically exempted a certain type of Federal employees from the ban in the existing law under which no official could prosecute a claim against the United States until 2 years after leaving Government service. At that time Comptroller General Lindsay Warren called attention to legislation under which officials have resigned from public office to make big money as attorneys (a respectable name for lobbying), now prosecute claims in departments about whose affairs they are familiar. Naturally, they have the inside track over lawyers who have held no such position of trust.

Corruption and favoritism and lobbying practices ran riot in Grant's second term. They were so flagrant that in 1872 an act was passed prohibiting any officer, clerk, or employee of any Government department from acting as counsel, attorney, or agent in prosecuting any claim against the United States pending in any department while he was in the Government service until 2 years after he had left the service. That law helped stop the evil now prevailing in Washington during the Spanish-American War and the World War. But now, when the law is most needed, a provision was quietly slipped into the 1943 Revenue Act and the 1944 Contract Settlement Act which modified, if it did not repeal, the wise act of 1872. And now the sky is the limit.

Writing of this public scandal, made possible by the repeal, Mr. Stokes says:

"One prominent Government official has spoken out bluntly and plainly against a 'joker' put through Congress which would permit war agencies' employees who handled war contracts—and consequently have the benefit of inside knowledge and contacts—to go out after they leave the Government and represent claimants against the Government.

"This is Comptroller General Lindsay Warren, one-time House leader, who is the agent for Congress as head of the General Accounting Office delegated to check expenditures of Government departments.

"He expressed his opposition and concern in a letter last May to Representative

SUMNERS, Democrat, Texas, chairman of the House Judiciary Committee.

"Mr. Warren advocated repeal of this Revenue Act provision and substitution of a bill of Representative SATTERFIELD, Democrat, Virginia, which would forbid employees of Government agencies or Army and Navy officers from accepting compensation within 2 years after leaving the Government, in 'prosecution of claims against the United States arising out of any contracts or agreements for the procurement of supplies, materials, construction work, or services for the Army, the Navy, or any other agency of the Government which were pending or entered into while the said officer or employee was associated therewith.'

"The Satterfield bill was adopted in House and Senate as an amendment to the 1944 War Contract Settlement Act, but was changed in conference later so that employees of any agency still could go out and prosecute claims immediately upon leaving the Government, except for those they handled directly, in which cases they must wait 2 years.

"Speaking of the earlier revenue act exemption, which has been superseded by that in the Contract Settlement Act, Mr. Warren pointed out that the departments and agencies named 'are the principal purchasers of materials and supplies for war purposes—already costing billions of dollars.' He added: 'I am firmly of the opinion that the said law results in the removal of a restriction in a class of cases where control is most vitally needed.

"'Aside from the fact that, in some instances, certain individuals might be instrumental in reviving claims which otherwise would lie dormant, it is felt that such a practice generally is as morally and ethically wrong as it would be for an attorney for one client to become the attorney of his former client's adversary, or for a judge to become counsel in the same cases in which he had presided.'

"He explained that after the last war 'there mushroomed into existence a great number of private organizations holding themselves out as able to offer special facilities in the adjustment of contracts, and representing or implying in many instances that their services were of particular value by reason of a former connection of persons in these organizations with the Government and intimating that their services were indispensable to the contractors in order to secure a satisfactory settlement.'

"'Since,' he said, 'the number of Government supply contracts during World War No. 1, and the amounts involved, were rather insignificant compared to the number and amounts of the financial obligations incurred by the Government during the present conflict, it would appear evident that the necessity for such legislation at this time is correspondingly intensified.'"

As soon as it reconvenes Congress ought to go back to the 1872 law with such new, strong measures as will put a stop to the evil that act made illegal. It should go further: Make the act apply to ex-Members of Congress and all lobbyists.

P. A. C. Overestimated Its Power

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. HOFFMAN. Mr. Speaker, the P. A. C. may have elected the President; the administration and the Democratic Party may clear everything through Sidney. About that I do not know. But the first battle fought in the new Seventy-ninth Congress demonstrated that the combined forces of the New Deal and the P. A. C. do not have absolute control over Congress. Both the administration and the P. A. C. lost the first pitched battle.

The Dies committee exposed not a few left wingers and Communists who held policy-making positions in the New Deal administration. Almost from the beginning, its activities were opposed by the administration and on one or two occasions by Mrs. Roosevelt, who personally appeared before that committee with some individuals with communistic leanings.

Ever since the Dies committee was created in May of 1938, the Communist leaders, the C. I. O., and still later the P. A. C. have criticized its activities, disputed its findings, demanded that it be abolished.

There is no doubt but that the Dies committee made many mistakes; that at times it was inaccurate; but the same can be said of the New Deal and, for that matter, of any other organization which operates on a large scale over a period of years and on controversial issues.

Nevertheless, it is of record that not only the Department of Justice but the F. B. I. and the Intelligence Service of the Navy, Army, and the State Department, benefited immensely by the evidence which it gathered, analyzed, and made available.

The P. A. C. boasts that it brought about the defeat of at least three members of that committee, two of them Democrats, and that it frightened the chairman, Martin Dies, into declining to be a candidate at the last election.

Flushed with victory, both the P. A. C. and the administration thought they had an easy task to bring about their long desired purpose—the end of the Dies committee, the end of its investigation of subversive activities.

But, on January 3, the administration forces in the House, taken by surprise, were soundly defeated and the P. A. C. learned that, notwithstanding its political influence, its millions of dollars available for the defeat of Congressmen who opposed it, it could not intimidate Congress on this issue. Both the administration and the P. A. C. with its would-be political bosses learned that the Congress, when it comes to the fundamental issue as to whether it will back those in the armed service by establishing a permanent committee to investigate and propose measures to curb subversive influences here at home, has no hesitation whatever in making its decision.

Instead of waiting and creating a special committee to continue the Dies committee activities, the House, under the leadership of JOHN RANKIN, in a surprising parliamentary move, amended the rules of the House and established a nine-man permanent committee to continue the job begun by the Dies committee.

Not a few Members voted against establishing this committee, because they believed that a special committee would better answer the purpose and because they wanted the Speaker to appoint its members. The House, however, was determined to take no chances on the creation later of the special committee, so adopted RANKIN'S motion and how the committee has been made permanent. Its chairman and membership will be selected by the Democratic and Republican organizations of the House, will not be appointed by the Speaker.

Should any attempt be made to thwart the will of the House by packing the committee, the House might again assert itself and make its own selection of the members of that committee.

This, the first nonroutine official action of the House, is encouraging and it demonstrates once more that a coalition of southern Democrats and northern Republicans, who believe that not everything that happened back in the "horse and buggy" days was wrong, can be effective when it chooses.

The Best Argument for the Missouri Valley Authority Is Benefits That Have Accrued to States as a Result of the Tennessee Valley Authority

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1945

Mr. COCHRAN. Mr. Speaker, seven Governors whose States are served by the Tennessee Valley Authority have at the request of the St. Louis Post-Dispatch submitted their views in connection with its operation. What the T. V. A. has accomplished for the Tennessee Valley is evidence what the M. V. A. will do for the Missouri River Valley.

Under permission granted me, I am including as part of my remarks the interviews:

BY J. MELVILLE BROUGHTON, GOVERNOR OF NORTH CAROLINA

To the EDITOR OF THE ST. LOUIS POST-DISPATCH:

I have found T. V. A. to be most cooperative, and have only praise for the agency's operations in this State.

In distributing fertilizers for soil improvement tests on more than 5,000 North Carolina farms, T. V. A. has worked with State and county agencies. All the county farm agents with whom I have talked have commented on the fine service and the cooperative spirit of this Federal agency, which is free of arbitrary methods.

Minerals research has been carried on in cooperation with State agencies, including work on kaolins, vermiculite, olivine and mica. Experiments in the T. V. A. ceramic laboratory at Norris Dam have increased use of North Carolina pottery clays. Whenever we have a problem pertaining to minerals, we find T. V. A. invariably ready to lend a helping hand. The agency has agreed to staff and equip a laboratory for research on clays which we are erecting in Asheville.

New and improved farm machinery is now in use in North Carolina. These improvements include a barn hay-drier and a small trailer-thresher developed by T. V. A. The trailer-thresher is manufactured by a North Carolina firm.

I am a strong believer in States' rights, but T. V. A. has done nothing which to my mind embodies any threat to the rights of this State. In building Fontana Dam, for example, it was necessary for T. V. A. to pond a highway. The agency agreed to build a satisfactory substitute road and also to extend a park area. There was nothing arbitrary about this, the whole thing being arranged through amicable negotiations.

Swain County has been deprived of a large part of its taxable land values by ponding for Fontana Dam, it is true, but this loss has been largely offset by T. V. A. payments in lieu of taxes. Certain T. V. A. revenues are paid into the State treasury, and this money is distributed to the affected counties on the basis of a formula recognized as equitable and satisfactory.

My only complaint about T. V. A. is that power generated in North Carolina is used by factories located mainly in other States. I would like to see the Federal Government place more war industries in this State, but I cannot hold T. V. A. responsible for the Government's policy in this regard.

To sum up, North Carolina has found T. V. A. to be thoroughly competent and cooperative, and public sentiment in the State is highly favorable.

J. MELVILLE BROUGHTON.

RALEIGH, N. C.

BY PRENTICE COOPER, GOVERNOR OF TENNESSEE

To the EDITOR OF THE ST. LOUIS POST-DISPATCH:

The people of the United States are entitled to development of their country's natural resources. The only instrumentality capable of effectively developing a great river valley is the Federal Government.

T. V. A. benefits not just a region but the country as a whole. The agency is justified from the standpoint of national defense alone. Our country needs to develop great power resources in the interior, where installations are less vulnerable to attack than in coastal regions.

T. V. A. already has effected tremendous savings in flood control, and will provide extended protection after the war, when additional dams are constructed and reservoirs are operated for this purpose. National commerce has benefited from improvement of the inland waterways and cheap transportation rates.

People throughout the Tennessee Valley are enjoying low electric rates which the private companies used to tell us were fantastic and impossible. Our farms have been electrified, and rural life has been made more profitable and enjoyable. You will notice that, in speaking of T. V. A. benefits, I have placed several things ahead of cheap power. Power development is only one of the phases of this regional plan.

I have heard the argument that a regional authority centralizing control over a major drainage basin interferes with States' rights, and I consider it an example of cloudy thinking. It comes from failure to recognize what is a natural field for the Federal Government. From the beginning of this Nation, development of natural resources has been considered a Federal field.

I believe in upholding States' rights. I have served as head of the Southern Governors' Conference, and I drafted the resolution, which was unanimously adopted last year at the national conference of governors in Columbus, Ohio, calling for strict guarding of States' rights against Federal encroachment. During my 6 years as Governor of Tennessee, I certainly have had ample opportunity to study T. V. A., and I can say that the rights of this State and its citizens, far from having been restricted or violated by activities of this Federal agency, have been enlarged through enriched opportunities.

To those who contend that T. V. A. eliminates large areas from local taxation, let me say that these taxes have been more than replaced in Tennessee by T. V. A. contributions, both in the form of direct compensatory payments to the State treasury and in indirect benefits.

T. V. A. has proved an uplifting, progressive, civilizing influence on our people, and whatever opposition once existed in Tennessee has completely disappeared. The agency represents one of the best investments ever made with taxpayers' money. It would be little short of a crime if the benefits of such unified regional planning were not extended to other regions with undeveloped resources. The Missouri River Valley is only one of the regions capable of such development. We would like to see our Cumberland River Valley similarly developed.

PRENTICE COOPER.

NASHVILLE, TENN.

BY COLGATE W. DARDEN, JR., GOVERNOR OF VIRGINIA

To the EDITOR OF THE ST. LOUIS POST-DISPATCH:

Only a small part of Virginia is in the Tennessee River watershed, and T. V. A. has no construction projects in this State. Our experience with T. V. A. has been principally in soil conservation work. In this field the Federal agency has made a notable contribution, and farmers in southwest Virginia are enthusiastic about it.

Virginia has many test-demonstration farms using T. V. A. phosphate fertilizers. I am told that the State extension service, reporting results on 98 farms after 8 years, showed a 30 percent increase in farm income based on 1935 prices, 40 percent increase in crop yields and carrying capacity of pastures, a 25 pecent increase in livestock, and a 20 percent increase in labor efficiency.

T. V. A. has provided millions of seedlings for planting on eroded acres, and has established selective cutting demonstrations on farm woodlots.

T. V. A. operations in Virginia have not resulted in any encroachment on State rights. Of course, impairment of State rights might develop in the long run, and is a possibility to be borne in mind. But to date there has been no such impairment.

Virginia has enormous coal deposits at the expense of which hydroelectric power projects may be organized. I do not know whether such hydroelectric projects, financed with tax money, really provide cheaper electricity. It is a moot question, and T. V. A. production of power was the subject of considerable controversy before the war thrust most other considerations into the background.

COLGATE W. DARDEN, JR.

RICHMOND, VA.

BY SIMEON S. WILLIS, GOVERNOR OF KENTUCKY

To the EDITOR OF THE ST. LOUIS POST-DISPATCH:

T. V. A.'s work in Kentucky centers around the gigantic Kentucky Dam, $110,000,000 structure controlling the Tennessee River near its mouth. The dam, designed to extend the navigation channel 184 miles upstream and to reduce flood crests on the lower Ohio and Mississippi Rivers, is nearing completion.

The operational test for T. V. A. in Kentucky is yet to come. My experience with the agency during 1 year in office has been confined largely to the building stage. I can say that during this period there have been no conflicts between the State and the Federal agency. As far as I know there were no land controversies in preliminary work on the big dam.

There is no reason why T. V. A. should not be able to operate without encroaching on States' rights. The idea underlying the regional valley authority is sound, and it is perfectly reasonable for State and Federal governments to work together to realize all the varied advantages accruing from unified control of an entire drainage basin.

Of course, something has to be done to compensate local governmental units for loss of revenue in taxes on property taken over by T. V. A. The agency recognizes this, and has made substantial payments in lieu of taxes. I have only a preliminary report on these payments at present. The subject is under study, and is a matter for future development.

Anything improving the home life and the income of farmers naturally is welcome. T. V. A. has numerous test-demonstration farms in Kentucky, and has provided tons of phosphate and nitrate, with the result that there have been increases in net farm sales and livestock carried, and a reduction in labor required. To encourage sustained-yield forest practices, selective cutting demonstrations have been established on Kentucky farm woodlots. Municipal and cooperative systems supply T. V. A. power to a number of Kentucky consumers.

Development of Kentucky Lake, which will have a 2,000-mile shoreline, should provide a popular recreational area. T. V. A. has transferred 9,000 acres of land to the United States Fish and Wildlife Service for inclusion in the Kentucky Woodlands National Wildlife Refuge.

SIMEON S. WILLIS.

FRANKFORT, KY.

BY THOMAS L. BAILEY, GOVERNOR OF MISSISSIPPI

To the EDITOR OF THE ST. LOUIS POST-DISPATCH:

Mississippi was the first State in which T. V. A. power was distributed, commencing with Tupelo early in 1934. I was a member of the State legislature when this development was proposed. I supported this as well as subsequent T. V. A. measures.

We are largely an agricultural State, and any program, Federal or private, designed to bring electric power to rural sections is definitely a step forward in the development of the State. The life of our people has been greatly enriched by T. V. A. and the Rural Electrification Administration, the development and extension of cheaper electricity having proved sound and wholesome from every point of view.

Use of electrical appliances has lifted many of our burdens. In the northeastern part of the State, we are milking cows, pumping water, cutting wood, refrigerating food and giving decent light chiefly with T. V. A. power. Better refrigeration means not only a saving of food but improved health, while the electric pump, tank, water system, and sewage disposal facilities are likewise of incalculable value to public health. These vital things we owe largely to T. V. A., and to the power companies operating in our State.

I do not feel that the role played by this Federal agency in Mississippi has constituted any encroachment on our State rights. We have cooperated with T. V. A., and it has cooperated with us and our State agencies. The result has been satisfactory.

Development of cheaper electricity in other sections of the country, either through Federal agencies or private companies, where feasible and practicable, is in the interest of the Nation's welfare. In addition, such development would help provide jobs for returning service men and women and war workers, at the same time encouraging resettlement on the farm by giving to farm life the many blessings which would result from the use of electric energy.

THOMAS L. BAILEY.

JACKSON, MISS.

BY CHAUNCEY M. SPARKS, GOVERNOR OF ALABAMA

To the EDITOR OF THE ST. LOUIS POST-DISPATCH:

At the inception of T. V. A. 11 years ago, I publicly stated that I considered this the

greatest experiment in empire building this Nation ever had undertaken. I have had no reason to change that view.

Under the leadership of David E. Lilienthal, T. V. A. Chairman, the agency has kept free of politics. Not only that, but T. V. A. has been careful to work with our State agencies and local communities. In its far-reaching soil-improvement experiments, T. V. A. has cooperated with the State extension service, and in developing industry it has worked with chambers of commerce and other local groups. There has been no question of a Federal agency coming in and riding roughshod over the State and local agencies.

T. V. A.'s fine record has impressed business, agriculture, and labor alike. In recent years I have found no opposition to T. V. A. Conducted as it has been conducted, with vision and regard for local agencies, it has made a tremendous contribution to public welfare.

Taxation is the major potential field of conflict between State and Federal rights. In this connection I should like to point out that the Federal agency makes an annual contribution to the State in lieu of taxes, appraising the value of lands taken over and making a contribution from its power earnings. Last year T. V. A. contributed $447,669 to the State treasury in lieu of taxes. In addition, it makes a settlement with each city and county affected on an ad valorem tax basis.

Taking into account what T. V. A. has done in improving flood control, navigation, power distribution, agriculture, cattle raising, dairying, soil conservation, and home life in general, I can say that the State has gained immeasurably more through service to its citizens than it has lost in mere taxes on lands taken over by the agency.

CHAUNCEY M. SPARKS.

MONTGOMERY, ALA.

BY ELLIS ARNALL, GOVERNOR OF GEORGIA

To the EDITOR OF THE ST. LOUIS POST-DISPATCH:

The only complaint I have regarding T. V. A. is that its influence has not permeated this State further. Activities of this agency have been of great benefit to the people of Georgia, and we would welcome extension of T. V. A. operations from the northern to other sections of the State.

There once was talk about the danger of such a Federal agency wrecking local government and upsetting the tax structure. Such fears have proved unfounded. There has been no encroachment on States' rights, and I believe the States actually have received more money under the T. V. A. system of payments in lieu of taxes than they did before the Federal agency went into operation.

If we are going to industrialize the South and the West, we must have wider distribution of electric power. I might add that privately owned utilities have benefited from the advent of T. V. A., having been stimulated to render more service, with the result that their profits increased.

T. V. A. has been particularly active in cooperating with Georgia institutions in programs for development of the State's resources. Extensive work has been done in developing a flax-growing and processing industry with the Georgia School of Technology. In cooperation with several State institutions, T. V. A. was instrumental in setting up 30 community dehydrators in 1943 as a first step toward complete community food-processing plants.

This has been done in addition to rural electrification, establishment of test-demonstration farms, erosion control, forest fire control and selective cutting demonstrations for better utilization of forest resources. The mountain lakes T. V. A. has created in north Georgia have given marked impetus to our developing tourist industry.

People in all walks of life—business, agriculture and labor—have benefited from operations of this agency, and are grateful for T. V. A.

ELLIS ARNALL.

ATLANTA, GA.

Throat Operation Performed With Jackknife

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by war correspondent Lee McCardell:

AID MAN WITH JACKKNIFE DOES THROAT OPERATION—INCISION IN WINDPIPE, HELD OPEN BY FOUNTAIN PEN, SAVES WOUNDED SOLDIERS' LIFE

(By Lee McCardell)

With United States Third Army, Germany, November 29.—A "tracheotomy" or windpipe operation performed with jackknife and fountain pen by a 19-year-old medical-aid man on a wounded American soldier under fire near Metz is believed to be one of the most remarkable pieces of battlefield surgery thus far reported in the war.

"Timely, resourceful, daring, and intelligent," was the description which Capt. David Dunn, of Westminster, Md., 5th Infantry Division surgeon, applied to the operation performed by Pvt. Duane N. Kinman, of College Place, Washington.

APPARENTLY SUFFOCATING

Kinman was binding up a chest wound and fractured ankle of another soldier when a mortar shell fragment struck a rifleman of his company in the throat. The rifleman fell in the mud and thrashed about from the pain caused by his slashed throat muscles, of what medical men later called a "perforation wound in the neck, with the wound exit over the tracheal area, and fracture of the trachea."

He was turning blue in the face, gasping and apparently suffocating from the windpipe injury which had cut off his breathing, when Kinman reached him.

Recollecting two lectures he had last year in basic training, Kinman whipped out his jackknife to perform an operation which is delicate even under the best surgical conditions. He knew he would have to open the wounded man's windpipe and he knew he would have to have a tube or wedge to keep it open. He noted the fountain pen in the wounded man's pocket.

BATTLE STILL RAGING

The battle was still raging. Under machine-gun fire and mortar fire, with a muddy field for an operating table and an overcast sky for light, without any anesthetic, Kinman cut into the wounded man's throat while another soldier held him down.

"I don't like to do this," said the aid man, "but it's the only way he's gonna live."

He made a clean incision of 1½ inches in the wounded man's windpipe at a point where a slip of the knife into the jugular vein would have been fatal. Into the incision to hold it open he slipped the rounded end of the infantryman's fountain pen.

"Keep that in and you'll be O. K.," said Kinman. "You can't breathe through your nose or your mouth, but if you keep that pen in your windpipe you can breathe through the cut I made."

WALKS TO AID STATION

Supported by Kinman, the wounded infantryman walked into the battalion aid station a few minutes later. The battalion surgeon stared at the improvised tracheotomy in amazement. Having no facilities to improve upon it, he sent the patient on back by ambulance. The wounded man was now able to stand up and breathe without difficulty.

At the clearing station of the Fifth Medical Battalion, Captain Dunn, surgeon on duty, marveled at the patient, now almost nonchalant about his injury. Captain Dunn removed the pen and inserted a regular tracheotomy tube.

From Captain Dunn's clearing station the wounded man was sent farther back to the field hospital where, after a brief period of observation by astonished doctors, he was evacuated to an evacuation hospital without further treatment.

Kinman, 5 feet 10 inches tall, had completed two years' high school and was working as a truck driver when inducted into the Army in September 1943. He joined the Fifth Division last September as a replacement medic when the Fifth was fighting in the Moselle River bridgehead.

Don't Buy Business

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, January 6, 1945

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published by the Onancock (Va.) News with respect to a speech made by the Honorable James A. Farley before the Alabama State Chamber of Commerce at Birmingham, Ala.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DON'T BUY BUSINESS

Mr. James A. Farley, former Postmaster General, recently spoke in Birmingham, Ala., advising the people of the South to balance their agriculture with industry and to make it possible for the people, through increased incomes, to satisfy their wants and their needs.

In addition, Mr. Farley urged that no effort be made to buy business, declaring that "I am not one who would advocate giving free sites to industries, years of tax exemption, special concessions and franchises, guaranties of roads and highways, waterworks, etc."

The New Yorker puts his finger on one of the rackets of modern industrial progress. Very often a community is faced with demands from a prospective industry that it provide, free of charge, certain essentials which are the legitimate expense of business. The people proposing the new enterprise are anxious to get as much as they can for nothing and are adept in playing one community against another. As localities bid against each other, the net result is the loss

of considerable revenue and the donation of considerable public funds.

Mr. Farley asserts that "real legitimate business does not ask, does not expect, and would not have these baubles hung in front of their faces." He adds that "the business that demands these is worth looking into—it savors too much of speculation and too little of permanency; it rings too much of theory and too little of practice; it's long on hope and short on know-how."

We thoroughly approve the sentiments expressed by Mr. Farley and give them publicity. Nevertheless, we have no illusions that what he says will persuade industry-hungry localities from attempting to buy business. In the long run, however, we are convinced that there is no net gain.

Sixth War Loan

EXTENSION OF REMARKS

OF

HON. JOSEPH RIDER FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following message from the Territory of Hawaii:

JANUARY 6, 1945.

Subscriptions to the Sixth War Loan in the Territory of Hawaii were more than double the quota set for the islands.

The office of the Delegate to Congress from Hawaii, JOSEPH R. FARRINGTON, was informed of this record in a wire from Honolulu today following an announcement by Fred Kanne, collector of internal revenue at Honolulu, telling the results of the drive and speaking in the highest praise of the response from all elements of the civilian population, including many thousands of war workers, and men in the armed services to the Sixth War Loan drive.

In confirming the results of this drive, the Treasury Department informed the Delegate that Hawaii had subscribed 210 percent of its quota.

The goal in the Territory was twenty million. Subscriptions up to last Wednesday were in excess of $41,100,000.

The total subscriptions to series E bonds were $14,200,000, with a quota of $10,000,000. Subscriptions to other bonds reached $26,900,418.

Free Enterprise

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. HORAN. Mr. Speaker, many of us who supported the amendment making the Committee to Investigate Un-American Activities a standing committee, hope that it may become a positive force in American life. We hope that it may increasingly define the real meaning of the word "America."

It is time we were brought to realize, to use the vernacular, that "we've got something here" in America that others do not have. Without the spirit that built America, without the atmosphere that can and does make divergents live peaceably together "peace on earth among men of good will" is altogether impossible.

I was much impressed with an article in the Washington News for January 6, 1945:

FREE ENTERPRISE

(The author of this challenging article is A. L. Swim, a staff writer for the Scripps-Howard Memphis Press-Scimitar and a member of the American Newspaper Guild. He is also president of the Memphis Industrial Council, C. I. O.)

The people who are talking loudest about "free enterprise" are not the people who stood in bread lines during the depression, or walked picket lines while organized labor was fighting to establish itself, or dug ditches for W. P. A.

This is unfortunate because the group that did those things is large and politically powerful.

It is unfortunate that the campaigners for "free enterprise" are too easily associated in the minds of wage earners with the closing of factory gates and the employment of strike-breakers.

And it is unfortunate that those now fighting to preserve the fundamental American way of doing things haven't a better slogan than "free enterprise."

If any radical change is made in the American system it will come with the support or at least the approval of those who did the picketing and the ditch digging.

This support or approval will result from their dissatisfaction with what they have had in the past and their desire for something better.

They will remember that they went through their worst period of economic stress under "free enterprise."

They will recall that it was the Government which fed and clothed them when "free enterprise" failed to do the job.

They will be inclined to forget that "free enterprise" built the factories and the railroads that gave them the jobs they lost during the depression, and to skip over the fact that the United States, under a "free enterprise" system, advanced further and faster economically and politically than any other nation ever did.

It's human nature to remember the bad forget the good—and that's why too many people associate "free enterprise" with land grabbing, long hours, low pay, bad working conditions, indiscriminate firing, the lockout, labor spies, and strike breakers.

Somebody should hang a new tag on the type of enterprise that has made America great. And there should be less talking about ideology and more about results—the things that really count.

The average person who works for a living—whether on the farm or in the city—measures his progress by the groceries he buys, the house he occupies, the clothes he can provide for himself and his family, the medical and educational services he can get, the amount of work he has to do and the money he can save.

He's more interested in pork chops than in isms—and this is no reflection on his intelligence.

Why don't the "free enterprise" campaigners take advantage of this? Why don't they use plain facts instead of fancy phrases?

What facts?

Facts like these:

The worst an American employer can do to an employee is fire him.

In a government-controlled state—such as Russia—the employer (the party in power) can and often does "liquidate" offending employees.

In the United States, in peacetime, a person can change jobs when he pleases, eat where he pleases, sleep where he pleases, have his fun where he finds it, and buy his groceries and clothes at stores of his own choosing.

In communistic Russia a person is told where he must work—and that's where he works. He eats in a government-designated restaurant, plays in a government-operated recreation area, buys his merchandise at noncompetitive government stores.

In this country a person can begin at the bottom of the economic heap and work to the top—if he has the ability.

In a socialistic state one gets to the top because of political connections or stays at the bottom because of lack of them—with working ability playing little part in his progress.

An American industrial worker can rise in a union meeting and declare that his boss is a dirty bum, a lousy chiseler, a pinch-penny tightwad—and get by with it.

Totalitarian states have concentration camps and firing squads for workers who talk that way about their bosses—the political party.

An American farmer can, without fear of reprisal, yell across the fence to his neighbor that the Secretary of Agriculture is a crackpot and that "the President doesn't know any more about farming than a hog on ice."

When you farm for the state you do what you're told and keep your mouth shut.

Facts? There are plenty:

The men in America's depression breadlines dressed better than the men who queued up in front of Russian stores at the height of Russian prosperity.

Workers who have been smarting under wartime controls that "froze" them to their jobs and limited their pay increases have had only a slight taste of what Government control can mean.

Landlords irked by O. P. A.'s rent freezes know just a little about Government "direction" of business.

Anybody who has tried to get W. P. B. priorities knows only a bit about Government red tape.

Let's cite the facts. Let's compare actual living in this country with that of socialistic states.

And America's "little people"—the important John Joneses and Mary Smiths who make up the Nation's backbone—should never forget this:

Under the American system of enterprise you can fight back at those who take advantage of you. Sometimes you win and sometimes you lose—but you can fight without being jailed or shot.

Nineteen Hundred and Forty-five Food Outlook Is on the Lean Side

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. OUTLAND. Mr. Speaker, one of the best over-all statements of the food supply situation from a nongovernmental source was contained in an address recently made by Paul S. Willis, president of the Grocery Manufacturers of America, reported in the New York Times of January 2, 1945. It contains so much information of vital interest to food distributors and housewives it seems to me

worthy to be printed in the CONGRESSIONAL RECORD. Due to a variety of reasons, the food supply situation for this new year will be tight in many areas. I am sure Members will benefit by learning the facts from so well informed an authority.

The titles of the article summarize the story. They are: Nineteen Hundred and Forty-five Food Outlook Is On the Lean Side; Willis Predicts That Less Meat, Butter, and Sugar Will Be Available for Civilians; World Factors Blamed; Milk, Eggs, Cereal Products, and Margarine Expected To Make Up Other Deficits.

The article is as follows:

1945 FOOD OUTLOOK IS ON THE LEAN SIDE—WILLIS PREDICTS THAT LESS MEAT, BUTTER, AND SUGAR WILL BE AVAILABLE FOR CIVILIANS—WORLD FACTORS BLAMED—MILK, EGGS, CEREAL PRODUCTS, AND MARGARINE EXPECTED TO MAKE UP OTHER DEFICITS

American civilians will have less meat, butter, sugar, and certain processed foods during the next 3 months than at any time since the war began, but they will eat at least 7 percent more per person of food of all kinds during 1945 than they averaged in the years 1935 through 1939, according to Paul S. Willis, president of the Grocery Manufacturers of America.

Milk, eggs, cereal products, margarine, certain vegetables and fruits—and perhaps even an increase in turkeys—will make up the deficits in other food items, Mr. Willis indicated in a food-supply analysis and forecast.

Declaring that the return to rationing last week of many foods that had been point free had been made necessary by the unexpected military reverses in Europe and by other distressing world factors, including record floods in Europe and a drought in Australia, Mr. Willis said that the Office of Price Administration's action was heartily endorsed by well-informed leaders in the food industry.

FLEXIBLE RATIONING SYSTEM

Although the return of so many food items to the ration list was "grim and disappointing news to many people," said Mr. Willis, it was fortunate that the rationing system was flexible enough to change quickly with changing conditions.

"When foods were more plentiful early this fall," he said, "it was clearly indicated that rationing be relaxed. Now that an unexpected reverse has halted our military progress, it is wise to revert quickly to our fair share system of distributing available supplies."

Mr. Willis made the following statement about the food situation:

"Just as the German offensive in Belgium and Luxembourg has forced us to revise our estimates of how quickly the United Nations can achieve victory on the western front, so it has also forced us to revise downward our estimates of the food supplies that will be available for civilian use in 1945.

"Only a few months ago, our military leaders seemed sure of victory in 1944. America had just harvested bumper crops, and food manufacturers had set new high production records. With VE-day in sight we could then expect some surplus foods and the return of competitive selling in 1945. But as the fortunes of war shift, so must our home front estimates."

PROSPECT IS FOR LESS

"Because of steeply increased military requirements the prospects now are that in spite of huge production there will be less meat, less of many processed foods, less butter, and less sugar for civilian use in the first quarter of 1945 than at any time since the war began.

"Not only our temporary military setback in Europe, but other unfortunate world conditions indicate that the drain on American food supplies will be very great in the coming year.

"The most significant news comes from Europe and Australia. Europe is experiencing its worst floods in 100 years—floods that are seriously damaging large areas of some of Europe's most productive farm land. In peace times Europe supplies about 90 percent of its own food supplies. According to early optimistic estimates, most of Europe's needs in 1945 could be met if Germany had been defeated in 1944. However, because of the continuation of the war and destructive floods, European relief feeding requirements will be far higher in 1945 than any previous estimates would indicate.

"On the other side of the world, in Australia, the farmers are suffering a drought of calamitous proportions. Only the droughts of 1902 and 1914 equal it.

"Wheat production in Australia is expected to be less than one-half of last year's crop. Large numbers of sheep are being slaughtered because of the shortage of fodder.

"The past dependence of the American armed forces on Australia for food supply, as well as Britain's dependence on food imports from the dominions, makes the drought losses very important in our own forward thinking. In order to conserve shipping space, a very large proportion of the subsistence supplies for United States armed forces in the Pacific area have come from Australia. Shipping space is somewhat more plentiful today, but the number of men in the Southwest Pacific area has been greatly increased, so this advantage is largely canceled out."

BRITAIN'S PLACE VITAL

"Britain's place and problems in the world food picture are also vital in estimating the 1945 food situation in the United States. The British Minister of Food has announced that England will purchase all surplus beef, mutton, and lamb from Australia and New Zealand until June 1948. Canada is to supply nearly 12,000,000,000 pounds of bacon through 1946. All exportable sugar from the colonies and dominions up to 1947 is to go to Britain.

"All this spells one thing for the United States: We are soon to face the problem of supplying practically all our food for our own military forces and can place less dependence in the war years to come on nearby Allied sources.

"In spite of these gloomy prospects, the total civilian supply of food in America in 1945 is expected to continue about the same as in 1944, when per capita civilian consumption was at least 7 percent above the pre-war average, 1935–39 period.

"Just as the floods in Europe and drought in Australia are upsetting previous estimates, so the weather this coming year here in America may be the key factor. We have had 5 straight years of extraordinary fine growing weather. The law of averages is against a repetition in 1945. But if we have normal growing weather, it is possible to approximately estimate production.

"Supplies of some fruits, turkeys, and beef may be larger next year, but supplies of pork, potatoes, butter, and, perhaps, chicken and some fresh vegetables probably will be smaller. Civilian food supplies will not be generally changed by the end of the European war since noncivilian requirements will continue to take a substantial proportion of the total food supplies throughout 1945.

"For the year 1944, as a whole, civilian supplies of most of the manufactured dairy products, canned fruits and vegetables, better grades of beef and turkeys have been short of civilian demand at ceiling prices. However, relatively large supplies of cereal products, lard, margarine, eggs, pork, canned fruit juices, and the principal fresh fruits, particularly citrus, have been available for civilian consumption. Even though sales of fluid milk and cream have been restricted, their consumption reached a new high and has been very important in meeting civilian nutritive needs.

"Civilian meat supplies, particularly pork, were very large until last summer. Since then, they have been reduced considerably by seasonal decreases in production during the summer and by markedly increasing war requirements for the last quarter. However, meat consumption for the year as a whole probably will be from 140 to 145 pounds per capita. In 1945, it appears that civilians will get much less pork but more beef. Per capita consumption of all meat will fall but probably will be still above the 123-pound average in 1935–39.

"Egg consumption in 1944 has been unusually high, even with the very large meat consumption. It is probable that civilians will consume at least as many eggs next year. Chicken supplies for civilians probably will be reduced a little because of some decrease in production. Turkey supplies may increase somewhat.

"Butter supplies for civilians next year might be below the level of 1943 and 1944 because production may fall off again next year. Fluid milk supplies will continue at a near record level. Cheese and evaporated milk probably will continue to be short of full civilian demand. If noncivilian requirements continue at the 1944 rate, less lard would be available for civilians next year because of the reduction in hog slaughter. Supplies of shortening and edible oils for civilians may be about the same in 1945 as in 1944, but smaller than in 1943. However, margarine supplies will be slightly increased.

"FRUITS AND VEGETABLES

"Civilian fruit and vegetable supplies in 1944 have been about the same in total as in average pre-war years, 1935–39, and, if weather conditions are about average, there probably will be little change in over-all supplies next year. Canned fruits have been short, but there have been large increases over 1943 in the consumption of canned fruit juices and fresh fruit, particularly citrus, and some increased consumption of dried fruits. Canned fruits will continue short in 1945. Increased supplies of bananas and other fresh fruits from outside the country might balance possible decreases in fresh deciduous fruit production.

"Similarly in vegetables, fresh supplies in 1944 have been large, but supplies of some of the commercially processed vegetables have been somewhat short of civilian demand. During 1945 supplies of some fresh vegetables may decrease from the very high levels of 1944. However, supplies from Victory gardens and home canning may be expected to continue large."

Address by Bernard M. Baruch at Federation Day Breakfast Meeting, New York City

---

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, January 6, 1945

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Honorable Bernard M. Baruch at the Federation Day breakfast meeting, New York City, on Tuesday, December 12, 1944.

No man in America, in my judgment, has contributed more generously and effectively to the public good of our Nation than has Mr. Baruch. The great things he has accomplished and the success of his efforts are evidenced in many ways, although he himself does his best to avoid publicity.

America owes a great debt of gratitude to Mr. Baruch for his services, which I am happy to say, are recognized generally, and greatly appreciated.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Your invitation to be here today brought certain thoughts to my mind—thoughts that are as applicable to all other religions or communities as they are to the Jews. Therefore, I think they may be called American.

If we want to retain the system of personal initiative, we must support private charity; the two go hand in hand. Abolish private charity and the State takes over, in a grim, organized, statistical way.

The day of the old poorhouse will return, because bureaucracy will lack the personal touch possessed by our present highly developed system. This is enlightened self-interest. Yes; I am willing to call it that. What motive in life is not open to that perfectly proper interpretation?

I do not like classes or groups that come together for special pressure purposes, as opposed to the general good. I believe in the preservation of a broad front, without cleavages into special interests. But, charity is not special. Because, it is for another we give—not for ourselves, except for the joy in giving.

There are primary liberties to which this country is consecrated. Those liberties have to do with the basic rights of all peoples. After these liberties come certain privileges.

I want to give my life—I hope I can say continue to give my life—to the protection of freedom of speech, of worship and of assembly. Upon these things rest social justice, social progress and economic privileges. No matter what organized society may do, however, each one must finally rely upon himself.

The system of individual effort, which we call the capitalistic system is the best in the world. It has proved itself so in peace and in war. I believe in trying to better that system, instead of tearing it down. I believe it rests upon the elements that I have named, and that the protection of these essentials leads to certain social and economic levels, which promise progress.

These levels cannot be attained without fully realizing that the enterprise system carries personal obligations and that one of them—charity—is greatest at this moment.

The Jew has always tried to take care of his own. That characteristic has always been a proud badge of the members of this faith, and is even a prouder one these days when paternalism is so soft and beguiling.

We must proclaim the lessons we learn—that we live by the sweat of our brow—that helpfulness to others is helpfulness to ourselves; that these are measures of a social conscience, which we freely accept and enact, rejecting a pauperizing, strength-destroying form of statism, against which the whole spirit of America is committed.

Another Jew said, 1900 years ago—the fighting St. Paul: "And now abideth faith, hope, and charity, these three; but the greatest of these is charity." (New Testament—I Corinthians xiii: 1–4, 13.)

Let us go forth and follow this preachment.

Tragedy of One-Man Rule

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Saturday, January 6, 1945

Mr. WILLIS. Mr. President, under date of December 21, 1944, the eminent columnist, David Lawrence, presented in the daily newspapers of the country in an article entitled "Tragedy of One-Man Rule," certain thoughts and observations which I consider of value. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON, December 21.—This has been a week of tragedy in Government. For in the midst of a war being fought to establish the "four freedoms," democratic government acquiesced in what may be termed the crucifixion of principle.

Whether the plan for the partition of Poland proposed by Marshal Stalin and defended by Prime Minister Churchill is right or wrong, and whether the forces of dissension in Belgium and Greece should have been handled by a military government instead of by political puppets—all these questions are being debated in the House of Commons. But should the Senate of the United States, as a coordinate branch of government in the matter of advice on foreign policy, remain silent?

The American people must, indeed, be bewildered as they read the press dispatches from world capitals today. First, the British Prime Minister makes an extended speech to the House of Commons in which he plainly and openly introduces a violation of what the whole world had understood to be the principles of the Atlantic Charter, then a day later the Prime Minister says he had "a lapse of memory" and was referring to a different document which apparently was in conflict with the Atlantic Charter.

On top of this, when the whole country is waiting for some expression from President Roosevelt in comment on the Prime Minister's speech, the President indulges in a half-humorous discussion of how the actual Atlantic Charter was never signed, how it consisted of a number of scribbled statements by himself and the Prime Minister aboard a warship in the Atlantic in August 1941, and how, when an important treaty embodying the Atlantic Charter was to be signed, nobody could find the document, and there was no ink in his fountain pen to sign it, etc., etc.

Certainly when anybody wants to wiggle out of a contract a dozen excuses can be found. The President gave the impression that maybe the exact language of the Atlantic Charter wasn't so important after all because it was not signed by anybody but was merely a "press release" containing principles that could now be variously interpreted or applied.

The World War has gone on for 3 years so far as the United States is concerned, and our casualties have passed the 500,000 mark, and mothers and fathers of the boys who are making the sacrifices are being told, in effect, that our war aims really never had any binding basis on our allies and that the principles could be altered to suit the whims or the ambitions of the statesmen of other countries.

The root of the trouble is that three men—Churchill, Stalin, and Roosevelt—are handling the world's affairs without regard to parliaments, legislatures, or congresses. Discussion has been discouraged on the theory that it would hurt the solidarity of the Big Three heads of state. But much more important than this is the morale of peoples, especially the American people whose manpower and whose resources are bearing the brunt of the struggle.

If, however, the President failed to see his true responsibility this week, the Senate failed also. Jealous about its power of treaty making and ready and willing to oppose any change in its authority, the Senate nevertheless did not have a session of its Foreign Relations Committee to formulate and present to the President and the Secretary of State its advice as required by the Constitution in the making of international understandings.

Territorial rearrangements and shifts of population abroad are very much a matter of concern to the Senate. It would be a grave mistake if the Senate waited until after these Executive agreements had been made and disappointments had been engendered throughout the world, sowing the seeds of a third world war, before saying anything about the circumstances now being unfolded.

One-man government plunged Germany into the war after one-man government had made a treaty of alliance between Russia and Germany in 1939. One-man government is the root of all the tragedy this week because national legislatures are not being informed and hence peoples are also in the dark. The indifference of the Congress is incomprehensible. It may or may not be the result of the indifference of the American people themselves to what is happening before their eyes.

Biddle Bargains Bioff-Browne

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. SMITH of Wisconsin. Mr. Speaker, again we have further evidence of the incompetency of Attorney General Biddle. A few years ago this country was shocked by the revelations in the trials of Willie Bioff, a professed panderer and George Browne, international president of a union and an intimate of Capone gangsters. These men were shake-down artists of a high order and were found guilty and sentenced to prison. Then the Attorney General made a deal with these criminals and now to the further astonishment of the people, these crooks are given their liberty after serving 3 "soft" years. It is about time Mr. Biddle was removed from office by impeachment.

As a part of these remarks I include herein an editorial from the Milwaukee Journal:

BIOFF-BROWNE PAROLE

Willie Bioff was a panderer. George E. Browne was a pal of Capone gangsters. Browne was president of the International Alliance of Theatrical Stage Employees. Bioff was his personal representative in Hollywood. Together they extorted at least $550,000 from the motion-picture industry, threatening to call strikes if the blackmail was not paid.

These men, who betrayed their positions of leadership of 125,000 persons, whose actions were destructive to the very life of honest unions, who extorted huge sums by gangster methods, were found guilty and sentenced in November 1941. Bioff got 10 years and Browne 8 years. They also paid fines—$10,000 each, mere tokens of the amounts they extorted.

Months ago there were rumors that the Attorney General's office had promised Bioff and Browne paroles in a deal to secure their help in convicting six other Chicago crooks. The deal was denied.

But what happens now? After having served only 3 years—not too arduous years, at that, with many months spent at somewhat less than hard labor while they were kept available as Government witnesses—these two crooks are given their parole freedom because of their aid in the trial of the six. The Attorney General's Office does not oppose the parole. No deal, eh? That is hard to believe. And Judge Knox doesn't talk about their conviction as "a breath of fresh air," as he talked at the time they were convicted. Rather, he explains that these two men have "really aided the Government with their testimony."

Must Uncle Sam bargain with panderers and gangsters to get testimony?

The Ghost of Mr. Dies

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Baltimore Sun of January 5, 1945:

THE GHOST OF MR. DIES' COMMITTEE COMES TO LIFE

It turns out now that obituaries written to mourn or to celebrate the passing of the Dies committee were premature. By a tour de force of parliamentary strategy, Representative RANKIN, of Mississippi, succeeded in reestablishing the Committee on Un-American Activities as a permanent standing committee of the House of Representatives on the opening day of the new session.

This committee was the personal vehicle of Congressman Dies, and when he failed to run for reelection the common assumption was that it would pass quietly out of existence. To be sure, as a vehicle for Mr. Dies, it has already gone beyond recall. The question now is, What useful role can the revived committee play?

The Dies committee was not an unmixed blessing. True, it did much to enlighten the public on the activities of those who employ the constitutional immunities of our system for the purpose of working against that system. This was useful work, and work of a kind which could have been done only by a congressional committee endowed with a congressional committee's special powers. The black fury of the persons whose activities were thus aired, though it impressed the gullible, does not alter the fact that through the committee the people of this country learned a great deal about the political methods and objectives of the extreme Left and the extreme Right, which they had never learned in school.

On the other hand, Mr. Dies' methods of work were hardly above criticism. On occasion he showed small scruple for some of those same constitutional immunities which it was his sworn purpose to defend. Too frequently he played the part of a prosecuting attorney rather than a disinterested investigator, showed indications of personal malice and vindictiveness, disregarded the accepted rules of evidence, and used his position to "pillory" individuals on very doubtful grounds.

All that was bad; and that is what explained the suspicion in which the Dies committee was held by so many men of good will.

Now that the committee has been given a new lease on life, and has been shorn of Mr. Dies, the House of Representatives should insist that its methods of procedure be placed above criticism. The work of public enlightenment can properly go on; and a congressional committee is well equipped to perform it. But Congress should beware of creating a private gestapo, an inquisition, a vehicle for some congressman's personal witch hunt. A continuing congressional investigation of some of those matters which concerned the original Dies committee is not only justifiable but perhaps desirable. However, it is investigation, not persecution, that is wanted.

Missouri Valley Authority

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Saturday, January 6, 1945

Mr. MURRAY. Mr. President, with great pleasure I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a very excellent editorial recently appearing in the Lewistown Democrat-News of Lewistown, Mont. This newspaper, edited by the Honorable Tom Stout, a former Member of Congress, has presented to its readers a clear and forceful editorial supporting the creation of a Missouri Valley Authority. While many newspapers are engaged in confusing the issues involved in this proposed legislation, Mr. Stout has presented a convincing argument in its support. I am most happy to ask that it be inserted in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NONPARTISAN APPROACH NEEDED

As the lines tighten for the battle over who shall develop the Missouri River Basin and how it shall be done, there is evident need for a common-sense approach to the whole problem.

As we hear and read the opinions on the subject both in the Halls of Congress and from leaders here in the State, we have become concerned over the selfish partisanship that has entered the debate. Here we stand on the eve of the greatest development of our region in history—development that promises far-reaching changes in our whole economic life—and some factions choose to confuse the principles behind the project with fencing in pure partisan language. Where name calling begins, there reason leaves off. And there is getting to be too much name calling in this matter.

The sole issue must be which method of procedure in development of the river basin will do the greatest number the most good. As pointed out before, the reclamation interests and the Army engineers have resolved some of their differences, which is indicative of progress in the matter. Many of the proposed dams have been agreed upon. But there is still conflict, however, over whether flood control or irrigation should take precedence in the development. That is largely an upriver versus a downriver clash, for the floods downstream are just as pressing a problem as the need for irrigation is upstream. The matter of maintaining a navigable channel also enters the picture.

The proposed Missouri Valley authority would pattern the development organization after the Tennessee Valley Authority, which is winning increased recognition as an eminent success despite the bitter fight conducted by private power interests to discredit it. The problems of the Tennessee Valley were to develop cheaper electric power and control floods. The T. V. A. has accomplished that and given residents of that valley a new economic outlook.

The Missouri Valley is vastly larger and its problems more complicated. To needs for abundance of cheap electric power and flood control are added the needs for vast quantities of irrigation water for reclamation projects in the semi-arid West. The problems are more complex in our valley but the principle of an all-valley panning project cannot be successfully challenged, whether it is the M. V. A. or called by some other name. A pattern must be worked out for the entire valley and development follow those lines. There can be no place for individual State planning and development, for that would result in an endless hodge-podge of inadequacies and conflicting State interests.

Protect State rights within reason, yes; but don't sacrifice the future of the valley for a political principle. A balance of interests of all people through the valley must be struck and serve as a guide.

There is no reason why flood-control and irrigation interests cannot be meshed. In fact, by all appearance they seem complementary; downstream they don't want the water, and we do. More common sense must enter the planning.

Beware those who condemn any plan as entirely wrong, or who hold up the bugaboo of bureaucratic control. They are talking from selfish or partisan motivation. The stake of all residents of this valley in its development is too great, the interests of the individuals or individual companies are too small to let partisanship dictate the program.—Lewistown Democrat-News.

Mr. Dies' Political Ghost

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. OUTLAND. Mr. Speaker, on the first day of this new Congress a most unusual step was taken when the rules of the House were amended in order that a new standing committee might be created. In my judgment this was not only bad procedure, but the committee so established, unless very carefully conducted, can become a real danger to the

ideals of American democracy. Millions of Americans realize the menace of the old special committee popularly known as the Dies Committee. Those same Americans, shocked by the action of Congress on its first day, are now hoping that the unusual step then taken will not have the serious consequences to this Nation that are potentially present.

I am very much impressed by the following editorial from the New York Times January 5, 1945, and should like to include it here as a part of my extension of remarks. It seems to express in succinct fashion the hopes of many of us:

MR. DIES' POLITICAL GHOST

A shift of a dozen votes would have defeated the parliamentary offensive by which Representative JOHN E. RANKIN, of Mississippi, succeeded on Monday in resurrecting the ghost of the Dies committee. Mr. RANKIN and his southern Democrats and northern Republicans worked fast, and one can only conclude that they feared defeat if their measure had proper consideration. Some indication of what the public thought of the methods of the old Dies committee may be had from the election returns. Mr. Dies and three others out of eight failed to return to Congress. If Mr. Dies didn't even venture to run it was plainly because he knew he could not be reelected.

The Special Committee to Investigate Un-American Activities suffered from ambiguity at its birth. Just what is an un-American activity? The law defines crimes against the state, and persons committing such crimes are admittedly un-American. But is it un-American to hold an unpopular opinion? Is it un-American to hold an opinion or take an attitude that is also held or taken by Communists? The Dies committee, or rather Mr. Dies for the most part, seemed to think so. Had he pushed his position to its logical end more than half the population of the United States might have been denounced, for surely most of us wished for the success of the Communist arms and for friendly relations between Washington and Moscow. Still, most of us were not un-American. Moreover, even when Mr. Dies was pursuing a border-line offense or a totally imaginary crime he used methods that old-fashioned persons regard as un-American—indictment by innuendo, refusal of defense testimony, prosecution, and sometimes persecution, in place of impartial investigation.

There are, of course, un-American activities, and possibly the F. B. I., the State and local police, the local, State, and Federal courts are not competent to deal with all of them. Perhaps a few congressional amateurs are required to supplement the existing and time-honored agencies. If this is so, let us hope that at the least the resurrected committee will not itself indulge, as Mr. Dies' committee surely did, in un-American practices. Let it be impartial. Let it respect the rules of evidence. These changes would be an improvement that might make the committee useful.

America's Prayer

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Edgar H. Bierly, of Emporium, Pa.

AMERICA'S PRAYER

Our Heavenly Father, hear our prayer,
Bless Americans everywhere,
Whether on land or on the sea,
Headed for endless eternity,
Bring them back to Thy loving care,
This, O Lord, is our earnest prayer.

If we should fall or go astray,
Or walk in our own will, or way,
As we are sometimes tempted to do,
And even crucify our Saviour anew,
Forgive us and take us back into thy loving care;
This, O Lord, is our earnest prayer.

We thank Thee, Lord, from day to day,
For what Thou hast done for the U. S. A.
Continue to guard us forevermore;
Keep all tyrants from our shore;
Guard us and guide everywhere;
This, O Lord, is our earnest prayer.

God protect America, our native land;
Firm may she ever stand.
Continue to guide by Thy loving hand,
Until before the "judgment bar" we stand,
Then take us all home to Thy loving care;
This, O Lord, is America's prayer. Amen.

—*Edgar H. Bierly.*

A Reason Why Not

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. PLUMLEY. Mr. Speaker, I have consistently supported the Dies committee since its original establishment as a special committee. I have voted for every appropriation made in its behalf. I would vote for a similar resolution at the proper time, but I shall not vote for the pending motion and take that position with no excuse, alibi, or apology therefor.

The reasons offered by the majority leader in opposition to the proposition are sound and adequate. We are confronted by an attempt to establish a new and standing committee out of order, prematurely, in amendment to if not in violation of the existing rules of procedure. There is no exigency which demands the use of such high-pressure tactics at this time in the session.

Anyway, Mr. Speaker, the action that is proposed by the pending amendment to the rules of the House to create a standing Committee on Un-American Activities is, to say the least, a rather singular proceeding.

The matter has not been presented to the Rules Committee in line with the customary procedure. The jurisdiction and the number of members on the committee proposed by this amendment has been considered by nobody other than the author of the amendment. It is in every respect so unorthodox that, as a former Speaker of the House of Representatives, I am compelled to pause and consider carefully our contemplated action today from a parliamentary standpoint.

A standing investigation committee is in itself a most unusual committee. If it be the purpose of the House to have a permanent committee to conduct investigations, then surely the committee should be larger and its jurisdiction and scope extended so that it might well serve at least as a kind of investigatory pool.

But there is an even more persuasive reason why I shall vote against this proposed amendment of the House rules. In the very last week of the Seventy-eighth Congress, the House passed a concurrent resolution authorizing the creation of a joint committee of the House and Senate to examine into and to make recommendations covering the broad subject of the reorganization of Congress. That committee was appointed. I have the honor of membership on it.

Among other things, the resolution whereby that committee was created provides for a full and complete study of the organization and operation of the Congress. It is authorized to make recommendations with a view to the simplification and strengthening of this body, parliamentarily and otherwise.

Furthermore, the resolution authorizes the study of the "structure and relationships between the various standing, special, and select committees of the Congress."

There is general agreement that this study is long overdue. The very purpose of this study is to so improve the techniques, the processes, the organization and the operations of the legislative branch as to improve its effectiveness and to recapture the prestige and position which it has always occupied in public esteem.

Here, however, is proposed without adequate consideration or study, the creation of a new committee of unknown and uncertain authority in the very face of the action taken in the last week of the preceding Congress. It doesn't make sense. What's the hurry? Why not defer this matter? Why not let it become a part of the subject matter to come before the Reorganization Committee? Why not approach this problem in a rational and proper manner and afford the consideration which is due a matter of such importance?

I would find myself in a most illogical position were I to vote approval of the pending amendment. For that reason I shall vote nay. I feel certain that I express the sentiments of my colleague from Illinois, for he has already indicated his position by voting against the amendment as has also my colleague from Oklahoma, both of whom are members of the special committee Congress has selected to help clean up some of these things.

I am opposed to the resolution. My objection is directed at the parliamentary processes involved in the premises. The work, duties, and responsibilities of the Dies committee or its successor are not an issue or involved in this vote. I am opposed to the method and manner of submitting the proposition to amend the rules to increase the number of regular committees of the House without further study of the situation.

Capital and Labor

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 3, 1945

Mr. WHITE. Mr. Speaker, we are told the great industrialist, Charles M. Schwab, once said that the three M's were the essentials of success—men, management, and money. In the present trends in our political economy, it seems our labor leaders are prone to overlook the part that management and capital plays in support of prosperous industry and a balanced national economy.

There recently came to my desk a treatise on capital and labor which I have rearranged and condensed for the consideration of my colleagues. I regret that the original has been misplaced, and I am unable to give credit to the author. However, the condensation is inserted herewith:

Some people say that capital is the enemy of mankind; and capitalists can succeed only by exploiting labor and oppressing the poor. The theory is false.

The average cash investment for each American worker in industry is $6,000. This investment provides, on the average, six horsepower of installed and motivated mechanical equipment for each employee to use. It is this capital investment which makes the higher man-hour production possible and justifies the correspondingly higher pay and higher standard of living.

Seldom can the workman himself furnish this $6,000 investment. Some investor (capitalist) puts up the money in hope of getting greater yield from superior tools, thus speeding up the worker's production.

Compare what capital and labor receive from an average investment in American industry. According to the best available figures, stockholders received 4 to 6 percent on such investments over the past 10 years. Wages, as a result of this same investment, have doubled; climbed twice as high as the English standard, three times the earning of men who use the still cruder tools familiar to continental Europeans. The average American worker has increased his income nearly 300 percent as a result of capital invested by the American industrialist, while the capitalist himself gets only a 6 percent return. The average is even less.

Under the American system, labor benefits more from the capitalist's investment in industry than does the capitalist himself. In other words, capital is labor's benefactor—a friend without which American labor would be living on European standards—yes, without which all labor would be living on the standards of China.

China's interior had a civilization before the year 1. America was a jungle long after Christopher Columbus was laid to rest. Now, 500 years from start, America's interior has railroads and tank cars and moves kerosene 200 miles a day for 1 cent a gallon, but the Chinese still lug their oil on the end of a stick 100 miles in 10 days at 10 cents a gallon. Chinese coolies draw a dime a day and walk; American railroaders get $8.50 a day and ride. It is a matter worth looking into.

There are great opportunities in China and the people who live there see these opportunities and let them pass. Why? Simply because they don't dare invest their money in anything. The economic system is such that both bandits and government rob business. Capital hasn't got a chance. Under the local war lords, whose tenure is by force, it is a government of grab. If a wealthy man, or an association of well-to-do men, or a rich corporation of small stockholders invests money in something, it's gone. They lose it. The rulers take it if bandits don't beat them to it. Private business on any new scale, as soon as it prospers, is confiscated. As a result nothing prospers.

In America we have an average investment in tools of $3,000 per farmer. Counting the value of the land, farm investment averages $6,000 per farmer. With good tools, each workman of the soil cultivates 50 to 400 acres. He can't eat up a modicum of what he raises. The surplus is exchanged for improved equipment and learning; for automobiles, refrigerators, and radios; for dress suits, jewelry, and oriental rugs that a Chinese family spent their lives weaving. With an investment like the Chinese enjoy, American farmers would till few acres, have little or no surplus and do without practically everything—even health.

Any move against invested capital is backward in America's path of unique progress.

Montana Wants a Missouri Valley Authority

EXTENSION OF REMARKS
OF
HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 4, 1945

Mr. COCHRAN. Mr. Speaker, when a Missouri Valley Authority which would solve the many problems confronting the States in the Missouri River Basin was originally suggested, some characterized it as a dream, but after mature study there was a great change in public opinion. The action of the President in endorsing the proposal brought it to the attention of the Nation.

The President last week approved the flood-control bill with the understanding that it in no way jeopardizes the creation of a Missouri Valley Authority.

He said the legislation in general "is a step forward in the development of our national water resources and power policies."

Noting that the bill authorizes construction by Army engineers and the Reclamation Bureau of improvements in the Missouri River Basin which he recommended last month be developed and administered by a Missouri Valley Authority, he said:

My approval of this bill is given with the distinct understanding that it is not to be interpreted as jeopardizing in any way the creation of a Missouri Valley Authority, the establishment of which should receive the early consideration of the next Congress.

Similar to the Tennessee Valley Authority development, a $400,000,000 program for the Missouri River Basin is authorized. This was prepared by the Army engineers and the Reclamation Bureau with the approval of the President.

Public-spirited citizens in Montana have taken the lead and organized the first State Missouri Valley Authority Association. As part of my remarks, I include an editorial from the St. Louis Post-Dispatch of December 20, 1944. It follows:

MONTANA LEADS FOR M. V. A.

A group of public-spirited Montanans has done a splendid thing in organizing a Montana-Missouri Valley Authority Association. We should like to see all the States of the Missouri Valley follow Montana's lead.

There is much work, and much-needed work, for State M. V. A. associations to do.

The Montana Missouri Valley Authority Association has wisely chosen to make the informing of the public one of its first objectives. Many of the 7,000,000 people of the Missouri Valley do not have anything like a full knowledge of M. V. A. or of its living, working prototype, T. V. A. Some of them have actual misunderstanding.

It is not hard to realize why this is so, for powerful interests have worked night and day for 11 years to spread misinformation about T. V. A., and the Missouri Valley is too far from the Tennessee Valley for most of its people to be able to learn the facts for themselves at first hand.

The Montana association is also well advised to urge the M. V. A. idea upon its State legislature. As a means to political action, the association will undoubtedly find it helpful to encourage discussion by all sorts of groups at every opportunity. New ideas need to be chewed thoroughly before they can be digested, and to much of our great valley M. V. A. is a new, novel, and only partly understood idea, which calls for discussion.

In all these and in other ways, the Montana-Missouri Valley Authority Association can be of service to Montana and to the Missouri Valley. May this movement for organization, started at the headwaters of the Missouri River, percolate down through all the valley.

Mr. Speaker, despite the fact we have spent several hundred million dollars on the Missouri River the flood waters continue to increase. The following letter received by me from the Chief of Engineers will be of interest:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, December 21, 1944.

Hon. JOHN J. COCHRAN,
House of Representatives,
Washington, D. C.

MY DEAR MR. COCHRAN: Reference is made to your letter of December 8, 1944, in which you ask to be advised of the approximate amount of money expended in the Missouri River Basin during the past 30 years. You further ask for a figure for the average rainfall in the Missouri Valley for the same period.

The amounts of funds spent by this Department or the accomplishment of its authorized works in the Missouri River Basin for the past 30 years are $313,000,000 for rivers and harbors projects and $20,000,000 for flood control projects, or a total of $333,000,000. These amounts are divided between new work and maintenance as follows:

Type of work	Expenditures for past 30 years	
	New work	Maintenance
Rivers and harbors improvements for navigation	$276,000,000	$37,000,000
Flood control improvements	14,000,000	[1] 6,000,000
Total	290,000,000	43,000,000

[1] Expenditures principally for emergency repairs to local levees.

Regarding your request for a figure on the average annual rainfall for the Missouri River

Valley, it should be noted that there are wide variations in the average rainfall in the various parts of the river basin. For instance, throughout the drainage area of the Missouri River, which includes approximately 530,000 square miles, the rainfall may vary from a few inches in the arid regions of the northwestern portion of the basin to as much as 40 inches per year near the mouth of the river. It is also known from the records of climatic conditions that, over the period of years 1900 to date, the Missouri River Basin has experienced periods of wet years known as wet cycles and periods of dry years known as dry cycles. For example, from 1900 to 1929, the flood stage at St. Joseph, Mo., was equaled or exceeded 13 times out of the 30 years. Since 1929, the flood stage at this point has been equaled or exceeded in 4 years only out of the 15, all of these occurring since 1938. In other words, the period from 1900 to 1929 is considered to be a period known as a wet cycle, whereas the period from 1930 to 1941 is a dry cycle of unusual severity as compared with the period prior to 1930. For your information, the Department, in its report on the Missouri River Basin, printed as House Document No. 475, Seventy-eighth Congress, second session, has stated that the average rainfall for the area of the Missouri Basin between Sioux City, Iowa, and the mouth varies from 26 inches at Sioux City to about 40 inches near the mouth. An over-all average of rainfall records for the seven principal States in the Missouri River Basin, disregarding the variations mentioned above, shows an annual figure of about 21 inches for the 30-year period 1914 to 1943.

Sincerely yours,

E. REYBOLD,
Major General,
Chief of Engineers.

Mr. Speaker, in view of this tremendous expenditure is it not time to provide a Missouri Valley Authority?

Prohibition Legislation

EXTENSION OF REMARKS
OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

MARYLAND STATE AND DISTRICT OF COLUMBIA FEDERATION OF LABOR,
December 7, 1944.

Hon. THOMAS D'ALESANDRO, Jr.,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: On behalf of our members and many thousand right-thinking citizens of the District of Columbia we are sending you 469 petitions of 14,072 signatures in protest against the consideration by Congress of any prohibition legislation. We had prohibition once, but we never want to return to those terrible days again.

Will you therefore please have our protest entered into the CONGRESSIONAL RECORD, showing the total number of signers, at your very earliest convenience.

Thank you for your assistance and best wishes for your continued success.

Very truly yours,

R. J. BAUXBAUM.

P. S.—In addition to the above, we are sending you 328 petitions containing 10,838 signatures of citizens of the State of Maryland likewise protesting against prohibition. Will you be so kind as to enter these along with those from the District of Columbia in the CONGRESSIONAL RECORD under the section provided for petitions?

R. J. B.

A Soul-Stirring Message

EXTENSION OF REMARKS
OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. JOHNSON of Oklahoma. Mr. Speaker, as I am sure all Members of this Congress know, one of the great radio commentators of the country is Cedric Foster of Boston, Mass. Some Members however, may have missed his wonderful Christmas message in his broadcast of December 25, 1944. It is a soul-stirring, heart-warming message that should be preserved for posterity.

Therefore, under the permission granted me, I am including as a part of my remarks the Christmas message of not only a great news analyst and commentator but of a philosopher and a Christian gentleman:

This is Cedric Foster speaking from the studios of WNAC, in Boston, the key station of the Yankee network in New England.

Because of the fact that this is Christmas Day and the nature of today's broadcast, there will be no interruption in this program, and I bring to you today at the request of many hundreds of listeners a broadcast which I delivered 2 years ago on the 23d of December. I've just left my home at 20 Chestnut Street here in Boston, on Beacon Hill. I've just left the laughter of a child, who spends with us today her second Christmas; a child who, with sparkling eyes, said to her daddy, naval Lt. Jim Britt, of Detroit, Mich., and her mother, Peggy: "This is the most wonderful Christmas I've ever had." A year ago her daddy was on the island of Tarawa. A year ago last night, on Christmas Eve, her daddy, riding with his skipper, Commander Eddie Saunders, of the Naval Air Squadron 137, completed a bombing run over the Japanese-held island of Nauru, a mission from which all were most fortunate to return. And so it is not surprising that today Judy, so vibrantly alive with the thrill which comes only to an 8-year-old child, should speak the words which she did. Before I give you my broadcast of 2 years ago I want to send greetings from all of us, from Mrs. Foster, from Shirley, and from Sarah Ann, now recovered from her accident, and from the Britts as well. I can't answer the hundreds of Christmas cards on my desk. All I can do is to thank you all with a grateful heart, all of you who remembered me on this day.

It was 2 years ago that Thomas F. Woodlock wrote in the Wall Street Journal an article on post-war Japan and Germany. He says in that article that Ambassador Grew's report from Tokyo is a very simple one. It tells us that in Japan we have an enemy with whom we can no more negotiate than one negotiates with a man-hunting tiger in the jungles of Bengal. It tells us that like that animal it won't yield even when it is cornered, but it will fight until it is killed. It tells us that our enemy is strong in weapons and in morale and skilled in every form of killing known to man. It tells us in all of these things that the Japanese are virtually united as one man. And it tells us that these people possess all of the appliances of modern science and that they use all of the gadgets which make up the material panoply of western civilization. It is a picture of 100,000,000 human beings with whom we can have no normal, human intercourse. This in the twentieth century of the Christian era.

Mr. Grew tells us that he knows; that it is his business to know; that he spent 10 years in Japan. We must presumably believe him, but it is difficult to fit what he tells us into our imagination, even though we have had already some factual confirmation of its truth. Thus, our two enemies are beyond the scope of negotiation, for by now we all agreed that we can't do business with Hitler. This is the first time in modern history that such a war has broken out. Two groups of people, both armed with all of the resources of modern science, are engaged in a fight which, seemingly, must be to the death. Yet neither can exterminate the other. Japanese and Germans will continue to exist in this world. They will live side by side with the United Nations, even though their fighting strength is annihilated, as, no doubt, it will be. No nation such as these can be kept perpetually in protective custody. Were such a thing possible, it would mean a bankruptcy of civilization itself, but it isn't even possible. At the end of the victory road we race the greatest problem of all: How shall the Germans and the Japanese be readmitted to membership in what we know now must be a real world order? Sooner or later they must be, if there is to be a world order, for such an order cannot exist any more than could we half slave and half free.

Mr. Woodlock then declares that it is easy enough to see what must be achieved to reach the goal. There must be a common ideal, a common purpose and a common will to effect that purpose, one in which Japanese and Germans will join the United Nations. It must be the fully human ideal and purpose, and the will must be present. Germans and Japanese are human beings like ourselves. Like us, they have intellect and reason and will. They have proved themselves our match in all human techniques, peaceful and warlike. They have demonstrated skill and courage and tenacity equal to our own. We are not dealing with pure animal instincts but with free human wills.

This war, for all of its complicated mechanical aspects, is first, last, and always a conflict in the spirit and it is in the order of the spirit alone that it can and must be ended. Our victory in the battlefield will be no victory unless we are victorious in the spiritual field. We already know that, at least in a general way, for we stand ready, when the fighting is done, to bind up the wounds of our conquered enemies, to supply them with food where they need it and with material needs for the resumption of a normal life. We are prepared to give them every opportunity to enrich that life, for we know that in so doing we shall enrich our own. So far, excellent. We offer to these enemies, as to all, the freedoms which we claim for ourselves. Again excellent. We hope that these things will evoke the one thing necessary, the common will.

But all of these, Mr. Woodlock points out, are means—they are not ends. Our enemies had them in sufficiency for what they deemed their needs. They had every opportunity to increase them as the years went by. Yet they took the road they did. A crushing military defeat will, no doubt, convince them that the road is forever impassable. Military defeat can change the policies of our enemies but it is a change of heart that must be achieved. Nothing so vividly demonstrates the disease that has been sapping the vitals of our boasted western civilization as does the fact that it should have produced this appalling problem. Whatever else we do in preparation to deal

with it, one thing is indispensable, and that is to search our own hearts to see to what extent we, too, are sick with it. We already half-suspect its nature. Vaguely we feel that we have forgotten or ignored something in our calculations. That something is our own nature and its origin. There is stirring amongst us, of that there is no doubt, a long-forgotten or ignored sense of religion. We have at last reached the point where we aren't ashamed to speak the word with apologies.

In conclusion, Mr. Woodlock declares that the more we restore religion to a true place, to its place amongst ourselves, the better hope we can indulge for restoring it amongst our conquered enemies. There is no other thing upon which a common ideal, a common purpose, and a common will can be founded among nations.

Mr. Woodlock's discussion in the Wall Street Journal is particularly appropriate in this Christmas season, the commemoration of the birth of the Prince of Peace. We have too oftentimes in the past refused to view Christmas in its aspect, to accept it for what it actually is: The anniversary of the birth of our Lord and Saviour, Jesus Christ, whose hands and feet were nailed to a cross that the sins of the world might be washed away. We have refused to evaluate Christmas for its real worth because we have been afraid, in a rankly materialistic world, of being accused of sentimentalism, of being marked as a Godly man or women, as being out of the usual run of humans who walk blindly down the road of life refusing to admit that there is an all-power Being who rules this universe. But we are now getting away just a trifle from the crassness of things. Possibly we have been motivated in this change by a fuller realization of just how fleeting our earthly existence is. Life today is touch and go as it never was before. When we say "good-bye" to loved ones, who depart for fields of battle, we know full well that we may never see them in body again. But when they have departed, when they have gone in body, the spirit remains. Actually the spirit is the only thing that counts. The body does nothing but house the spirit, if you want to use that term. Those of us who fail to realize that fact, who gain no consolation through faith, through the belief that the spirit is eternal, those people are poor, indeed. Such faith and belief are the only anchors to the windward that humanity has as it tries to outride the storm. Once you are convinced that the spirit of man is eternal, and that God will never allow that spirit to be destroyed, then you can attain a calmness and a serenity of life that eases, and eventually dissipates, the sorrows and the sufferings of this world. There are those who will scoff at and ridicule such a statement but they know not whereof they speak. When the sands of time are running out and the hot breath of death is fanning the cheek, the scoffers and the ridiculers disappear.

Men fight today a bitter fight for freedom. We fight this war on many fronts for the preservation of the ideals which gave birth to our Republic, the United States of America. We fight this fight because we believe that God meant man to be free. In that fight we cannot afford to lose sight of God, Himself. You may think that this broadcast is like a revival meeting; that a news commentator or analyst has become a preacher; that he's got religion. That isn't true. But this I do know. Those who refuse to turn to God in prayer when assailed by trouble are refusing to take advantage of the strongest rock of refuge available to mankind. There isn't any use in living without faith in God—in a Supreme Being. If we have that faith, then we will deal with all mankind in a manner dictated by God. We will apply the Golden Rule of treating others as we would wish to be treated ourself. We will do it whether we are Protestant or Catholic or Jew. That doesn't mean that we won't punish our enemies. To the contrary it means that we will press the prosecution of this war with all of the strength at our command. But when we attain the victory, as we certainly shall, we will build on a foundation of quicksand if we fail to extend the hand of friendship to all the peoples of the earth. That doesn't mean that those who would destroy our civilization will not be punished. The God whom we all worship is a just and righteous God and His judgments are righteous altogether.

It was Patrick Henry who asked the questions with a voice choked with emotion: "What is it that the gentlemen want? What is it that the gentlemen wish?" We may well ask those questions in regard to the peace to follow this war. What kind of peace do we seek? Do we seek one which will eliminate future wars or will we write a pact which will be a festering sore and which will breed the germs of future battles? We can have either kind of peace. Ours is the choice. As we ponder this problem on the birthday of the Christ Child we should remember that Christianity is a great religion. It is truly a great religion. It is one of the tragedies of mankind that it has never been practiced.

Phil Spitalny and His All-Girl Orchestra

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. CELLER. Mr. Speaker, the work of Phil Spitalny and his all-girl orchestra in their presentation of hymnal music on their weekly Hour of Charm program merits commendation. The orchestra on the air show has been featuring hymns for the past 10 years. The hymns being featured now are those requested by members of the Army, Navy, and Marines. Servicemen have written to express their appreciation. Those in distant lands write to say that when they hear these hymns they are carried home and are once again with their families listening to the inspirational music. Thus, music and faith are combined to bolster morale on a world-wide scale, helping the American fighting man and strengthening his will and spirit on his road to victory and peace.

United States Merchant Ship Production

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the following press release from the Maritime Commission showing United States merchant ship production from 1936 to 1944:

United States merchant-ship production, 1936–44

	Number of vessels	Total	Dead-weight tonnage	Total
1936	-------	9	----------	107,938
1937	-------	18	----------	194,788
1938	-------	25	----------	289,765
1939	-------	28	----------	341,219
1940	-------	55	----------	641,056
1941	-------	99	----------	1,137,163
1942:				
January	16		197,628	
February	26		280,549	
March	20		201,473	
April	36		401,632	
May	57		619,779	
June	67	746	749,654	8,089,732
July	71		791,667	
August	68		752,774	
September	93		1,016,112	
October	81		889,737	
November	84		892,536	
December	121		1,197,191	
1943:				
January	103		1,007,680	
February	130		1,236,481	
March	146		1,513,244	
April	157		1,603,307	
May	176		1,782,836	
June	167	1,896	1,670,442	19,238,626
July	158		1,660,341	
August	164		1,630,411	
September	160		1,652,571	
October	163		1,675,311	
November	164		1,692,763	
December	208		2,044,239	
1944:[1]				
January	124		1,204,730	
February	134		1,372,864	
March	152		1,538,357	
April	154		1,593,691	
May	155		1,537,915	
June	145	1,677	1,379,994	16,343,436
July	126		1,274,433	
August	119		1,157,602	
September	124		1,185,997	
October	145		1,310,295	
November	154		1,430,660	
December	145		1,356,898	

[1] Production decline in 1944 reflects conversion of high-production yards to Victory ships and military types. Total production 1936 through December 1944 is 4,553 ships and 46,383,723 dead-weight tons.

America Must Be American To Remain Great

EXTENSION OF REMARKS

OF

HON. PEHR G. HOLMES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. HOLMES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Worcester (Mass.) Sunday Telegram:

AMERICA MUST BE AMERICAN TO REMAIN GREAT

The American people will be well advised to stop worrying about what kind of government Spain, Italy, Poland, New Guinea, and India are going to have and begin making up their minds what kind of government the United States is going to have. The more intolerant we become of all kinds of isms in other countries, the more tolerant we seem to become of the encroachment of foreign isms into our own. The more insistent we are upon American ideals and the democratic form of government for other nations, the more vague we seem to become on the meaning of these things in our own land.

In the past 12 years we have made tremendous strides toward the belief that government can—and must—do everything for us. We have not yet begun to realize that the more government does for us, the more government demands of us; of our substance and of our liberties. For everything government does for us we must give it a little more authority, so that by and by it has authority over the whole course of our lives.

Whether this is good or not, it is not what we have always identified as the American ideal. It is not the ideal on which our country was founded and by which it became, in a century and a half, the greatest nation and the most privileged people in history. It is nowhere visible or intimated in our Declaration of Independence or Constitution. It is either socialism, fascism, or communism, and if we come to it we shall find it will be no different in the United States from the same brand elsewhere.

But the thing we should face now, before we are committed to any of these offshoots of excessive paternalism is this: All these European contrivances for Utopia are the confessions of peoples that they cannot take care of themselves; that they have not the energy, enterprise, or courage to create their own affairs and administer them. Therefore, they turn them over to one person, or a coterie of persons representing an idea. That idea, under whatever name, is always the same. It is that this one person or coterie has all the enterprise, energy, courage, and wisdom, and the people have none. The people themselves have admitted it. Individuals who deny it are dealt with to whatever extreme the arbitrary will or petulant caprice the rulership may dictate, for that rulership exists only for the perpetuation of its own power, aggrandizement, and wealth. This is Utopia. It has been tried many times. The result has always been rebellion, civil war, bloodshed, and generations of sorrow. It is as foreign to America as the Grand Mogul, the Emperor of Japan, or Hitler.

There is no compromise between liberty and tyranny. Tyranny does not destroy one-half or one-third of a people's liberties and leave the rest. There is no compromise between legislation enacted by elected representatives of all the people and the edicts issued by a dictator. There may be advantages to both. But we cannot have them both. They are antagonistic to each other to the death. It has to be all or none.

Yet, at first sight they do not appear to be antagonistic. They seem alluringly susceptible to compromise. The delusion of compromise creeps in so insidiously, and by such pious protestations for the "common man," as to be unnoticed. It creeps in by what appears to be the will of the people. But it is not the will of all the people. Many problems arise to blunt and confuse the general will. The seeds of minority power begin to germinate. At such times the whole structure of government of a people is confronted by a grave danger, the danger of the shifting but persistent coalescence of dynamic minorities for the gaining of special privileges. That is the compromise we should see now and face with our eyes open and with our eyes on the future of America.

America was made great by enterprise and daring; the enterprise and daring of individuals. Our place in the world is testimony to it and nobody in his sane mind can deny it. Individuals pioneered in new frontiers, in invention, in manufacture, in transportation, and in science. Beyond a few land grants and some often dubious tariffs the Government had nothing to do with these adventures, other than they were made within a structure of laws sanctioned by our Constitution.

Certainly these laws were often broken, and there were instances of rapacity and ruthlessness and corruption, and laws were not always administered with even-handed justice. But does anybody with sense—or with faith in the inherent power of righteousness—believe we could have come to greatness if the great march of our progress had not been dominated by honor, decent kindness, justice, and enlightenment? Only the stupidly ignorant could believe that we did, or could. All these things were the soul of America's greatness, just as personal vision, enterprise, courage, and opportunity, were its power.

We are not a defeated nation, to backtrack for defense into ancient morasses. More swiftly and surely than any other nation in history we have come a long way. Unless that means that we have a great inheritance of character and of soundly founded institutions there is no sense or order in human affairs.

But suppose our Thirteen Colonies, finding themselves a sovereign nation, had decided that the way to progress and the happiness of the people had been to pass a law which gave the Executive power to say that every worker must join a union, not of his own selection, or be barred from the opportunity to earn a living. Suppose the union had been liberated from all legal restraints that applied to other associations, had no need to account to its members for the money they paid in to it, and could compel any member to contribute, on pain of losing his livelihood, to a political cause fostered by it (against the law but by Executive indulgence) no matter how antagonistic the member might be to that cause.

And suppose, though the union could do anything against the employers, even to the destruction of their property, the employers had been forbidden under the severest penalties to protest, argue, or even comment to a worker on the undesirability of any course of conduct, or of any one union, or express any preference for another. How far would our Thirteen States have gone toward becoming the great United States of America? It is doubtful that they would have lasted 25 years. But that is one of the ways we are now being told leads to the great highway to Utopia. Fortunately, the Thirteen States did none of these things. They wrote a Constitution and Bill of Rights, and these carried them through far greater vicissitudes than we now have.

History did not begin in 1932; nor did humanitarianism. There had been great labor leaders and great leaders in management, and great strides of equity and conciliation had been made. The care for the welfare of labor does not threaten our American system. It is a part of it and will strengthen it. What threatens our stability is the herding of labor into a minority and antagonistic group by parasite leaders intent only on exploiting it either for their own profit or for the propagation of a foreign political system. It is the creating, for political expediency, of laws or directives, or inconsistent interpretation of laws or directives, by which one group of Americans can do a thing that is a felony for another group of Americans. It is the fostering of the arrogant belief that a union can forbid one group of our citizens to join it, because they are Negroes, and at the same time forbid that group to work without joining. It is the negligent point of view that allows our Executive to punish a political enemy for disobeying an administration order and to plead that he has no authority in law to punish a political friend for the same refusal.

And there are other things that threaten our system, though not so visibly: The belief that there is a concrete evil in wealth and a concrete virtue in poverty; the belief that Government can redeem every personal failure or misfortune by bounty or by confiscatory legislation; the belief that our Constitution is outmoded and should be ignored or perverted; the belief that it is useless to combat "ideals" that would subvert our independence and our personal energy of spirit.

But it was our faith in these things that made America great. And it is by our integrity to these things that we shall overcome our difficulties, our conflicts, and our mistakes, and make our Nation ever greater. The false magic of will-o'-the-wisps will lead us only into the mire. To know what that mire can do we have only to look at the map of Europe.

Providing Post-War Markets for Our Agricultural and Manufactured Products

EXTENSION OF REMARKS

OF

HON. EUGENE WORLEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. WORLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith an address given recently by Mr. Curtis E. Calder, president of American & Foreign Power Co., Inc., at the thirty-first national foreign trade convention, New York City, on October 10, 1944.

In view of the necessity of providing additional post-war markets for our agricultural and manufactured products, I thought the membership of the House might be interested in these timely and thought-provoking observations.

The address follows:

The approaching end of the most devastating of modern wars, evolving out of a period of social and economic turmoil, finds us, as a nation, confused in our thinking and inadequately prepared, psychologically, for our new role on the international stage. It is quite understandable that we should be having this difficulty. Our shift from debtor to creditor came upon us very suddenly during World War No. 1, following 140 years of financial immaturity. After that war we immediately entered into an era of tremendous industrial expansion and technological progress. We were flush with money. It was in this spirit that we blithely set sail, without chart or compass, upon the troubled sea of international finance. In the 1920's we were in no mood to study commercial navigation. We invested billions in foreign mines, agricultural lands, public utilities, and manufacturing plants. Some projects were wildly speculative, others were for genuinely productive purposes. The petroleum resources of Venezuela and Colombia were developed; Habana plantations were established in Central America; rubber plantations were set out in various parts of the world; manufacturers of cement, textiles, electrical products, glassware, and automobiles established plants and branches abroad; and nearly a billion United States dollars went into the public-utility industry in South America, Europe, and Asia.

Meanwhile the older creditor nations were adding to their foreign holdings. The British and the Dutch were particularly active. There was this difference, however: They had been able to secure and hold their places as great creditor nations by opening their markets to the exports of their debtors. Although highly industralized like ourselves, they were, first of all, trading nations. As a nation, we still placed all the emphasis on selling. Pressure groups representing var-

icus interests campaigned for and obtained higher tariffs against the products of the very countries who were our debtors. When the pleasant trade winds failed us and we found ourselves in the grip of the economic hurricane which had been brewing, unheeded, along the course we were traveling, there was no financial haven in which we could take refuge. Caught in the same economic storm, our good neighbors found that no one was interested in their foodstuffs and industrial raw materials, and they quickly learned that we had lost our appetite for foreign loans and credits. To conserve dwindling resources of foreign exchange, our debtors instituted exchange restrictions and import controls, blocked the remittance of earnings by foreign enterprise, and defaulted on foreign obligations. After 1939 few new foreign investments were made.

Although we were disturbed by the wave of defaults that swept over our foreign bond list, and by our inability to earn a fair return in dollars on our direct investments, our basic, friendly feeling toward the major recipients of our foreign loans and investments were unaltered. The good-neighbor policy was received by our businessmen and investors with genuine acclaim. Misgivings soon arose, however, then nationalistic politicians and demagogues in good-neighbor countries began to use this policy as a shield for unfair attacks on American interests and seizure of the property of American nationals. The trade-agreements program was also hailed as a constructive step although as a nation we were far from being sold on the free-trade principle.

Faced with the immediate necessity of converting and expanding the capacity of our heavy industry for the production of unheard of volumes of war materials, we quickly realized it was vitally important that the economies of our good neighbors be kept in a healthy condition. Although we tried earnestly to keep our friends supplied with the necessities which they were accustomed to buying from us, we were no longer interested in selling as such. On the other hand, our purchases of strategic materials soared to fantastic levels, and we continued to import large quantities of the agricultural products which formed the traditional bases of the economies of our sister republics. Overnight the countries of Latin America, which had been the major recipients of our investment funds, found themselves accumulating dollar exchange in excess of immediate needs.

As the war approaches a climax we realize that we stand alone as the only large-scale creditor nation on earth. The world looks to us for social, economic, and financial leadership, and we cannot retire into our economic shell. The entire world is in debt and has only the alternatives of increased production or repudiation. This will mean increasing our exports of capital, capital goods, and also of men possessing the technical skill and administrative ability to protect our expanding international investment position.

Now that we are exporters of capital, we are indifferent as to whether foreigners choose to invest in our domestic enterprises. However, our investments in other countries will become of more and more importance to our economy—an importance measured least of all by the return in dollars and cents to the investor. We are all familiar with the slogan "trade follows the dollar" and, where direct investments are concerned there is a lot of truth in it. The introduction of American methods of doing things and the higher living standards made possible by increased productivity are reflected in orders for our goods. Imports are vital to us in peace and war, and our foreign investments make one of their most significant contributions to our economy by making it possible for us to obtain the things we need from other nations.

Our foreign investments are so valuable as to make their protection a matter of great public interest. The first responsibility in protecting them lies with the individual or the organization putting up the money. Many of the countries most needing help will not be good credit risks for private capital, and our Government will have the problem of working out measures for the protection of its commitments. I would like to emphasize the need for making a clear-cut distinction between our loans to foreign countries, and those contributions which should be labelled as gifts.

As to the private investor, his best protection will continue to be his own good sense and business judgment. In the carefree 1920's, many investors thought that a high rate of return was their best protection against political and economic uncertainties surrounding foreign investments. They now know that while a high rate of return may be a measure of the risk, it is an inadequate protection against the hazards of default and repudiation. Our present-day investors are fairly realistic. They seek, and have a right to expect, a reasonable return on their money. They are ready to take the normal business risks which are characteristic of private enterprise; but ventures which are exposed to the hazards of capricious and discriminatory legislation by foreign countries are not normal risks. Since political and economic hazards cannot be entirely eliminated, the investor will be well advised to secure as much diversification as possible, dividing his commitments among several different countries.

Some protection against political hazards can be obtained, and public relations can be improved by inviting the participation of local capital in foreign enterprises. The foreign investor or industrialist is unwise to try to buck any tide of rising nationalism. Management's first obligation, however, is to the stockholders and creditors who have made the enterprise possible. Operating efficiency must be maintained through the selection of the best available technical and administrative personnel, either local residents or foreigners. Representatives of investment interests are not the only ones who have something at stake. The countries whose economies are being strengthened and diversified by infusions of new capital should be equally interested in its protection.

Countries seeking foreign capital should take a realistic attitude toward the foreign-personnel problem. They should discourage antiforeign agitation, as such, wherever it appears. Foreign capital, abusing its privileges, should be subject to the same penalties as apply to local capital in similar circumstances, but the offenders should be castigated as individuals and not as foreigners. Finally, a government seeking to attract additional foreign capital should avoid taking unilateral action against the interests of law-abiding foreign companies. If the law permits recapture of companies exploiting natural resources, the terms and conditions under which expropriation can take place should be made perfectly clear to the concessionaire before, not after, he commits his capital to the undertaking. Political intervention in the affairs of friendly nations is a thing of the past, and happily so, but there are many occasions when our Government can use its good offices to remove causes of friction between its citizens and foreign nations. There is every reason, then, for our Government to take the lead in evolving a code of international ethics applying to the treatment of foreign capital to which all nations interested as importers or exporters of investment funds might subscribe.

Every American has something at stake in these foreign investments. A large and influential segment of our population are still political and economic isolationists at heart. They still talk about expanding our exports and maintaining high protective tariffs, in the same breath; they still think we can insulate ourselves and let Europe and Asia stew in their own juices; and they oppose our participation in the industrialization of China, Russia, and Latin America on the grounds that we are cutting ourselves out of markets and setting up business competitors. We who, because of our business background and international contacts, can take the broader view. We should support our Government in its trade-agreements program, its good-neighbor policy, and its plans for post-war economic cooperation with other nations.

The more we invest in other countries, the more we must be concerned with their production, selling, and exchange problems. I refuse to believe that, when this world conflict is over, we and the nations which need our help will be so bereft of vision as to be unable to reconcile any possible differences in viewpoints, so that we can pull together and, in a spirit of mutual confidence, employ our separate gifts and attainments to promote the welfare of all.

Placing of a Ceiling on Live Cattle

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. MILLER of Nebraska. Mr. Speaker, in the past several weeks there have been numerous meetings and press releases relative to the placing of a ceiling on live cattle. The O. P. A. in this respect has been conforming to the law by holding conferences with both the producer, the feeder, and the processor of beef. I believe the record will show that in all of these meetings the producer and the feeder of livestock have been generally opposed to this new regulation. They are opposed to the regulation because it brings confusion, misunderstanding, and uncertainty as to the future of the livestock industry. We have in Nebraska a great many feeders who fill their yards with stock cattle with the understanding that they might make a reasonable profit out of their feeding operations.

From a conference with Mr. Vinson, the Economic Stabilizer, it appears that after weighing all of the evidence, most of it from the Office of Price Administration, he is about to issue a directive which will place a ceiling of $17.50 a hundred on good and choice cattle at Chicago basis. The good and choice cattle make up about 9 percent of the cattle coming into the central markets. There is to be an additional 50-cent-subsidy on this type of cattle. The subsidy will be raised from $1.10 a hundred to $1.60 a hundred. Such a regulation will cause the men who are now feeding cattle to take a considerable loss on their feeding operations. If the payment of the subsidy was reflected to the producer and feeder, it might be the difference between a profit and a loss. These regulations

will probably further discourage the feeding of cattle which in turn will mean less meat to our armed forces, our allies, and the citizens at home. If the administration really wants to raise meat and satisfy these demands, then there must be some feeding of cattle from the range. The price suggested by the Economic Stabilizer will not reflect a profit. The incentive for raising and feeding cattle is the profit incentive. The cattlemen are not unreasonable when all they ask is a reasonable profit for their work.

The production of meat is of first importance to the world. The livestock industry has certainly done its part in support of the war program and the production of meat. It would seem that the Government agencies should set a policy which will not continuously disrupt the livestock industry. It takes a long time to produce a calf with sufficient meat for the consuming public. There has been entirely too much rumor of changes, entirely too many threats against the cattle producers that it is difficult for them to make their plans to continue intelligently in the production of meat.

This is not the first time the Administration has changed the rules in the middle of the feed lot. It is apparently being done this time at the request of the citizens of New York, who have been buying black-market meat and are forced to pay an exorbitant price for the finished product. If the order would eliminate the black market it might be worth while.

The cattlemen do not want this ceiling but if it must be inaugurated, they hope it will succeed in eliminating the black market. I personally feel the move is a mistake. It may well mean that good beef will become seasonable like fruit and vegetables except in the black market, which will find expanded operations. It means breaking faith with the feeders and a distinct loss to them. It will probably mean there will be less meat for the world.

At this point I desire to insert a telegram addressed to the Honorable Fred Vinson, the Stabilizer Director, which was sent to him by Harry B. Coffee, the president of the Union Stockyards Co. of Omaha:

JANUARY 3, 1944.

Hon. FRED VINSON,
Stabilization Director,
Washington, D. C.:

Price incentive essential to encourage increased feeding operations and beef production. Inequitably low wholesale price ceiling on beef makes it impossible for any packer to pay more than $16 per hundredweight for choice cattle Chicago, for sale through legitimate channels without loss, proposed additional 50 cents subsidy included. Over-all price ceiling of no benefit if only black-market operator can pay the established ceiling price without loss. Suggest restoring wholesale and, if necessary, retail ceiling prices that prevailed before roll-back subsidy program inaugurated. Heavy liquidation of feed-lot cattle and curtailed beef production anticipated unless wholesale beef ceiling price raised.

HARRY B. COFFEE.
President, Union Stock Yards Co. of Omaha.

Paper and Pulp Industry in Central Wisconsin

EXTENSION OF REMARKS
OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, recently the following editorial appeared in one of Wisconsin's leading newspapers, the Wisconsin Rapids Daily Tribune. It indicates the interest and importance of reforestation in this territory.

REFORESTATION PLAN

A vigorous plan which Wisconsin Rapids and central Wisconsin should weigh thoughtfully is that advanced by Virgil L. Dickensen, of Augusta, Wis., a member of the Wisconsin Conservation Commission, which is intended to solve the immense job of reforestation in Wisconsin. Dickensen proposes as a vehicle for extensive post-war employment the creation of a quasi public forestry corporation in which 17 of the central, northeastern, and northwestern counties of the State which have great areas of cut-over or nonfarm lands, would participate as corporate bodies.

The corporation would be capitalized through loans from one of the several Federal agricultural lending agencies on a long-range basis. Dickensen suggests 50 years. The vast tree-planting needs on thousands of acres of lands not suited for agricultural production thus could be financed and dividends paid in forest products.

Dickensen suggests the following counties in central Wisconsin: Adams, Clark, Jackson, Juneau, Marquette, Portage, Waupaca, Waushara, and Wood. "Much of the land in these counties is more adapted for the production of forest products than farm crops," the conservation commissioner says. He makes a strong point of it that even in growing pulpwood those lands can be made to return a steady, annual profit where they now are sterile and completely valueless.

"For much of Wisconsin, central and northern especially, there never has been a more profitable crop than its forests," he says, "It also remains that private investment has not and will not do the entire job of reforestation. Forestry differs from both agriculture and industry because of the length of time involved in getting a return from the original investment. Therefore it must be considered from a different angle," he explains.

The commissioner proposes that a reforestation corporation be authorized by specific legislative charter and that it be managed by a board chosen by the participating counties. He believes that capital probably could be obtained from the Reconstruction Finance Corporation or some like United States agency. According to Dickensen's proposal, the corporation could purchase or lease land and harvest timber at maturity with all returns being applied to repayment of the loan principal and interest.

The corporation would be sufficiently capitalized to pay land taxes on property acquired or leased and it could also reforest private lands on a customs basis. All work would be in close collaboration with specialists of the conservation commission and the Universty of Wisconsin.

The commissioner contends that there is a fundamental need for the development of Wisconsin resources to broaden the tax base, to perpetuate existing industries, and encourage new ones seeking raw material supplies. He rightfully believes also that the welfare and prosperity of the many communities in the forest regions of the State would be protected.

"An infinitely valuable land resource is waiting to be used for that which it is best adapted," Dickensen says, adding that it is a challenge to Wisconsin's ingenuity and foresight. "It is up to us now to take the initiative and act for the future welfare of the State. There never was a time in history when the natural resources of Wisconsin's forests were depleted as fast as they now are due to the pressure of war."

Mr. Dickensen's plan is well conceived and its execution would mean much to Wisconsin Rapids and vicinity. There may be one flaw, however, in that the lending agency might attach a few strings in the form of controlling power. Then anything could happen.

Mr. Speaker, the communities where paper mills are located realize that if these mills are to have a permanent supply of raw materials permanent jobs will be provided, permanent civic, religious, and business institutions will be maintained, and permanent homes will result.

Looking Back 158 Years and Looking Ahead 50 Years

EXTENSION OF REMARKS
OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. WHITE. Mr. Speaker, in seeking to advance civilization after the present war many thoughtful people are proposing plans for a new world government—modeled on the plan of our United States.

The following is taken from Babson's book Looking Ahead 50 Years:

The Constitution, however, involved the surrender of certain sovereign rights possessed by the Colonies, and the transfer of these to a Federal Government. Thereby, the Federal Government was empowered to declare war and make peace, to raise and support armies and a navy, to establish a common currency, to regulate foreign and domestic commerce, and to do other specified things. All rights and powers not definitely specified remained with the States which were thus left free to manage their own internal affairs. The new Government was thus implemented for action in the common interest of all the States. This is what must sometime be done again, but on a world-wide basis. The price which the nations must pay for permanent peace and prosperity is the surrender of some of their sovereign rights and the transfer of those rights to a world-wide league or federation.

The international problem therefore presents a dilemma for the American people who, after the war, must choose between isolationism and a drastic readjustment of their economic life. For a league or a federation to be effective, it must control—within limits at least—international tariffs, subsidies, currencies, sea routes and immigration. Whether or not the American people

will within 50 years agree to these restrictions is problematical. They surely will not do so except on a graduated-scale basis. Some think only a severe depression or a great spiritual awakening would bring about such radical changes in our policies. Yet, such changes are necessary to insure world peace.

The O. P. A. Decides To Regulate Church Suppers

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. PHILLIPS. Mr. Speaker, under leave to extend my remarks in the Appendix, I want to call attention to a recent regulation from the O. P. A. I have come to the conclusion that the "O." in O. P. A. must stand for Olympus, for I cannot think of any word suggesting a place from which such Godlike powers could emanate, self-assumed, of course. In the current regulation, the O. P. A. attempts to regulate church suppers, luncheons, and similar events. You understand, Mr. Speaker, the O. P. A. does not call them that; the O. P. A. never uses language which can be so easily understood, not even in the O. P. A. This regulation is directed to "Occasional Users of Ration Food."

I have here, Mr. Speaker, an editorial from the Santa Ana Register, of Santa Ana, Calif., referring to this new regulation. It offers a "Tip to the O. P. A." It is amusing, but I suggest that it is more serious than amusing. At a time when the ineptness of this agency is about to produce a genuinely serious meat situation, and when the O. P. A. has confessedly broken its promises about the cancelation of ration stamps, it seems to me there might be something more important in those offices than rationing "occasional users of ration food."

It is plain to me, Mr. Speaker, that the writer of this new gem from the O. P. A. never attended a strawberry festival, nor an oyster supper, nor even their modern equivalent, the church supper. The editorial follows. It is from the Register of December 23:

TIP TO O. P. A.

The O. P. A. has issued a new regulation covering "occasional institutional users of ration food." Translated—as most O. P. A. terms must be—this means people who now and then serve a church supper or similar eating function and charge money for it.

The "occasional institutional users" must now make application 30 days before the date of the meal, and specify how many persons are going to attend. They must also account for any unused rationed food within 10 days "after the last service of food during the period covered by the application."

Now this may be very well, but it is clear to us that the regulation was drafted by some city slicker in Washington who never attended a church supper.

If he had he would know that he was dealing with an old and inflexible American tradition in which two things inevitably happen:

1. The "occasional institutional users" never know how many are going to attend their occasional function, and (2) no amount of planning is going to prevent the late comer at said function from getting a superfluity of hot biscuits and cole slaw, and something less than a minimum of creamed chicken.

Our advice to the O. P. A. is to forget the whole thing.

T. V. A. Should Be Applied to the Missouri Valley

EXTENSION OF REMARKS
OF
HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. COCHRAN. Mr. Speaker, under the permission granted me, I enclose an editorial that appeared in the New York Times Sunday, January 7, 1945. It follows:

"THE T. V. A. IDEA"

The Tennessee Valley "experiment," as T. V. A. Chairman David E. Lilienthal describes it in our magazine today, has now reached a stage where it has to be regarded as a pattern for other river-valley developments. Its record sustains the four claims which Mr. Lilienthal makes for it. T. V. A. has achieved a unified engineering control of a river, and through cooperation, not compulsion, a unified economic and social growth is being brought about in the Valley of the Tennessee.

In order to carry out its mandate, T. V. A. was compelled to supersede one private enterprise—the production and sale of electric power—in its area. With this single exception there has been an increase, not a decrease, in the volume of big and little private enterprise. On farms and in factories the pioneer spirit of self-reliance has actually been strengthened by this governmental intervention. Thirdly, T. V. A. has shown that government itself can be decentralized. Its own roots are in the valley, not in Washington. Fourthly, all this has been done outside the scope of partisan politics. The result is that after 11 years T. V. A. has almost no enemies in its own territory. It is supported by chambers of commerce, by labor organizations, by farmers' organizations, and by men of widely differing political views.

The T. V. A. pattern, as Mr. Lilienthal says, "is no cooky cutter." It could not be laid down exactly in the Missouri, the Columbia, or the Arkansas Valley. But the main idea, of unified development, of governmental decentralization, of reliance on the energy and initiative of the people residing in an area, of nonpartisan cooperation for the common good, can certainly be widely applied. There is no reason why it should not be applied in the Missouri Valley, for instance, despite the wide difference in climatic and other conditions between the Missouri and the Tennessee. A new sort of governmental agency has been invented, one of which Jefferson as well as Hamilton could consistently approve. It has worked with brilliant success. Why not expand its use?

Persecution Fails

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. HOFFMAN. Mr. Speaker, again, as often happens, persecution, malice, hatred, and intolerance, however, masquerading, has finally been disclosed in its true light.

Because a few people attempted to expose what they sincerely believed to be a plan to destroy Christianity, overthrow popular government throughout the world and more especially here in America; carried on a crusade originally designed to unify patriotic Americans in opposition to a movement which would have destroyed our constitutional liberties, they became the object of persecution.

Spurred on by certain groups, the Department of Justice of the Federal Government assigned one William Power Maloney to make an investigation. Assisted by Dillard Stokes, using two aliases, certain individuals were induced to mail anticommunistic and anti-Semitic literature to Stokes here in Washington. That was all Mr. Maloney needed to start his inquisition. In passing, it might be said that William Power Maloney's conduct came before the United States Supreme Court and, on March 1, 1943, of him that Court had this to say:

> At a time when passion and prejudice are heightened by emotions stirred by our participation in a great war, we do not doubt that these remarks addressed to the jury were highly prejudicial, and that they were offensive to the dignity and good order with which all proceedings in court should be conducted.

Prior to that statement Maloney had, by associating the names of some 10 or 15 individuals whose only offense appeared to be that they were anticommunistic and anti-Semitic with the names of certain convicted individuals, created the impression, aroused the suspicion, that the individuals so named might be linked in a conspiracy with those formerly convicted of a criminal offense.

Some 30 individuals were indicted, and for more than 2 years the case had been dragged through the courts and through the public press, and was only brought to what may be a temporary halt by the death of the presiding judge.

For something like 7 months, testimony was taken and, while I never heard a word of it, never attended a session of the court, newspaper accounts indicate that, insofar as the majority of the defendants were concerned, it in no way indicated that they were engaged in any subversive activities.

The testimony did show that some of them were violently anti-Semitic. Prejudice because of race, color, creed, or land of origin has no place here in America. I have no such prejudice and have never

by word or act given justification for anyone to think that I harbored such views. Nevertheless, in common with thousands of others, because some of those charged in the so-called sedition trial had circulated some of my speeches which went into the CONGRESSIONAL RECORD by the unanimous consent of every Member of the House, I, too, was a subject of a campaign of hate and misrepresentation.

Under the public eye, the trial became so clearly a persecution, some of the defendants so evidently the victoms of persecution, that even the Washington Post, which had much to do, through its reporter, with the collecting of evidence and through its editorials with the creating of prejudice and the return of the indictment, was finally forced to admit that the trial itself was a farce, that justice was not being meted out to the defendants.

In the Saturday Evening Post of January 6 is an editorial which probably as clearly and concisely as any states the overwhelming editorial opinion of the press of the country. That editorial is as follows:

LET IT BE OUR LAST MASS TRIAL

It is probable that the Department of Justice long ago realized that the sedition trial in Washington was a particularly obstreperous white elephant, but it was not until the death of the trial judge, Edward C. Eicher, that the Department had the opportunity to cut its losses and save its face. For our part, we hope that this is the last time that American justice is made to look silly by an effort to emulate Nazi-Communist propaganda trials.

The so-called sedition trial was an effort to lump in one basket the sins and irregularities of a variety of cranks and dissenters, ranging all the way from Mrs. Elizabeth Dilling to the late Elmer J. Garner, age 83, who died during the trial in a Washington rooming house, leaving, according to Senator LANGER, of North Dakota, 40 cents as his sole assets. The 30 defendants were accused of various manners and degrees of sedition, but there was no reason to try them en masse, since their alieged unrelated offenses were committed in places as far apart as New York and California. The idea seems to have been to stage a patriotic rally in a courtroom.

Months ago, the Washington Post, which has done its share in ferreting out evidence of actual sabotage, reached the conclusion that the case would "stand as a black mark against American justice for many years to come." A touch of courage in Washington—a willingness to defy the asinine charge that an end to the farce indicated sympathy for traitors and appeasers—would have disposed of the long-drawn-out indignity before it reached the depths of absurdity. As things were, however, only the death of Judge Eicher availed to release American justice from an exhibition far more appropriate to the courtrooms of Berlin and Moscow than to those of the United States of America.

The fact that only the death of the trial judge could put an end to the show must stand as a warning to every citizen that the right to a full and fair trial as an effort to render justice, and not as a means of making a good show to stimulate morale or for some other extraneous purpose, is one which can be maintained only by constant vigilance and labor. The protection of American justice from such showmanship ought to rest on more secure ground than the mortality of Federal judges. Perhaps the poor reception enjoyed by the Washington performance will make its repetition less likely.

The IV–F Group

EXTENSION OF REMARKS

OF

HON. CHESTER H. GROSS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JANUARY 3, 1945.

Congressman CHESTER H. GROSS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN GROSS: I am writing to you against the pernicious and dangerous plan now brewing in our powerful bureaucracy. Problems arise. What happens? Many are not solved by democratic principles. Voices immediately arise: "Turn on the machine of regimentation. Set the wheels in motion. Hence strange laws are passed." Now another problem, the problem of labor. We have 4,000,000 men classified in IV–F. Millions of men and boys caught in the grip of intolerance and bigotry. Yes; caught, because reputable physicians say they are unfit for the rigors of military life. Yes, caught by handicaps; countless thousands of whom have not brought this upon themselves, but have been afflicted by nature.

I speak from experience. My own son has a heart condition since boyhod. Naturally, he was rejected. He, like millions of others, suffered from intolerance and bigotry. I have gone through trying hours in which my son has been filled with depression and discouragement. I know many other fine, clean youngsters in this same category and they are not slackers. The majority of them hold positions. My son being unfit for factory work is taking a course of studies to fit him to take a place in our national life. Pitiful but true, these men and boys are scorned by some citizens, others in Government, and a few commentators who constantly point fingers of accusation and ridicule at them. I should like to face some of these accusers in Government while I ask them a few questions. What have you done to aid and rehabilitate the millions of fine men and boys? Have you tried the American way of planning to revive their broken spirits and proud hearts? Have you made these citizens feel necessary in our war effort? As human beings and not robots? Have you studied some broad plan in which you may find a gold mine among this class; yes, a gold mine of brilliant minds and potential leadership? Of late, have you read some biographies of the great? Do you realize that many of them came from this handicapped group? Have you thought far enough ahead to think about the days of reconstruction; that it will be among these despised IV–F'ers, in which the Nation will largely have to find talents and leadership; knowing full well that when millions of our boys return from the battlefields, they are going to be war-weary and disillusioned? All they will ask for is the fireside, peace, and a good job. There will also be among them the maimed and mentally unfit; while thousands will have passed on tragically to their eternal rest. No; you have no plan in which you will find heartfelt cooperation. You want regimentation; also battalions of labor for military camps, filled by the very ones whom reputable physicians claimed unfit for military service. Battalions of exterminated humanity. Few men will hold out under these circumstances. They will be crushed physically and mentally. Through this act we may lose a Jefferson or Lincoln, and many a brilliant career, because a Government could not find a way to lift up the morale and dignity of these citizens.

I will now give you an example of one classified as a IV–F. This lad was a victim of infantile paralysis as a baby, leaving him with varicose veins. He was turned down several times, when the patriotic urge once more made him hitchhike many miles to an induction station. He was turned roughly away and told not to return, and then wearily trudged back home, arriving the following day. I saw him in the afternoon, a pitiful and pain-racked youth with ankles swollen twice their size while his feet looked as though they would burst through his shoes. Do you call this youngster a slacker?

Have you heard young men sob with bitterness because they have been left behind? Are you going to continue this harsh treatment in dealing with a human problem, or turn about face and find the ways and means to fill the demands of the war effort with talented leadership and needed labor? This can be accomplished by realistic planning and human understanding. If so, we shall have plenty of cooperation. Proud Americans have learned at home and in the schools the true meaning of democracy and proud men will not tolerate Old World ideologies.

Will Congress give away the tremendous powers that Mr. Byrnes requests for himself and the few? Will Congress dare to endanger the sacred principles which have been entrusted to them by the great immortals; a principle of living that has made us the greatest and freest Nation on earth? Will Congress dare to entrust such power in the hands of the few; in which it is said physically handicapped boys will also be thrown into the machine of regimentation in which precious lives may be lost? Will Congress dare to trust free enterprise in the hands of a few when something may arise, when our whole economic system may meet its end on the auction block to be sold to Uncle Sam? The businessman fears that this will happen some day. Many have discussed the situation openly with me, and yet I cannot believe Congress will so jeapardize the faith of our fathers, by giving away these powers which belong in their hands, and not with the bureaucrats.

I still have faith in Congress that they will defend and protect the Constitution of these United States and remember that this is a Government of the people, by the people, and for the people; and they will see to it that our freedom here at home will be kept intact. What could be a worse tragedy than to lose it here, while our men are fighting and dying for it across the seas. Freedom is not lost in a day, but it can come slowly but surely, like a thief in the night, if a Nation is caught napping. We all must remember that the rights and liberties of a free people have always been bought through privation and even bloodshed, and yet it is a harder and more difficult task to keep this freedom after attaining it.

With kind regards.

Sincerely yours,

ELMINA BINDLEY MANTOR.

Ration Board Service Is Thankless Task

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. WHITE. Mr. Speaker, an important factor indispensable to the war

effort which receives scant mention in news columns is the home-front service of the volunteers operating county ration boards. These volunteers give unstintingly of their time and talent in keeping informed on O. P. A. regulations, receiving, reviewing, and approving thousands of applications for rationed items, and issuing ration books and certificates of purchase. They receive no remuneration, no medals for meritorious service, and little appreciation.

Typical of the extent of the work of a ration board is a feature story appearing in the Lewiston Morning Tribune of December 31, 1944, concerning the activities of the Nez Perce County (Idaho) Ration Board, which I offer for inclusion in the RECORD as a tribute to all of the other county boards in the Nation serving so faithfully and so inconspicuously:

SERVING ON RATION BOARD IS THANKLESS TASK

(By Tish Erb)

Three years ago, a scant 3 weeks after the sneak attack at Pearl Harbor, the nucleus for the Nez Perce County war price and rationing board was formed when the Governor of Idaho appointed a committee of three Lewiston residents to make preparations for compliance with O. P. A. regulations for wartime distribution of tires for civilian use. As the war progressed and other commodities were added to the ration list, the original committee was expanded from time to time until today there are 20 members on the ration board, 19 of whom were appointed by the civilian defense council and approved by the O. P. A. district office. Hobart Burns, chairman, is the only one of the Governor's three 1941 appointees remaining in the organization.

Starting from scratch with no precedent to follow, no fund for expenses, and few instructions, the committee first set up headquarters in the chamber of commerce office. Within a short time more space was required and the ration office was moved to the foyer of the ballroom of the Lewis-Clark Hotel, which also became inadequate as the program advanced. In the spring of 1943 the ration headquarters were again moved to the present location at 859 Main Street, where a clerical force of a chief clerk and six assistants, a corps of volunteer workers, and seven board panels serve the public in carrying on the activities of the O. P. A. for distribution of food ration books, tires, sugar, gasoline, shoes, and rubber boots, automobiles, stoves, and fuel oil, as well as price-control surveys.

Indicative of the volume of work handled at the ration office is the gasoline program for the 8-month period, April 1 to December 1 of this year, when coupons were issued covering 2,320,731 gallons. This work included processing and issuance of 4,135 A books each containing coupons for 120 gallons, or a total of 496,200 gallons; 5-gallon B coupons totaling 219,385 gallons; 5-gallon truck coupons totaling 920,630 gallons; 1-gallon coupons for nonhighway gasoline use for running woodsaws, washing machines, and other equipment, 25,201 gallons; 5-gallon C coupons totaling 141,375 gallons; and 5-gallon coupons for tractor, combine, and other farm uses totaling 517,940 gallons.

BOARD WORKS IN PANELS

During the same 8-month period 2,712 applications for purchase of tires were approved and certificates issued.

More than 150 tons of canning sugar were issued at the ration office in a program carried on entirely by volunteer women workers. Coupons issued totaled 60,950 for a total of 304,950 pounds of sugar.

Fuel-oil applications approved totaled 4,190. Each fuel-oil book must be tailored to the number of coupons allowed the applicant with each book containing a different amount.

For the convenience of civilians and for concentrated activity of board members, the ration program was divided into panels early in 1943. Each panel is required to be familiar with the voluminous O. P. A. regulations, amendments, and rescissions affecting the particular panel department. From 20 to 25 printed pages of instructions are received daily at the ration office from the national and district headquarters, and it is no small task for the panels to keep abreast of their duties in keeping informed on the regulations.

PANEL MEMBERS

The panels and personnel include:

Transportation, Roy Charboneau, chairman; Hayden Mann, Edward D. Sanman, J. Leslie Hardin.

Food, J. C. Mackey, chairman; Mrs. M. F. Ward, G. R. Braum.

Fuel oil, E. H. Sloat, chairman; Marion Montague, G. W. Tarbet.

Miscellaneous, Jay B. Watson, chairman; M. M. Belknap, Carl Gerding.

Price control, W. W. Force, chairman; Ed Klonick, Mrs. Robert Mullin.

Community service, W. E. Bitter.

Volunteers, Mrs. Janette Perkins.

Member-at-large, Corbett Lawyer, Lapwai.

VOLUNTEERS INDISPENSABLE

The board meets twice a month but panels meet at least once a week and oftener if applications are on hand for review or special cases are presented for consideration.

Volunteer workers, besides board members, have included in the last 6 months 57 women working 369 hours in issuing A gasoline ration books; 127 women working a total of 1,123 hours issuing canning sugar coupons; 56 workers 202 hours on price control; 14 clerical volunteers, 57 hours; and an unspecified number of people working 120 hours in the educational program speaking at club and other organizations on the purposes and importance of the O. P. A. program.

Neither board members nor volunteer workers are allowed to incur any personal expense in behalf of the work they are doing. When trips through the county are necessary, the board member is issued coupons for the mileage to be covered but must purchase the gasoline from personal funds. When the non-salaried chairman makes trips to the district office at Spokane, which he is frequently required to do, he must bear his own travel and sustenance expense.

GRUMBLERS ARE FEW

Violations reported to the ration board are investigated but the board is not constituted as a policing force. In cases where complaint or evidence is submitted alleging violation of an O. P. A. regulation, the board issues a summons to the person accused and holds a hearing. During the last year one violator was denied the privilege of selling gasoline until rationing is taken off and in other cases gasoline rations were canceled for varying periods of from 30 days to 1 year.

"Rationing started on the basis of cooperation between civilians and the Government to prevent waste, conserve commodities likely to become scarce, and to prevent inflation," said Mr. Burns, who has been chairman of the board since April 1942. "As a general rule, Nez Perce County residents have complied goodnaturedly with the regulations, although they have been caused considerable inconvience thereby. About 3 months ago, however, as war news became optimistic and victory looked near in Europe, irritation became noticeable in the attitude of the people making application for rationed items. They simply felt the ration program was no longer necessary, but with the recent setbacks on the military fronts and the tightening of regulations on the home front, there is a perceptible change and a willingness to cooperate.

"There has been a minimum of grumbling the last few days because new regulations invalidated unused red and blue stamps. The few grumblers failed to appreciate the fact that, if they had been forced to use the stamps instead of buying freely of the rationed commodities, they would have been in far worse plight than they imagined themselves with the sudden announcement of cancelation of the stamps."

BOARD EXISTS FOR FAIR PLAY

"Panic seizes a great many people when they find any commodity is to be rationed but they soon learn that they get along fairly well with the use of their ration books."

Mr. Burns said he believes there are fewer black-market operations in this community than the average throughout the country. Black-market operations reported to the ration board are referred to the district office and an investigator is sent to cover the case.

"The O. P. A. district office does not dictate to the board in any way as long as we follow the regulations," declared Mr. Burns. "Any time an applicant is dissatisfied with the decision of the county board, he has the privilege of appeal to the district office, and from the district office to the regional office and then to the national officials at Washington, D. C.

"The ration-board obligations are to the people of Nez Perce County and not to the O. P. A. We exist for the purpose of seeing that there is an equitable distribution of the rationed commodities to the people entitled to receive them."

PATRIOTISM PROMPTS WORKERS

"Too much credit cannot be given to the volunteers who assist with the ration program. With only seven paid employees in the office, it would be impossible to handle the peak loads such as issuing A and T books, fuel-oil coupons, and sugar certificates and in making price surveys.

"No advance information has been received by the board on rationing except that shoes are not going off the ration list. So far as we know, no other item of clothing is to be added to rationing."

Besides presiding at meetings, Mr. Burns devotes himself untiringly to his duties as chairman of the board. He spends 3 hours, 5 days a week and all day Wednesday at the ration office supervising the work, attending to correspondence, familiarizing himself with regulations, and holding conferences with official callers.

Board members and volunteers receive no emoluments nor medals from the Government and few accolades of community appreciation and yet this home-front activity is a necessary part of the war effort. The only recognition for service is a pin award for volunteer service beyond 200 hours and a certificate to board members signed by O. P. A. officials and President Roosevelt.

The third anniversary of preparation for rationing in Nez Perce County passed without fanfare or observance of any kind, an omission befitting the modest demeanor of the board and the volunteers, whose service is actuated solely by patriotism.

Fair Employment Practice Commission

EXTENSION OF REMARKS

OF

HON. CHARLES M. LaFOLLETTE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. LAFOLLETTE. Mr. Speaker, under leave to extend my remarks, I am

including a public statement issued by me on January 3, 1945, with reference to H. R. 481, a bill to establish a permanent F. E. P. C. which I introduced on that date:

I again introduce and again commend to the Congress this bill to establish a Permanent Fair Employment Practice Commission, with the sober and humble realization that it constitutes a potent win-the-war weapon. True, it is only one of the many weapons that this Congress will be called upon to forge in winning and insuring the peace, but it is one that strikes at the heart of prejudices that even today sabotage our production of guns and tanks and planes.

This bill would make the Fair Employment Practice Committee a regular agency of Government, responsible to the Congress and to the courts, and with full authority to carry out the mandate that there shall be no discrimination in employment because of race, color, or creed.

This is no new proposal. I hope I shall be joined in its sponsorship by a group of my colleagues of both parties. In the last Congress this very same bill received the support of practically all the major national union, civic, and religious organizations—Catholic, Jewish and Protestant—and of many community organizations throughout the country, whose representatives came to Washington last summer to testify in its behalf before the House Labor Committee. The Labor Committee reported it favorably, and only shortness of time prevented final House action.

In reintroducing this bill I am helping to initiate the implementation of the platform of my party, fulfilling my pledges to the voters who returned me to Washington, and serving notice to the world that we intend to practice at home the policies of equal economic opportunity we preach abroad.

If anyone had any illusion that our manpower problems were being met under existing Executive regulations, those illusions were dispelled on New Year's Day with the release of the report of the Director of War Mobilization and Reconversion.

"We cannot be complacent yet." Mr. Byrnes declared in his letter of transmittal to the Speaker of the House. "We must man our war plants to the fullest extent necessary to meet the requirements of our military leaders. We must do this in the face of a further withdrawal from our available manpower supply to provide replacements for the Army and to build the Navy up to the strength which it requires to man its ships."

I read with great interest and concern Mr. Byrnes' description of the steps he has taken to fill the demands for manpower in war industries. I read carefully his recommendation for legislation to carry labor and industry through this war and through reconversion. I am impressed by the thoroughness of his approach and by many of his proposals. But nowhere in his communication do I find any recognition of a fact we all know to be true—that prejudice still stands between our minority citizens and vacant jobs.

Mr. Byrnes reports that he has taken steps to tighten selective service, War Manpower Commission, and War Production Board regulations. He has ordered the suspension of all race meets and is appealing to the 60,000-odd employees of the racing industry to enter war production. He is ordering a review of IV-F's and appealing to Congress to consider compulsory war industry service for those physically unsuited for military service. But nowhere does he appeal to industry and labor to take all comers on the basis of ability and without regard to race, creed, or color.

Mr. Byrnes recommends that Congress strengthen the authority of the War Manpower Commission. He recommends that Congress strengthen the authority of the War Labor Board—I quote—"to enable it to enforce its decisions in the courts without resort to seizure."

But nowhere does he recommend the strengthening by legislation of the Fair Employment Practice Committee so that it may enforce its decisions. That is a most regrettable oversight. Surely the little president knows of the cases cluttering the files of the President's F. E. P. C.—cases representing workers kept from jobs in violation of the President's executive order—because the F. E. P. C. has no authority. Has he forgotten that the President had to seize the Philadelphia transit lines last summer to enforce a decision of the F. E. P. C.? Has the little president forgotten the campaign promises of the big president?

The people have not forgotten.

The Negroes, the Jews, the Catholics, the Spanish-speaking Americans have not forgotten. They cannot forget because they suffer discrimination here today while their sons face the lack of munitions overseas tomorrow. The Members of Congress must not forget theirs is the privilege and the obligation to remove every possible barrier that stands between men and machines. And the barrier of prejudice must be the first to go.

Mrs. Ruth Hanna Simms

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include as a part of my remarks a brief tribute paid the late Mrs. Ruth Hanna Simms in an editorial in the New York Herald Tribune of yesterday. Ruth Hanna Simms was my valued friend and those of us who had the pleasure of serving with her in the Congress knew her splendid qualities of mind and heart. She was an able, accomplished, and fearless woman, a really great American.

The editorial is as follows:

MRS. RUTH HANNA SIMMS

Mrs. Ruth Hanna Simms ranks with Mark Hanna, her father, among the great leaders of the Republican Party. She was, too, an inspiring pathfinder for women in assuming and acquitting extraordinarily well heavy responsibilities in public office and party councils. She grew up with politics, twice married men whose first interest it was. Her father inducted her as his secretary when she was 18 and often she was his companion at the Washington breakfasts where the Republican Party's fortunes were molded in the McKinley era. She aided the political career which carried Medill McCormick to the Senate. She herself served in the House of Representatives from 1928 to 1930, when she barely missed election to the Senate. She supported Theodore Roosevelt's Progressive Party break, crusaded for women's suffrage and for child-labor laws. Some years after Senator McCormick's death she married Albert Gallatin Simms, who had sat next her in the House, and continued her political activities, including energetic support of Governor Dewey for President, from a New Mexico ranch.

Her interest and influence in politics were the natural products of both inheritance and environment, but her constructive contributions to her country, her party, and her sex were the products also of a fine mind and heart, of a forthright zeal and an indomitable faith. We pay this tribute to her although we did not agree with her views—isolationist views too typical of the Midwestern States, where her influence had been greatest—on the war and on the obligations of this country to help secure the peace. For hers was the sort of shining faith, the boundless energy, and the inborn competence which builds nations like America.

State of the Union

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

Monday, January 8, 1945

Mr. McKENZIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the Washington Star, under date of January 7, 1945:

STATE OF THE UNION

President Roosevelt takes on full stature as a wartime leader of all the people in his 1945 message to Congress on the state of the Union.

In the words of Winston Churchill, he has exposed the "grim bare bones" of the problem confronting this country as we move into what is unquestionably the most critical phase of the war. Stated in its simplest terms, the problem is to win this war of national survival at the earliest possible time and to make certain, so far as it lies within our power to do so, that the world will not again have recourse to arms in the settlement of international disputes.

If this is to be done, we can no longer tolerate half measures. For long, tortured months the men at the battle fronts have been fighting a total war. Many of us at home have yet to learn what that term means. But the pressures of total war are irresistible, and this year will find those pressures closing in around us.

The President, in calling for a maximum effort from the whole Nation, kept his sense of proportion. In 3 years of war our armed forces have made splendid progress. Mr. Roosevelt reported on that progress with justifiable pride. The military victories were made possible by production of an infinite variety of weapons—an accomplishment which has been the marvel of the world.

Yet the fact remains—and the experience of the battlefield confirms it—that we are not doing enough. In 1945, and perhaps in 1946, there must be even more production, more effort, more sacrifice, more of that will-to-win which counts no exertion as being too great. And, with all of this, there must be the firm resolve to move forward toward the ultimate goal of a strong America in a secure world.

To meet immediate demands the President asked for amendment of the Selective Service Act to provide for the induction of nurses into the armed forces. He requested the immediate enactment of legislation permitting use of IV-F's in whatever capacity is best for the war effort. He declared that we must have universal military training after the war as an "essential factor in the maintenance of peace," and he said that he would submit a special message on this subject. These are minimum requests, and it is reasonable to expect that they will be granted. The real test of the intentions of Congress—and indirectly that means the intentions of the people—will come in the

action taken on the President's forthright and unqualified appeal for adoption of a national service act.

As Mr. Roosevelt put it, the fighting man wants, needs, and is entitled to insist upon our full and active support—now. That is a simple statement of fact, and the only question is whether the people at home really want to give the fullest measure of support to the men they have sent off to war.

The President had asked for a national service act a year ago. But his request at that time was qualified and weakened because it was conditioned on the adoption of other things—a "realistic" tax law, a "cost-of-food" law, etc. "Unless these other measures were adopted," he said, he "would not recommend" a national service law, and that reservation proved fatal. But this year his request is unconditional and urgent. The hope of victory in Europe in 1944 is gone, the war is mounting in its fury, and first things must be put first.

Underlying the urgency of his appeal is the knowledge that American men are suffering and dying around the world while other men are quitting their jobs in war plants; while still others, men and women, should be, but are not, in essential work. Underlying it, too, is the President's knowledge that, despite excellent past performances, manpower shortages are causing lags in critical production programs, are delaying the return to action of damaged fighting ships, are impairing the output of new and better weapons which, in the hands of our troops, would mean the loss of fewer American lives. In a word, we are capable of more than we are doing. The voluntary methods of the past 3 years have been tried and found wanting. If we are to give our fighting men that last full measure of support which the furious character of the war demands, the Government must be empowered to use compulsion on the home front when all other means have failed.

To those who have been clamoring for blueprints and formulas precisely defining America's position in relation to every conceivable international problem, the President's views on foreign policy will be read with something less than satisfaction. But considering the present state of the world, with the war reaching new peaks of violence and with the internal politics of the liberated and semiliberated lands unavoidably in a condition of either flux or confusion, it is difficult to see how Mr. Roosevelt could have expressed himself better or more specifically.

The United States, says the President, still adheres to the principles of the Atlantic Charter and will do its best, now and in the future, to secure so far as is humanly possible the fulfillment of those principles. Economic and military strength is an important and inescapable factor in international politics, but in keeping with the charter and with American tradition, the policy of this country is that all such power must be linked with responsibility and obliged to defend and justify itself within the framework of the general good. Thus, for example, power cannot very well defend or justify itself if it is used during this troubled interim period in the liberated lands to block the eventual exercise of the peoples' right freely to choose the government and institutions under which, as freemen, they are to live. Accordingly, as a matter of policy, we and our allies have a duty, which we cannot ignore, to use our influence to the end that no temporary or provisional authorities, in Poland, Greece or elsewhere, will be allowed to prevent popular elections later on when it will be possible to hold them.

But in reaffirming these and other principles the President wisely emphasizes that this is an imperfect world and that although the Atlantic Charter is a good, useful, and essential statement of objectives, those objectives do not provide rules of easy application to each and every problem now pressing for solution or still in the making. He is frankly concerned about situations like those obtaining in Greece and Poland, but there is no simple answer to them from the American standpoint. His views seem to reduce themselves to the basic thesis that while the objectives of the Atlantic Charter must be sought after with the utmost earnestness, the making of a sound peace also requires that the American people, and other peoples as well, cultivate an understanding, tolerant, and patient frame of mind. For we and our allies are not always going to see and think alike, and international cooperation and progress are not helped by any nation assuming that it has a monopoly of wisdom and virtue. Perfectionism can be as dangerous and it is unrealistic. If we are to guard against extremes of disillusionment, then we must take the mistakes, the disappointments, and the imperfections in stride, realizing that they are almost inevitable.

It is a wholesome frame of mind that President Roosevelt appeals for. If we can have it, then we can proceed at once, as he urges, to enlarge upon what has been achieved already at Dumbarton Oaks and establish without delay, during this year, the permanent machinery for the maintenance of world peace.

The keynote of the President's discussion of domestic affairs, unrelated to the prosecution of the war or to foreign policy, is that "an enduring peace cannot be achieved without a strong America—strong in the social and economic sense as well as in the military sense."

His conception of a socially and economically strong America is based on acceptance of that "second bill of rights" outlined to Congress last year, of which the "right to a useful and remunerative job in the industries or shops or farms or mines of the Nation" is fundamental. In painting an outline of the post-war prosperity to supply 60,000,000 post-war jobs, the President wields his brush in broad strokes.

We shall rely "as much as possible" on private enterprise, based on "initiative and vigorous competition," freed of monopolies and cartels, with the Government standing by to share the risks involved in private financing of new facilities, plants, and equipment.

Along with the development of natural resources, which the President exemplifies in the work of the Tennessee Valley Authority, will come the construction of civil airports and great highways, urban redevelopment and provision of decent housing—needed undertakings which, on top of a resumption of normal manufacture, should supply "millions of productive jobs" under private enterprise, yielding and maintaining a national income high enough to "provide for an orderly retirement of the public debt along with tax reduction."

It is not necessary to accept in detail this alluring prospect of post-war America in order to catch and feel something of its inspiration. Most of us have some faint idea of the problems to follow the collapse of our war-supported national economy. Yet the amazing feats of production accomplished already in this war have given us the faint outlines of new and promising horizons that peace will make more attainable. The progress that can be made toward these horizons by American initiative and resourcefulness, without dependence on Government spending, controls and restrictions of individual freedom will measure our real progress. The only spirit with which to face this future is the spirit of confidence in the American people.

There will be debate, as there should be, over putting into immediate effect the revolutionary measures in total mobilization of civilians for which the President has asked. But no citizen now can remain unconscious of the silent pleadings in support of those measures, pleadings which take form in the lengthening columns of names on every new list of the wounded, the missing, and the dead.

The Nation's Strength

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. DONDERO. Mr. Speaker, permission having been granted by the House to include in my remarks a short item, I offer it for its excellence and solid thought. Preserve the bonds of home, keep the school bells and the church bells ringing in our favored land, then the starry flag with all it represents of freedom, opportunity, Christianity, and equal justice for all will not perish from the earth.

THE NATION'S STRENGTH

I know three things must always be
To keep a nation strong and free.

One is a hearthstone bright and dear,
With busy, happy loved ones near.

One is a ready heart and hand
To love, and serve, and keep the land.

One is a worn and beaten way
To where the people go to pray.

So long as these are kept alive,
Nation and people will survive.

God, keep them always, everywhere,
The hearth, the flag, the place of prayer.

Atlantic Charter Hoax

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am submitting herewith a timely editorial from the Janesville Gazette of Janesville, Wis., as of January 4, 1945:

ATLANTIC CHARTER HOAX

President Roosevelt now says the Atlantic Charter, admittedly in the diplomatic discard, was never a signed or binding document. It was a statement of principle, a verbal agreement between President Roosevelt and Prime Minister Churchill as to what would be best for all the nations of the world when war had ceased. It was a mental picture of an ideal situation, when all the peoples on this earth would dwell together in harmony.

To bring about all the wonderful things outlined in its phrases it would be necessary, of course, to have the official endorsement and signatures of the three great powers. Both were lacking. In fact, no effort was made to convert what amounted to a mental memorandum into an official document, from which the future course of the world was to be charted. By no stretch of the imagination could it be termed an open covenant, openly arrived at.

Churchill has known this all along. Russia has proceeded in respect to Poland as though Stalin had never heard of the charter.

All of which must come as a shock to the peoples of those European nations that regarded the charter as their means of salvation. They had pinned their faith to the paragraph which said: "We respect the right of all peoples to choose the form of government under which they will live; and we wish to see sovereign rights and self-government restored." It was misleading and poor diplomacy, never agreed to by the American people.

Accomplishments of Committee on Small Business of the House

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. PATMAN. Mr. Speaker, it has been my privilege during the life of the Seventy-eighth Congress to have served as chairman of the Select Committee on Small Business. It is my belief that the work done by this particular committee has been of extremely high value to both the small-business men of this Nation and to the Government as well. Serving with me on this committee have been such able Members as Mr. ROBINSON, of Utah; Mr. KEOGH, of New York; Mr. JACKSON, of Washington; Mr. KEFAUVER, of Tennessee; Mr. HALLECK, of Indiana, who resigned from the committee last fall to take on duties which he felt were temporarily more pressing; Mr. LEONARD HALL, of New York; Mr. PLOESER, of Missouri; Mr. STEVENSON, of Wisconsin; and, as successor to Mr. HALLECK, Mr. HOWELL, of Illinois.

The Small Business Committee of the House has not been as highly publicized as some of our other select committees, but, in my opinion, its record of performance is no less impressive for that reason. The committee has neither spent as much money as most committees nor has it employed as large a staff of investigators as have other committees. Despite this effort to be truly economical in its handling of its assignment, I feel that we can point with pardonable pride to a very creditable list of committee achievements, many of which are already reflected in improved conditions for small business and improved relationships between small business and the various important Federal agencies.

Following is a general idea of the activities in which the committee has had an interest since its inception on the first of the year, 1942:

In the year 1942 the committee held 40 public hearings, during which a total of 663 witnesses were heard. The following subjects were investigated in the course of these hearings:

Problems of the automobile dealers.
Problems of the tire dealers.
The scrap metals shortage.
Problems of the retail druggists.
The fire insurance industry.
The sugar shortage.
The refrigerated locker industry.
The distribution of war contracts to small business.

In the year 1943 the committee held 30 public hearings and 1 hearing in executive session, at which 445 witnesses were heard. These hearings were held on the following subjects:

Problems of the small meat packers.
Problems of independent oil producers.
Effect of O. P. A. rulings on various retail groups.
Problems of the lumber industry.
Disposal of surplus Government-owned property and its relation to the problems of small businesses.
Operations of the Smaller War Plants Corporation.
Problems of the trailer coach industry.
Problems of the smaller freight forwarders.

During the year just passed the committee held 8 public hearings, at which 167 witnesses appeared. The problems taken up in these hearings consisted of the following:

Disposal of surplus Government-owned property, continued.
Operations of Smaller War Plants Corporation, continued.
Manpower and contract problems of small manufacturers on the west coast.
Problems of the independent oil producers.

To date the committee has issued six interim reports to the House of Representatives, as follows: I. Operations of the Smaller War Plants Corporation; II. Petroleum Supply Situation in the United States; III. The Control, Disposition, and Sale of Government-Owned Surplus Property; IV. Current Lumber Industry Problems: Part 1, the National Lumber Situation as of January 1, 1944; part 2, Problems of the Southern pine industry; V. The Surplus Property Problem from the Viewpoint of Small Business; VI. Current Problems of Independent Crude Oil Producers: Part 1. Unfavorable Effect of Present Price Policies; part 2. Trend Toward Monopoly in Crude Oil Production.

The problems that have come to the committee have come from both industry-wide groups and from individual firms. No problems have been too small when it was clearly indicated that assistance was needed in seeking the answer to a question or ironing out a difficulty or misunderstanding with any of the various Government agencies. The committee files contain countless letters of appreciation from small firms whose principals could not afford nor spare the time for a visit to Washington.

SMALL BUSINESS NEEDS WASHINGTON REPRESENTATION

As a result of the wartime tempo and resultant business problems, many businesses have found it advantageous and in some instances necessary to have Washington representation. Big business can well afford to maintain its representative or representatives in Washington for such emergencies. Unfortunately, very few firms in the category of small business can afford to maintain a Washington office. The total expenditures of the committee can well be justified if only on the basis of having performed services for these individual small firms and keeping in business many that would otherwise have been victims of war through no fault of their own.

LUMBER INDUSTRY

As an example of industry-wide problems, I might cite the committee's investigation of the problems of the lumber industry. The committee was in receipt of reports from many small lumber producers that they had or were going out of business for various reasons beyond their control. A preliminary study disclosed that thousands of small mills had gone out of business in the face of an over-all lumber shortage that threatened to be a major factor in the successful prosecution of the war. The committee reported that its study indicated that the production of lumber in 1943 would fall short of essential military and civilian needs by 6,000,000,000 board feet. This figure was disputed by various Government agencies, but was subsequently found to be all too true.

The committee found that there was insufficient coordination of the activities of the various Government agencies whose rulings affected the lumber industry, and that as a result, the maximum efficiency of the industry was not being realized. Therefore it was recommended by the committee that an over-all policy committee be organized, the membership of which would be a representative from each Government agency having some degree of control over the lumber industry.

The wisdom of that recommendation can best be reflected in the following quotation from a letter received from a representative of an association which speaks for a sizable segment of our lumber industry:

> It was at the suggestion of your committee that the Log and Lumber Policy Committee, composed of representatives of various agencies concerned with lumber's part in the war, was established. This policy committee provided the means to correlate activities of various governmental agencies, eliminated unnecessary duplication and conflict between agencies, and resulted in a more orderly and efficient handling of the lumber industry's complex war problems. It was an outstanding example of how the legislative and administrative branches of the Government can cooperate with industry. We hope this type of cooperation will continue after the war. The recommendations of your committee have been sound and indicative of an understanding of the lumbermen's problems.

Following is a quotation from a letter from an official of the War Production Board and a member of the Log and Lumber Policy Committee:

> I would say, however, that during this committee's existence that it was unquestionably the largest single contributing factor to progress on governmental and logging problems that existed. May I take this opportunity of expressing my appreciation of your sympathetic understanding and support of all of us in the solving of these problems. We hope we shall continue to have your active interest.

As a result of our study of the problems of the lumber industry, we were petitioned by representative members of the southern pine industry for assistance. This segment of the lumber industry consisted almost entirely of very small producers, hundreds upon hundreds of

whom were falling by the wayside as war-production casualties. As a result of a price squeeze, the small business committee recommended and prevailed upon the Office of Price Administration to depart from its normal procedure in making an industry price survey. It was pointed out, as a result of the committee's study, that the resultant delay in compiling cost data from firms representing the usual required percentage of production would only result in additional mill failures and additional loss in production of a critical material. Too great a percentage of southern pine is produced by the very small mill, known as the peckerwood mill, to make a cost survey under the usual procedure. A great percentage of these small mills are of such a size that the owner is often the principal worker and actively engaged in the physical production of lumber himself.

The records of these mills are often of the check-book stub variety and hopelessly inadequate for use in the compilation of cost studies by the Office of Price Administration. The Small Business Committee therefore recommended that cost data be obtained from a representative group of producers and thereby eliminate the danger of further delay in arriving at definite cost figures upon which relief to the industry was based. The gratitude of the southern lumber producers is adequately proven by the volume of letters of appreciation in our files.

TRAILER-COACH INDUSTRY SAVED

As another example of industry-wide problems, I can point to the hearings held by the committee in November 1943, in behalf of the small firms manufacturing trailer coaches. Due to arbitrary action by the National Housing Agency, 82 percent of these small manufacturers were obliged to either close their plants or go out of business entirely. After investigation by a subcommittee, a recommendation was made to the War Production Board which resulted in a transfer of responsibility for this program from the National Housing Agency to the War Production Board. As a result of the committee's action and positive recommendation to Mr. Nelson, the majority of these manufacturers are now being permitted to manufacture trailer coaches for war and essential civilian purposes.

Following are a few quotations received from members of the trailer-coach industry:

The trailer industry has been crying in the wilderness for over 2 years and has never been given an opportunity to present its side of the picture. Finally through your efforts they have been allowed to present their case. I therefore personally wish to thank you and your committee for the unselfish efforts given to this small industry. (A Detroit manufacturer.)

Following is a quotation received from an official of the Trailer Coach Manufacturers Association shortly after the hearing:

The 1-day hearing before your subcommittee has done more to clarify our problem and the attitude of the Government agencies interested in our industry than 6 months spent in calling upon these agencies, writing them letters, and supplying them with masses of information.

As a further indication of the feeling of the industry, a final quotation from a gentleman active in trailer dealer organizations in a bulletin to its members:

The House Small Business Committee has proven its worth and sincerity to small businesses in general and particularly to the trailer coach industry. You will remember that it was this committee that held a hearing on November 11 of last year to hear the business problems of the trailer coach industry. After this hearing they advised that the N. H. A. divorce itself from the regulation of the trailer coach industry and that the W. P. B. inaugurate a program to permit the manufacture of trailer coaches. These recommendations are both being carried out.

DISTRIBUTION TRADES

The committee has also been active in the field of distribution trades. One of the controversial issues in this field which engaged the committee's attention was the so-called community ceiling price plan which seriously affected thousands upon thousands of small retail grocery merchants. The O. P. A., in establishing this method of apprising the public at large of ceiling prices, used the principle of publishing a price list of the four groups of retail grocers predicated upon volume of sales.

Group I represented independent grocers with sales of less than $50,000 per year. Group II consisted of independent grocers with sales from $50,000 to $250,000. Group III were stores with annual sales of less than $250,000 but not independent. Group IV were predominantly chain stores operating four or more units with sales of over $250,000.

These four lists of prices were published in daily newspapers and in large sheets containing the prices of all four groups and were widely distributed to consumers. The consumers were able to compare prices of these four groups. This caused an uproar of complaints from retail grocers in classes I and II. The operations of these smaller stores normally is on a service basis with credit, and delivery, and clerk service. They were forced, under the regulations to advertise their larger competitors' prices, who almost without exception operates without credit, delivery, and clerk service. It became a practice for operators of big stores to use newspaper space in advertising to the public the price differentials in an effort to undermine group I and II grocers.

It was insisted by the committee that these regulations were unfair to the small grocer and Administrator Bowles of the Office of Price Administration changed the entire plan. Grocers in either group now display only their own prices and not those of their competitors.

INEQUITIES IN DISTRIBUTION CORRECTED

Also in the distribution trade, the committee became actively interested in certain inequities in the distribution under the low-cost garment programs of the War Production Board.

A survey was conducted by the committee of one of these orders issued by the War Production Board for the allocation of cloth to make women's house dresses and slips, men's shirts and shorts. The order contained an "equitable distribution clause" based on purchases in 1943 by customers of these manufacturers. Also affecting this program was an order by the Office of Price Administration. The survey disclosed that upward of 90 percent of these scarce items were disposed of by the manufacturers to large distributors such as mail-order houses, metropolitan department stores and chain-store corporations.

Wholesalers who provide the outlet for small retailers received less than 10 percent. On this basis there was no equitable distribution. The smaller merchants, who normally represent the bulk of distribution, received comparatively little of this low-cost merchandise.

Partly responsible for this was the O. P. A. order which provided that manufacturers would allow wholesalers a discount of 8 percent from their prices as a small payment to act as wholesale distributors. The manufacturers took the most profitable way out by selling direct to the large retail distributors because of the additional 8 percent profit they were able to thus make.

To the credit of the War Production Board it should be said that Chairman J. A. Krug took immediate action when our committee insisted that unless there was more equitable distribution and its order enforced, no future orders of this type should be promulgated. Mr. Chester Bowles, Price Administrator, also acknowledged the unfairness of the 8-percent allowance to wholesalers and asserted future price orders of this type would not be issued. As the allocation order and the pricing order worked out in practice, they tended to create a monopoly in the hands of the larger distributors while many civilians were unable to obtain any supplies of this merchandise.

The same principle has followed the distribution of what is called piece goods, which housewives use for making clothes for the family. There has been a scarcity in small stores of this material. A price differential enabled the large retail distributors to pay more for such merchandise—contrary to usual policy—than wholesalers. This has enabled them to obtain large supplies of this scarce merchandise and has seriously handicapped small merchants who depend on wholesalers for their supply of merchandise.

The manufacturers made the extra profit by selling to large retail distributors due to the 4-percent feature.

ALL GOVERNMENT ORDERS SCRUTINIZED

These are the kinds of maladjustments which the House Small Business Committee has endeavored to see corrected or avoided by the Government agencies. This kind of work requires close attention to the wording of all agency orders which affect small business and the committee has been very vigilant in the daily scrutiny of such orders.

There has been a material change in the administration of the Emergency Price Control Act. While not attributed solely to this committee's efforts, it has contributed its share to a better understanding of the problems of business.

News releases have been issued periodically, but only when there has been a definite point involved. The fact that

the newspapers and trade publications have invariably given these releases space shows their value.

There has been no desire or effort made to issue releases promiscuously to propagandize the committee. The committee has consistently endeavored to do a constructive job in behalf of all small business enterprises. The large number of letters expressing sincere thanks for accomplishments is the best evidence of the service rendered by the House Committee on Small Business.

INDEPENDENT OIL PRODUCERS

At present the committee is cooperating with the Office of Price Administration in seeking a solution to some of the problems of the independent oil producers of America. As a result of recommendations made by the committee—Sixth Interim Report: Current Problems of Independent Crude-Oil Producers—the Office of Price Administration is now making a survey of operating costs and revenues in the producing and refining fields, and, in compliance with our committee's request, has also appointed an industry advisory committee to represent the crude-petroleum producers.

FUTURE WORK OF COMMITTEE

The work of the Small Business Committee is far from done. The reasons which prompted the House of Representatives to create the committee in the first instance are not history. We are still in the midst of a total war effort and while we are all hopeful, naturally, of an early victory, we are warned that production must continue at peak levels on the assumption that the war in Europe may last at least another full year, and the war in the Pacific for some time after the end of hostilities in Europe.

Many of the problems of fitting small business into the war-production program are still with us and it is the duty of the Congress to maintain a committee that will continue to keep a watchful eye open in behalf of the small-business men and small firms of the Nation.

Aside from the committee's interest in the problems of small business during wartime, the committee should be, and is, engaged in studies that have a definite bearing on the future of small business in this country. Among these studies are:

First. Tax relief for small business.

Second. Methods of inducement to private capital to invest in competent small business.

Third. Effect of present Government controls on small business with a view to eliminating such controls as quickly as possible, yet, also, with a view to determining the possible unfavorable effect on small business if all controls should be suddenly withdrawn at the end of the war emergency period.

Fourth. Degree and nature of governmental assistance desired by small business after the war.

During the past year, we have placed considerable reliance upon the use of our staff in personal investigations and contacts to eliminate as far as possible public hearings and to save the time of our Members. The effect of this has been to greatly increase the efficiency of the committee and, in practical results, has enabled us to cover many more subjects of current value to small business, including problems of individual firms, than could othewise have been covered and still leave the Members free for attendance upon their regular duties.

Small business faces an uncertain future. It is not organized into powerful associations and has no powerful voice here in Washington. It needs and relies upon the Congress to understand and help it in the solution of its many problems. We have a special duty to see that this vital segment of our Nation shall be preserved and adequately protected. We must maintain a favorable climate not only for big business and labor but also for our established small manufacturers and distributors, the employers of so many of our citizenry.

In addition, we must prepare to see fed into our economy other and newer small enterprises which shall have an equal opportunity to survive and grow to maturity and to do so, not at the expense of our established small firms and others, but because we have vision and plans which are based upon practical observation. To this end, the House Small Business Committee has performed and can continue to perform a very useful function.

In conclusion, it must not be forgotten that both President Roosevelt and Governor Dewey, in their pre-election campaign remarks, spoke emphatically of the need for protecting small-business enterprises of all types. If there is to be full employment at fair wages in order to maintain a high standard of living, the full use of small-business facilities must be had. This will not be possible through big business alone.

In his address to the Congress January 6, 1945, on the state of the Union, the President reiterated his support of programs to aid and preserve small business in the following words:

> We Americans have always believed in freedom of opportunity, and equality of opportunity remains one of the principal objectives of our national life. * * * We are opposed to restrictions, whether by public act or private arrangement, which distort and impair commerce, transit, and trade. We have house cleaning of our own to do in this regard. * * *
>
> We must make sure that private enterprise works as it is supposed to work—on the basis of initiative and vigorous competition, without the stifling presence of monopolies and cartels.
>
> During the war we have guaranteed investment in enterprise essential to the war effort. We should also take appropriate measures in peacetime to secure opportunities for new small enterprises and for productive business expansion for which finance would otherwise be unavailable.
>
> This necessary expansion of our peacetime productive capacity will require new facilities, new plants, and new equipment.
>
> It will require large outlays of money which should be raised through normal investment channels. But while private capital should finance this expansion program, the Government should recognize its responsibility for sharing part of any special or abnormal risk of loss attached to such financing.

On December 18, 1944, the committee gave a statement to the press calling attention to the dependence of the Nation upon small businesses as well as large ones if we are to attain our objective of full employment of 60,000,000 persons after the war. At that time public statements made by both the President and Governor Dewey in this regard were quoted. A statement carried by the press at that time follows:

> WASHINGTON, D. C., December 18.—The future safety of small business may well take second place in importance to winning the war and establishing a firm peace, said Congressman WRIGHT PATMAN, of Texas, chairman of the House Small Business Committee, today.
>
> The recent election, he added, carried with it an injunction to the Seventy-ninth Congress for an all-out effort to fulfill the pledges of President Roosevelt and Governor Dewey to give aid and comfort to the free enterprise system. They committed the Democrats and Republicans, Mr. PATMAN said, to support the free enterprise system wholeheartedly. There is, therefore, no controversial issue involved if there ever had been any heretofore.
>
> Moreover, upon the continuance of small business depends largely the aims of President Roosevelt to provide the 60,000,000 jobs in the post-war period through an expansion rather than a contraction of business "if we are to avoid the collapse which took place following the period after the First World War," said the Texas Congressman, who has been a consistent advocate of the protection of all small business concerns.
>
> Chairman PATMAN called attention to the speech of President Roosevelt at Chicago on October 28, when the President said small business must be protected "from the selfish and cold-blooded monopolies and cartels."

THE PRESIDENT'S VIEWS

> Mr. PATMAN further quoted the President as saying in that speech:
>
> "I believe in free enterprise—and always have.
>
> "I believe in the profit system—and always have.
>
> "I believe that private enterprise can give full employment to our people.
>
> "And if anyone feels that my faith in our ability to provide 60,000,000 peacetime jobs is fantastic, let him remember that some people said the same thing about my demand in 1940 for 50,000 airplanes.
>
> "I believe in exceptional rewards for innovation, skill, and risk-taking by business.
>
> "This administration has been mindful from its earliest days, and will continue to be mindful, of the problems of small business as well as large.
>
> "Small business played a magnificent part in producing thousands of items needed for our armed forces. When the war broke out, it was mobilized into war production. Money was loaned to them for machinery. Over 1,000,000 prime contracts and subcontracts have been distributed among 60,000 smaller plants of the Nation.
>
> "We will make sure that small business is given every facility to buy Government-owned plants, equipment, and inventories. The special credit and capital requirements of small business will be met.
>
> "And small business will continue to be protected from selfish and cold-blooded monopolies and cartels. Beware of that profound enemy of the free-enterprise system who pays lip service to free competition, but also labels every antitrust prosecution as 'persecution.'"

GOVERNOR DEWEY STATES POSITION

> Speaking at Buffalo on November 1, Governor Dewey also spoke plainly on the subject of small business and enunciated these policies of assistance:
>
> "Proposal 1: Direct all Government policies toward the goal of full employment through full production at a high level of wages for the worker with an incentive for the businessman to succeed. Your next administra-

tion will work out the problems affecting labor, agriculture, and business in full consultation with all three and without discrimination against any class or section of our country, or any race, creed, or color.

"Proposal 2: Change and lower the income tax on business so that it can be encouraged to expand and help create the millions of jobs we need.

"Proposal 6: Survey forthwith the millions of reports required of big and little business every year by Government and immediately abolish the greater part of them. We have done this in New York and we can do it in the Nation."

"It is apparent from these quotations," said Congressman PATMAN, "that both the President and Governor Dewey are fully aware of the importance of small business in the future economic welfare of the country. It is also obvious that we cannot be a prosperous Nation without full employment. This is not possible unless all sections of the United States have industries employing workers at a wage scale that will enable them to provide the buying power to sustain this prosperity.

"I believe this view is concurred in by every member of the House Committee on Small Business and that they are in full sympathy with promoting the interests of such enterprises as the only means whereby we can accomplish the much-desired program of full employment and opportunities as laid down by the recognized leaders of both parties."

Urges Congressional Action To Streamline Veterans' Administration and Its Facilities

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. LEMKE. Mr. Speaker, I have received numerous complaints in the past from disabled veterans of World War No. 2, that their applications, while acknowledged did not receive prompt attention. In some cases there was a delay of some months. Then, I have observed other cases where some serious mistake was made somewhere. The veteran feeling he had exhausted his remedy, accepted the decision of the Veterans' Administration.

I recall when I spoke on August 13, last, at a farmers' gathering at Plymouth, Ohio, there was a disabled veteran of World War No. 2 on the platform, who was hardly able to walk, and who was at least 90-percent disabled, receiving his disability in an airplane crash, and he stated that before the G. I. bill was passed the Government paid him $10 a month for his disability, and that after the G. I. bill passed he received an increase of 15 percent, or $11.50 a month. Of course, he and his parents were rather bitter over the situation. I was sure that there had been some mistake made, and I suggested to this veteran that he take the matter up further with the Veterans' Administration.

I, therefore, am glad to include in my remarks an article by Joseph Leib, vice commander, Costello Post, American Legion, Washington, D. C., including the resolution passed by that post:

URGES CONGRESSIONAL ACTION TO STREAMLINE VETERANS' ADMINISTRATION AND ITS FACILITIES

(By Joseph Leib, vice commander, Costello Post, American Legion, Washington, D. C.)

The Veterans' Administration must be modernized in order to efficiently care for the servicemen of both World Wars. This Department has limped along for some 24 years under the handicaps of a model-T machinery. It is woefully in need of repair and streamlining.

Obnoxious red tape, pettifogging, and bewilderingly long delays are rampant throughout its conflicting bureaus and subdivisions. It has become one of the major monstrosities of bureaucratic fumbling in the whole Federal Government. At present, due to the "G. I. bill of rights" legislation, it has gleefully been engaged in pyramiding additional bureaus, causing interdepartmental jealousies and petty conflicts. Yet it steadfastly refuses to initiate a comprehensive study directed to reform its antiquated, topheavy, and cumbersome bureaucratic machinery that is costing the taxpayers untold sums in money. Unless immediate action is taken it will slumber into a greater colossus of impotence than we now find it.

The welfare of approximately 12,000,000 new service cases will soon be added to the already overburdening functions and responsibilities of the now existing Veterans' Administration.

In line with these considerations I respectfully urge the introduction of legislation calling for congressional study and revamping of our sadly neglected Veterans' Administration.

The Costello Post recently adopted the following resolution, which is self-explanatory and worthy of serious study:

"Whereas members of this post have reported that the Veterans' Administration facility on Wisconsin Avenue, known as Mount Alto Hospital, Washington, D. C., is not able to provide care to which veterans in this vicinity are by law entitled; that the institution is understaffed and overcrowded; that veterans in need of hospital care cannot obtain such care; that the present buildings, besides being inadequate for the needs of this vicinity, are badly in need of repair; that the hospital has a general gloomy and 'poorhouse' atmosphere not conducive to high morale or rapid recovery of patients; and

"Whereas Mt. Alto Hospital is the diagnostic center for the Veterans' Administration and therefore not strictly speaking a hospital for the care of veterans in this vicinity; and

"Whereas we feel that it is a cardinal duty of the American Legion to see to it that adequate and competent hospital care under pleasant and comfortable conditions is made available to veterans in need of such care as provided by law: Therefore be it

"Resolved by the Vincent B. Costello Post, No. 15, the American Legion, Department of the District of Columbia in regular meeting assembled this 2d day of January, 1945, That the executive committee of the department be urged to order a comprehensive survey to determine (a) the requirements of veterans in this vicinity for hospital care, including clinic facilities, (b) the extent to which and the manner in which such requirements are being met by existing Veterans' Administration facilities, and (c) what additional facilities or corrective measures are necessary to assure adequate care for all veterans; that a committee be appointed by the department commander to make this survey and that the committee be instructed to present its report to the department executive committee at the earliest practicable date, but in no case later than 1 month prior to the 1945 department convention.

"Unanimously adopted, January 2, 1945.

"THOMAS A. COSTELLO, *Commander.*

"DAVID E. MILLER, *Adjutant.*"

The F. B. I.—One of the Greatest Organizations in the World Today—Thanks to J. Edgar Hoover and His Splendid Organization

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. MORRISON. Mr. Speaker, the amazing capture of the two German spies—William Curtis Colepaugh, 26, and Erich Gimpel, 35—who were well schooled and taught the art and cunning of sabotage and spying at the special German SS School at The Hague, Netherlands, recently in New York City, who had previously landed in Maine, is another remarkable feat accomplished by the F. B. I.

J. Edgar Hoover again demonstrated that his F. B. I. is the finest and best organization of its kind in the world. There were many regretable and costly acts of sabotage in the last World War and there probably would have been even more in this war without Hoover's great F. B. I. The comparatively few minor acts of sabotage in World War No. 2 is little short of a miracle and can be safely attributable solely to the uncanny and remarkable work of the F. B. I.

F. B. I. ALWAYS ON THE JOB

When the German spies, several months ago, landed on a coast in Florida and again on the Atlantic coast, the amazing agents of Hoover's organization lost no time in grabbing them. When one thinks how much damage they could have done in even a few months, our people cannot help but shudder at the consequences, and thereby be exceedingly thankful that our great Nation has such an efficient, able, and scientific organization.

HOOVER LEAVES NOTHING UNDONE

J. Edgar Hoover, who has devoted all of his talents and energies for the past 20 years as head of the F. B. I., is not only America's No. 1 gang buster in the minds of American youth, but he is America's No. 1 protector in the minds of all Americans. And remember that German spies in this war have been schooled to a far greater degree and know a great deal more about the cunning operations of spy work than in the last war. That is why J. Edgar Hoover and the F. B. I. deserve our best appreciation and congratulations for a great and difficult job well done.

HOOVER LOOKS AHEAD

Not content with wiping out major criminals, dangerous spies, saboteurs,

and the like, Mr. Hoover has done another great job. His program of handling juvenile delinquency and his program to wipe that out in America will bring tremendous dividends to this Nation in the prevention of future crimes.

Thanks again to J. Edgar Hoover and his great organization for a job well done. All America is justly proud of you.

Punishment of War Criminals

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT ON PUNISHMENT OF WAR CRIMINALS

FOREWORD

This statement on the punishment of war criminals was submitted by the American Jewish Conference on August 25, 1944, to Secretary of State Cordell Hull.

Among its recommendations, the American Jewish Conference urges that "In all trials of those guilty of crimes against civilian populations, criminal acts performed against the Jewish people shall be duly specified as part of the indictment." This demand is prompted not by a desire for vengeance but by the moral and practical implications of just punishment. The Jewish people have been singled out by the Nazis for total annihilation. Those who sought this annihilation may try to continue, even after the war, their anti-Jewish agitation and terror, extending their activities to countries beyond their present reach. They must be made to realize the consequences they will have to bear.

It is therefore the moral obligation of the United Nations, who are fighting to establish a world of freedom and security, to bring to justice the perpetrators of crimes against the Jews of Europe. Such punishment should serve as a warning against future attempts to instigate or commit similar crimes.

This statement on punishment of war criminals is one of a series on the rehabilitation and reconstruction of Jewish life in the post-war period.

Since their rise to power, the leaders of the Nazi regime in Germany have repeatedly and consistently proclaimed the extermination of the Jewish people as a major aim. Both before and since the beginning of the war, they have pursued this aim with unrelenting vigor and brutality, utilizing every measure of degradation and despoliation, including forced labor, starvation, deportation, and mass murder. This campaign of terror and annihilation has been carried out with unexampled bestiality in consort with Axis allies and associates, and with the connivance of Nazi followers and subordinates in their home countries and their collaborators in occupied territories. These crimes cannot go unpunished without destroying the legal and moral foundations upon which our civilization rests

The United Nations, being aware of the manifold crimes committed by the Axis Powers against the Jewish people, have solemnly and officially affirmed as their policy toward all those guilty of these crimes the exaction of full and just retribution.

Thus, the Inter-Allied Declaration signed at St. James' Palace on January 13, 1942, though not making express reference to the Jews, proclaimed that the signatory powers "place among their principal war aims the punishment, through the channel of organized justice, of those guilty and responsible for these crimes (against civilians), whether they have ordered them, perpetrated them, or in any way participated in them."

Subsequently, in a joint declaration issued simultaneously at London and Washington on December 17, 1942, the United Nations took formal cognizance of the fact that "the German authorities * * * are now carrying into effect Hitler's oft-repeated intention to exterminate the Jewish people in Europe," and thereafter "reaffirm their solemn resolution to insure that those responsible for these crimes shall not escape retribution, and to press on with the necessary practical measures to this end."

In conjunction with the historic Moscow Conference, the heads of the Governments of the United States, the U. S. S. R., and Great Britain, "speaking in the interests of 32 United Nations," issued on November 1, 1943, "a solemn public declaration." As Secretary of State Cordell Hull stated on November 18, 1943, before a joint meeting of the Senate and the House of Representatives, the declaration promised that "due punishment will be administered * * * to the perpetrators of the bestial and abominable crimes committed by the Nazi leaders against the harassed and persecuted inhabitants of occupied territories—against people of all races and religions, among whom Hitler has reserved for the Jews his most brutal wrath."

On March 24, 1944, this policy was clearly and emphatically reiterated when President Roosevelt, with the approval of Prime Minister Churchill and Premier Stalin, made a public pronouncement calling attention to the fact that the extermination of the Jewish people was "begun by the Nazis in the day of peace and multiplied by them a hundred times in time of war," and stating in part: "we again proclaim our determination that none who participate in these acts of savagery (against Jews and other civilians) shall go unpunished. The United Nations have made it clear that they will pursue the guilty and deliver them up in order that justice be done. That warning applies not only to the leaders but also to their functionaries and subordinates in Germany and in the satellite countries. All who share the guilt will share the punishment."

In view of the solemn and unequivocal declaration of policy embodied in these and similar official statements, which leave no doubt as to the intention of the United Nations to visit just punishment upon those guilty of crimes against civilian populations, and notably against the Jewish people, the American Jewish Conference, representing the Jewish community of the United States of America, urges that in carrying out this policy the United Nations take cognizance of and proper action upon the following considerations:

1. Among the crimes to be made punishable under this policy, there be expressly included the publicly announced intent of the Axis nations and their allies and associates to annihilate the Jewish people, and all acts whereby they sought to accomplish this aim, before and during the war, within their own and occupied territories.

2. In all trials of those guilty of crimes against civilian populations, criminal acts performed against the Jewish people shall be duly specified as part of the indictment.

3. Those charged with specific crimes against individual Jews, or with acts designed to bring about the ultimate annihilation of Jewish communities, such as deprivation, starvation, deportation, unendurable forced labor, and mass murder by whatever means, in territories occupied by the enemy, shall be prosecuted with the utmost energy and vigor in the national courts of the States where such crimes were committed, irrespective of the nationality of the accused or of the victims.

4. The prosecution of those guilty of these acts against the Jews in Germany and in the territories of her allies and associates, as well as of crimes not confined to single territories, shall be within the jurisdiction of the contemplated international court for the trial of war criminals.

5. The United Nations shall agree among themselves to declare as common criminals, and shall so desire, all those guilty of these acts against the Jews, and shall require the Axis Nations, their allies and associates, the neutral nations, and any other country where the criminals may seek asylum, to surrender or extradite all persons thus designated. Provision for the surrender of these criminals by the Axis Powers, their allies and associates, shall be included in the terms of the armistice.

6. Representatives of the respective Jewish communities shall be consulted in the preparation of evidence against these criminals, and shall be recognized in the national courts as amici curiae, and provision shall be made to this effect.

7. Representatives of the Jewish people shall be officially admitted as amici curiae before the contemplated international prosecuting body and the international court for the trial of war criminals. The constituting acts of those bodies shall contain the necessary provisions to this effect.

8. The Commission for the Investigation of War Crimes, or such other body as may be constituted for this purpose by the United Nations, shall receive and give due consideration to all suggestions which may be submitted to it by a representation of the Jewish people, and it shall grant such a representation a locus standi.

AUGUST 28, 1944.

E Pluribus Unum

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. HOBBS. Mr. Speaker, Hon. Robert J. Goode, executive vice president of the Motor Vehicle Association of Alabama, has recently given us all something to think about by writing an article which he calls E Pluribus Unum—A Trade Barrier Discussion.

Alabama born and bred, graduate of the University of Pennsylvania, and former commissioner of agriculture and industries of Alabama, Mr. Goode is a gentleman whose character, ability, and studious attainments make anything he has to say worthy of consideration.

The article follows:

Just before the present World War, a party of foreign newspaper correspondents paid a visit to our so-called United States. They planned to make a sight-seeing trip from New York to San Francisco and back by bus. A company with whom they discussed chartering a bus tentatively agreed on a price of 25 cents a mile pending a check of the laws and regulations of the States through which they would travel.

Here is what was found.

California would charge $231 for operating in the State—$140 in taxes and $91 license fees. New Mexico would charge $25 for passing through its borders. Arizona would re-

quire $6.30 plus an undetermined gross weight charge. Oregon had to get $2.50 for registration plus 6 percent of gross revenues. Montana called for $15 filing fee, $2 insurance, and one-half of 1 percent of gross revenues. Wyoming $5 and one-half mill per passenger-mile. Missouri $5 plus $3 per day vehicle tax. Kansas 2 cents per mile. After checking that far it was decided that the services of several lawyers, expert auditors, and accountants, together with a battery of adding machines and comptometers would be required, so the trip was called off. This sounds unbelievable, but the figures given were actually correct and were not as bad as could have been found on some other routes.

As we all remember, the Thirteen Original Colonies declared their independence of Great Britain in a document adopted by the Second Continental Congress on July 4, 1776. In it, the new Nation was called the "United States of America." In fact, however, the American States were in no sense actually united. Their only bond at that time was their mutual desire to free themselves from Great Britain.

The more foresighted, however, realized that the Colonies must be united in fact, and 8 days after the Declaration of Independence was signed a committee started to draft the Articles of Confederation. Under these loose articles, the American Revolution was successfully fought. Under them, the last red coat was unfrocked and a treaty of peace was signed with Great Britain.

The peace treaty with Great Britain had provided that each of the Thirteen Colonies should be "a free, sovereign, and independent State." This was the purpose of the war. Each State was saturated with the ideal of independence. Each State fought to preserve its own independence. Each State had, and used, its sovereign right to tax the goods imported into it, not only from foreign countries but from neighboring States as well. The result was not a "United States of America" at all. It was a group of loosely tied, independent nations, each one of which was waging a bitter economic war with the other twelve. It is all too plain to us now that this internal strife nearly cost the life of the new-born nation.

New York imposed tariffs on New Jersey vegetables, chickens, and eggs. In retaliation, New Jersey taxed New York $1,800 a year for the privilege of maintaining a lighthouse on Sandy Hook. Wood cutters, who turned the apparently inexhaustible forests of Manhattan Island into firewood, found their business jeopardized by shrewd Connecticut Yankees who brought firewood to Manhattan and undersold them. But that was easily fixed. New York merely imposed a heavy duty on Connecticut firewood. Enraged New London businessmen staged a mass meeting and unanimously resolved to discontinue any and all business with New York.

And so it went.

During 4 long years the discord mounted. During this trying period there were many who confidently predicted that the struggling infant would never survive these growing pains. It was perfectly obvious that if the Nation was to survive something had to be done to end this internal warfare that had, in some incidents, actually resulted in bloodshed. It was imperative that the United States become united in practice as well as in name.

In 1787 the Congress of the Confederation issued a call for a Convention to meet at Philadelphia for the purpose of revising the Articles of Confederation. With the exception of Rhode Island, all the Original Thirteen States sent delegates. George Washington presided at the Convention. Benjamin Franklin was one of its leaders. And the voices of Alexander Hamilton and James Monroe were frequently heard in the convention hall.

After sitting for 5 months, the framers of the Constitution decided that their work was finished, and the new Constitution was submitted to the various Sates for ratification. By July 1788, 11 States had ratified it, and that short, simple document thereupon became the lifeblood of our Nation. The Constitution is as cherished by Americans as the Declaration of Independence, but for a different reason. The Declaration of Independence established the freedom of America. The Constitution gave us the only means of implementing our unity and strength in maintaining this freedom.

It was fully realized by the founding fathers that if the general welfare was to be safeguarded, there must be a power which exceeded that of the several States. Each State, therefore, was given jurisdiction over its own territory. But the power to regulate interstate commerce was placed squarely in the hands of the Federal Government. The very first article of the Constitution, the tenth section, states, "No State shall, without the consent of Congress, lay any imposts or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws." In their wisdom, the writers of our Constitution knew that only by the establishment of free trade between each of the States could this country expand and prosper.

During the first century of our country's history this free trade area was preserved intact. Then—slowly and insidiously—States began taxing imports in an effort to protect their own businessmen. But these were more or less isolated instances and at the time they gave no warning of what was to follow. And, finally, there arrived a rainy Friday in late October of 1929, a day which altered the course of American history in many ways.

Prices on the New York Exchange collapsed and they continued to stumble and fall for nearly 3 years, as the United States was held firmly in the grip of the worst business depression in the country's history. Squeezed in the vise of depression, State politicians increasingly lost sight of the first principles. In their eagerness to balance budgets they forgot the general welfare. They forgot the chaos which resulted from the imposition of state trade barriers in the 1780's. Desparately in need of additional revenue with which to meet new demands for relief and other public expenditures at a time when normal revenues had shrunk, they chose what seemed like an easy way out. They decided to increase State wealth at the expense of their neighbors. Simultaneously, in State capitols throughout the land, politicians began taxing the goods and products of other States.

Money-tight, local businessmen urged them on. Grasping at straws, these businessmen, applying the old national tariff argument for "protection"—cried out for State protection—from real or supposed competitors in neighboring States. Railroads howled a bit louder than the rest. Beginning with the depression years, railroads began losing an ever-increasing amount of traffic to motor vehicles. Believing that their problems would be at least partially solved by the imposition of taxes and license fees on trucks and busses, railroads eagerly called out for such impositions. And, inevitably, States whose goods were taxed answered in kind. An eye for an eye and a tooth for a tooth, you have taxed my goods and now I am going to tax yours.

In the early depression years these barriers to interstate trade, taken individually, seemed relatively harmless. There was so much else to think about that no one gave them much consideration. But after a few years of steady building it was suddenly realized that these walls between States had reached such a height that they could no longer be scaled. These dwarfs had banded together and collectively they had the strength to constrict the trade of an entire nation. The cost ran into billions of dollars.

Thus, except for isolated instances, the policy of unity enunciated in the Constitution was maintained throughout the years until the dark days of the great depression following 1929. Then here, there, and yonder, with increasing tempo, the States began to fortify their borders against their neighbors.

Picking a few examples at random, North Carolina refused to permit Louisiana strawberries to enter the State. Maine charged its brewers and distillers who used Maine products a license of $100 but charged those that used the products of any other State a license fee of $3,000. Out in Idaho all persons employed on public construction, repair, and maintenance work had to be bona fide residents of the State, and all contractors in order to work in the State, had to be local taxpayers. Connecticut, forgetting all about the firewood incident that had occurred 150 years before, required that all milk products used in frozen desserts had to be pasteurized within the State.

Cities and towns took up the hue and cry. In a small village in Wyoming a retailer one day became aware that he was losing business to itinerant peddlers, so he went to the local chamber of commerce, which, in turn, was instrumental in having passed an ordinance forbidding house-to-house canvassing except by the invitation of the occupants. This ordinance became a test case in the courts and it was upheld. As a result, hundreds of other cities and towns followed suit in one way or another.

One night a few years ago a municipal power plant in the town of Old Hickory, Tenn., was struck by a bolt of lightning which left the 9,000 inhabitants without lights, water, or fire protection. A rush order for a length of copper cable was sent to Chicago. To insure prompt delivery, a motor carrier was quickly dispatched. Suspecting that the truck driver might run into red tape, the shipper gave him a letter asking that, even though the truck might not fully conform to State regulations, it be allowed to pass in view of the emergency. Kentucky inspectors found the truck just 12 inches longer than the law allowed and refused to let it pass. Not until the money was telegraphed to pay the fine did the truck get through, and then only after a delay of 60 hours.

Another example: A Nebraska nurseryman located 20 miles from the Kansas line got an order to deliver some rose bushes to a Kansas customer. He started out with the bushes in his truck and was stopped at a port of entry on the Kansas State line. There he had to buy a Kansas commercial license for his truck, show insurance papers covering it, submit to an inspection of all his equipment, have his truck weighed, buy a Kansas permit to haul a commercial load on the State highway, report his destination and the highways over which he would travel, and deposit $50 to guarantee payment of a one-half mill tax per ton per mile for use of the roads when he should leave the State. He then had to buy a permit to sell nursery stock in Kansas, had to prove that his stock was free of pests and disease, and had to show that his rose bushes were labeled as to color and variety. One such experience was enough for him. It was his first and last attempt to do an interstate business in the State of Kansas.

Thus, did the cancerous growth of trade barriers gain strength and momentum. Thus it was that there grew up in the decade from 1930 to 1940 a situation which is threatening the Union exactly as it was threatened in the period immediately following the American Revolution. Just as something had to be done then, so must something be done now.

Today, in the distressing light of world conditions, it is more important than at any time in the country's history that we be united.

Today, virtually every State in the Union has imposed some form of trade barrier. There are well over a thousand of these restrictive measures on the statute books of our States. The result is bitterness, retaliation, boycotts, and border wars. At a time when, as a Nation, we are engaged in a war for the very preservation of life and liberty, there are guards on the borders of several of our States ready to enforce with guns these internal barriers to trade between each other.

Thus are we killing the goose that laid the golden egg. Thus are we destroying the very thing which made the United States the most prosperous country on the face of the earth, a free market in America for American goods and services. It is of the utmost importance to America today that we get back to the original premise under which the Nation was established—"United we stand; divided we fall."

Among trade barriers, nothing has been a more serious obstruction than the multifarious highway trade barriers which have been imposed by every State and many municipalities.

The web of numerous and conflicting State laws and regulations which today hold motor carriers helplessly enmeshed is such a burden on the public that it is, inescapably, a public problem. In a single year over 10,000 bills affecting transportation by trucks were before the legislatures of our States. Over 1,200 were enacted into laws.

That the railroads were the godfather of many of these laws, which are today keeping trucks off the highways, is attested by the very laws themselves. Texas, to cite only one of many possible examples, passed a law permitting only 7,000 pounds weight, unless the truck were taking its load to a railroad station, in which event, 14,000 pounds was permitted. You may guess just once who had that law passed.

"Consider a picture of barricaded roads and highways guarded by men in uniform," says a recent bulletin of the National Highway Users Conference. "Envision long lines of travelers awaiting their turn to pass through the required formalities of proving their fitness to enter the country. Observe the arbitrary levying of imposts, the delay, expense, and inconveniences—and, finally—the issuance of the precious clearance certificate.

"Such is the picture of a frontier—not a frontier of Manchukuo, Soviet Russia, or a Balkan State—but a picture that is being witnessed along the invisible boundary lines between our States * * * right here in the United States."

Not only are these laws myriad in number, but many of them are in direct conflict with each other. "An Iowa farmer," says a bulletin of the National Highway Users Conference, "recently started for St. Louis, Mo., with a load of cantaloups. He was stopped by the Iowa highway patrol at Mount Pleasant, where he was forced to install three green clearance lights. Shortly after dark, he parked in a Missouri town. Emerging from a restaurant after a hasty supper, he found his newly acquired green lights being torn from his truck by an irate policeman, who soundly berated him for violating the Missouri law.

Restrictions governing the width, length, weight, and equipment for single-unit trucks, tractor semitrailers, and other combinations vary for almost every State. Not only must truckmen conform to these multiple restrictions but they must first find out what they are, which is a most difficult task because of their complexity and because they are subject to such frequent changes.

On top of all that most States have some kind of license requirement and tax which must be met by out-of-State vehicles. Trucks entering most States are required to do one or more of the following: Register, deposit a cash bond, obtain a license or permit, pay ton-mile taxes, gross-receipt or personal-property taxes. It is self-evident that in some parts of the country these restrictions make a haul through several States utterly impossible.

Innumerable instances of the burden on traffic could be given, but a record kept by one company of costs during 1 year for fines and penalties amounting to $14,651.13, with an additional $3,000 to $5,000 for preventing arrests—pay-offs—is a good enough example.

Not only does the operator have these kinds of obstacles imposed by the States but there is an increasing tendency for municipalities to add to it by the imposition of various municipal licenses and taxes.

The problem of interstate trade barriers is by no means local in its scope and effect, but is national. Every trade barrier, however small the area of its immediate application, has the effect of increasing costs and restricting trade and commerce to all the people of the Nation.

Our system of mass production requires the free and unimpeded flow of commerce—physical goods—between the States. It becomes each year an increasinbly large part of all business. In the time when each community produced only a sufficient supply of processed goods or commodities for its own use there was very little interstate traffic in such goods. But with the development of mass production by which the cost of production was decreased sufficiently to overbalance the cost of long-distance transportation, interstate trade was greatly increased.

To provide full employment to our returning soldiers and workers now engaged in war production, it is esesntial that all obstacles to the free flow of goods—from any manufacturer anywhere in the United States to any consumer anywhere in the United States—be removed. It is only in this way that continuing production, employment, and purchasing power may be stimulated.

Interstate trade barriers deny to the American public the full benefits of mass production. They always raise prices, and, therefore, curtail production, thus actually reducing rather than increasing employment. Mobility of material is as essential to our peacetime economy as to the efficient operation of an army.

While it is true that the people of a State which has erected trade barriers around it do not pay more for many standard products and articles than anyone else, the increased cost of transportation and other restrictions is reflected in the price to all consumers.

Thus, by setting up trade barriers, a State works against the interests of all others of the 47 States, not just the ones immediately surrounding it. Trade barriers erected by Alabama raise prices in California, and trade barriers in Ohio raise prices in Alabama.

For these reasons, all our people should be acquainted with the ill effects of trade barriers on them. All manufacturers, retailers, taxpayers, and consumer groups should see to it that barriers lifted during the war shall not be replaced and that current barriers be removed.

Because of their effect on everyone and because it is believed that the public should be advised of the multiplicity of harmful barriers which effect them, a few of such interstate trade barriers will be briefly mentioned.

In the field of dairy products, essential to the health of all, there has been a great mass of legislation, presumably for the purpose of protecting the health of the consuming public and stabilizing the purchasing power of dairy farmers; but which, in fact, has been used to restrict the market area of the products and uniformly added to their cost to the consumer.

All States and most cities have enacted laws and regulations governing the sale and distribution of milk. It is entirely right that the health of the consumer be protected from diseases and epidemics which may be spread from diseased herds or by milk produced under unsanitary conditions. However, it is entirely wrong when these health provisions are used to interrupt the flow of interstate and intercity business.

Numerous States and cities will not permit the sale of milk, cream, or butter in the areas over which they have jurisdiction unless they, personally, have inspected the farms on which the products were produced. Local dairymen were protected by the simple expedient of refusing to inspect other than local farms.

For example, during the recent depression, when prices had dropped to extremely low levels, the State of Connecticut refused to register out-of-State dairies and may still refuse registration to farms beyond the State's natural milkshed. This natural milkshed is, of course, closely confined to Connecticut's boundary lines.

Because of great technical improvements in refrigeration in recent years, it is now possible to safely deliver milk from midwestern farms in eastern cities. But, by bigoted sectionalism, this scientific progress is thwarted and our national market of 3,000,000 square miles is broken up into a thousand or more tightly closed trade areas.

Rhode Island has an extremely arbitrary law requiring that all milk shipped into the State must go direct from the farmer to Rhode Island dealers or consumers. To enforce this law, the Rhode Island dairy commissioner is authorized to add red coloring to illegal milk. Not long since, over 5,000 gallons of perfectly good Vermont milk was colored "Rhode Island red" for a minor infraction of the law. Naturally the Green Mountain boys rose up in righteous wrath. Sad to relate, however, Vermont's own record was none too clean. Back a few years ago, Vermont, in an effort to protect its own dairymen, decreed that all margarine must be dyed an unattractive shade of pink.

This suggests what has been and still is one of the most unjust, unfair, and undemocratic discriminations in the entire history of internal barriers to trade—the high taxes and innmerable restictions placed upon the manufacture, distribution, and sale of margarine.

Just as railroads have been instrumental in imposing restrictive taxes and conditions on motor vehicles, so has the dairy industry been instrumental in imposing these taxes on margarine. Without cataloging the numerous taxes and restrictions, suffice it to say that the manufacture and sale of margarine is more restricted than any other product sold in America, with the possible exception of narcotics.

And what is this product which requires such strenuous regulation and restriction? Merely the scientific combination or mixture of pure vegetable or animal oils, pasteurized skimmed milk and salt, and to most of which is now added the requisite amount of vitamins. It is a healthful product equal in its nutritive value to the best butter. There is no earthly reason that it should not be sold on its own merit free of artificial restrictions, except that certain dairy interests have had sufficient political power to enact Federal and State barriers by means of which low-income consumers who cannot afford butter are denied the right to purchase margarine.

Thus, is the war between our States being fought today. Thus, have we established in our country a hundred frontiers on each side of which there is bitterness and ill will.

Thus, are we defying our Constitution, that document which has made it possible in a war-torn world to retain our status as the freest and the richest country on earth.

Anti-chain-store legislation, by placing restrictions on one of the important agencies beyond interstate commerce, has added fuel to the fire which is today consuming our nationa' unity. Since 1925 there has been active opposition to chain stores. But it was not effective until the United States Supreme Court held valid the Indiana chain-store tax. That was in May of 1931. Now 23 States and more than 50 cities are enforcing anti-chain-store license taxes.

On other frontiers similar battles are being waged between our States. Today, 28 States will buy nothing for State institutions that is not produced within the boundaries of their own particular State. Thirty States have enacted measures making it compulsory that local residents be favored in public employment. Foreign insurance companies are discriminated against taxwise by practically every State in the Union. And sad but true, the otherwise progressive State of California will not permit her students to study from any textbook that has not been printed in a California press.

Among other discriminatory trade barriers could be mentioned quarantines and inspections against both livestock and nursery products; grading, labeling, and packaging laws; State-financed advertising of farm products; State taxes on the manufacture and sale of out-of-State alcoholic beverages; prohibition of the sale of prison-made goods; municipal taxes and licenses; and others too numerous to mention.

All such barriers, regardless of their intent or the means by which it is attempted to justify them, are bad. They restrict trade and commerce; add unjustifiable costs to goods, commodities and services; and reduce the national income which is so necessary to provide the full employment we must have if we hope to enjoy post-war prosperity.

And what is being done or can be done to rectify this reprehensible situation?

There are two schools of thought as to the remedial action to be taken. First, and the most desirable one to our way of thinking, is by State action. The other, less desirable but which may be brought about by the failure of the States to act, is Federal legislation.

Already, strong and important influences are under way to correct by State action these laws and regulations which subvert and circumvent the plain intent of the Constitution. Much progress, largely sponsored by the Council of State Governments, has been made by mutual and cooperative agreements between the several States. As indicated by the name, the council is composed of official representatives of all the States. Each State should have a council of cooperation affiliated with the national organization in order that any needed reciprocal agreements might be easily arranged.

The greatest draw-back to getting the barriers removed by State action alone is that such action is slow and can be held up indefinitely by recalcitrant and selfish groups in certain States. Examples of such delays may be found in the failure of Kentucky to permanently remove its fantastically unreasonable truck weight limitation of 18,000 pounds gross weight; or, of a number of the dairy States in retaining their prohibitive tax barriers to the sale of margarine.

That the Federal Government is not unaware of the gravity of the situation and is in a mood for remedial action can probably best be exemplified by quoting from a letter recently written by President Roosevelt to Governor Cochran, of Nebraska, then chairman of the Council of State Governments, as follows:

"Interstate trade barriers have arisen in many instances from the same causes that resulted in mounting tariff walls between nations—accountable for so much of the world's unrest in recent years. The Federal Government is seeking to break down trade walls between this and other nations of the world, and to remove the hampering restrictions that have been placed upon world commerce.

"Interstate trade barriers, if allowed to develop and multiply, will, however, constitute social and economic problems even more serious than international tariffs. It is a matter which demands the immediate attention of all the people of our country, and it is my earnest hope that the several States will take effective steps toward the removal of all barriers to the free flow of trade within our Nation."

Again, at the Federal-State Conference on War Restrictions called by the President to clear away the "legal obstacles arising from a desire for regional and local advantage" so that an unimpeded all-out war effort might be prosecuted, it was clearly indicated that the States must, or the Federal Government would, remove their principal barriers to the free flow of goods, supplies, and personnel during the emergency. The Conference resulted in an admission by the States of the worst of such barriers and an agreement for their voluntary removal by the States for the duration.

There has also been a midway proposal by which the Congress would provide for the appointment of Federal-State commissions authorized to study and propose joint Federal-State action on any questions of interstate commerce. It was thought that, since the Congress, under the commerce clause of the Constitution, clearly has the power to regulate interstate trade, such a commission would provide the opportunity for each State to take the requisite action in such a way that there would be no invasion of State's rights. On the other hand for unreasonably recalcitrant States, provision could be made for relieving interstate commerce of such unreasonable restrictions.

Our feeling is that the States should take the necessary action to remove these barriers to commerce which are burdens on the public. However, there is no doubt but that the Constitution gives a clear field to Federal action in the event States fail to act. It is not unlikely that, in such cases, some such arrangement as that suggested with respect to a Federal-State commission may be the answer. Certainly, we should advise our business friends and associates of the conditions. Many of them do not know that such conditions exist, or that we all are paying for such narrow and short-sighted restriction on our commerce. Public knowledge of the conditions will influence a desirable result more quickly than anything else.

In their wisdom, the writers of our Constitution established the principle of free trade between each of the States so that the entire Nation could expand and prosper. Through the years, the original 13 States became 48. Not only geographically, but agriculturally and industrially, did this great Nation spread its wings and soar. To America came a higher standard of living than to any other nation in the world. Americans became free citizens in a vast realm, the envy of the world. Why? Largely because there existed a market of over 3,000,000 square miles—from the Atlantic to the Pacific; from Canada to Mexico—in any part of which any American could sell—unhampered—the fruits of his labor.

Only by maintaining and jealously guarding this principle of free trade among ourselves, can we continue to soar.

Overtime Pay for Government Employees?—Why They Don't Even Get Straight-Time Pay for Overtime Work

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. MORRISON. Mr. Speaker, I desire to bring to the attention of the House an analysis of the present overtime pay plan for United States Government employees and the inequities caused by that plan. At a time when the Federal Government is requiring private industry to pay its employees time and a half and more for overtime work, it is neither logical nor just for the Government to require its own employees to work extra hours at a rate of pay which is actually less than the rate paid for the regular day's work.

In addition to this, it is recognized that the cost of living has risen rather sharply, and this rise has, for the most part, been matched by increases in basic rates for employees in private industry. Government salaries have not been adjusted in more than 10 years.

The table presented herewith shows that Government employees are paid today at a lower rate than they were prior to the compulsory 48-hour week. Among all the salaried workers in the country, they alone have had their rate of pay reduced while their cost of living has been advancing, and while their neighbors who work for private employers have had adjustments in pay scales to meet advancing living costs.

The computations in the chart are based upon the following data:

Prior to the 48-hour week order, Government employees worked 39 hours each week—7 hours for 5 days and 4 hours on Saturday. There were 8 regularly recognized holidays on which they did not work. Thirty-nine times 52 minus 56 equals 1,972 hours. The base annual salary divided by 1,972 gives the hourly rate of pay for the 39-hour week.

Under the 48-hour workweek Government employees work 48 hours each week and are excused on only one holiday, Christmas Day. Forty-eight times 52 minus 8 equals 2,488 hours. Total salary paid—base plus overtime—divided by 2,488 gives the hourly rate of pay for the 48-hour week. The difference between 1,972 hours and 2,488 hours or 516 hours is the overtime worked each year.

The information shown in columns 1 to 4, inclusive, is taken from tables published by Government agencies.

The figures shown in column 5 are computed by multiplying the base rate shown in column 8 by 516, the number of hours of overtime.

The figures shown in column 6 are computed by adding column 2 and column 5. This represents the pay an employee would receive if he were paid

straight time at his pre-war basic rate for the additional hours he is required to work.

Column 7 shows the additional amounts employees would receive, at the rates shown, if they were paid for all the hours they work, at original basic rates.

In columns 8, 9, and 10 hourly rates are compared.

It will be noted that while all employees receive less than straight time for the hours worked, those employees who occupy positions compensated at more than $2,900—basic salary—are subjected to a discrimination which appears to be wholly illogical and unjustified.

Under certain conditions employees are compensated for hours worked in addition to the present standard 48-hour week. That provision is not covered here. My purpose is simply to call attention to the apparent inequity of the Government's plan for compensating its employees for the additional work required of them under the 48-hour week by existing legislation.

Government employees have to meet higher living costs; they have to pay higher taxes; they are making a creditable record in the purchase of War bonds and in contributions to the Community War Fund, the Red Cross, and all the other welfare and war fund drives.

Is it not time, Mr. Speaker, to review the Government salary tables and bring them into harmony with 1945 living conditions?

Analysis of present U. S. Government overtime pay plan

Grade	Base rate	Overtime paid	Total salary paid	Overtime earned at base rate	Total salary earned at base rate	Total earned less total paid	Hourly rate, 39-hour week	Hourly rate, 48-hour week	Hourly overtime rate
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
CAF-1	$1,320	$300.00	$1,620.00	$345.41	$1,665.41	$45.41	$0.6694	$0.6511	$0.5814

American Foreign Policy

EXTENSION OF REMARKS

OF

HON. FRANK FELLOWS

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. FELLOWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Hon. ROBERT HALE at Portland, Maine, on January 2, 1945:

Ladies and gentlemen, I make no apologies for speaking to you tonight on the topic of American foreign policy. The topic was of your selection in the first place, and even if it had not been, I think that one can no longer gainsay its importance and interest. In the 5 eventful years since Hitler invaded the unhappy Nation of Poland, the American people have had borne in upon them the fact that foreign policy shapes their lives fully as much as domestic. If we had had a sounder foreign policy from 1919 down to 1941 we should not have had to pass the Selective Service Act, the Lend-Lease Act, the War Powers Act, the Emergency Price Control Act, or any of the other far-reaching pieces of war legislation which now shape our lives from the time we get up in the morning until we go to bed at night.

Nor do I hesitate to discuss American foreign policy for lack of information as to what that policy is. I may be quite as helpful in telling you what I don't know as in telling you what I do. The American people are not nearly as well informed about their own Government policies as the British people are.

It is unnecessary to remind you that we are now at war with Germany and Japan. The common hypothesis is that we shall victoriously conclude the war in Europe before we can conclude the war in Asia. I see no present reason to reject this hypothesis and on it I shall predicate my observations tonight. Indeed, as the European situation is obviously far more critical than the Asiatic, I shall speak tonight of Europe only.

There lies at the very heart of our foreign policy the question of what we propose to do with a conquered Germany. Until we have made that decision, if indeed we ever do make it, it is impossible to say what responsibility we are going to assume in the other parts of the world. Unfortunately I do not at all clearly know what our Government intends to do with a conquered Germany. Neither does any one of you. I am not certain that Secretary Stettinius or President Roosevelt knows and I might at this time confess a fear that the President is somewhat better informed about our foreign policy than the Secretary of State himself. For often in the last few years the President has served as his own Secretary. Such are the evils of highly personalized Government under which we are now living.

It can be assumed that we do not intend to let Germany off easily and that we do intend to make a peace which, if possible, will prevent the recurrence of war in Europe. Such a peace will certainly comprehend the complete disarmament of the German people, whether anybody else disarms or not, at least some occupation of German territory, some punishment of so-called war criminals, and possibly some attempt to reeducate minds defiled and distorted by Nazi doctrine.

Other countries are clearer in their minds about what to do with Germany. They have a better defined comprehension of their own interests. Russia means to retain German prisoners to rebuild Russian cities. She means to annex eastern Poland (referring to the boundaries of Poland in 1939) and to compensate the Poles by giving them East Prussia west to the great port of Danzig with some 200 miles of frontage on the Baltic. This wipes out the old Polish Corridor, or widens it, if you prefer to express it that way. But it involves a transfer of population on a scale never before attempted so far as I know. The nearest precedent is the transfer in 1919 of the Asia Minor Greeks back to their own country. This was successfully consummated, but the number of people involved was less and the Polish and East Prussian populations are more urban in character. You can make a farmer swap farm A for farm B, but it is not so easy to take a skilled technician in one trade in Lwow and turn him into a skilled technician in a different trade in, say, Königsberg.

This Poland-East Prussia game of stagecoach has received Churchill's blessing but not Poland's nor ours. Churchill expressly says that the Polish plans do not alarm him. As to us, you will recall that Churchill said (December 15): "I find great difficulty in discussing these matters because the attitude of the United States has not been defined with the precision which the British Government have thought it wise to use. All I can say is that I have received no formal disagreement during all these long months upon the way in which the future of Poland seems to be shaping itself or is being shaped." Mr. Drew Pearson is authority for the statement that the President rejected the so-called Curzon line in the spring of 1942.

In western Germany, France means to take the land west and south of the Rhine, which includes the Rhineland, so-called, the Palatinate, the Saar Valley, in addition to her old lands of Alsace and Lorraine, which have changed hands so often.

Churchill will bless this arrangement. It is substantially what the French wanted in 1919 but were induced to give up on the assurance that their territorial integrity would be guaranteed by Great Britain and the United States. As everyone knows, we never came through on this guarantee. These partitions of Germany have been practically agreed to elsewhere. Shall we go along? I don't know. Who does? Are we going to sit on the fence while other countries decide on European boundaries and then say, "Yes, yes," or "No, no," when the blueprint of the new Europe is handed to us. And if we say "No, no," what happens then? Bear in mind that boundaries are not unimportant details of international relations. They mean the life and death of nations—no less. Yet it has been stated that we shall not discuss boundaries until after the war. This may be feasible as to some boundaries, but certainly not as to all.

Sumner Welles, in his book, The Time for Decision, published last summer, makes a forcible argument for partitioning the German Reich into three states, a Prussian state in the east (including Pomerania, Brandenburg, Mecklenburg, Silesia, and South Sax-

ony), a South German state (Bavaria, Wurtemburg, Baden, and the Rhineland); and a West German state (Hanover, Westphalia, North Saxony). Emil Ludwig, the Swiss writer, favors cutting Prussia off from the rest of Germany. Many people, on the other hand, feel that such a partition of Germany wou'd be ineffective for the prevention of war and would do more harm than good. Such, I confess, had been my own view, but the arguments of Welles and Ludwig have a good deal of persuasive force. For better or worse, I believe that some sort of partition will be carried out.

Sumner Welles points out, as have many other writers, that the belligerent tendencies of Germany have emanated from the German general staff, which has been predominantly Prussian. The theory is that if you can destroy the influence of the general staff on the German state you can destroy the belligerent propensities of Germany. No one can say that that theory is sound, but, at least, it seems as sound as any other. It does seem to me that our State Department should have long ago made up its mind what it is going to do with Germany and should have concerted an agreement with the British and Russian Governments. It is possible that such an agreement was reached at Cairo, Teheran, Moscow, or Quebec. But if such an agreement had been reached, I would have supposed it expedient to give some inkling, at least, of its terms to the Nazi government, and over its head to the people of Germany. The only intimation that we have given to the German Government is "unconditional surrender," a phrase first used by General Grant and agreed upon between Churchill and Roosevelt at Casablanca. This phrase has always seemed to me rather meaningless, as some conditions must in fact be attached to any surrender. If the Germans knew what the conditions were, it might conceivably weaken their resistance.

I am aware that the counterargument is that announcing the conditions might lead to a negotiated peace which would not be durable. I do not see why this should be so. It implies no weakness on our part to define the terms which we propose to exact. If, for example, we do not propose personally to "try" or punish any German except incumbents of certain high offices, why not say so? Then a German who knows he is not going to lose his head at our hands might be more willing to risk losing it at Hitler's or Himmler's. President Wilson's Fourteen Points in the last war are generally credited with expediting Germany's surrender. In my opinion, our difficulties after the last war were due not so much to having procured a German surrender before exterminating the German Army or marching to Berlin as to the unwisdom of some terms of the Versailles Treaty and the unwillingness to enforce it.

In any case an essential of any peace terms would seem to be to make possible some sort of an economy under which the German people can live. There will be no German economy left after the war. It would obviously be more humane to send 80,000,000 men, women, and children to the firing squad or the Vernichtungslager than to have them starve to death over the years. The suggestion of Secretary Morgenthau to destroy all German industry would have left no assurance of any economic future for Germany. The problem is to leave the Germans with an economy under which they may live but not rearm. I confess that this seems to me one of the most difficult problems any nation has ever had to work out and no sound conclusion can be reached without the assistance of economists and technicians. There must clearly be close surveillance over German industry through the next few decades, or at least until we have reason to suppose that the belligerent propensities of the German people have been curbed.

This leads to the most difficult question of all, the reeducation of the German mind. Not long ago I talked to a flyer who had been shot down over Germany and escaped with assistance from elderly residents of Germany. He told me that the Army had cautioned him above all to keep away from young people from 10 to 21, as these had the most fanatical Nazi minds. This is a testimonial to the effectiveness of German education at the hands of the Nazis in the last 11 years.

If we are really to undertake the reeducation of German youth whom can we get to do the job? On what basis are teachers to be selected? The whole history of attempts to educate a people by imposing on them foreign teachers is a history of failure. I confess that the idea of having American teachers and college professors going into German schools and universities seems little short of grotesque.

On the other hand, if Nazi theories of race and culture and the Nietzschean philosophy of military aggression for world conquest are going to be taught in Germany after the war as before, there seems little hope for the German mind. If our State Department has reached any conclusions on these difficult questions it would comfort most Americans to know it. I confess that I have never seen any solution of the German problem which satisfied me; nor have I been able to make one for myself. I am able here merely to outline the problem. But our State Department has definite responsibility for reaching this solution, and I hope we may assume that it has done a thorough and intelligent job to that end. I am glad to take this occasion to say that I have confidence in our new Secretary of State. Paying all possible respect to Secretary Hull, I am glad that, with the difficult problems which lie before the State Department, it is to be headed by a man of Mr. Stettinius' comparative youth and apparent robust vitality. But Mr. Stettinius must rely for success on the thinking that the Department has already done and the commitments, if any, already made at Teheran or elsewhere.

When Secretary Hull addressed the House of Representatives on November 18, 1943, he said: "As the provisions of the Four Nation Declaration are carried into effect, there will no longer be need for spheres of influence, for alliances, for balance of power, or any other of the special arrangements through which, in the unhappy past, the nations strove to safeguard their security or to promote their interests." I should welcome an opportunity to tell you tonight that we have progressed so far in the spirit of this Four Nation Declaration that we had outgrown or at least were outgrowing spheres of influence, plans for the balance of power and the similar special arrangements. Unfortunately the fact is precisely contrary.

The Russians in the teeth of the Atlantic Charter have announced the intention to devour Esthonia, Latvia, and Lithuania. The fate of Poland has formed the subject of countless discussions and long negotiations over the last 3 months. I was in the gallery of the House of Commons on October 29 when Mr. Churchill reported on his visit to Moscow then just concluded. He made another important speech to the House of Commons on the subject of Poland December 15. I shall not try to detail these negotiations. Suffice it to say that eastern Europe appears to be becoming a Russian sphere of influence, the Mediterranean a British sphere, and western Europe partly British, partly French. Upon all this has been imposed the Franco-Russian Treaty just negotiated by De Gaulle. De Gaulle has a clear idea of French foreign policy and is acting on it. He seems to be one of the clearest headed men in Europe.

Russian acquisition of territories to the west from Poland or the Baltic countries violates: the first paragraph of the Atlantic Charter that the signatories "seek no aggrandizement, territorial or other"; the second paragraph that they "desire to see no territorial changes that do not accord with the freely expressed wishes of the people concerned"; and the third that "they respect the rights of all people to choose the form of government under which they will live and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them."

Mr. Churchill seems to recognize the practical necessity of ignoring the charter in special cases. Mr. Roosevelt has virtualy repudiated the charter as a series of longhand notes written out by radiomen. He may not have intended—probably didn't intend—the inferences that have been drawn from his remarks but they were irresistible inferences.

It seems to me only fair to recognize that the charter is being scrapped. This has led Dr. Goebbels to say: "The whole Atlantic Charter was an arch fake. It never even existed on paper. It was just a crude confidence trick of which we were to be the victims." For once the doctor is nearer the truth than any of us likes.

My own view is that we ought at least to seek from our allies compliance with the terms of the charter. A very able newspaper writer in Washington has made to me the comment that we have the right President at the wrong time, that we lost the peace in 1919 because Wilson was an idealist and a bad politician, while we shall lose it in 1945 because Roosevelt is a smart politician and a wavering idealist.

Like all over-neat comparisons this is not exact, but there is food in it for thought. It is unfortunate that certain defects of the American mentality are now beginning to manifest themselves. Our subconscious isolationist instinct will not let us stick out our international neck. We have, too, a complacency which tells us that other nations are so inferior to us morally that everything is hopeless. Cooperation with them appears a waste of our noble effort. Thus we decline to accept leadership which we could take for the world's advantage and our own. When, having rejected the opportunity for leadership, things go wrong, we attribute the consequences to the moral depravity of all peoples but our own.

The British situation in Greece is a painful affair. Churchill justified intervention in Greece as simply the maintenance of civil order on the British line of communications to the Balkans. He denies any ulterior attempt to control the Greek Government, to dictate the country's internal affairs. I have said publicly that I think Mr. Churchill entirely honest in his statement of the British case. The fact remains that by intervening thus far ineffectively he has caused considerable bloodshed, has failed to maintain order, has exposed his government to the ugliest accusations and misgivings, and has detained in Greece troops sadly needed in Germany. The British people are no more pleased about this than ours. There is some evidence that we washed our hands of Greece in advance. However that may be, it is only too plain that Russia, France, Britain, and the United States should have a concerted diplomacy and haven't one. Their disunity is alarming and is being felt at the front. We badly need the Council of United Nations promised at Moscow.

The plight of the liberated countries is a pitiable one. Their economies are still wrecked. Even where democratic impulses survive, as in France, the mechanism for

elections have been impaired or destroyed. Voting lists have been lost. Voters have died or disappeared into German prisons, or have moved their residences. Restoration of democratic processes must be slow.

I regret to say that I have met and talked with bumptious and ignorant Americans who take the troubles of the liberated countries of Europe lightly, and say that we are suckers for trying to help their people, that no liberated nation will be grateful to us for so doing. And so on. There could be no more mistaken attitude. The purpose of a foreign policy is not to incur gratitude—at best a very fallible and fugitive emotion in either the foreign or domestic field. The purpose of any American foreign policy is to preserve our own sovereignty and independence in the most effective and cheapest way. Fighting a global war every quarter century is not a cheap or necessarily an effective way to preserve our sovereignty. It would be cheaper to build now a Europe in which the dragon's teeth will not grow. We shall not do that by intervening irresponsibly in the local affairs of occupied countries beyond the point of seeing that some government, however created, can stop shooting and maintain order. Above all, we should not make the mistake of supposing that communism can be suppressed by foreign bayonets. Kolchak, Denikin, Yudenich, Wrangel solidified the Bolshevik regime in 1919.

In a hungry and demoralized Europe, there is a fertile breeding ground for communism particularly of that comparatively mild west-European type which is little if any to the left of the New Deal and none at all to the left of Adolf Berle or Rexford Tugwell or perhaps Eleanor Roosevelt. Pay rolls, crops, transportation, food, peace will best combat this type of communism.

The people of Europe are as civilized as those of America. There is little if any evidence that man for man the people of Europe are morally inferior to the people of America. We owe the peace that we have enjoyed on our continent to constructive statesmanship and we ought to take some responsibility for a constructive statesmanship in Europe, not for the sake of helping Europe but to preserve America and keep ourselves from the menace of future wars in which neutrality is and always will be impossible.

In Washington as elsewhere, we are plagued by the people who hate and fear Russia and the even more numerous people who hate and fear Britain. I have no patience with these groups. They aid Hitler who even now needs no aiding. I shall not repeat the things they say over and over again. I should like it better if Russia were more generous to Poland and Britain were conserving bullets in Greece. If our allies seem mistaken in their policies, it is appropriate for us to tell them so through the ordinary official channels and to cooperate with them to better policies. But the cheap formulae "I always told you that Russia would commit such and such outrages," and the "British are just a dirty lot of people trying to gyp us" certainly help no one but Hitler and Von Rundstedt.

These demonstrations of our thinking and our attitudes emphasize all the more the urgent necessity of perfecting our security organization along the lines announced by Cordell Hull, heretofore pursued by our Government all too falteringly, and the necessity for formulating a more articulate and less clandestine foreign policy. Let us hope that the new year will see victory over Germany, pease in Europe, security for America and a better day dawning for the sons of men.

Christmas Night Address of Raymond Gram Swing

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. HOBBS. Mr. Speaker, ever since the first population to become numerous enough to enable its elders to indict youth without exclusive reference to their own children, quite a few members of society have seemed to make it their favorite indoor sport to talk about the degeneracy of the younger generation.

It is encouraging, therefore, to hear a voice raised now and then in praise of those so frequently condemned.

On Christmas night such a voice was heard. It was that of Raymond Gram Swing, who had just achieved the unique distinction of being for the third successive year crowned on merit as king of American radio broadcasters. It gives me pleasure to quote a part of his script:

Today has been a Christmas of separation. As a nation we have been separated from the very ones who are serving the Nation with the highest devotion. It has been separation physically; it is more, it is separation in experience. The men fighting in western Europe, in Italy, in the Philippines, the millions waiting overseas, the men on ships and at air bases, are not close to us mentally, nor are we close to them. One of the great hardships of war is the gulf between the front and life back at home. Anne O'Hare McCormick, writing in the New York Times yesterday, said: "Soldiers from the front don't talk about battle to people at the rear. They can't. An officer just returned from a short leave in the United States"—Mrs. McCormick was writing from Rome—"says he couldn't discuss at home what he saw and felt in the war theater, because it didn't seem to fit into the context of normal life. He was desperately homesick after 2 years of overseas service, but when he got home he felt restless, alien, and eager to get back. There is no getting away from the fact that millions of men in battle zones are living abnormal lives in an abnormal world that comes, in time, to seem more normal than the one they have left." There is more to it even than Mrs. McCormick points out. Living is a language which one can communicate only to those who know the language from their own lives. The men at the front have as real a life, and one even more rich with value and worth in some respects than what Mrs. McCormick calls normal life—our life back home. But they cannot translate it to us because we don't know the words. So they are silent. They can't share themselves, and so they remain apart. But what is true is that not they are apart, we are apart. I am not suggesting that we can do much to overcome our isolation from them. But we can, at least, recognize that we are finding ourselves incapable of joining them even though they are in our service. And we can think consciously and devotedly of our gratitude to them.

We Americans can have a very special gratitude for the character and quality of our young men. And in days when the preview of the future is confused and dismaying, we can have faith in the future because they are going to have to make the future, and indeed are at work making it now. I am going to quote something about these young men, what they believe and what they think, not derived from questioning them now, but from a study made of a good many of them when they graduated from high school 2 years ago. It is contained in a survey reported at the time in Fortune, and reexamined by Elmo Roper in the New York Herald Tribune. These boys were from 16 to 18. They had grown up during our depression years. At the time of their graduation, not many of them had an idea that they would be in the Army today. But they had no doubt about the war being worth fighting. "Taking everything into consideration," they were asked, "do you feel it is worth while to keep on fighting this war, or do you think it would be better to try to make peace as things stand now?" "Keep on fighting," was the answer of 91 percent. These high-school seniors were asked for their conception of what the war was being fought for. Less than 1 in 12 thought we were fighting to protect our country—this was in the June after Pearl Harbor—but having said the war should go on, nearly half of them conceived it as a war for freedom and liberty, 1 in 4 thought of it as a war for democracy and American ideals; just over 1 in 6 thought of it as a war to stop fascism and nazi-ism, and less than 1 in 10 as a war to establish peace. So 80 percent saw the war as being fought for something positive, not for something purely negative.

The boys were asked to rate the things they hold valuable in life. What would they be willing to give up first if they had to give up something? Would they give up freedom of speech, freedom of worship, the vote, the right to trial by jury, the right to change jobs if they wanted to, the right to earn more than $3,000 a year? Well, the boys rated these rights in just the reverse of that order. Sixty percent would be ready to give up the right to earn $3,000 a year, about 20 percent the right to change jobs, less than 5 percent the right to trial by jury, less than 5 percent would give up the right to vote, less than 3 percent would give up the freedom of worship, and only 1 percent the freedom of speech. There wasn't much materialism in that outlook.

These lads already had a sense of the importance of the form of government, and when asked if they agreed that human lives are too important to be sacrified for the preservation of any form of government, three out of four said, no. Nor did they face the world skeptical of the possibility of achieving real peace, or of dealing intelligently with social problems. A statement was made to them: "In spite of all our efforts for peace, nations just can't live together peacefully, so we might as well expect a war every few years." To this 67 percent said, "No" and less than 29 percent said "Yes." And to the statement: "The world is in such a muddle that no one really knows what people should do—so why try?" Ninety-three percent answered, no. As to religion, only 1 boy in 10 had not made up his mind or thought there was no God or no life after death. More than 8 in 10 believed in a God who rewards and punishes after death.

It is not a complete study of our young fighters by any means. But it is clear as to certain fundamentals. And anyone who does not feel he can trust these youngsters—yes; with the intricacies of the post-war world—has lost touch with America. For they are the best of America.

As a simple expression of the soul of a soldier of democracy, I am going to close by quoting a short poem, not by an American boy but by a British soldier, whose outlook on the fundamentals undoubtedly is quite the same. During the war in north Africa, the British Eighth Army held a poetry contest

for soldiers, and a volume of their contributions has been published, called Poems From the Desert, by the British Eighth Army.

The stanzas I am going to read were not submitted in the contest. They were found in a slit trench. The author has never been identified. These are the lines:

"Stay with me, God, the night is dark,
The night is cold: my little spark
Of courage dies. The night is long,
Be with me, God, and make me strong.

"I love a game, I love a fight,
I hate the dark, I love the light.
I love my child, I love my wife,
I am no coward. I love life.

"I'm but the son my mother bore,
A simple man, and nothing more.
But, God of strength and gentleness,
Be pleased to make me nothing less.

"Help me, O God, when death is near,
To mock the haggard face of fear,
That when I fall—if fall I must—
My soul may triumph in the dust."

Tel-Aviv

EXTENSION OF REMARKS
OF
HON. SAMUEL DICKSTEIN
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Anne O'Hare McCormick from the New York Times of January 6, 1945:

ABROAD—AMERICAN BOYS FIND TEL-AVIV LIKE A HOME TOWN

(By Anne O'Hare McCormick)

TEL-AVIV, January 5.—Forty percent of the Jewish population of Palestine lives in Tel-Aviv. One of the world's youngest cities, better planned, more modernistic than the Florida boom towns it resembles, it is suffering today from a housing shortage as acute as that of the oldest cities in ravaged Europe. This is because a large proportion of the refugees of war years have found shelter here.

These Zionists created by Hitler are easily distinguishable from Zionists by conviction. The original settlers built their dream of new Zion with such fervor into schools, boulevards, and cooperative houses that their joy and triumph pervade the town like the bright atmosphere here of these crystalline winter days.

Certainly, the first impression produced on the visitor from the sad lands on the other side of the Mediterranean is that here at last are people who want to be where they are and are following a way of life that satisfies them.

Tel-Aviv boasts that it is the first all-Jewish city in the world. It is so completely Jewish, indeed, and within its expanding limits so independent, that it does not reflect fairly the problem of Palestine as a whole. Largely self-administered and self-taxed, it does not feel, as mixed populations ordinarily do, the close pressure either of the Arab majority or the mandatory power.

Almost in spite of itself Tel-Aviv is cosmopolitan and international. In a lively little restaurant attached to the garden of the hotel, American and British officers on leave enjoy the best meals procurable this side of New York. In the evening they dance with WAC's, Red Cross or local girls, to the music of a first-class three-piece orchestra. The genius of the place is a plump, soft-voiced, warm-hearted Russian whom everybody calls "Mama Weis."

She is a personality as well as an expert restaurateur. She ran three restaurants in Berlin until 1933, when she saw the handwriting on the wall, left the Nazis to "liquidate" her establishments—which they did—and came to Tel-Aviv with £5,000 to start over again.

Mama Weis treated us to a kummel—"Palestinian and very good," she explained—and talked at length of Zionism, the world, and the future. She, as a Zionist, is thrilled by Tel-Aviv and its proofs of what urban Jews can make grow on barren ground, but as a successful businesswoman before she came to Palestine she is less lyrical than the Zionists who escaped from the dark ghettos of eastern Europe. She described herself as Russian.

The eyes of Mama Weis were not the only eyes wet with tears as a violin sang songs of old Vienna. In that room in Palestine, where the Zionist dream comes true, one felt a wave of homesickness for a lost world. Maybe only the older generation or recent immigrants are pulled by instinct and emotion to the countries they have left.

"You don't look back," they say, and it would be strange if a generation brought up here or rescued from the horror of Hitler's Europe should elect under any circumstances to return.

Certainly these half-articulate nostalgias, of a section of the old for the countries they still feel they belong to, of a section of the young for another land of promise, are elements in a situation that becomes more complex the nearer you approach it. Even in this 100-percent Jewish community it is evident at first glance the problem is not a simple antithesis between Zionist and anti-Zionist or between Arab and Jew. It has as many tentacles as an octopus, each as sore as an exposed nerve.

There is one new element, for instance, in the reaction of American soldiers to a personal view of this problem country. Palestine in general, Tel-Aviv in particular, is a leave center for thousands of officers and G. I.'s from all parts of the Middle East, Africa, and Italy. The main leave camp is within a few miles of Tel-Aviv. Boys on furlough flock to this town, where they see American movies in clean American model theaters, meet girls who speak English, and stroll on streets that look like Main Street.

In the peculiarly warm and affectionate atmosphere of a Jewish household they are entertained by scores of motherly women like Mama Weis. "Don't ask me to discuss politics," she says. "My only policy is to serve good food, good drink, and make the doughboys happy." The doughboys like it. They like Tel-Aviv. The so-called Arab world isn't their world. They feel alien and uncomfortable in its strange sights, sounds, and smells. Here they feel at home. "It sure feels good to see something like an American town," said the inevitable boy from Texas, mailing postcards in the Tel-Aviv post office this morning. "This is the best place I've seen since I waved good-bye to Old Lady Liberty."

The result of this experience is likely to make these soldiers strongly Zionist when they get home. It may be argued that these passing personal emotions are unimportant beside hard realities and irreconcilable interests interwoven in the Palestine problem. So they are, but the problem would not be nearly so hard to solve if it were not also a conflict of emotions. While feelings are violently engaged on all sides, anything that swings the balance of sentiment in the United States cannot be ignored.

The first thing one discovers here is that the attitude of America will have a powerful influence in deciding the future of Palestine and, by extension, the wish for this is the keypiece in the puzzle—the future of this restless and troubled part of the world.

Teamsters Union Asks Repeal of Wagner Act and End of National Labor Relations Board

EXTENSION OF REMARKS
OF
HON. JOHN S. GIBSON
OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. GIBSON. Mr. Speaker, under unanimous consent, I extend my remarks in the RECORD, and include therein an article appearing in the January 9, 1945, issue of the New York Times. My purpose in inserting this article in the RECORD is not to endorse the same in toto, but to bring the contents of said article to the attention of the membership of the House as information and for such study as the membership may think the contents deserve.

I do know, and I do not hesitate to say, that the leadership of the C. I. O. is exercising, and being permitted to exercise too much authority in the operation of our Government, which to me is a most dangerous condition. Anyone who has kept up with the activities of labor during the crisis that our Nation and the world has faced for the last few years, must agree that the American Federation of Labor as a whole has endeavored to cooperate with our war effort and to avoid strikes and shut-downs and to produce as rapidly as possible the much-needed war materials. It must be further recognized by those with an open mind that this cannot be said of the leadership of the C. I. O. In far too many instances they have put their greed and hunger for power over and above the preservation of human life on the battle fronts.

The article follows:

TEAMSTERS UNION ASKS REPEAL OF WAGNER ACT AND END OF N. L. R. B.

CHICAGO, January 8.—The International Teamsters Union, A. F. of L., headed by Daniel J. Tobin, today came out openly for repeal of the Wagner Labor Relations Act and abolition of the National Labor Relations Board, which the union described as a standing committee of the C. I. O.

The demand was made in an article in the union's magazine, the International Teamster, for January, just passed, written by Thomas Flynn, executive assistant to Tobin. Labor circles viewed the authorship of the article by Mr. Flynn as an expedient to avoid embarrassing Mr. Tobin in his relations with the White House, and to avoid prejudicing Mr. Tobin's chances for appointment as Secretary of Labor, a post that he is known to desire.

"The N. L. R. B. has been used by both employers and the C. I. O. to disorganize the teamsters union," Mr. Flynn's article said.

"Scarcely a day goes by that we do not receive an order from the Board calling for a collective bargaining election in some place we have organized.

"We used to receive such orders three or four times a month. Now we receive them every day. The Board is playing hand in glove with the C. I. O. in taking advantage of wartime conditions in an effort to take away our membership.

"The way it works is this: one of our unions petitions for a wage increase for certain of its members. The employer passes the buck the War Labor Board. The W. L. B. is snowed under with cases and cannot handle the case promptly. Knowing there will be a delay, the C. I. O. goes to work on our members, promising if they will affiliate with the C. I. O. that the C. I. O. will get the wage increases the teamsters cannot.

"After a certain amount of this agitation based on misrepresentation, the C. I. O. petitions the N. L. R. B. for an election and the N. L. R. B. breaks its neck to comply with the request of its friend, the C. I. O.

"We will not sanction any strike by our members during the crucial period of this war, no matter how great the provocation or how unjust the treatment we have received. The C. I. O. knows that and the N. L. R. B. knows that, and they both take advantage of it. The N. L. R. B. authorizes raids by the C. I. O. after the W. L. B. has failed to reach a decision in our cases and the men have become exasperated and inflamed by the C. I. O. agitators.

"CLAIMS THEY ARE PENALIZED

"Thus we are placed in an incongruous position of being penalized by two agencies of the General Government because we are keeping the wartime pledge we made to the Government. We are in a football game in which both the referee and umpire are on the opposing team and, whatever we do, we are penalized.

"We have nothing to hope for from the N. L. R. B. It is thoroughly biased and is working for the C. I. O. rather than for labor as a whole. We have tried long and patiently to get a reorganization of this Board. That appears to be impossible.

"Therefore, our only recourse appears to be to ask Congress to repeal the Wagner Act and wipe out the N. L. R. B., which has become nothing more than a standing committee of the C. I. O."

Capt. Louis H. Tankin

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Baltimore News-Post of August 15, 1944.

This article shows the true and courageous spirit of Capt. Louis H. Tankin, of the Army Medical Corps. Since this article was written, Captain Tankin has been reported missing, and only recently his family was notified that he is a prisoner of war in Germany.

I have known him practically all of his life and I believe he typifies the spirit of the real American fighting man.

The article follows:

CAPTAIN TANKIN WINS PLEA TO STAY AT FRONT

Rather than be sent from the combat zone, Capt. Louis H. Tankin, Army Medical Corps, with one of his legs banged up pretty badly in the early days of the Normandy invasion, has won his plea to remain in a hospital in France.

Decorated with the Bronze Star and Purple Heart, Captain Tankin, who is attached to an armored division, rejected hospitalization elsewhere because he wanted to recover quickly and rejoin his unit as soon as possible, it was revealed today.

MARRIED 3 YEARS

The decorated Army physician's wife, Mrs. Ruth E. Tankin, resides at 36 North Milton Avenue. They were married 3 years ago. He is a son of Dr. Harry J. Tankin, a coroner during the administration of the late Gov. Harry W. Nice.

It was a long time before his wife knew about his wounds. He had been sending cheerful letters home with no mention of them until the War Department let the cat out of the bag with the customary official family notification in such cases.

"BANGED UP BADLY"

Then he wrote home:

"I've been banged up pretty badly. Don't worry. I'll be O. K."

His last letter read, in part:

"I'm now trying to walk without aid of crutches and hope to get back on duty soon."

Captain Tankin first saw action at Casablanca. He was there almost a year. While there, he treated a French nobleman who presented a jewel-studded sword, an heirloom and prize possession, to him, in appreciation of his service.

Captain Tankin was an intern at Sinai Hospital when he entered the service. He received his degree of bachelor of arts at Johns Hopkins and his degree of medicine at the University of Maryland.

Captain Tankin's last letter to his family said:

"Sherman was right about war, but I am anxious to remain and see it through."

Dr. Tankin has another son in the service, Pvt. Richard S. Tankin, a member of the Medical Corps, who is undergoing training at a Government hospital.

What an Officer That Leads Our Soldiers in Europe Thinks

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. WHITE. Mr. Speaker, so many patriotic citizens devoted to the principles of good government laid down in the Atlantic Charter are asking what our country is fighting for—that it is interesting and informative to have a statement of principle submitted by an American officer leading his men through the thick of the fighting in Europe, whose name, for obvious reasons, must be withheld.

This officer, prominently mentioned in recent war dispatches, is performing an extra service beyond the call of duty while bravely leading his forces in battle, by giving us an insight into old world conditions and revealing to us what a man at the battlefront thinks his report and recommendation is submitted for the consideration of my colleagues:

A SOLDIER CRUSADER SPEAKS

AUGUST 31, 1944.

We have talked about this war, its causes and aftermath, so frequently that there is probably little I can add that I have not previously said; but we have a lull in the battle to refit for another engagement, and, as I cannot talk to you, I am moved to write again of my ideas.

This has become a crusade to me. I have seen more of my men dead on the field starring with glassy eyes at the sky than I care to contemplate. Frequently I have paused to look at some youngster scarcely older than our boy and ask myself, "For what did he die, and will others like him die again in a few years for the self-same reason?"

UNITED STATES MUST ACT NOW OR LOSE THE PEACE

I wish you would try to bring the arguments I have so frequently advanced to the attention of someone who can awaken our leaders to the need for concerted action. If our Congress does not act promptly, we shall inevitably lose the peace. Perhaps I am pessimistic in this, but I have heard little to make me think otherwise. General de Gaulle will assert his efforts to safeguard the French Empire, as did Clemenceau before him, and Mr. Churchill will make certain that the British Empire not only thrives but expands upon the spoils of war, as Lloyd George did 25 years ago. The United States, divided in its efforts, will have small success in planting its ideals in the receptive minds of the common folk of Europe.

WHAT ARE WE FIGHTING FOR?

If we are fighting to reestablish the small countries of Europe on the standards which previously existed, Prince Paul to his throne, King George to his, etc., then the cemeteries along the road to Rome must house restless heads indeed. Those self-same cemeteries will be enlarged within a few years with the bodies of young Americans from the same States.

Punishment will certainly not achieve a lasting peace, nor will an international police force which would eventually fall from the weight of its cost. The present war could not have happened except that the people of Europe had many very real grievances. In one fashion or another, these actual or fancied wrongs were used by the leaders to steer the public toward war. Poverty and unhappiness are fertile ground in which it is easy to plant the seeds necessary to convince people that they must fight to improve their lot. Their leaders elected the road of force to secure their ends. Future leaders will probably try the same means, unless the present conquerors—the Allies—seize upon this opportunity to destroy the evils which are basically responsible for the tragic European conflicts.

LACK OF UNITY SPELLS WAR

In the past, France and England in particular, have thrived upon the lack of unity throughout Europe. This is the underlying reason of the unrest which has made it possible for unscrupulous leaders to gather a fanatical following intent on improving their lot. Surely now even England will be able to see the importance of taking steps to forever eradicate another such catastrophe as that which has already well-nigh destroyed Europe. A peace based upon reparations will be the foundation about which fanatics will eventually organize to right their fancied wrongs. Now is the time, if there ever was such a time, to establish peace on earth, good will to all men.

FOUNDATION FOR PEACE IN EUROPE

The secret of future peace in Europe depends upon unity. If the United Nations will insist upon a unified Europe west of Russia the collosus Mars will die for lack of encouragement while his prospective subjects labor competitively, as in the United States, to improve their lot.

There are but a few steps that must be taken to pull Europe together into a united nation. These steps are drastic but not impossible. The troubles of Europe spring from the many nationalities, each with different standards of living. These small countries must be amalgamated until individuals feel that they are citizens of Europe and not of their small countries. Only time can bring about the necessary changes, but unless a farsighted plan is established to break down the barriers between countries there can never be any permanent peace.

The victoricus Allies can require anything they wish, and if such plans were based upon farsighted ideals, suitably explained by propaganda and education, Europe could be brought under a single government within the period of two decades.

A UNITED STATES OF EUROPE

If a United States of Europe were created such as visualized by the one-time Premier of France, M. Aristide Briand, peace within Europe would be insured. Such a nation would give uniform privileges to all citizens of Europe, freedom of travel, freedom of trade, a single monetary system, a single language and government by and for the people. If the conquering Allies could block out as their goal this plan, we could really feel that the dead had not died in vain.

An entire book could be written on this matter but the broad picture is simple to understand. Only one who has traveled a great deal in Europe knows how little one country knows of another. Millions of people live and die without visiting a country so close that it would be a mere week-end picnic with the family automobile in the United States. The matter of visas between countries, the different languages and customs, different monetary systems, etc., make a formidable barrier which is seldom passed by the average individual.

AMERICA CAN SHOW THE WAY

American genius, ingenuity, and ambitions have their roots in the people of Europe. If these peoples were given a chance they would respond by improving European conditions. I have talked with hundreds of people of Turkey, Transjordan, Italy, and citizens of the world—from all ranks of life, soldiers, diplomats, and peasants, and when you mention the possibility of a state such as I suggest their eyes gleam and their voices thrill with hope.

I am sure that there are a multitude of people in our diplomatic service who have the vision and are qualified to work out the details to begin the change of government which I have outlined. I will, however, discuss briefly in the following paragraphs some of the methods which seem to me entirely feasible to secure a workable solution to this vast subject.

HOW TO SECURE A SINGLE LANGUAGE

Europeans are natural linguists. A large percentage of the people already speak two or three languages. French and English predominate among the languages of commerce. If one of these languages or if a composite Esperanto were made the language of Europe, it could be made universal within two decades. Europeans are accustomed to complying completely with government orders. If schools taught the new language and it was made as a requirement for employment in key firms, and that an increased percentage of employees be required to speak the new European tongue each year, with a view of 100 percent of all employees speaking the language at the end of 10 years, there is no question but that the language would be studied enthusiastically. If radio broadcasts and advertisements were begun at once in the new language with a definite goal that the sole language used for such purposes, throughout all Europe at the end of 5 years would be the new language, the results would startle the world. If anyone questions the feasibility of such a plan, study carefully the achievements attained in Turkey under the forceful efforts of Mustafa Kemal Pasha. Such a language would go far to remove one of the present intangible barriers.

GOVERNMENT BY THE PEOPLE

Let us assume two houses of government, the controlling house to be at the outset occupied by representatives of the victoricus allies. As years pass, representatives of various countries could be given increasing voice in this ruling house until at the end of a suitable period of transition—possibly 30 years—Europe would be solely the master of her destiny.

Simultaneously, in the lower house would be the immediate representatives of the people. Here even Germany would be represented from the beginning. People would elect their representatives on a basis of population so that their wishes, desires, and ambitions might be known to the governing house and through this body to the world. Some of these countries would, at the outset, be given no vote in the recommendations to be submitted to the governing house but, however, would have full right to present their pleas and recommendations. This house, like the governing house, would advance in authority with the years until finally each of the European states would be given equal representation and the ruling house of the government must needs have the consent of the house of representatives to create a new legislation.

Eventually the European electorate would elect a president, congress, and a house of representatives—or whatever names might be agreed upon for the governing houses.

FREEDOM OF TRAVEL AND FREEDOM OF TRADE

These are matters which can be solved with a single stroke of the pen by the conquering Allies. Revoke for all times the restrictions which require people to have permission to travel between countries or to engage in competitive trade. This would achieve the results in a peaceful way that Germany has attempted to secure by force of arms during two wars. It would attain an understanding among the peoples and a common level of living based upon the amount of energy people are willing to exert to improve their lot.

Under the present system, restrictions on visas from one country to another make it almost impossible for the ordinary individual to travel, and the required police identification at every hotel insures strict explanation of the reasons for any visits and increases the difficulties of the average citizen. Altogether, there are intangible but formidable barriers which make it impossible for the average individual to improve his lot within the present confines of Europe. A man born a peasant must die a peasant, and a son of a servant, regardless of mentality, grows to manhood serving the master his parents served before him.

Freedom of trade can be secured as automatically as freedom of travel with the removal of duties and embargoes between states. This would help materially to level the standard of living throughout all Europe, would increase competition, and give increased incentive to the inventive genius of Europeans. Duties received from imports from outside countries would be prorated systematically and sensibly among the governments of the several European states.

In conclusion, I want to reemphasize the statement that peace in Europe can only be secured by some such vigorous method as I have outlined. I have thoughtfully observed the people of Japan, China, India, Turkey, Germany, Italy, France, Belgium, England, and have talked with a multitude of their peoples, and I feel that it is cowardly for any of us not to fight unceasingly for what we know is the only solution. The armies of the Allies are equipped to a large extent by American money, and a goodly number of Americans have died or been maimed because of the injustices of various countries. It is the duty and right of our country to take the place in the world that God intended for us.

Selective Service Classification of Farm Workers

EXTENSION OF REMARKS

OF

HON. SHERMAN ADAMS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. ADAMS. Mr. Speaker, a letter from Gen. Lewis B. Hershey for the information of selective-service boards, stating the position of the President concerning those in the 18 through 25 age group, deferred under the Tydings amendment, is of great concern to New Hampshire farmers. General Hershey's letter is as follows:

Recently the Office of War Mobilization stated that the President of the United States has found that the further deferment of those now deferred in the 18 through 25 age group because of agricultural occupation is not as essential to the best interest of our war effort as for the urgent need of those same men for our Army and Navy.

The President feels that in view of the present military situation, agriculture, like all other war industries, can with few exceptions be carried on by those in the older age group.

Registrants in agriculture are classified under the Tydings amendment to the Selective Service and Training Act and the Selective Service System has been authorized to take whatever action is necessary to provide to the fullest extent permitted by the Tydings amendment for the classification and induction of the men agriculturally deferred in the age group of 18 through 25.

The effect of a literal interpretation of this letter might well be a general breaking down of agricultural production in New Hampshire. It is my understanding, however, that young men in the above age group will not be inducted unless it is clearly evident that older men or other substitute labor is unavailable to conduct any given farm enterprise, and that unless the deferment is clearly outside the conditions enumerated in the Tydings amendment.

The results of the above letter will depend upon the fair-mindedness of the local boards. Unless there continues to be a realization of the paramount importance of farm production, the Nation may well find itself in an irreparable food scarcity.

To illustrate the concern of New Hampshire people in this subject I quote a letter just received from the president of the New Hampshire Farm Bureau Federation together with a telegram which he has sent to the War Food Administration:

NEW HAMPSHIRE FARM
BUREAU FEDERATION,
Concord, N. H., January 4, 1945.

Hon. SHERMAN ADAMS,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR SHERM: Farm people in this State are very much concerned over press releases that have come from Washington with reference to the drafting of young men on farms who under a reasonable interpretation of the Tydings amendment would be continued in class II–C and would continue to make their contribution to full production. These reports from Washington seem to indicate that Selective Service, with the approval of the President and Stabilization Director James Byrnes were considering the production requirements of those occupying deferment under II–C to such an extent that it would practically eliminate the purpose for which the Tydings amendment was passed.

War Manpower Director J. Ralph Graham conferred with me on this subject recently and he is seriously concerned with the present situation and feels that if those men who are not rendering efficient service on farms were taken off, it would be impossible for New Hampshire to meet its production quota as asked by the Federal Government. Commissioner Felker feels the same way and I am sure from the reports I get that the farm labor situation is going to be more serious in 1945 than in 1944, and that if any tightening of the regulations as provided in the Tydings amendment were made, we certainly would not be able to produce what we are asked to do.

It has been suggested by some that part-time help such as war prisoners, boys and girls out of school, Jamaicans and others might take the place of these competent farm hands. The number has been reduced to such an extent that if any more are taken it will be impossible for us to do the job.

I am enclosing copy of a telegram I sent to Hon. Marvin Jones, War Food Administrator, today which states in brief our feelings in the matter. Reports from the O. P. A. office indicate that on many food products there is no surplus at the present time and as stated in my telegram to Mr. Jones if they were to take away these necessary and efficient workers on the farms, and if coupled with that we should have a poor crop this year, no one can tell what the effect would be on the winning of the war. We must all remember that there is one reason for our record production in 1943 and 1944—due to people on the farms, the entire family, men, women, and children, working overtime. Many of these people have reached the age and have so exerted themselves during the past 2 years that they are tired and worn out and less efficient than they were in 1943 and 1944.

We all want everyone to be in the place where he can render the greatest service toward winning the war, and we have lost in this State hundreds of boys off the farms who voluntarily enlisted, and in addition to that others have gone into industrial plants, and now if Selective Service takes many of those left I certainly don't know what will happen to food production the coming year and I don't want to have the boys come back home and say, "If you had only given us the food, we could have won the war much sooner."

I am also enclosing copy of an article which appeared this afternoon in the Concord Monitor, written by Mrs. Irene Shook after conferring either personally or by phone with Commissioner Felker and Mr. J. Ralph Graham, chairman of U. S. D. A. War Board, and myself, which gives a pretty clear picture of what our people are thinking—those, I mean, who are in a position to know fully about the situation.

I hope you will, as a Member of Congress, use your influence to protect the food production program as established by the Agricultural Adjustment Administration officials as being necessary to provide necessary food for the Army and civilian population.

Thanking you for giving this matter your serious consideration, I am

Very sincerely yours,
GEORGE M. PUTNAM,
President.

JANUARY 4, 1945.

Hon. MARVIN JONES,
War Food Administration,
Washington, D. C.:

Farm people and officials responsible for supplying labor for farmers in this State greatly disturbed over news stories from Washington that rules as to essential farm workers under Tydings amendment are to be so modified as to make the law ineffective. Situation this State will not permit further drafting of competent farm labor if production quota to be met. Urge you continue to oppose any action that will lessen present supply of competent farm labor or invalidate the purpose of Tydings amendment. Record production of past 2 years result of all-out effort of all people on farms and very favorable weather conditions. With competent farm-labor supply reduced and unfavorable weather conditions I hesitate predict what might be the effect on the winning of the war.

GEORGE M. PUTNAM,
President, New Hampshire
Farm Bureau Federation.

Postal Workers Lose Again

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. MADDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago American, Chicago, Ill.:

POSTAL WORKERS LOSE AGAIN

The legislative log-jam at the close of the Seventy-eighth Congress prevented action by the Senate on a measure providing pay increases for postal employees, and thus prolonged the Federal policy of injustice against these vital Government workers.

This is an unmitigated betrayal of the most grievously and inexcusably underpaid group of workers in the United States.

The thousands of postal workers who would have been the beneficiaries of this measure have not had an increase in basic pay for nearly 20 years.

They actually work overtime at a lower rate of pay than that applying to regular time.

Congress had every moral reason to pay this bill.

It had plenty of time to pass it.

The House of Representatives, in fact, did pass it in ample time.

But the Senate, to its shame, simply did not get around to it until the final hour of the closing session—and then found itself lacking a quorum.

This is a bitter experience for America's postal workers, but an all too familiar experience.

It is a particularly bitter disappointment for their families at holiday time, and the Members of Congress responsible for it are guilty of a shameful act of negligence and discrimination.

The next Congress, convening in January, should make it the first order of business to put an end to the prolonged disappointments and discouragements of the Nation's postal workers.

It is little short of a national crime that these essential, overworked, and underpaid employees of the Federal Government should continue to be victims of congressional negligence and discrimination, and the new Congress should deal with their cause according to its obvious and acknowledged merits.

R. F. C. Gives Aid to Little Business

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. PATMAN. Mr. Speaker, the Washington Sunday Star of January 5, 1945, contains a splendid article by Hon. Jesse H. Jones in his capacity as Chairman of the Reconstruction Finance Corporation. As one of the Federal agencies engaged in rendering financial assistance to small firms, R. F. C. diligence and effectiveness in aiding worthy small firms is portrayed in considerable detail by Mr. Jones in this well-documented news story.

It is indeed gratifying to me as one of the many Members who have always had the interest of these small manufacturers and distributors at heart to read this splendid account of the achievements of this fine agency. For the benefit of those who did not have occasion to read this article, I am inserting a copy of it herewith:

R. F. C. GIVES AID TO LITTLE BUSINESS—SEEKS TO REVERSE MORTALITY TREND RESULTING FROM WAR

(By Jesse H. Jones)

Little business operates on the commercial frontier of the United States.

In that field, lie the risks and adventure, but also the hopes and profits of individual initiative.

The forces arrayed against little business are not those the early settlers faced as they moved West, but they are no less real. Competition, depressions, and wars create many hurdles for little business, frequently, too many for the man or woman imbued with the laudable desire to be his or her own boss.

Because the impact of war imposes the most severe strain little business has had to face, its problems and how little business can best be encouraged and protected in our day of mass production and distribution are of great concern.

EARLY WAR MORTALITY HIGH

When the United States first entered World War No. 2 and for many months

thereafter, the mortality rate among little businesses was high. There are many failures in this category during more normal years, but, over a long period of time, new ventures have exceeded those which have found the going too rough. After we became involved in the war, this trend was reversed. The establishment of new businesses failed to equal those which closed their doors and between 1939 through 1943, the net decline in the number of business establishments—large and small—totaled $536,400, an average of more than 1,100 in each of the 48 States.

At the present time, the decline appears to have been checked and the number of little businesses in operation is remaining fairly constant. The year 1944 may even show a slight increase. We are at the point from which we must go forward if small business enterprises are to survive.

We in the Department of Commerce and the R. F. C. have not only had actual private experience in little business, but a great deal of experience in the relationship between Government and little business. The personnel of the R. F. C., including its directors and other executives, have spent their entire lives in business—small business. Executives and experts in the Department of Commerce are also experienced in small business.

NO EXACT FORMULA

We know little business, its problems and its difficulties. There is no exact formula for defining little business.

The man who operates a shoeshine stand, an independent drug store or corner grocery is certainly a little-business man, but there are little businessmen in the steel industry, in the field of automobile manufacturing, in the production of tobacco products, the operation of hotels, restaurants, radio stations, and many other lines.

Suppose we say that any business which needs financing up to $100,000 is regarded a small business and for the purpose of this discussion, that figure is probably as accurate a measure as we can arrive at.

The Reconstruction Finance Corporation has made more than 19,500 individual loans in this category, but if $100,000 strikes you as being a lot of money, the R. F. C. has made approximately 7,000 loans under $5,000, 3,400 loans between $5,000 and $10,000, and 4,500 loans between $10,000 and $25,000.

It has actually disbursed $1,008,675,948 to business institutions in the 10 years in which it has possessed the authority to make business loans. It has made more than 22,000 such loans—some in every State of the Union. The fact that we have made and offered to make business loans, both directly and in cooperation with banks, has made credit available to thousands of independent businesses on terms that they could hope to meet—and usually do meet—loans on terms that banks have heretofore, for one reason or another, been reluctant to make. This reluctance was due in some cases to banking laws or customs against longtime loans and many times because the loan did not appear to be a risk that the bank could take.

MANY SAVED FROM FAILURE

These figures and facts demonstrate that the R. F. C. has appreciated the importance of little business to our economy and has been active in making credit available for it. Our experience in making these loans has demonstrated that with proper attention, encouragement and advice, many small businesses that otherwise would have failed have survived.

R. F. C. has not competed with private lending institutions but has cooperated with them. It has made many loans that the banks did not feel justified in making and has taken participations in 5,000 loans made by banks, R. F. C.'s participation running as high as 90 percent of the loan, the bank making and servicing the loan. R. F. C.'s experience in making industrial loans has clearly shown that, had the banks been energetic enough and taken the trouble to make the loans and nurse some of them, they could all have been made. This is proven by the fact that R. F. C.'s losses on such loans have averaged less than 1 percent. This percentage of loss can be taken from a reasonable rate of interest and still leave a proper profit for the bank. After all, money lending is much like insurance. Rates can be adjusted to fit the approximate risk.

Few, if any, private institutions, which skim the cream off the loan field, have a better record and few have worked as hard as R. F. C. to make such loans. This is demonstrated by the fact that in hundreds of cases, after R. F. C. examiners and officials have reset the financial structure of some small business, local bankers have decided that the loan which they had turned down, because of the risk, was really a loan that the bank should make.

BOOM FOR SMALL PLANT

There has always been romance in American business and there has been plenty of it in the record of R. F. C. loans to business.

Consider the small machine shop in Miami with a book value of $32,280, which, before the war, made fishing tackle. Its biggest year, 1940, resulted in sales of $40,000.

With the outbreak of the war, the proprietors conceived the idea of using their equipment for the manufacture of aircraft parts.

On August 8, 1941, R. F. C. made a loan of $20,000 to provide working capital for the first contract. An additional $25,000 was authorized in November of that year and, by April of 1942, contracts which the company had obtained justified a loan of $600,000.

To date the loans which have been authorized to this little company aggregate $8,463,000 and only $568,000 is outstanding as unpaid.

Or consider, if you will, the $7,500 loan made in 1938 to a man and his wife who were in the grocery business in Washington. At the time the money was advanced their profits were not sufficient to meet the payments on their store fixtures.

Today they owe R. F. C. only a few dollars. Their life savings have been protected and they, themselves, with several helpers, have been kept at work.

Out in Spokane, Wash., a loan, amounting to only $2,800, assisted a woman in establishing a small drug store in 1939. She has been kept in business and her loan has been substantially repaid.

AID FOR TELEPHONE COMPANY

The residents of Whiteville, N. C., are dependent upon a small independent telephone company for service. The financial picture of this company in June 1938 was discouraging. R. F. C. authorized a loan of $12,500, which made possible expansion of service. The company has shown a very much improved earnings record and the loan has been almost entirely repaid.

A woman in Demopolis, Ala., needed assistance in 1939 for the installation of a cold-storage locker plant. The R. F. C. advanced her $7,000. The plant has been successfully operated and the proprietor has had no difficulty in meeting her payments.

Out in Helena, Mont., a small oil and gas company needed funds to save its business. R. F. C. made $25,000 available to it in 1943 and its business was saved.

At Newborn, Ga., a man was making wooden slat blinds in 1938 when he was faced with disaster for lack of working capital. R. F. C. made a $1,600 loan, which had not been entirely repaid when the war forced a discontinuance of the business.

The borrower did not give up. He is making his repayments from wages as a machinist in a war plant and expects to reopen his shade business after the war.

Fittstown, Okla., is supplied with electric power by a small local company.

FISH COMPANY SAVED

In December 1941 R. F. C. made a loan of $15,000 to it to pay a mortgage, install new facilities and provide working capital.

The loan put the company in good shape and enabled it to provide additional badly needed facilities. The company is succeeding.

In Nanticoke, Md., there is a small fishing company that has been in business since 1917.

It found the going rough in 1942 and obtained a $1,900 loan from the R. F. C.

It needed $275 more in May 1943 which it got.

The company has been able to stay in business, thereby providing employment and badly needed food products.

We are inclined to think of shipbuilding in terms of such companies as those operated by Henry Kaiser, Todd Shipbuilding Co., Newport News Ship, Bethlehem, Cramps, and New York Shipbuilding—all of which are tremendous operations.

But we, in the R. F. C., have knowledge of others.

Take, as an example, the small shipbuilding and repair yard in Seattle, which needed to install additional facilities to participate in the war effort.

R. F. C. in August 1941 took a 70 percent participation in a loan of $150,000 made by a local bank, the bank taking the other 30 percent and servicing the loan.

TERMS TO BANDOLEERS

This was only the beginning. Since that time, R. F. C. has cooperated with a local bank, in loans aggregating $23,564,000 and the company has assisted materially in the construction program of the Navy Department.

The present outstanding balance is only $775,000.

A small fern packing firm in Florida faced difficulties because it could no longer obtain boxes to ship its products.

It decided it could make bandoleers if it could obtain the necessary financing.

The R. F. C. provided it and a small plant employing 40 to 50 persons was kept in operation.

These few typical loans are only examples of thousands of others like them which R. F. C. has made.

The record of the past is, however, mainly useful as a signpost for the future—a future which for the present can be devoted only to an all-out war effort, but which on a day we cannot now foretell, will bring peace to the world and provide opportunities for thousands of little businesses.

With the coming of peace, there will be many opportunities in the field of small business and many men and women anxious to challenge the opportunity. A great many men now in the service will want to go back to their former jobs or businesses, but many will want to try their own wings. They have been risking their lives to preserve freedom and our way of life and may want a business of their own, however small. They must have that chance and it will be small business. Estimates made by experts in the Department of Commerce indicate that the war has created a deficiency of 270,000 small businesses in the field of retail distribution alone.

STORES SUFFERED MOST

The net change in the number of firms in retailing is particularly important since the number of businesses in retailing account for nearly half of all enterprises.

Wartime casualties particularly included grocery stores, eating and drinking places and filling stations, but many small manufacturers were put out of business in the early years of the war. Some of these were later given orders which enabled them to start up again. Relative to the total number of various types of retail stores in existence at the end of 1941, household appliance and radio stores, meat and seafood markets, automobile dealers, filling stations, and shoe stores suffered most severely. In each of these lines, there was a net decline during 1942–43 of a fourth or more of the number of stores operating at the end of 1941.

In retailing, as in all other industry groups, roughly nine-tenths of all business discontinuances occur among firms employing fewer than four workers. This proportion has remained relatively constant throughout the 4-year period, 1940–43. About nine-tenths of all new enterprises also hire less than four workers, but the proportion has tended to decline during the war years. The net decline in the number of businesses has, therefore, been greater among small (i. e. those with less than four employees) than among large firms.

There will be plenty of released veterans and discharged war workers to fill this gap and more. We must, in fact, if we are to achieve the President's goal of 60,000,000 jobs, find a place in our economy for 750,000 to 1,000,000 new small merchants.

Much emphasis in post-war discussions has been placed on our increased productive power and it is certainly the keystone of future prosperity, but if the products of our mills and factories lack free and full outlets to the consumer, we will have created a dangerous bottleneck. Little business will have to supply the channels through which goods and services move.

What can Government do, in addition to seeing that credit is available to little business to aid in this situation?

It can and should provide operating and management counsel and advice. The high-mortality rate in the field of little business over the years proves that this is true. Too many men and women attempt to set themselves up in business with no experience and scant knowledge.

Too many people, unfortunately, have believed that possession of a little capital, some energy, and a great deal of ambition provided sufficient equipment for entry into the small-business field.

GREATER AID IS URGED

They have found to their sorrow that there is more to commerce and trade, whether it be big or small, than these attributes.

Many have succeeded with no better initial equipment, but they have learned as they went along. There will, of course, always be failures.

Certainly it is the responsibility of Government to make available fundamental information which can be used by anyone who wishes to set himself up in business and thereby give him as good a chance as it is possible to do.

The Department of Commerce has, for some time, asked Congress to take a step in this direction through the expansion of its field offices—already in existence—so that there may be provided for business a service similar to that which Government has for years placed at the disposal of agriculture through county agents.

This does not mean that we think there should be a representative of the Department of Commerce in every county in the United States, but even a limited number of men—able to give sound advice and pass along to the newcomer in business the experience of thousands of others—would be of great value and avoid many needless failures.

MUCH ADVICE AVAILABLE

As an illustration of what can be done, I cite the program which is already under way through cooperation between the War Department and the Department of Commerce.

Specialists in the Department of Commerce have prepared or are preparing 17 textbooks dealing with the establishment and operation of the most populous small-business lines. They have been written in complete cooperation with industry, so that they contain not only the advice and counsel of Government experts but the practical suggestions of men who have already established themselves firmly in business.

These books deal with the establishment and operation of automobile repair shops, retail bakeries, electric appliance and radio shops, grocery stores, metal-working shops, painting and decorating businesses, real estate and insurance brokerage businesses, small sawmills, shoe-repair shops, apparel stores, beauty shops, building contracting, hardware stores, service stations, general merchandise stores, dry-cleaning establishments, laundries, and restaurants.

The War Department will only distribute these textbooks among soldiers whose desire it will be to go into business for themselves upon demobilization.

They spell out the financial and physical needs in each class of business and try to show the things that will be helpful and how to avoid the things that will spoil the chances of success.

EXPERTS ARE NEEDED

They should be generally available, and there should be on hand experts who could discuss with men and women the situations which the books set forth.

Moreover, the time will come, after a small business has been established, when the operators will need help and guidance which Government should be in a position to provide, and there will always be new developments which it is the Government's duty to pass along to its citizens.

We will need the aid of every citizen to keep our economy functioning in peace just as we have needed the cooperation of every one for war production. Banks should occupy the leading role in this field. It is their responsibility to meet the credit needs of the country, and if it takes a little extra trouble to look after a small businessman, the banker should welcome the opportunity. He should know that if he does not meet it, the Government will, and his natural field will get narrower and narrower.

The future of small business does not, however, lie entirely in the hands of those who may enter it after the war.

There are, at the present time, 2,500,000 establishments which may be classed as small business. They, for the most part, have weathered the stresses and strains of operation in wartime and their problems are concerned not so much with the present, which, because of consumer demand, is relatively bright—but with what will happen after the war.

Representatives of the Department of Commerce in the past 6 months, have met with many groups—geographically well distributed—in order to find out what was worrying these businessmen.

The distributors, mostly retailers, were primarily concerned with the sale of surpluses to speculators rather than through regular channels, with upgrading of merchandise by manufacturers, making it impossible to maintain low and medium priced goods in stock; and with post-war competition from large manufacturers with their own outlets and chain stores, which could buy up new merchandise as fast as it came on the market.

Some retailers were disturbed by growing competition from consumer cooperatives, manpower shortages, job freezing, and inequitable freight rates.

The manufacturers, almost all of whom employed 100 or less people at the time, were almost uniformly concerned over the distribution of surplus goods; their inability under present tax laws to build up a cash reserve essential for quick reconversion to civilian production; need for equitable freight rates.

TAX CHANGES VITAL

In both categories, credit needs were most frequently advanced under the discussion of taxation. The solution to the problem of post-war risk capital was uniformly taken up as a tax question, not in terms of borrowing more funds.

I do not take this cross-section of small-business opinion to mean that there will be need only for tax relief in the reconversion period, but income-tax rates, regulations, and schedules will need to be revised if the smaller units in businesses of all kinds can pay their debts from earnings over a reasonable time, and there is no other way for them to pay their debts other than from earnings.

We cannot expect business, little or big, to put risk or venture capital to work under a tax system which does not enable the investor of the money to get either a profit on his capital or the opportunity of amortizing his obligations in an orderly way.

We cannot abridge the right of honest and ambitious men to enter the business field because our financial institutions are unwilling to take a chance on the future of the United States.

As a matter of fact, there is little or no risk involved for the banker. The R. F. C. has for a good many years and is still willing to participate with banks in making industrial loans in any degree up to 90 percent. No system of guarantied loans could reasonably go any further than this and certainly any banker should be willing to take at least a 10 percent share with his Government in the advancement of his own community.

SMALL LOANS NOT HURTFUL

To put it another way, a loan application made by a fellow citizen in which a local bank is not willing to take some of the risk is either a very poor loan or a great reflection upon the fitness for his job of the banker who turns it down.

I do not believe, however, that the bankers of the United States are going to make the mistake of denying credit to reputable men and women of character in amounts appropriate to the circumstances. And as for little business and little loans, I would remind the banker that no bank ever got seriously hurt from small loans.

In many communities banks have either already established credit pools to finance small business or are in the act of doing so. Some of these pools will contain as much as $100,000,000. They should be operated on a constructive basis. The R. F. C. stands ready to participate with these pools so that there may be no lack of credit for legitimate enterprise, regardless of size, that will provide employment and opportunity.

This proposal, which we will be glad to consider in any part of the country—if the banks want R. F. C.'s cooperation—will not only provide a greater amount of available credit but will be, in effect, a participation by the R. F. C. in any loans which are made.

The banks of the country ought to go to work post-war just as every one else to assure a high level of production and employment. Too stringent policies in the operation of the credit pools will make them ineffective. Liberal policies may mean some losses, but there again, there will be profit enough in the interest rate to cover them.

Our experience has convinced us that an organization operated along constructive business lines—as the R. F. C. has been—can provide sound and helpful assistance to all business with no net loss. And no loan is too small or too large to be given serious and prompt consideration.

I repeat, and wish to emphasize, that there is profit enough from reasonable interest rates to cover any net loss on small-business loans.

Estimated number of all operating business firms (small and large) in 1939 and 1943

	1939	1943	Number	Net change, 1941–43,[1] percent decrease (increase) since 1941
All industries	3,316,700	2,861,600	−536,400	−15.8
Mining and quarrying	21,400	26,200	+3,800	+16.2
Contract construction	202,100	178,100	−85,700	−35.2
Manufacturing	214,200	228,600	+2,800	+1.2
Transportation, communication, and public utilities	207,700	188,600	−21,200	−10.1
Finance, insurance, real estate	286,400	261,200	−23,800	−8.4
Wholesale trade	144,800	114,800	−31,400	−21.5
Retail trade	1,601,400	1,330,400	−299,400	−17.9
General merchandise	26,800	24,500	−2,500	−6.8
General stores with food	37,700	29,700	−6,100	−17.0
Grocery, with or without meats	241,500	284,300	−62,500	−18.0
Meat and sea food	39,500	28,700	−10,200	−26.4
Other food stores	120,000	93,700	−20,100	−17.7
Liquor stores	15,300	13,800	−1,600	−10.4
Automobile dealers (new, used)	38,400	30,900	−10,100	−24.6
Other automotive	15,100	13,700	−3,000	−18.0
Apparel and accessories	73,000	66,700	−6,200	−8.5
Shoes	13,100	10,400	−2,800	−21.2
Home furnishings and equipment	29,500	28,100	−4,500	−13.8
Appliances and radio	15,000	10,300	−4,500	−30.4
Drugs	52,200	47,200	−4,400	−8.5
Hardware and farm implements	37,500	34,800	−3,500	−10.1
Lumber, building materials	31,300	27,200	−4,500	−15.0
Eating and drinking places	295,400	250,800	−57,000	−18.5
Filling stations	226,700	170,900	−56,700	−24.9
Other retail	182,700	155,100	−29,500	−16.0
Service industries	638,700	554,200	−89,500	−13.9
Hotels, boarding houses, etc	27,500	24,400	−4,700	−16.2
Laundries, dry cleaning, etc	86,700	92,500	−3,400	−3.5
Barber and beauty shops	203,400	183,400	−30,100	−14.1
Other personal services	93,600	73,100	−8,600	−10.5
Automobile repair	77,500	59,100	−18,500	−23.8
Amusements	44,200	38,000	−6,600	−8.5
Business services	106,400	83,400	−17,600	−17.4

[1] 1941 was the peak year for the total number of operating businesses.

Livestock Ceilings

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. MILLER of Nebraska. Mr. Speaker, under unanimous consent to extend my remarks, I insert in the Appendix of the RECORD an editorial from the Nebraska Farmer, Lincoln, Nebr. The cattle ceiling directive, when put into effect, will have a disastrous result for the feeder of livestock. The feeders filled their feed yards with the understanding that there would be no tampering with the price of cattle. This directive will cause the feeders to lose from $15 to $25 on every head they feed.

It would seem that the Government's experience with the attempt to control pork prices should have been a sufficient warning that further manipulation and directives relative to cattle raising and feeding would have a similar result.

This directive is being placed in effect to satisfy a few consumers in New York City. It will not eliminate the black market, because it would cause a further scarcity of beef. The only way to eliminate the black market is the production of more beef which the consumers want and are able to buy. The consumers want good beef, not the utility grade which now is flooding the market.

The O. P. A. and the Office of Economic Stabilization will put this order into effect against the considered judgment and advice of the producers and feeders of livestock.

LIVE-CATTLE CEILINGS

As we go to press the O. P. A. is on the verge of announcing a $17.50 rigid ceiling on live cattle over the protests of producers and feeders. This action has been threatened for some time in spite of promises made during the summer that cattle price relationships would not be disturbed, and the obligation of the O. P. A. to consult representative producer groups before making any change. The closed meetings being held with a few producers and industry men can hardly be called representative of the livestock industry nor conducive to a full public understanding of the problems involved.

The reasons given for a live ceiling are, first, to curb the black market in beef which makes it difficult for packers to obtain their slaughter needs without paying above the previously announced flexible ceiling and, secondly, the difficulty of eastern meat retailers to get enough meat to supply their trade.

Fat cattle have sold as high as $18.50 per 100 pounds in recent months, so the proposed ceiling would bring loss to many feeders who have already filled their yards at a cost which does not allow a reasonable profit with a $17.50 top. Such operators will be inclined to cut short their feeding in order to reduce the loss while others will not feed at all, thus contributing to a reduction in beef supplies which are already inadequate for the demand. The Government's experience with hog ceilings which have resulted in more curtailment in pork making than desirable should serve as warning of what to expect from beef producers.

It is doubtful if a live-cattle ceiling will control the black market in beef. The black market thrives because of a scarcity of supply and high consumer income which encourages some people to pay whatever price necessary to get the product. If feeding is reduced still more the black-market traffic will increase. The best curb for black market is more beef of the kind consumers want and are able to pay for. Right now that is not the utility grade. Furthermore, the difficulty in buying cattle under fixed live ceilings will permit practices which may often penalize the seller and cause general dissatisfaction.

The trouble arises from an impractical understanding by Government officials of the fundamentals and economics in the beef making business, from a divided and confusing authority between the O. P. A. and W. F. A., and from their failure to adopt a policy which the industry has recommended, based upon the consumers' ability to buy good meat, and adequate price margins to encourage more feeding and therefore a bigger supply of meat.

We Had To Fight This War—Better Now Than Later

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. MADDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial of H. B. Snyder, editor of the Gary Post-Tribune, Gary, Ind.:

WE HAD TO FIGHT THIS WAR—BETTER NOW THAN LATER

Because we seem to be getting away from the promises of the Atlantic Charter and the proposals of Dumbarton Oaks some of the old isolationists are rising to insist that they were right all along and that it is impossible to win security through collaboration with Russia and Great Britain.

But what do they suggest? Isn't it another try at the very isolationism which got us into this war?

"Oh," they say, "we did not get the country into this war. Roosevelt and the interventionists did that. If they hadn't started out to save Britain and had adhered to a strictly neutral policy the war would probably have been over and the United States would have had no part in it."

But what a picture that is. The war would have been over but both Britain and Russia would have been conquered and the world outside of North America would now be ruled by Germany and Japan.

That picture does not seem to bother some isolationists. They say that every country must selfishly look after its own interests and therein lies progress and peace.

They have no sense of being their brother's keeper. The practice of Christianity, they say, has no place in the affairs of nations and only brings disrepute and loss of place and possessions.

Roosevelt, it is charged, has turned the conduct of our foreign affairs over to Russia and

Britain and these countries are now parceling out Europe and the things we are supposed to be fighting for are being lost in the grab for power.

There is some truth in the charge about Russia and Britain grabbing for power, but none at all in the claim that we would have fared better had we let the Germans subjugate Britain and Russia.

Anything that can possibly come out of this war will be better than that, for the defeat of Britain and Russia would have put right up to us the job of protecting ourselves against Nazi savagery for unnumbered years.

Defeat of a Nazi world organized against us would have been impossible and yet without defeat it would have remained a constant threat to our very life. The United States, tiring of being a Nation in arms, would probably have succumbed to the ever-growing threat.

It is impossible to say, on the other hand, that we have reached the goal we set out for in this war. Somewhere our leadership failed. What we want is an international organization to keep the peace and we seem to be getting an international alliance which is not respecting the integrity of small states.

Naturally there is criticism, harsh criticism, and some of it is probably deserved. However, we must realize that we do not have a free choice of what the world after the war will be like. That world will be a result of compromise.

Russia is setting up on her western border a string of countries which will be oriented toward her rather than toward the west. If that is merely because she fears the west time may assuage that feeling.

Particularly may this happen if we can get a league of nations organized and a workable peace established so that the league may be given a chance to function.

Let us remember that the other league had a great deal of experience and therefore the new league will start with a much better understanding of the way it must go. Then, too, its greatest weakness—the absence of the United States—probably will not affect the new one.

Yes there are reasons for being dissatisfied with the way world political affairs are heading but none whatever for having got into the war. We had to fight for our lives—later if not now.

It should not be necessary to go through another period like that following the last war when we were led down a blind alley because we were too ignorant of international affairs to understand the meaning of the terrifying advance of technology. It will destroy us if we do not control it and we can control it only with an international organization.

That was true 25 years ago and it is tenfold true today with the emphasis of facts which everyone can understand.

Draft of Farm Workers

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, as one representing a thoroughly agricultural State at large, I feel it my duty to present to the Congress the farmer's side of the proposed draft of farm workers which I shall do in a detailed manner under special orders Thursday of this week. I herewith attach a telegram from Mr. Glenn Talbott, president, North Dakota Farmers' Union:

We are very much alarmed at recent reclassification and induction into military service of farm boys in 18 to 26 age group. There may be areas where surplus of farm labor still exists. However, North Dakota has long ago scraped the bottom of its agricultural manpower barrel for military service if maximum food production is vitally imperative as is indicated by food goals established for 1945 by W. F. A. and U. S. D. A.

We believe maximum output from our farms to be of equal importance in winning the war with maximum output from our mines, factories, and shipyards; particularly is this true if there are to be several more years of war.

Additionally this war is being fought to destroy the totalitarian ideology of fascism. The destruction of fascism is the major prerequisite of building for our people and the people of the world a decent peace under which the will of the people may be expressed and their needs may be served through governments and economic systems of their own choice. For these reasons the winning of the war and the peace must be an inseparable process. With few exceptions the induction of North Dakota farm boys between the ages of 18 and 26 means an inevitable reduction in our food production from the maximum which effective prosecution of this war and the establishment of a lasting peace will require.

NORTH DAKOTA FARMERS' UNION,
GLENN TALBOTT, *President.*

Letter From Melvin B. Wehler

EXTENSION OF REMARKS

OF

HON. CHESTER H. GROSS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

LITTLESTOWN, PA., *January 6, 1945.*

Hon. CHESTER H. GROSS,
House of Representatives,
Washington, D. C.

DEAR SIR: Every time I open my mouth to criticize government, I imagine I can feel the results later in the arrival of groups of auditors from Internal Revenue, Wage and Hour, Social Security, O. P. A., W. P. B., and others. It is less trouble to keep quiet, say nothing—but silence gives consent.

It burns me up to hear shouting from high places, pleading for patriotism toward the war effort, threats to draft farm boys who already are putting in 50 percent more hours without time and a half, and at the same time these high officials passively approve boondoggling in war industries actually causing slow-downs. We even seize industries to enforce these humanitarian working conditions. The elves tie down the giant with thread.

Why must we hear stories such as the following?

1. It is rumored that right here in the York Safe & Lock Works, union stewards prohibit a good worker from turning out more than just so many pieces in 8 hours, even though 100 percent more could be done. Good workers are held down to make the output of faithful dues-paying loafers look better.

2. In the shipyards, why must an oiler be required only to oil an engine 15 minutes morning and noon, and sit there for the balance of the day doing nothing? Do we have enough suckers to lay $75 on the line for a War bond to pay this oiler's wages each week for just oiling?

3. Who makes the rules at our ports where the carloaders do a certain piece of work that the stevedores cannot touch, while dozens of them stand there and look on? Later the stevedores work and the carloaders must look on. Neither can touch the other's work—war goods wait.

4. Why cannot a truck driver carry his cargo through the door into a warehouse? Another man must do this.

5. Why do a lot of merchant-marine sailors get 45 days shore leave after only about 60-day periods in transport?

6. If made work was questionable in peacetime depression, is it even tolerable in wartime?

Visible facts make the shorten-the-war speeches look like ballyhoo. Do the high politicians really want it to last a while?

Yours very truly,

MELVIN B. WEHLER.

Manpower Problem

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. H. CARL ANDERSEN. Mr. Speaker, I am submitting herewith a very timely editorial from the Renville Star Farmer, of Renville, Minn. The writer, Mr. L. F. Reid, believes that the answer to the shortage of manpower is to have the Government draft workers for essential industries.

He cautions, however, in this article, that the supply of manpower on the farms should be looked into very carefully so that food production is not retarded in any way.

The editorial is as follows:

MANPOWER PROBLEM

When it seemed imperative that the teenage boys be drafted into the armed services, there were no dilatory tactics employed, either by the administration or by Congress in passing the necessary legislation for drafting the young men.

Right now, a far more serious situation has arisen, relative to the prosecution of the war, as well as the ultimate object of fighting to a victorious finish just as quickly as possible. The boys are fighting the good fight on all fronts. They are putting in all they have, that Germany and Japan may be quickly brought to their knees. We realize that both foes are hard bitten and well grounded in the art of modern warfare. They also have slave labor to produce the necessary war materials to carry on a long war.

According to reliable reports, the Allies are short of some critical materials, due to a manpower shortage in factories turning out munitions of war. If it is true that the effort to win the wars we are engaged in as quickly as possible is being seriously hampered by a shortage of manpower, why does not the Government do the obvious, i. e., draft workers for essential industry?

There are a great many comparatively young, able bodied men in every community throughout the land capable of working long hours in manufacturing or shipbuilding plants, even though they have been deferred for one reason or other from the

armed services. Many of them are working in or conducting nonessential businesses. There is also a backlog of manpower on the farms, though that should be looked into very carefully so that food production is not retarded in any way. In this day and age of labor-saving machinery it takes a smaller amount of labor to run the average farm than was the case before the invention of the tractor, the corn husker, and other time-saving devices There are cases where there can be found an extra husky youth on a farm not essential to the efficient operation of the farm.

I believe that serious consideration should be given by Congress to the matter of drafting manpower for essential work, so that the flow of necessary munitions may not be halted and the war brought to a victorious conclusion in the shortest space of time possible. Every hour the fighting is allowed to drag on for any reason at all, means the killing of many young men.

If this method outlined for filling the ranks of labor in war industry were followed there would naturally come up the question as to what the unions would think about it. In case the labor bosses would object to any fair system of employment that would be of help in getting the necessary war materials produced on time, I would say the said labor leaders should be declared out for the duration. There is no reason why, when the Nation is in the serious situation it is, with its young men out in the mud and snow fighting and dying, that anyone should have the right to halt production of war material for 1 hour.

We can and must go the limit in putting in our best punches, now that the enemy is on the ropes, ripe for the kill.

Jurisdiction and Distribution of Water Between the Several States

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. MILLER of Nebraska. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD a resolution relative to the jurisdiction and distribution of water between the several States. The resolution upholds the superior rights in the use of water for agricultural purposes.

This resolution is from Attorney T. F. Neighbors, chairman of the resolutions committee at Scottsbluff, Nebr.:

Resolution 2

Whereas there have been introduced in the Congress bills proposing the creation of valley authorities for the purpose of undertaking, among numerous other things, the development, utilization, and management of waters of the several valleys named in the bills, generally referred to as authority bills; and

Whereas authorities provided in proposed legislation are Government corporations, vested with unlimited powers, clothed with Government immunity from responsibility for their acts, free from ordinary congressional controls, beyond the jurisdiction of the General Accounting Office, established by Congress for supervising the expenditure of public funds; would deprive the States of jurisdiction over the distribution and use of waters within their boundaries; prevent compacts between States relating to such waters; drastically interfere with and seek to control the economy of the affected States; unreasonably and unwisely centralize in a Federal agency powers and duties more appropriately lodged in and efficiently performed by the States; bring into public ownership large segments of privately owned property, displacing tax revenues and thus increasing taxes on remaining property; and, finally, build unwholesome and undesirable Government monopolies: Now, therefore, be it

Resolved, That this association, in regular meeting assembled, does hereby declare its opposition to the enactment of regional or valley authority legislation for the rivers of the Nation of the type and character contained in proposals now before Congress.

T. F. NEIGHBORS,
Chairman, Resolutions Committee.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. SCRIVNER. Mr. Speaker, one of the questions concerning which all of us are receiving many inquiries, and which will be the subject of consideration and discussion in the present Congress is that of some program for universal military training. In response to the large number of inquiries as to my stand on this question I have prepared the following statement, which has already been made public, and which I wish to insert in the RECORD under permission granted for the extension of my remarks:

The subject of military training for our young Americans is one of our most important post-war problems and one upon which many will differ, and lack of space will not permit complete presentation of these personal views.

History is filled with stories of broken treaties, unsuccessful peace pacts, and shattered alliances, all wrecked upon the rocks of power diplomacy and selfish national interests—sometimes selfish personal interests.

Through the service of the churches, their missionaries and their members, the world has improved through the years, but sufficient change has not yet taken place in the nature of human beings or of nations to demonstrate that the peace to follow this war can be much more successful than many of its predecessors, unless we adopt a practical peace policy backed up by the strongest civilian military population in the world. The world has not yet been converted to the Christian principle that peace and harmony cannot exist where selfishness, avarice, envy, jealousy, hate, and malice are in the hearts of men and of nations.

The United States will emerge from the war with many enemies. Its unshattered factories, homes, and cities will stir up envy; its industrial power will be jealously eyed; and, deeply in debt as we are, our comparative wealth will be coveted. Nations will undoubtedly look selfishly to but one thing—their own national welfare. Evidence of this, in spite of the veil of secrecy, is already apparent.

For these and many other reasons the view of future peace is not optimistic. War can come suddenly from any one of many quarters with no time to train, possibly not enough to mobilize, our forces. Although we have given freely of our families, factories, and fields, our back-log of potential friends as future allies is limited. We, ourselves, must retain the power to prevent another war and to avoid the future slaughter of our young men.

Twenty-five years ago an army of young men, including myself, came home from France. Virtually all realized that had they had a year's training prior to the war they could have given their country much better service. It was generally agreed that had we maintained a strong, trained army and navy, Germany would never have committed any act that might bring us in against her.

After 25 years, I am of the same opinion. Had we been militarily prepared, Japan would not have defied us, among other acts, with the sinking of the *Panay;* for which we accepted dollars, not having the strength to venture war. Having this as one example either of our lack of fighting courage or of our weakness, it is no wonder that Japan dared to attack Pearl Harbor. Weakness invites attack. A strong, well-equipped and well-trained army, a two-ocean navy, and a superior air force, I am certain, would have prevented the disgraceful disaster of December 7, 1941. Had the Allies had the force and courage to back their early demands against Japan, Italy, and Germany this entire World War might have been prevented.

For 25 years the American Legion has favored universal military training. For many years it cried out for preparedness. For many long years Legionnaires begged for a larger army, for the best air force in the world, and for a two-ocean navy. These prayerful petitions were ignored.

We've paid for our lack, not only in dollars—a mountainous public debt which will not be paid for generations—but also in the lives of the finest youngsters American homes ever produced; none of them replaceable. That was the price of unpreparedness and war. The price of peace and preparedness would have been great—but far, far less. Lack of a military-training program did not keep us out of this war.

One year's service could be—if it is the kind that leaders in Congress are urging it shall be—of the greatest value. Among other things it would give American youth physical stamina, self-confidence, self-reliance, a disciplined mind and body, the ability to "take it," consideration (tolerance) for the opinions and rights of others regardless of their walk or position in life or of their religion, race, or political affiliation. It would bring maturity of mind and purpose; a broader, less selfish, vision; a greater love of country, and respect for its Constitution, its institutions, and its flag.

Let there be no misunderstanding. This must be a strictly military program—not merely an excuse for a glorified social and educational program; not an occasion for such regimentation or propagandizing as of Hitler's youth with its goose-stepping, blind following of a dictator whose word was law. It should be equal service for all—with no pampering or preference to any youngster, either by reason of wealth, position, or political prestige. Each should serve as best he can in view of his particular physical and mental ability.

The delay of a year in beginning higher education might prove beneficial, as I'm sure it did in my case, since the value of additional education would probably become apparent. The more mature mind would be better able to discern, grasp, and retain facts.

Adoption of this program should not, with safety, be too long delayed, yet, in all fairness, and in view of the extreme change from our traditional attitude, at this time I cannot now see reason for undue haste. The proposed training program should be honestly, frankly, and thoroughly discussed. Since there are now more than 10,000,000 of our men whose sons—because in the absence of a grave emergency there must be

no drafting of our daughters—will be affected, action should be deferred until a majority of these fighting men have returned and have had an opportunity to express their views, based upon their own experiences. These same men will form an adequate reserve of trained men to cope with military situations which might arise during the discussion period.

These new veterans may—and many to whom I have talked do—agree that a preparedness program such as has been proposed in the past by groups of older veterans was a good one—good enough to be tried for our future safety and security.

Nearly 2,000 years ago Christ, the Prince of Peace, said, according to His friend, Luke (11:21): "When a strong man armed keepeth his palace his goods are in peace."

About 1900 years later a great American said: "Speak softly, but carry a big stick."

On the Nurse Shortage

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Milwaukee Journal of January 5, 1945:

ON THE NURSE SHORTAGE

Despite the acute need for nurses for the armed forces, and a parallel but much less acute shortage on the home front, there are several phases of this total nurse problem in which the various agencies that deal with it or have an influence on it appear to be working at cross purposes.

The United States Public Health Service, which seemed slower than it should have been in throwing its full weight behind the drive for nurse recruitment for the armed forces, finally got into a better stride. Quite aside from the question of whether it had too large or too small a staff for peacetime, it was virtually a hoarder of nurses when the armed forces had a desperate need for them.

Dr. Thomas Parran, Surgeon General, United States Public Health Service, is now exerting great efforts to get public health nurses to enlist. He has also sent excellent letters to senior student nurses, to the directors of nursing schools and to hospital administrators, urging nurses to enlist.

But there is still a policy of the United States Public Health Service that hampers nurse recruitment. The U. S. P. H. S. furnishes desirable scholarships for nurses to do graduate work. These scholarships are now rather easy to get. A considerable number of understandably ambitious nurses are therefore leaving active nursing to pursue graduate studies. In peacetime this would be highly commendable, but now—with the acute nurse shortage—it is taking nurses out of service when they are most needed. Why doesn't the United States Public Health Service cease offering these scholarships in this war period

The health department of the city of Milwaukee likewise does not seem to be making the fullest use of its nurses, in view of the war emergency. The department has been generous in releasing city nurses who wished to enlist, but city health nurses work only 40 hours a week, whereas the vast majority of Milwaukee nurses work 48-hour weeks. The city might help relieve the nurse shortage, and certainly could remove a source of complaint by other nurses, if city nurses—for the duration—worked 48 hours.

Alaska Prosperity, Safety, and Fish

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. HORAN. Mr. Speaker, I am pleased to present for the consideration of the Congress a most timely article by Mr. Edward W. Allen, of Seattle. This article was printed in the Argus, December 16, 1944, and deals with one of the outstanding industries of the Pacific Northwest:

ALASKA PROSPERITY, SAFETY, AND FISH

(By Edward W. Allen)

(Edward W. Allen is United States Commissioner and Chairman of the International Pacific Salmon Fisheries Commission; United States Commissioner and secretary of the International Fisheries Commission; author of North Pacific, La Perouse, A Check List, and miscellaneous articles on international law, fisheries, and Alaska.)

Thousands of Americans in the past, when they thought of Alaska, thought of gold. Since the tragedy at Pearl Harbor an increasing number associate Alaska with Japanese aggression and national defense. But comparatively few people are acquainted with the prosaic fact that in peacetimes the fundamental basis of Alaska's economy was the fishing industry or that had it not been for the salmon packers having their fleets of cannery vessels available where needed for Army and Navy use, Dutch Harbor might have furnished a disaster more tragic than Pearl Harbor. Not only the Pacific coast but the entire Nation might well have been confronted with the threat of an enemy entrenched within our own continent of North America.

What are these fisheries? First in importance is salmon. When explorers such as James Cook, George Vancouver, and Jean Francois Galoup de Laperouse came to the Northwest coast they found fish similar in appearance to the European salmon. So "salmon" they called it. Now, although ichthyologists say it is technically a different fish, the name "salmon" sticks to this Pacific Ocean species, and probably always will.

Salmon belong to that class of fish which spawn in fresh water, but live most of their lives in salt water. Five varieties, pinks, reds, medium reds, chums, and kings—each with an array of other names—range in weight up to a hundred pounds. Pinks, the smallest variety, have a life cycle of only 2 years. They spawn in fresh-water streams, the young go forth to the ocean. In the second year they return to fresh water to spawn and die. Red salmon normally extend the life cycle to 4 years, 5 years in the Far North. Except in the case of pinks, as to which scientists are still arguing, it is believed that salmon return to the identical streams in which they were spawned.

Because salmon only return to fresh water when they feel the sexual urge, and because it is at that time that they have built up the necessary energy to drive their way upstream and have therefore reached the maximum size and quality, also because that quality in turn decreases coincidentally with their ascent of the fresh-water streams, the logical time to catch salmon is as they approach the coast from the sea.

And because Pacific coast salmon spawn but once, then die, it is essential to the annual recurrence of the runs, that a sufficient number of salmon be permitted to reach the spawning grounds each year. Accordingly, maximum production can be maintained only by restricting salmon fishing to the salt waters adjacent to the coast and carefully ensuring adequate escapement into the streams. These factors make it necessary to prohibit exploitation of salmon fisheries by invading foreigners whose sole interest is to obtain the largest immediate catch regardless of the disastrous effect on the future supply. On the other hand, the regularity of the salmon life cycle lends itself to systematic regulation by Government authorities clothed with proper authority.

The future of the Alaska salmon industry is assured except for two threats—one foreign, the other domestic. A few years ago, the Japanese, operating in complete contempt for our conservation measures, made serious inroads. No misguided altruism should be permitted to write into the peace of any other treaty, provisions which would permit the Japanese or any other exploiters to defeat the sound plans evolved by the United States and Canada for the perpetuation of their Northwest fisheries.

The domestic threat is one of almost unbelievable inconsistency. The Fish and Wildlife Service, which has done such constructive work in fishery conservation, is now a branch of the Department of the Interior which, through one of those peculiar quirks of the present Secretary, is sponsoring a movement to take the fisheries of Alaska away from the white fishermen and operators and turn them over to a handful of Indians. This is on the quaint theory that because a century ago natives caught what fish they needed to eat, they are now not only entitled to continue to do so (as they are) and to fish in equal competition in the commercial fisheries (as they are), but that they are entitled also to a monopoly of the commercial fisheries.

Alaska with its normal pack of more than 6,000,000 cases of canned salmon (a standard case consists of 48 1-pound cans) produces more than one-half of the entire world's supply. Prior to the war a small portion of this pack was sold abroad but most of it was consumed by the American public. With the war came a new appreciation of the special value of this product because of its essential protein and vitamin content, its palatability, and the facility with which it may be transported, stored, and distributed, regardless of climate.

Second Alaska fishery in importance is that for halibut. This also has international complexities. Halibut are found in that part of the high seas which are over the so-called continental shelf, the comparatively shallow portion of the ocean bordering the shoreline but extending sometimes as much as a hundred miles seaward. Halibut are also found in the numerous salt water channels of Southeastern Alaska and British Columbia.

Overfishing following the First World War so depleted the halibut stock that it became hardly worthwhile for the fishermen to visit the banks. Then Canada and the United States tried an experiment. They created the International Fisheries Commission; first had it investigate the situation, then gave the commission power to formulate regulations which, when approved by the executives of the two nations, have the effect of law within each country and as to the citizens and vessels of both countries on the high seas. So successful has this cooperation been that these North Pacific banks now furnish the finest halibut fishing in the world.

It is believed by the Commission that the stock of halibut is still capable of substantial increase. There are also those who believe that if similar methods were applied to black cod and other fisheries, similar results might be achieved, resulting in further opportunities for employment and the production of an increased quantity of wholesome food.

Other Alaska fisheries are herring, cod, crab, and shrimp. Some of these, particularly the crab, show opportunity for increase. Prior to the present war, the Japanese came to the Alaska side of Bering Sea, caught and canned crabs caught there, and then sold the product largely in this country's markets. It is hoped that Americans will now develop this important fishery. But it is probable that the largest undeveloped fishery in Alaskan waters is for so-called bottom fish through the method known as trawling.

Trawling consists of dragging a net, which has a widely extended mouth, along the ocean bottom. The type of net now in general use is known as an otter trawl. In the North Sea trawling has been done for many years, but only recently in this country. Thus, New England figures go back only to 1905, yet in 1943 trawlers from Boston, Gloucester, and Portland, Maine, landed almost 300,000,000 pounds of fish. And in the State of Washington the number of trawlers has increased from about half a dozen in 1930 to almost 200 in 1944.

The rocky bottoms common in many southeastern Alaska channels do not lend themselves to this kind of fishing. But Government investigation just before the war disclosed the existence of huge bottom areas to the westward which are ideal for trawling. Great quantities of sole, pollock, gray cod, and crabs were procured by this method. Japanese successfully engaged in trawling on the American side of Bering Sea by "mothering" their trawlers with large vessels equipped as floating refrigerator plants. By similar practice, or by the erection of conveniently located shore cold-storage facilities, American operators have an opportunity to build up a substantial new phase of the fishing industry in Alaskan waters.

Alaska fisheries now afford more employment than all other industries of the Territory. They pay more taxes. They are the backbone of its present economy. Some of these fisheries approach as great an annual production as is reasonably to be expected. Others disclose prospects for further substantial development. If Alaska could be relieved from being an experiment station for bureaucratic control, its fisheries should furnish opportunities for many more Americans who, like Alaska's present fishermen, dare face Nature in her rugged grandeur and are not afraid of work.

Set-back in Poland

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Washington Evening Star of January 6, 1945:

SET-BACK IN POLAND

Although it had been clearly foreshadowed, Russia's recognition of the Lublin committee as the provisional government of Poland can hardly fail to aggravate the political differences among the principal Allied Powers.

Poland is a member of the United Nations—the first to resist Nazi aggression. It has suffered as much as any Allied country, if not more, at the hands of the Germans. Yet the outlook for the Poles, even after victory, is not hopeful, for the establishment of the Lublin committee as the functioning government may mean that Poland has fought one form of totalitarianism only to be engulfed by another.

In the political sense, this latest development presents the most serious difficulties. Moscow, having extended recognition to the Lublin group, which has been operating under Russian auspices, presumably will refuse henceforth even to discuss the future of Poland with the Polish Government in exile. London has announced that it will continue to recognize the government in exile for the time being, although Prime Minister Churchill has evidenced sympathy with the Russian territorial demands on Poland. Our own Government has not wavered in its recognition of the government in exile, and, in fact, the State Department took occasion to reaffirm its recognition immediately after the latest Russian move.

If the British adhere to their present position, the result would be a political deadlock with respect to Poland between London and Washington on the one hand and Moscow on the other. But the Russians are not apt to let matters rest there. The Red Army already stands just across the Vistula from Warsaw, and before many months have passed it will in all probability have driven the Germans from the entirety of Poland. Then the Lublin group will function in all of Poland as it has been functioning already in the liberated areas—as the Polish government in fact. When that time comes it seems quite likely that the Russians will come to an agreement with the Lublin group on all outstanding Polish issues, and we, and perhaps the British, would then find ourselves confronted with a settlement of the Polish question which we might disapprove, but which we could hardly undertake to disturb.

If we had ground for belief that the Lublin group was truly representative of the Poles, the outlook would be less disquieting. But that, unhappily, is not the case. The most reliable authority on this point is Stanislaw Mikolajczyk, who resigned as Polish Premier when the government in exile refused to support his program for coming to terms with Russia. Mikolaczyk supposedly is looked upon with favor in Moscow. Mr. Churchill has said that he has the greatest respect for him. Yet Mikolajczyk declared earlier this week that Russian recognition of the Lublin group would be counter to the wishes of the great mass of the Polish people, and he added that if the American, British, and French Governments were to follow Moscow's lead, the result would be a Communist and, therefore, a puppet Poland.

Statesmen or Politicians?

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. CRAVENS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I am including the following editorial from the Fort Smith, Ark., Southwest Times Record, appearing January 7, 1945, as follows:

STATESMEN OR POLITICIANS?

The Seventy-ninth Congress, which opened Wednesday, will enact legislation which will affect the life of every citizen of the United States in the immediate future and for generations to come. The decisions it reaches will influence standards of living, taxes, wages and salaries, and every other condition of life—directly or indirectly—of the people of Fort Smith and of every other community in the land.

What are these men in whom so much power and responsibility are vested—politicians or statesmen?

Let's save time and admit that they are all politicians while some may prove to be statesmen. The important question is: What kind of politicians are these representatives of the people?

Here are two Webster definitions of politics: In the positive sense it is "the science and art of government; the science of dealing with the organization, regulation, and administration of the business of a state, in both its internal and external affairs"; in the negative sense politics is a "dishonest management to secure the success of political candidates or parties."

Which of these is to characterize the work of Members of this Congress? Probably every Member of the body went to Washington in high hope of proving himself an able practitioner of the positive brand of politics. Some will not succeed. There will be those who fail for lack of tact or other similar personal qualification, and there will be others who yield to temptation to practice negative politics—to work for personal success and that of the party instead of placing first emphasis upon the welfare of the country.

Well, is the matter out of the hands of the people who elected them?

Not unless the public is willing to sit back and leave its representatives without guidance.

The man who goes to Washington to voice the will of his constituents cannot consistently do that unless he is kept informed, not by pressure groups, but by the people themselves. With the best intentions in the world, he may yet be misguided as to the changing sentiment of the public. Naturally, he is not a mere machine for the unreasoning casting of ballots as he has been instructed. He was elected in the hope that he had sufficient intelligence and wisdom to formulate judgments and initiate legislation on his own. But he was elected also in the hope that he would do these things in the light of the will of the citizens of his State or district. He cannot do this through intuition alone. If the people fail to keep him informed as to their attitudes, they have no right to complain if he acts on a basis of such expression as has been forthcoming and it develops that this expression came from selfish interests.

As for the legislator who is tempted to stray into the field of negative politics for benefit of self and party, or who shortsightedly believes this is the best way to serve his people, adequate expression of the opinions of his constituents will probably straighten him out.

In other words, the private citizen's share in representative government is not fulfilled when he casts his vote in an election. He has the additional duty of keeping himself informed upon vital questions and of helping his Representative or Senators keep informed as to true public sentiment.

This does not mean that every citizen should be a chronic writer of letters to Congressmen. He should write letters on occasion—and this should not be done only in those situations in which he has a selfish interest. There are other ways, however, in which public sentiment makes itself known. The important thing is that this sentiment be based on knowledge and understanding. This cannot be true unless citizens are consistent students of the affairs of the national enterprise of which they are part. How many of us qualify?

If the new Congress includes some nincompoops and men who are less than honest, so does the public it represents—and in greater proportion. Taken as a whole the Seventy-ninth, like its predecessors, is made up of capable men who want to do what is

best. They cannot do this successfully without the help of the general public. One way in which the individual citizen can help is to follow news reports and interpretations day by day, analyze them to the best of his ability, lend his support to that which seems for the general good, and oppose that which is calculated to serve selfish interests—including his own.

A Wrong to Norway

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. KNUTSON. Mr. Speaker, on last Friday there appeared in the New York Herald Tribune a report of an address delivered by Frederick C. Crawford, former president of the National Association of Manufacturers, before a gathering of that body. To say the least it was an amazing exhibition of self-assurance that cannot but lay the speaker wide open to the charge of misrepresentation. None can now speak of conditions now existing in Norway with any degree of accuracy since nationals of the Allied Nations are not allowed to visit the country, which is held in an iron grasp by a ruthless invader. Many have tried times without number to get detailed and reliable information on what is going on in Norway, also as to the condition of the people, but to no avail. It is more than strange that Mr. Crawford has been able to get such information, especially since he did not visit Norway on his recent trip to Europe. Doubtless there are elements in all underground movements in the occupied countries that may be radical but to say that they constitute a majority is to make a statement that is not susceptible of proof. Certainly that is true as it applies to Norway whose people have for centuries been known for their industry, integrity, and frugality. Permit me to append herewith a letter written to the Herald-Tribune by the Ambassador of Norway in reply to the unfair and unfounded statement attributed to Mr. Crawford, which appeared in yesterday's issue:

A WRONG TO NORWAY

MR. CRAWFORD'S STRICTURES ON HER UNDERGROUND MOVEMENT RESENTED

To the New York Herald Tribune:

In your issue of January 5 you publish a report of a talk given by Mr. Frederick C. Crawford before the New York State Chamber of Commerce. The following statement is laid to Mr. Crawford:

"The underground in France and Belgium was composed largely of Communists, young people and underworld ex-convicts, who robbed 10 peaceful French families for every train that was blown up. A similar situation," Mr. Crawford said, "exists in Norway."

Mr. Crawford is grievously wrong.

The Norwegian people's unyielding resistance to the Nazis for more than 4½ years is a people's movement and is known in Norway as the home front, rather than the underground. Ninety-nine percent of the population, under the leadership of the bishops of Norway, the justices of the supreme court, the president of the University of Oslo, and others, have taken their uncompromising stand against the new-order barbarians. Not one report has come out of Norway of one single instance of a peaceful Norwegian family having been robbed by members of the underground or home front. The very idea of such a thing happening seems preposterous to every Norwegian. The ranks of our home front comprise men and women and children of every walk of life and every stratum of society.

The dark and bloody pages of Norwegian history covering these years are replete with known and anonymous fighters of the home front, who, against dreadful odds, have beaten down every Nazi attempt to bend the freedom-loving Norwegians to the Herrenvolk's will. Many of our most prominent citizens have paid with their lives for resisting the Nazis, and countless others are languishing in concentration camps in Norway and Germany. Surely these people, martyrs of a noble cause, can not and will not be placed in the categories drawn up by Mr. Crawford with such lack of familiarity with actual conditions and indifference to the spiritual quality of the fight against Nazism.

To tell the factual story of Norway's home front on would need the space of a hundred heavy volumes rather than the limited columns of a busy newspaper. I shall, therefore, have to refrain from going into detail. But it is of more than passing interest to note that the man in Norway whose position in peacetime would correspond fairly closely to that high post held by Mr. Crawford as former president of the National Association of Manufacturers is Mr. Paul Frank, president of Norway's Commerce Association, and that Mr. Frank has spent a considerable part of the last 4½ years as a prisoner of the Nazis for his fearless resistance to the "new order."

W. MORGENSTIERNE,
Ambassador of Norway.
WASHINGTON, D. C., *January 6, 1945.*

Editorial Comment on the President's Annual Message

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1945

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Humanity Will Not Permit Our Failure," published in the Chicago Sun, and also an editorial entitled "State of the Union," published in the Washington Star of January 7, 1945, both editorials dealing with the President's message to Congress on the state of the Union.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Chicago Sun]

"HUMANITY WILL NOT PERMIT OUR FAILURE"

President Roosevelt, in laying his report on the state of the Nation before Congress yesterday, knew that he was addressing a deeply troubled America.

Our people, and Congress, are concerned over the immediate progress of the war in Europe. Our people, and all responsible Members of Congress, are even more concerned about the shape of the peace.

So is the President—on both those scores. His message grappled with the realities which America wants met. In grappling with them—if he failed to give us blueprints for solution of all the problems we want solved—he gave us sane and strong advice. He gave us promise of enlightened leadership. With fighting courage, he told us that we can and we shall, with devotion and good will, win a coalition war and a democratic peace of unity. We shall not surrender to the disillusionment of 1920.

As regards the war itself, the President's ringing confidence is based on solid realities. We have taken a hard blow on the western front. Germany will never be defeated until the last Nazi surrenders; but the tide has turned in the West; we are attacking. Whatever the immediate fortunes of battle, overwhelming power that spells total victory over Germany and Japan is in capable Allied hands. Only a political wedge between the Allies could save the warlords of either land. There is no wedge deep enough today to stave off their defeat; and in President Roosevelt we have, as this message demonstrated once more, a pillar of strength against division.

But the burdens of war are great. The casualties will be heavy. Essential goals of war production are not being met. That means a clear obligation of the American home-front and the American Congress, and the President did not mince declaring it.

If we are to give the support that is due to the average, hard-fighting young Americans who carry the weight of battle, Congress will enact a national service act, assuring that our civilian manpower fairly and democratically meets production necessities.

Pending full-scale national service, legislation to mobilize IV-F s for essential war work, as asked by the President, can be a partial, stop-gap solution—but it is no substitute for the full solution.

The call for legislation to apply selective service for Army nurses is obviously an emergency must. Our wounded must have care, the heroic nurses now serving must not be forced to break under the strain.

Our supreme objective, aside from victory in war itself, is defined by the President as it should be defined: The organization of the world for peace; an organization democratic, flexible, serving security through justice; an organization which must be the justification of all the dreadful misery that this world has endured. It should be launched early in 1945.

In itself, this organization can be the most powerful of all antidotes to the specific political sores and diseases which trouble us and trouble the President—problems like the Greek and Polish crises and their menacing effect upon full allied unity. Once America convinces the world that we are wholly committed to collective security, then can we wield trebled influence for the principles of the Atlantic Charter, which the President upholds, as against actions of unilateral might.

But rightly—and, we earnestly trust, with tremendous resolution—the President indicated that our Government would meantime wield its utmost weight for sound specific solutions. We shall, he says, use our influence now to secure as far as is humanly possible fulfillment of the Atlantic Charter's principles. This means that the President, in his forthcoming meeting with Messrs. Churchill and Stalin, has a vast assignment to help bring light over Poland, Greece, Italy, and other tortured lands. The Nation's prayers will go with him.

Yet there was nothing in his address, and no reality before the Nation, more urgent than his warning against betrayal by perfectionism. Disillusionment because we behold injustice can, as the President declared, as

surely destroy the peace as can the power politics or the blatant isolationism which he decries.

We cannot permit democracy to fail, we cannot permit our alliance to be split. That is the dual framework within which we must work. We shall not, as after World War No. 1, doom peace by preferring international anarchy to international cooperation with nations which did not see exactly as we did." In building the justice of the United Nations, the aroused conscience of humanity will not permit failure.

The task belongs to the President, to Congress, to our allies, to us. If we are worthy of it—1945 can—in truth, be the greatest year of achievement in human history. And it needs to be.

[From the Washington Sunday Star of January 7, 1945]

STATE OF THE UNION

President Roosevelt takes on full stature as a wartime leader of all the people in his 1945 message to Congress on the state of the Union.

In the words of Winston Churchill, he has exposed the "grim bare bones" of the problem confronting this country as we move into what is unquestionably the most critical phase of the war. Stated in its simplest terms, the problem is to win this war of national survival at the earliest possible time and to make certain, so far as it lies within our power to do so, that the world will not again have recourse to arms in the settlement of international disputes.

If this is to be done, we can no longer tolerate half-measures. For long, tortured months the men at the battle fronts have been fighting a total war. Many of us at home have yet to learn what that term means. But the pressures of total war are irresistible, and this year will find those pressures closing in around us.

The President, in calling for a maximum effort from the whole Nation, kept his sense of proportion. In 3 years of war our armed forces have made splendid progress. Mr. Roosevelt reported on that progress with justifiable pride. The military victories were made possible by production of an infinite variety of weapons—an accomplishment which has been the marvel of the world.

Yet the fact remains—and the experience of the battlefield confirms it—that we are doing enough. In 1945, and perhaps in 1946, there must be even more production, more effort, more sacrifice, more of that will-to-win which counts no exertion as being too great. And, with all of this, there must be the firm resolve to move forward toward the ultimate goal of a strong America in a secure world.

To meet immediate demands the President asked for amendment of the Selective Service Act to provide for the induction of nurses into the armed forces. He requested the immediate enactment of legislation permitting use of IV-F's in whatever capacity is best for the war effort. He declared that we must have universal military training after the war as an "essential factor in the maintenance of peace," and he said that he would submit a special message on this subject. These are minimum requests, and it is reasonable to expect that they will be granted. The real test of the intentions of Congress—and indirectly that means the intentions of the people—will come in the action taken on the President's forthright and unqualified appeal for adoption of a national service act.

As Mr. Roosevelt put it, the fighting man wants, needs, and is entitled to insist upon our full and active support—now. That is a simple statement of fact, and the only question is whether the people at home really want to give the fullest measure of support to the men they have sent off to war.

The President had asked for a national service act a year ago. But his request at that time was qualified and weakened because it was conditioned on the adoption of other things—a "realistic" tax law, a "cost of food" law, etc. Unless these other measures were adopted, he said, he "would not recommend" a national service law, and that reservation proved fatal. But this year his request is unconditional and urgent. The hope of victory in Europe in 1944 is gone, the war is mounting in its fury, and first things must be put first.

Underlying the urgency of his appeal is the knowledge that American men are suffering and dying around the world while other men are quitting their jobs in war plants; while still others, men and women, should be, but are not, in essential work. Underlying it, too, is the President's knowledge that, despite excellent past performances, manpower shortages are causing lags in critical production programs, are delaying the return to action of damaged fighting ships, are impairing the output of new and better weapons which, in the hands of our troops, would mean the loss of fewer American lives. In a word, we are capable of more than we are doing. The voluntary methods of the past 3 years have been tried and found wanting. If we are to give our fighting men that last full measure of support which the furious character of the war demands, the Government must be empowered to use compulsion on the home front when all other means have failed.

To those who have been clamoring for blueprints and formulas precisely defining America's position in relation to every conceivable international problem, the President's views on foreign policy will be read with something less than satisfaction. But considering the present state of the world with the war reaching new peaks of violence and with the internal politics of the liberated and semi-liberated lands unavoidably in a condition of either flux or confusion, it is difficult to see how Mr. Roosevelt could have expressed himself better or more specifically.

The United States, says the President, still adheres to the principles of the Atlantic Charter and will do its best, now and in the future, to secure, so far as is humanly possible, the fulfillment of those principles. Economic and military strength is an important and inescapable factor in international politics, but in keeping with the charter and with American tradition, the policy of this country is that all such power "must be linked with responsibility and obliged to defend and justify itself within the framework of the general good." Thus, for example, power cannot very well defend or justify itself if it is used during this troubled interim period in the liberated lands to "block the eventual exercise of the peoples' right freely to choose the government and institutions under which, as freemen, they are to live." Accordingly, as a matter of policy, "we and our allies have a duty, which we cannot ignore, to use our influence to the end that no temporary or provisional authorities—in Poland, Greece, or elsewhere—will be allowed to prevent popular elections later on when it will be possible to hold them.

But in reaffirming these and other principles the President wisely emphasizes that this an imperfect world and that although the Atlantic Charter is a good, useful and essential statement of objectives, those objectives do not provide rules of easy application to each and every problem now pressing for solution or still in the making. He is frankly concerned about situations like those obtaining in Greece and Poland, but there is no simple answer to them from the American standpoint. His views seem to reduce themselves to the basic thesis that while the objectives of the Atlantic Charter must be sought after with the utmost earnestness, the making of a sound peace also requires that the American people, and other peoples as well, cultivate an understanding, tolerant and patient frame of mind. For we and our allies are not always going to see and think alike, and international coperation and progress are not helped by any nation assuming that it has a monopoly of wisdom and virtue. Perfectionism can be as dangerous as it is unrealistic. If we are to guard against extremes of disillusionment, then we must take the mistakes, the disappointments and the imperfections in stride, realizing that they are almost inevitable.

It is a wholesome frame of mind that President Roosevelt appeals for. If we can have it, then we can proceed at once, as he urges, to enlarge upon what has been achieved already at Dumbarton Oaks and establish without delay, during this year, the permanent machinery for the maintenance of world peace.

The keynote of the President's discussion of domestic affairs, unrelated to the prosecution of the war or to foreign policy, is that an enduring peace cannot be achieved without a strong America—strong in the social and economic sense as well as in the military sense.

His conception of a socially and economically strong America is based on acceptance of that second bill of rights outlined to Congress last year, of which the right to a useful and remunerative job in the industries or shops or farms or mines of the Nation is fundamental. In painting an outline of the post-war prosperity to supply 60,000,000 post-war jobs, the President wields his brush in broad strokes.

We shall rely "as much as possible" on private enterprise, based on "initiative and vigorous competition," freed of monopolies and cartels, with the Government standing by to share the risks involved in private financing of new facilities, plants, and equipment.

Along with the development of natural resources, which the President exemplifies in the work of the Tennessee Valley Authority, will come the construction of civil airports and great highways, urban redevelopment and provision of decent housing—needed undertakings which, on top of a resumption of normal manufacture, should supply "millions of productive jobs" under private enterprise, yielding and maintaining a national income high enough to "provide for an orderly retirement of the public debt along with tax reduction."

It is not necessary to accept in detail this alluring prospect of post-war America in order to catch and feel something of its inspiration. Most of us have some faint idea of the problems to follow the collapse of our war-supported national economy. Yet the amazing feats of production accomplished already in this war have given us the faint outlines of new and promising horizons that peace will make more attainable. The progress that can be made toward these horizons by American initiative and resourcefulness, without dependence on Government spending, controls and restrictions of individual freedom, will measure our real progress. The only spirit with which to face this future is the spirit of confidence in the American people.

There will be debate, as there should be, over putting into immediate effect the revolutionary measures in total mobilization of civilians for which the President has asked. But no citizen now can remain unconscious of the silent pleadings in support of those measures, pleadings which take form in the lengthening columns of names on every new list of the wounded, the missing, and the dead.

Go North, Young Man

EXTENSION OF REMARKS
OF

HON. HOMER D. ANGELL
OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. ANGELL. Mr. Speaker, Alaska, our largest Territory, has played an important part in the prosecution of the war. In the post-war period it is destined to become of strategic importance by reason of our war experiences. The Alaskan Highway, the airway from continental United States to Asia and the Old World over Alaska, and the key position of the territory in our national defense, have brought this great northland to our attention. Alaska will become in the post-war period the one remaining frontier with the resources for national development and the territory for our increasing population.

Governor Gruening of the Territory of Alaska, has performed an outstanding service in his administration of this great Territory and in making known to the people of America the possibilities of this intriguing country. Capt. Richard L. Neuberger, who was aide-de-camp to General O'Connor of the Northwest Command during the days of the construction of the Alaskan Highway, has written an interesting and instructive article on the Alaskan Territory and the role played by Governor Gruening, under the title "Go North, Young Man," which I include in these remarks.

The article follows:

[From Collier's of December 23, 1944]

GO NORTH, YOUNG MAN

(By Richard L. Neuberger)

(That's the motto of Ernest Gruening, Governor of Alaska. He wants colonists for his Territory, believing that, as the last American frontier, it offers a great future to young men and women of courage and resourcefulness.)

Whitehorse, on the Yukon River, can get very cold indeed. Scotch whisky has been known to freeze there (so has the antifreeze solution for United States Army trucks and bulldozers. Whitehorse is the place where a young clerk in a log bank named Robert Service wrote about Dangerous Dan McGrew, who was "pitched on his head and pumped full of lead" by a stranger from the Klondike diggin's. It also is where a chunky man with wide shoulders and chubby cheeks walked back and forth impatiently along the Yukon's icy shores on a recent winter morning. The Honorable Ernest Gruening, Governor of the Territory of Alaska, had a message in his parka pocket which he had to deliver the next afternoon to the opening session of the Alaska Territorial Legislature at Juneau, 220 wilderness miles off to the south.

But how to get to Juneau?

This was one of Whitehorse's cold days. It was 61 below. The tiny narrow-gage White Pass and Yukon Railroad was immobilized. The locomotives were frozen. The water towers were frozen. The switches were frozen. The roundhouse doors were frozen. Everything was frozen. Otherwise, the Governor might have jolted down to the gold-rush settlement of Skagway at tidewater, from where the Coast Guard would buck frigid seas to reach Juneau.

The Governor trudged to the barracks of the Royal Canadian Mounted Police. Could a dog sled get through the drifts in the Chilkoot? Inspector Croknhite regretfully shook his fur-topped head. The snow in the pass was over a malemute's head and up to a constable's armpits.

Next, the Honorable Ernest Gruening rode in a jeep at 61 below to the United States Army Air Force hangar on a bluff high above the frozen Yukon. Would the Air Force take him to Juneau? Weather looked at the Governor. "Governor," said Weather, "it's 61 below here. Maybe it's 75 below up above. And a heavy ground fog covers the airport at Juneau like a blanket. I wouldn't advise it, Governor."

The Honorable Ernest Gruening fingered the speech in the pocket of his parka. "I've got to get to Juneau," he repeated. "If anyone will fly me, I'll try it."

"I'll fly you, sir," said a blond young captain, putting on his fur jacket.

"Good boy!" said the Governor.

"Are you sure it's wise, Governor?" asked Col. Ken Bush, Chief of Staff of the American Army's Northwest Service Command.

"I'm going to Juneau," said the Governor.

Americans and Canadians lined the runway with prayers and crossed fingers as the Beechcraft skidded along the icy sod, and they hung grimly to the telegraph ticker until Juneau reported 3 hours later that the plane had slipped through a hole in the fog the size of a doily and deposited a slightly frozen Hon. Ernest Gruening on the airfield at the territorial capital.

Alaska's Governor is like that. In the 5 years since he came to the Far North in 1939, Ernest Gruening has tried to demonstrate personally that his country's vast Arctic outpost can be lived in and traveled in, the calendar around. In Aleutian williwaw and Yukon blizzard, he has visited every settlement in Alaska—the first Governor in Alaskan history to do so—and he has journeyed by any and all possible means of conveyance in doing it.

Gruening has traveled by dog sled along the shores of the Arctic Ocean, by passenger bus on the new Alaska Highway, by canoe on Kuskokwim River, by whaleboat in the Bering Sea, on foot to Indian villages in the Wrangell range, and by plane over nearly every acre of Alaska's 56,400 square miles. He has sold War bonds to Eskimos on St. Lawrence Island, and he has administered first aid to a trapper who stuck his foot in his own bear trap. He has visited the far-flung posts of scarlet-coated Mounties in Canada's adjacent Yukon Territory, and he was in the bleak Aleutians when American soldiers wiped out the first invader of this continent in more than 100 years.

This ubiquitous behavior on the part of Alaska's 57-year-old Governor is due to a conviction which has become almost a shibboleth with him. He is convinced that Alaska has never had so great an opportunity to develop from a sprawling wilderness into an integrated part of North American civilization. He would like to have seven-league boots so that he could roam the territory at will, doing his share in the conversion.

"This is the biggest hour in Alaskan history," Gruening told Congressman HOMER ANGELL of the House Committee on Territories when they conferred at the high-pillared executive mansion in Juneau. "Several hundred thousand soldiers, sailors, and Coast Guard men have served on Alaskan soil since 1941. These men know Alaska, and they are the Alaskan frontiersmen and settlers of the future. The clock has struck for Alaska. If Alaska hears the tones, Alaska will be the forty-ninth star in the American flag. I predict statehood for Alaska within a reasonable time."

And when he fished for halibut and salmon in Auk Bay with Alaska's most distinguished visitor of all Gruening repeated his contention that Alaska does not need to remain a vast solitude, with scarcely more civilian residents now than it had during the gold rush of 1898. He told President Roosevelt as they dipped their lines in the blue waters of the Inside Passage that Alaska's inhabitants numbered 64,636 when tooth-sized nuggets were being sluiced out of Bonanza Creek and only 72,524—nearly half of them Indians and Eskimos—almost 50 years later. Where else under the American flag had time stood so still? The Governor cited the fact that Alaska, 14 times the area of Iceland, cannot begin to match Iceland's population.

And so it was that on his return from the North the President said to the Nation: "We were told that a number of officers and men are considering settling in Alaska after the war is over. I do hope that this is so, because the development of Alaska has only been scratched and it is still the country of the pioneers. I am going to set up a study of Alaska as a place to which veterans of this war, especially those who do not have strong home roots, can go to become pioneers. Alaska is a land with a very small population, but I am convinced that it has great opportunities for those who are willing to work and to help build up all kinds of things in new lands."

ON A PAR WITH SCANDINAVIA

This was music in Gruening's ears. In his opinion, few Americans realize the measureless expanses yet unsettled in Alaska. Timbered uplands and broad valleys are tolled off there by horizons rather than miles. The 12,000,000 people of the Scandinavian countries dwell in a smaller area than Alaska's handful of natives and whites. Trondheim, Norway, is near the same latitude as Ketchikan, Alaska, but Trondheim supports 55,000 inhabitants and Ketchikan 4,500.

President Roosevelt had this in mind when he said at Seattle that Alaska's "climate and crops and other resources are not essentially different from those of northern Europe—Sweden and Norway and Finland, where the people, in spite of the cold and the winter darkness, have brought their civilizations to a very high and very prosperous level."

Ernest Gruening believes that history justified these high hopes for Alaska. The men who came home from the War of 1812 opened up the plains beyond St. Louis. Veterans of the Civil War first broke the sod of many mountain valleys along the Pacific seaboard. Gruening is sure that Alaska will be settled and colonized by the soldiers of this war.

"Young men, following Horace Greeley's advice, have always gone West when they returned from the battlefields," he said not long ago. "This time I think they will go north. That is our motto now in Alaska: 'Go north, young man, go north.'"

The War Department, echoing Gruening's optimism, has just issued a discussion pamphlet for G. I.'s entitled "What Has Alaska to Offer Post-war Pioneers?" The pamphlet tells soldiers: "Alaska, America's continental outpost, is our last frontier. In its own way, it is as rich and varied as the land to which the Pilgrims came more than 300 years ago. It is almost unsettled in comparison with similarly situated lands in northern Europe. The war has greatly speeded up its development, has linked it with the rest of the United States by a new system of highways and airways, and has brought into its borders thousands of young men and hundreds of young women who would never otherwise have visited it. Alaska offers twentieth-century pioneers a challenge—and an opportunity."

In the three-fourths of a century since Czar Alexander II of Russia parted with Alaska for something like 2 cents an acre, no governor has seen such momentous events as Ernest Gruening. When in 1939 he jour-

neyed north with his first Presidential appointment in his brief case, the sole military installation in the Territory consisted of three companies of infantry at Chilkoot Barracks near Skagway—and their guns pointed not westward toward Japan but northward toward our Canadian allies. The post was a hold-over from the gold rush, when soldiers and Mounties patroled the border.

Today, 5 years later, Alaska is one of the most heavily defended areas under the American flag. Bases dot the volcanic Aleutians. On huge airfields in the interior, lend-lease fighters and bombers are transferred to Soviet crews. The Alaska Highway is a first land link with the rest of North America. Along the highway, the United States Army Signal Corps has built a 2,000-mile telephone system, tying Alaska by voice as well as by truck to the interior of the continent. And from countless Alaskan coves and fjords and inlets extend docks and wharves and breakwaters for the use of the Navy, Coast Guard, and Army Transport Service.

Watching all this from the colonial-pillared executive mansion at Juneau, Ernest Gruening came to the conclusion 3 or 4 years ago that it was now or never for Alaska. He began visiting Army bases in all kinds of weather. He chatted with thousands of officers and enlisted men. He sold a number of officers on plans for a post-war hunting lodge within sight of Mount McKinley's 20,300-foot ramparts. He convinced Brig. Gen. James A. "Patsy" O'Connor, engineer builder of the Alaska Highway, that a dairy farm amidst the meadows near Juneau could be an ideal place to retire when peace comes once more. And he assured G. I.'s from every State in the Union that Alaska offers a future to young men with imagination, courage, and resourcefulness.

After Gruening's hair-raising flight from Whitehorse at 61 below, his friend E. L. (Bob) BARTLETT, who has just been elected Alaska's new Delegate in Congress, observed, "Ernest would fly in a chicken coop held together with Christmas-tree tinsel in weather cold enough to freeze a polar bear, if he thought he was on his way to talk to some soldiers about settling in Alaska after the war."

Ironically enough, this man who believes so fervently in the post-war possibilities of the Arctic wilderness has been a dyed-in-the-wool inhabitant of great cities during most of his life. And even more ironically, although he was brought up to be a physician and actually has an M. D. degree, he did not lift a stethoscope or scalpel for 25 years until he discovered that an Alaskan Governor visiting far-flung Indian villages and isolated mining camps might well combine medical assistance with civil administration.

The Governor of our loneliest land was born in our biggest city in 1887. Ernest's father, Emil Gruening, was a celebrated eye, ear, nose, and throat specialist, and Ernest followed in the family tradition. He went to Harvard Medical School, graduated with honors and was assigned to the surgical service of the Boston City Hospital. But he read travel books instead of anatomies, and on ambulance rides he watched newspaper reporters at work.

One December day he took off his surgical gown and applied for a job on the Boston American. When he was accepted, his career in medicine was at an end. Journalism, he decided after a few weeks, was definitely his field. He had a flair for it. Writing came easily to him. He thought up all sorts of crusades and campaigns. Two years later he was managing editor of the Evening Traveler.

Gruening resisted Boston's rigid censorship and defended the quality and propriety of books and plays which had been banned in that city. When his paper retracted an accusation against a wealthy politician—an accusation Gruening believed to be true—he removed his name from the masthead, called his staff together and announced his resignation.

A CRUSADING JOURNALIST

He moved back to the place of his birth as managing editor of the old New York Tribune. During the first World War he enlisted in the field artillery. In 1921 he went with The Nation and commenced a crusade against what he called "dollar diplomacy" in Latin America. This got him interested in Mexico, South America, Canada, Alaska, the Philippines and other neighbors and possessions. He began to write books advocating a policy which he termed that of the "good neighbor." He demanded an end to the occupation of Nicaragua by our marines, and a series of articles from his pen helped bring about an investigation by Senator Medill McCormick of American military occupation of Haiti.

Gruening moved to Maine, where he founded the Portland Evening News and carried on a vigorous campaign against the Insull utility empire. One of his principal allies was a young politician named OWEN BREWSTER, now United States Senator from Maine.

In all these causes, Gruening occupied a strictly middle-of-the-road position. He denounced interference in the affairs of Latin-American countries by American banks and industries, but he also warned of the deteriorating influence exercised by Communists and extreme radicals. In 1924, Gruening took a leading part in the Presidential campaign of "Battling Bob" LaFollette, and 8 years later he was an active supporter of Franklin D. Roosevelt.

One of the new President's first acts was to send Gruening to Montevideo as adviser to the United States Delegation to the Inter-American Conference. There the policy of the good neighbor became the official policy of the United States Government. A year later Gruening was appointed director of the newly created Division of Territories and Island Possessions, in the Department of the Interior. This took him to Alaska on numerous inspection trips, and he became an enthusiastic advocate of the future ahead of the vast arctic outpost.

In 1939, President Roosevelt named this booster for the land of Boreas to be Governor of the country's largest Territorial possession. A few months ago he appointed Gruening to another 4-year term, and the appointment was unanimously confirmed by the United States Senate.

In this arctic domain, Gruening is an exponent of "the strenuous life," once championed so ardently by Teddy Roosevelt. He hikes up the lofty mountains which tower behind Juneau, and he and his wife, the former Dorothy Smith of Boston, go swimming in the chilly waters of the Inside Passage. Congressional visitors dip in one toe, look up at the glaciers which nourish the fjords and then decide to do their bathing back in the Executive Mansion in the bathtub.

THE GENERALS COULDN'T TAKE IT

Gruening is chunky and strong. On a hike up the slopes of Mount McKinley National Park with Lt. Gen. Simon Bolivar Buckner and Lt. Julius Edelstein, aide to Admiral Leahy, the Governor made both his companions holler "Uncle" before he consented to rest. He eats big meals with lots of meat and smokes a dozen fat cigars a day. Alaskan meats—moose, reindeer, caribou, mountain sheep—are among his favorites. All his annual reports to Secretary Ickes emphasize the condition of the Territory's nomadic reindeer herds.

Gruening especially rejoices in the fact that two-thirds of the 162,071 reindeer in Alaska are owned by Indians and Eskimos. He has learned the language of the natives and he spends a large portion of his time visiting their villages. He is particularly angered when he sees a cafeteria or hotel in an Alaskan town with the sign "We Do Not Cater to Native Trade." He hopes the coming session of the Territorial legislature will enact a law forbidding discrimination against Indians and Eskimos.

"The ancestors of these people were living here when the first white men came to Alaska," Gruening once declared indignantly. "They saw Baranof and Vancouver and Bering and all the other explorers land on Alaska's shores. How in righteousness and justice can we shun them in their own homeland?"

But the Governor's principal interest now is the development of Alaska by the veterans of World War No. 2. He has great hopes for Alaska as a tourist center. Frequently he has pointed out that Alaska has higher mountains than Switzerland, more fiords than Norway, finer fishing than California, better hunting than Ontario.

"The kind of tourist business to which Alaska is entitled," he said recently, "would employ thousands of people and would be highly appropirate for returning servicemen, particularly those who have been on duty in Alaska. They could combine guiding, ranger work and the management of small camps and lodges, of which Alaska can use many hundreds."

Soldiers all over the globe have written Gruening asking advice on how and where to settle in Alaska. This interest encourages him. He kept in his wallet a clipping from Yank, the Army weekly, telling that Sgt. William Koeninger, of Chillicothe, Tex., had selected an upland lake along the Alaska Highway as a place to open a tourist camp.

"That's the kind of specific plans we need," the Governor said. "Alaska will be the tourist mecca of the Western Hemisphere. Air lines have been developed by the Army and Navy. Alaska is on the direct route to Russia and the Orient. One highway already leads overland to Russia, and I am sure that other roads and perhaps even a railway will be constructed as post-war projects. Thousands of men and women will see Alaska's scenery and they will choose for themselves places to locate in the Territory."

The arrival in Alaska of the first Army nurses was warmly applauded by the Governor, as well as by the G. I.'s. He has always deplored the fact that Alaska has nearly three white men to every white woman. He also believes that the soldiers who have disliked their Alaskan service have been influenced mainly by the absence of female companionship.

"Alaska needs families, real families," Gruening has said many times. "I believe that a lot of soldiers will want to come back here with their wives after the war is over. I always am glad to see nurses, school-teachers, stenographers, and girl clerks come to Alaska. They get married and that adds to the wealth of the Territory, for the value of any land is in the homes and hearths it maintains."

However, the Governor has often warned that pioneering in Alaska is not a bed of roses. Few of the rural areas have electricity. Indoor plumbing does not exist on a frontier. Clearing brush and stumps from virgin land is the hardest kind of work. Lonely surroundings and the prolonged winter darkness present stern psychological handicaps. The North can strike swiftly and savagely against its challengers. An entire patrol of Mounties, veterans of the Arctic, once perished on the Yukon Trail from Dawson to McPherson.

"There is ample opportunity in Alaska," said Governor Gruening to a group of congressional visitors at Juneau, "but it is not opportunity of the magic-carpet variety. Neither is it opportunity involving great wealth and sudden riches. No longer can a man kneel on the edge of a creek and sift out a thousand dollars' worth of nuggets in a

few days. The opportunity in Alaska now demands persistence, elbow grease, a rugged physique, and the willingness to forego many of civilization's pleasures and comforts."

Three main areas offer a chance to farm. They are the timbered Kenai Peninsula, the Tanana Valley near Fairbanks, and the Matanuska colony, where 200 families cultivate 80-acre plots in the shadow of Mount McKinley. The growing season is approximately 115 days. All crops common to North America will thrive except corn, tomatoes, and the orchard fruits. American soldiers on duty in Alaska have eaten strawberries as big as a fist and potatoes the size of elephant's ears. Last year Alaskan farmers sold the Army $750,000 worth of produce; the Army would have bought more had it been available.

Yet Governor Gruening has warned that agriculture in Alaska will never be on a stable basis until marketing arrangements have been worked out which will enable Alaskan settlements to get many of their products from near-by farms instead of from far-off Seattle. "I know of instances," he has said, "in which peas or beans have been transported 1,200 miles from Puget Sound to Alaskan towns that could actually buy their vegetables from local Alaskan farmers."

Blame for this situation has been charged by Gruening to wholesalers who insist that they furnish every item sold by Alaskan merchants. In fact, Seattle and the Canadian prairie city of Edmonton are now engaged in a furious economic battle over Alaska's trade. Seattle was once the only gateway to the Far North, but the new air route pioneered by the Army now takes off from Edmonton. This is the series of wilderness fields via which planes are delivered to Russian crews at Fairbanks. The Alaska Military Highway connects these fields, and so for the first time since the thinly clad cheechakos traveled northward to seek gold in '98, Seattle has a rival as the portal to the Arctic.

Gruening is opposed to absentee ownership of Alaskan resources, regardless of from where it stems. He has frequently criticized the employment of nomadic workers who earn money in the Territory and then go outside by boat or plane to spend it. The election of BOB BARTLETT as Alaska's Delegate in Congress inspired Gruening to a long cheer because both BARTLETT and his wife were brought up in the Territory and got their education at the University of Alaska in Fairbanks. BARTLETT, who is Gruening's closest friend, once panned for gold in the creeks near Circle on the Yukon River, and then was secretary to Delegate Anthony J. (Tony) Dimond, who will be sworn in next month as Federal judge at Anchorage.

There are two definite schools of thought on the subject of Alaskan settlement. Tony Dimond, who has served longer in Congress than any other delegate in the history of the Territory, is sure that Alaska can rival the highly developed Scandinavian lands. He believes that Alaska equals Scandinavia in many resources and even surpasses it in others. For example, he contends that Sweden, with an agricultural population of 2,700,000 people, has less than half the farming and grazing area of Alaska. Doctor Vilhjalmur Stefansson, the noted explorer, backs up Dimond's contentions. In addition, Doctor Alfred H. Brooks, first head of the Alaskan Branch of the United States Geological Survey, long ago predicted that Alaska in time to come will be the home of at least 10,000,000 persons.

On the diametrically opposite side of the question are those who maintain that Alaska has been oversold to the American people. They think that only about 8,500 men and women can be added to the population of the Territory in the years immediately following the war, with fewer than 500 of these on farms. This group advocates a slow bell on any plans for Alaskan development and colonization. Its members have not forgotten that the late Maj. Gen. Wilds P. Richardson, for whom is named Alaska's largest military post—Fort Richardson at Anchorage—once cautioned against arousing false hopes about the economic possibilities of our vast northern bulwark.

PIONEER-TYPE SETTLERS WANTED

Gov. Ernest Gruening exudes optimism over the future of Alaska, but he believes that the potential settlers must fully realize the difficulties they will be up against. "We don't want to encourage any arctic replica of the Oklahoma land rush," he said recently. "Yet neither do we want to be so cautious and deliberate that Alaska fails to take advantage of this great opportunity. If caution had always prevailed in every council, Daniel Boone would not have gone to Kentucky, and Lewis and Clark would never have seen Oregon. I think Alaska can support a considerably larger population. But the men and women comprising that population must be prepared for hard knocks, strenuous work, drenching rainfall, long hours of darkness, and, in the interior, 60-below winters."

Post-war opportunities in the Land of the Midnight Sun, according to Gruening, will be highly diverse. He is sure that dairy farms and livestock grazing, commenced on a modest scale, can be conducted as successfully on the Kenai Peninsula or in the Tanana Valley as in many parts of Norway or Sweden. Fur farms, too, will thrive, he adds. Southeastern Alaska is mantled with a great green cloak of Sitka spruce, the best airplane wood in the world. Rafts of these lordly trees have been tugged 1,000 miles to Puget Sound for use in Mosquito bombers. Lesser forest species will support a pulp-and-paper industry producing nearly one-fourth of the needs of the United States, in the opinion of Lyle F. Watts, Chief of the United States Forest Service.

Governor Gruening thinks that a large permanent military establishment will be kept in Alaska, after the war. He has not overlooked the fact that the late Brig. Gen. Billy Mitchell, our pioneer advocate of airpower, believed "he who holds Alaska holds the world."

"In post-war Alaska," the Governor has pointed out, "there will be soldiers and soldiers' families. These people will require grocery stores, newspapers, barber shops, beauty shops, beauty parlors, movie houses, jewelry stores, and bus lines. This means countless chances in business. Service shops and small businesses of all sorts will be needed. Alaska will be a place for a man with relatively little capital—perhaps $3,500 or $5,000. Opportunities of this sort are typically American in our best tradition."

Ernest Gruening and his wife have two of their sons, Hunt and Peter, in military service. They are both in the Army Air Corps, the elder pilots a B-24. A third son, Ernest, Jr., died in boyhood.

"My sons and millions like them in the armed services will be looking toward the horizons of the future when this war is over," the Governor of Alaska has said. "I should want nothing better for my own sons than that they might be pioneers—whether pioneers in business, agriculture, or professional life—in a new land on a new frontier. That is the opportunity Alaska offers our soldiers."

Equipment of the Army of the United States

REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. O'HARA. Mr. Speaker, I wish to call to the attention of the Congress, and particularly the Military Affairs Committee, an article by Hanson W. Baldwin appearing in the New York Times of January 5. This gentleman is rather generally accepted as an able and fair authority on military affairs. He makes the charge that the new German tanks have proven far superior to ours and he suggests very strongly to the Congress that it is high time an investigation be made as to this and other matters of policy in the War Department itself.

Mr. Speaker, I do not make this statement in any spirit of undue criticism, but I am seriously concerned, and I feel we all should be. The Congress has appropriated, as it should, whatever has been requested for our national defense. The Congress should determine whether our boys are getting the best type of equipment to meet the enemy. I feel it is time the Committee on Military Affairs look into the matter.

The article to which I refer follows:

THE GERMAN BLOW—NEW GERMAN TANKS PROVE SUPERIOR TO OURS—INQUIRY BY CONGRESS URGED

(By Hanson W. Baldwin)

Allied troops, fighting through zero temperatures and driving snow, made progress yesterday in their attempts to nip off or eliminate the German Ardennes salient.

But in the Seventh Army sector from Bitche to the Rhine our thin line of doughfeet still gave ground slowly to the enemy, who has now eliminated nearly all our footholds in the Saar and is commencing to threaten communications of our forces in the Wissembourg gap and at Strasbourg.

Our drive against the Ardennes salient, moreover, will be handicapped—though it may well triumph over this handicap—by the technical superiority of the German tanks to our own.

Why, at this last stage in the war, are American tanks inferior to the enemy's?

That they are inferior the fighting in Normandy showed and the recent battles in the Ardennes have again emphatically demonstrated. This has been denied, explained away and hushed up, but the men who are fighting our tanks against much heavier, better armored and more powerfully gunned German monsters know the truth. It is high time that Congress got at the bottom of a situation that does no credit to the War Department.

This doesn't mean our tanks are bad. They are not; they are good. They are the best in the world—next to the Germans.

GERMAN TANKS BEST

The Germans are now using as the spearhead of their assault forces the Hunting Panther and the Royal Tiger tanks. These tanks, and the earlier models from which they were derived—the Panther and Tiger—are better all-round tanks than anything the Allies now have in the field. They are 10 to 37 tons heavier than the largest tank the Americans now have in battlefield use. With their new 88-millimeter guns, very heavy frontal armor, and wide tracks, they have more armor, more hitting power, and are better mudgoers than our tanks. They have a lower silhouette and their interior is less cluttered and more comfortable.

Our apologists have repeatedly said that we prefer a lighter tank with more maneuverability, but the Germans have demonstrated time and again the maneuverability of 45- to 72-ton tanks, and bridges and rivers have been no obstacle to them. And relatively recently we have been forced—belatedly and after too many men have died in lighter tanks—into building heavier tanks, some of which, it is to be hoped, may soon appear on the battlefield.

Other apologists have said that tactically we don't believe in fighting tanks with tanks. To which the only possible answer is an expletive. Every campaign of this war has sooner or later involved tank battles; practice, not theory, is the best guide to tank construction.

Still other apologists say that we can knock out the best of the German tanks. Of course, we can; no tank can be built that cannot sooner or later be knocked out, just as no ship is unsinkable. But the point is the relative degree of invulnerability, and, tank for tank, the German tank has more protection and is more sure of steam-rollering its way to a breakthrough than ours are.

UNITED STATES GUNS OUTCLASSED

We knock out the German tanks, but the 37-millimeter and 57-millimeter guns and even the short-barreled 75-millimeter are too light to do the trick, unless they get in close-range lucky side shots. Even the bazooka no longer holds its former terror for some of the German monsters. Our 76-millimeter high-velocity gun and the 150-millimeter can punch through the heaviest of the German armor, but only at relatively close range and provided the projectile strikes with a favorable angle of impact. Both guns are definitely outclassed for tank and antitank use by the new German 88-millimeter.

The 90-millimeter tank, antitank, antiaircraft and artillery piece, is the best of our high-velocity weapons, but the improved long-barreled German 88-millimeter is as good or better. We have 90-millimeter tank destroyers but do not yet have a 90-millimeter gun in any tank now fighting in France, so far as is known. We knock out the German tanks, but too often we have to do it the hard way; two or three guns against one German tank; several bazooka teams, or two or three of our M-4's against one German monster to get in a side shot against the weaker German side armor.

This condition is a well-known one along the fighting fronts. Americans at home, who take it for granted their sons are fighting with the best equipment in the world, are surprised at the German qualitative superiority. The British public seems to be better informed about the German qualitative tank superiority than our own, and for a time this question became an issue in Parliament, as it should become in our Congress. A recent dispatch to the British Information Service from London, spoke of the more heavily armored and armed German tanks and, in effect, said that we were opposing the German quality with quantity.

This deficiency and others almost comparable to it are not the faults of our designers and technicians. Far better better tanks than any we have in the field undoubtedly exist on the drawing boards or even in the factories in this country and may soon be in action. But the point is, the Germans always—save for a brief period in north Africa, when the enemy sent the first of their Tigers to Russia—have been ahead of us on the battlefield. And it is battlefield service that counts.

INVESTIGATION URGED

The reasons for this time lag are complicated and not easily determined; that is why Congress should investigate. They appear primarily to be a product of conservatism and traditionalism in the Army mind, complicated organization in War Department and supply and technical services in this country, plus lack of adequate liaison between these services and too much paper work. Too many checks act as delaying agencies between blueprint and battlefield, very few as expediting agents.

The Ordnance Department lays the blame on Army Ground Forces, Army Service Forces, or Armored Center; the Armored Center blames Ordnance, etc., ad nauseam. The links in the chain of procurement are many and some are clearly weak. The War Department General Staff, the Army Ground Forces, the Army Service Forces, the Ordnance Department, the Armored Center, the Armored Board, and several other subagencies, including the so-called "coordinating concern," the Requirements Division of the Army Service Forces, all have a finger in the pie.

The consequences are that we get good tanks on the battlefield at long last, but by the time they fight they outmatch the German tank of yesterday—not the German tank of today. Of course, we get them in greater quantity than the Germans, but shouldn't we have qualitative superiority, too?

FOR AHEAD IN OTHER ARMS

The adverse comparison of some of our weapons with the German does not stop with tanks. In antitank guns, mines, and mining technique, and self-propelled guns, the Germans have been consistently ahead of us on the battlefield. The Germans beat us to the battlefield with rockets. They were the first to use robot bombs, giant rockets, and jet-propelled planes. The Army Air Forces swell with false pride in announcing that by using a captured German robot bomb as a model their engineers have built a better robot in 60 days. So what? The proof is on the battlefield. The Germans have been using their's since June; our's are not yet in use; when they are the enemy will be another step ahead of us.

The same thing is true of the jet plane. In design, in pilot models, in technique and theory, and blueprints we are probably equal to, or ahead of, the Germans. But their jet planes are in use in the skies over Europe; ours are not.

There is no lack of American inventive genius, no lack of engineering skill, no lack of devotion and energy, but there is a superfluity of red tape; there is over-organization and there is lack of clear, directive vision. There is far too much time lag between design and battlefield use.

Congress should determine why.

For only by getting the facts and then willing facing them—no matter how punishing to our conceit—can we rid ourselves of the national habit of boastful self-deceit. And only if we put more emphasis upon quality will we get it. Today we are in danger of sacrificing qualitative standards for quantitative success.

Critical Meat Shortage

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter I addressed to the Honorable Fred M. Vinson, Director of Office of Economic Stabilization; Chester Bowles, Administrator, Office of Price Administration; and Marvin Jones, Director, War Food Administration:

CRITICAL MEAT SHORTAGE

On July 3, 1943, after months of study of the meat problem which confronted the Nation and which had become most acute, I wrote to you, to the Administrator of the Office of Price Administration, and to the Director of the War Food Administration, urging a workable meat program.

Since that time, we have witnessed surpluses, shortages, sudden reversals in the market, and maldistribution, all of which have been harmful to the war effort and to the furnishing of adequate civilian supply.

I am again repeating the general purpose statement of my program of July 1943, together with the recommended program, in brief, with comment which is directly applicable to the acute meat situation of today. I am of the opinion that had this recommended program been put into effect in its entirety many of the present-day difficulties would not now exist. Because of only partial willingness to meet the problem squarely, we today in America have unnecessary confusion.

GENERAL PURPOSE STATEMENT, JULY 3, 1943—APPLICABLE TODAY

1. Statement July 3, 1943: Bring meats and poultry from producer to consumer in adequate amount to properly feed all our people.

Comment January 8, 1945: The administration has failed to accomplish this purpose, as is evidenced by meat strikes in the East, critical shortages, and market congestion. New York City, many other points in the East, and cities throughout the country are unable to obtain supplies of beef because under W. F. A. regulations the armed forces are now confiscating 60 percent of the slaughterers' kill on many grades at a loss of $40 per head to the slaughterer. This leaves the slaughterers, for civilian sale, 40 cattle out of each 100 cattle killed, and it results in a consequential loss of $100 per head if sold to the wholesaler or retailer at O. P. A. ceiling prices, and a reduction of the kill.

2. Statement July 3, 1943: Provide ample supply for war needs.

Comment January 8, 1945: The administration failed to provide ample supply for war needs. Military and naval demands have fallen short; and the war needs have first priority over all other needs. The meat program, as carried out by War Food Administration, and the price program, as carried out by the Office of Price Administration, have so hampered processing and movement of meat in the market that they have restricted supply to both military forces and civilian requirements.

3. Statement July 3, 1943: Increase production of meats and poultry.

Comment January 8, 1945: The administration failed to adequately increase production of meats and poultry because of—

(a) Lack of faith upon the part of producers, processors, and packers in programs set forth by W. F. A. and O. P. A. All programs have been established after procrastination, which has been harmful to any plan for producers. Uncertainty of market value of crops engenders immediate uncertainty in plans for increased production.

(b) Mismanagement of feeding is direct result of maladministration on the part of the Department of Agriculture, O. P. A., and W. F. A.

(c) Had a sensible feeding program been adopted, there would have been an increase in the production of ammunition fats. Today we suffer a shortage.

(d) Allocation has been mentioned in amendment 10 to Ration Order 16 (O. P. A.) as a matter of policy, but O. P. A. then failed to implement policy with action.

4. Statement July 3, 1943: Function in conformity with the spirit and letter of the Price Control Act.

Comment January 8, 1945: The mismanagement of the Price Control Act has effectively created black markets.

5. Statement July 3, 1943: Bring to the consuming public adequate supply at a fair price.

Comment January 8, 1945: With the operation of competing markets—regular (which is price control) and black (which is out of control)—the public does not know what the fair price of meat products is today.

From January 1, to November 30, 1944, Lend-Lease has shipped 58,821,000 pounds of lamb and mutton to England, but the administration has not in any way planned, through official circles, to have the English Commonwealths of New Zealand and Australia ship an adequate supply of this meat to Great Britain. Both of these commonwealths could ship many times this amount without depleting their stocks; neither has the administration permitted importation of lamb and mutton to make up United States shortages. With proper functioning on the part of the United States agencies, Great Britain might have been supplied with lambs and mutton from her own commonwealths.

6. Statement July 3, 1943: Eliminate the black market.

Comment January 8, 1945: Black markets have not been eliminated and have not been diminished. They have been accelerated by the poor policies in price regulation.

7. Statement July 3, 1943: Protect the health of the Nation.

Comment January 8, 1945: Lack of meat proteins in the diet endangers health. Health controls on meat were destroyed by the growth of the black market, which is uncontrollable. Black-market meat is a constant danger to the public health.

8. Statement July 3, 1943: Provide an adequate program to supply post-war needs.

Comment January 8, 1945: Immediate effect on post-war needs has been the crippling of the independent meat industry in America. (This includes packer, processor, wholesaler, and retail butcher.) Lack of a workable program has left a great portion of the industry in bankrupt condition, and therefore, unable to effectively function either now or in post-war.

9. Statement July 3, 1943: Preserve the small-business units in the meat and poultry industry, and encourage them to greater production.

Comment January 8, 1945: Small business units, by virtue of the regulations of O. P. A. and W. F. A., have been in a life and death struggle for a mere existence. Greater production has frequently meant greater loss or bankruptcy.

10. Statement July 3, 1943: Expedite the war effort.

Comment January 8, 1945: Obviously, from the foregoing comments, O. P. A. and W. F. A. have operated to the direct injury of the war effort.

I think it is very important that the same recommendations made on July 3, 1943, be remade now. They were given in good faith as a constructive suggestion. I repeat them with the same interest, together with supplemental recommendations and with comment resulting from experience of the past 18 months.

RECOMMENDED PROGRAM, JULY 3, 1943

1. Recommendation July 3, 1943: Revision of War Meat Board, as follows:

(a) Creation of Industry Section of 15—Beef, Pork, Lamb, and Veal.

(b) Creation of Industry Section for Poultry. (Detail omitted.)

Comment January 8, 1945: I recommended on July 3, 1943, that a representative revision be made of the War Meat Board, so as to bring in people representing all branches of the industry involved; people who would competently understand day-to-day problems. When my recommendation was made, there was a change made in the personnel in the War Meat Board, but not in accordance with the representative feature of the recommendation, nor with the general purpose to obtain proper spirit and attitude.

2. Recommendation July 3, 1943: Establishment of retail ceiling on all grades of dressed beef, except Government grade AA. Ceiling on all other grades of beef, lamb, veal, pork, and poultry to be that now established by O. P. A., which is the rolled-back level. (Detail omitted.)

Comment January 8, 1945: This recommendation has been acted upon in part. Failure to carry out this recommendation completely has reduced the average weight of beef animals, and has shortened the supply for both military and civilian needs; and has shortened the supply of fats for ammunition.

3. Recommendation July 3, 1943: Establish wholesale ceiling which allows a reasonable profit mark-up for retailer. (Detail omitted.)

Comment January 8, 1945: This recommendation was partially complied with, but the break-down due to pressure not eliminated as suggested in other recommendations, has shortened the wholesalers' supply. There is a reasonable profit only when there is merchandise with which to trade. This seems to be difficult for the Administration to understand.

4. Recommendation July 3, 1943: Establish a slaughterer's selling price which is based on the cost of live animals and poultry plus operating cost and shrinkages with allowance for minimum profit. (Detail omitted.)

Comment January 8, 1945: Failure to carry out this recommendation is the basic reason for most of the present difficulties.

5. Recommendation July 3, 1943: A feeder's selling price ceiling should be placed on all but cattle which will grade AA when dressed. Likewise the feeder must be protected by placing a ceiling price on stocker and feeder cattle and beef calves. (Detail omitted.)

Comment January 8, 1945: This recommendation still holds today and it has been carried out (virtually) on pork. Why is beef neglected? The same principle is involved. Why does W. F. A. and O. P. A. continue to procrastinate and accentuate the shortage? In my recommendation on July 3, 1943, I stated that the present loss of live beef weight approximated 200 pounds per head of cattle; and that this total loss annually approximates over 2,000,000,000 pounds. Today that loss is in excess of 3,000,000,000 pounds. This is an important contributing factor to the acute shortage and it emanates from the stupid program to reduce weights.

6. Recommendation July 3, 1943: Producers and feeders of cattle should be protected in their feed costs. (Detail omitted.)

Comment January 8, 1945: Our feed crop now is more than adequate for a production program to increase the weight of beef cattle to be marketed. The United States Department of Agriculture in 1944 underestimated the corn crop and there is such a large supply on hand now that we have adequate corn available for cattle.

SUMMATION

In my plan of July 3, 1943, it was noted under summation:

"The plan outlined above is equally applicable to lamb, veal, pork, and poultry when the peculiarities of their production are analyzed similarly. Beef is the No. 1 problem of maldistribution and consumer shortage. There is not a shortage of live cattle. Lacking proper consumption and distribution, a critical shoratge may easily develop. The entire beef problem can quickly be solved by (a) proper adjustment of byproduct prices; (b) protection of feed costs; and (c) proper proportionment of the retail price."

It is not, by any stretch of the imagination, possible to attribute the beef shortage of cattle population in the country. According to the Department of Agriculture, as of January 1, 1942, the United States had 75,162,000 head of cattle; January 1, 1943, 79,114,000 head of cattle; and January 1, 1944, 82,192,000 head of cattle; and it has been estimated that we now have at least 81,000,000; and that the supply of feed cattle in 1945 will probably be as large as it was in 1942.

It is obvious, therefore, that the problems of production and distribution of beef have been accentuated by poor management. Government agencies, alone, must take the full responsibility for the beef shortage to both the military and the civilian consumer.

Raw fats and tallow have been priced so low by the O. P. A. that we are unable to increase our production of fats adequately, or to even import tallow to supplement our shortened supply. The bad price regulations on beef accentuate this. This is causing a shortage of fats for soap, glycerin, explosives, and drugs, and is seriously affecting the war effort.

In 1943, I pointed out the need of corrective measures and the need is clearly evidenced by present conditions. If the proper price were paid for fats, tallows, and hides, a lower price for edible beef could be obtained.

We are unable to obtain hides from Brazil or Argentina at O. P. A. ceiling prices and the British are reaping a full benefit from this by obtaining, at a higher price, the leather that would normally be allotted to us. It is the British influence which prevents these needed adjustments by O. P. A. on leather, and accordingly, directly injures our domestic supply during the war and our post-war foreign trade in shoes and leather goods.

Had the program recommended in 1943 been adopted promptly, it is probable that the following additional and supplemental recommendations would not have been necessary. Since additional aggravation has been suffered, I suggest the following supplemental recommendations:

1. That the President appoint a single executive food authority responsible to him and to the Congress.

2. Livestock ceilings, with Federal producers' subsidies, if necessary.

3. Control of livestock ceilings through the present normal trade mechanism, namely, accredited livestock exchanges and livestock markets. Subsidies should not be paid on cattle purchased by slaughterers when such cattle has not been passed through accredited centers. Certificates could accompany each sale. This would diminish black markets tremendously, if not eliminate them.

4. The Government should pay for all meat purchased for the armed forces and lend-lease—cost plus a reasonable profit to slaughterers. This is done on every other commodity for our war supply. Why not on meat?

5. Put into effect a rationing program separating from meat the cheese, butter, and other items not related to meats.

The foregoing has been submitted in the hope that you will urge it upon the W. F. A. and upon the O. P. A., thereby adequately supply the armed forces and the consuming public with meat food.

Respectfully submitted and recommended.

WALTER C. PLOESER,
Member of Congress.

Bradley Sees Nazi Thrust Backfiring

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1945

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of statement of Lt. Gen. Omar N. Bradley from today's Washington Post:

TEXT OF STATEMENT

The German attack was the direct result of pressure exerted by the Ninth, First, and Third American Armies—and the forces of the Sixth Army group (Seventh, United States, and French armies)—against the weakening German defense line.

The advances made during November and December were threatening vital Grman areas. It was necessary that the Germans launch some diversionary attack in sufficient strength to cause the Allies temporarily to stop their offensives against these vital areas and to try to gain time.

The build-up of German forces had been observed in the Ardennese area for some weeks before the attack, and the possibility of a German attack through the Ardennes was thoroughly studied by me and my staff.

In leaving the Ardennes line lightly held, we took what is known in military terminology as a "calculated risk," to strengthen our northern and southern drives. In other words, instead of employing our surplus divisions in the then-quiet Ardennes, we used them to attack in other sectors. This technique—of striking boldly while taking calculated risks—is what has gotten us to the German border.

FOE FOUND SLIM PICKINGS

In my opinion, had we followed more cautious policies, we would still be fighting west of Paris. We felt, in the case of the Ardennes, that we could take this risk because this territory contained no strategic objectives or large supply installations, and when Von Rundstedt sent his troops into action with orders to live on American dumps, they found slim pickings in an empty pocket. Many of the prisoners we have captured have been hungry and we have now captured many tanks and vehicles stalled for lack of fuel.

The actual timing of the attack and its strength were somewhat of a surprise. The attack was skillfully launched. Field Marshall Von Rundstedt's movement of his reserves from the Colcgne area to the jumping-off position in the Siegfried Line was masterfully executed. This was made possible by a period of bad weather which restricted our air reconnaissance.

In considering the possibilities of a German attack through the Ardennes, we recognize that it might meet initial success, but we felt the nature of the terrain and the size and mobility of our forces would justify our taking a risk. They would enable us to meet and stop an attack before it could do too much damage. This is exactly what happened.

ENEMY'S SCHEDULE UPSET

The enemy's schedule for his attack was upset by the heroic resistance of our troops and by the speed made by all three armies in shifting divisions to meet the attack.

The result was that wherever the enemy turned along the north flank, groping toward a place where he could break out in the Belgian lowlands, he was met by troops of General Hodges' First Army. He found blocking his way the same American divisions which had been soundly thrashing his best ever since the beachhead days of Normandy.

An even greater surprise to the enemy was the quick appearance of General Patton's (Third) Army on the south flank. Matching the speed with which General Simpson's Ninth Army and General Hodges deployed their divisions from the north, General Patton's forces first relieved Bastogne—which was, of course, a key to the whole battle—and then attack with such fury that the enemy was forced to slow his drive on the north. He had, in fact, to move some of his best SS Panzer divisions across the salient in an attempt to check General Patton's unexpected advance.

WEATHER HAMPERS YANKS

The German attack, launched on December 16, cut our direct telephone communication to the First Army and direct roads over which personnel contact was normally maintained. The weather prevented us from making frequent personal contacts with the First Army by plane.

It was therefore decided that the Twenty-first Army Group (originally comprising Marshal Montgomery's Second British and First Canadian Armies) should assume temporary command of all Allied Forces north of the salient (including the First and Ninth United States Armies). This was a temporary measure only, and when the lines are rejoined, the Twelfth Army group (First, Ninth, and Third Armies) will resume command of all American troops in this area. The soundness and flexibility of our Allied command is illustratcd by the ease with which this change in command was made.

Field Marshal Montgomery has made a notable contribution. Even before he took this temporary command of the First and Ninth Armies at 12:20 a. m. on December 20, the field marshal had moved to station his British and Canadian forces in position to protect Antwerp in event of any unforeseen breakthrough. It can now be announced that British troops were at that time dispatched to the tip of the salient. These troops served with distinction, engaging the covering forces of the Germans near their farthest advance.

GERMAN LOSSES ENORMOUS

Whenever the weather permitted, American and British air forces have seized every opportunity to strike together, and the effect of their coordinated blows has been of very great importance.

German losses in this offensive have been enormous. Our artillery and air forces have been able to punish him much more severely in the open than had been possible while he remained in his fortifications. Even in the matter of taking prisoners, despite the fact that the enemy had taken the offensive, the total number taken since December 16 by the First and Third American Armies is much greater than the number of United States troops reported missing in action or captured. His dead and wounded must be many more times the number we have suffered. Events may prove that the losses in men and matériel and the loss in morale when the salient eventually is reduced, may materially affect the Germans' ability to resist on the western front.

I do not mean to imply by this that we can assume the Germans are on the verge of collapse. They are not. We have known for some time there will be considerable fighting ahead. But we have never had any doubt about the outcome, and we have none now.

YANKS KNOW EVERY TRICK

What the American soldier has done in the Ardennes in the last 3 weeks is to my mind one of the greatest stories in the history of fighting men.

Most of our Army are veterans now and know every trick of the trade. But there were a lot of men who stopped the Germans in the Ardennes who had only joined us a short time ago and had only what they had been taught in their training—and their native courage and character—to carry them through the battle. These Americans, veteran and newcomer, fought against picked German soldiers especially trained, rested, and equipped just for this offensive.

The Germans had thinned the Siegfried line to make this force possible. Their soldiers were given a pep talk before the attack and told this offensive would take Antwerp in a few weeks and end the war.

WHIP NAZIS' BEST

They believed what they were told and fought with skill, and in places, with suicidal determination. So it turned out that the American soldier met the best fighting force that German militarism had been able to put in the field, and licked it to a standstill again and again.

In many places the Panzer tactics temporarily split our troops up into small isolated units. The men then fought even more determinedly than they had in the attack. They used an enormous variety of weapons with deadly effect. The stories of individual heroism that you have read in our own Army paper, the Stars and Stripes, and ably reported in the press, are far from being exaggerated, and have been, to my certain knowledge, if anything, understatements. And, of course, only a small minority of the things that went on out there could have been observed or reported. The American people can be deeply proud of the achievements of their sons and brothers on this battlefield.

New Year's Eve Address of Hon. Claude Pepper, of Florida

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1945

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered on December 31, 1944, over the Columbia network from Station WQAM, at Miami, under the auspices of the United Nations Educational Committee.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow countrymen, in a very real sense this is a grim New Year's eve. We now know that the devil Hitler still lives and does his evil work. Our men upon the western front are locked in a death grapple with a resurging enemy who has broken out of his defenses and hurled himself in a vicious and desperate assault upon our forces and the areas which we recently liberated. We have experienced the shock of realizing that the war is not over upon any part of the far-flung battle line. The enemy is still strong, determined, and desperate. He is better equipped, stronger, and more confident than we thought he was. We now realize that the road to victory is long and hard and that it will not be given to us, but we shall have to win it with blood, sweat, and tears. This New Year, therefore, must be for us all a time of rededication to the high purposes for which we entered the war. And those objectives, vital now as ever they were, must again be declared. We must state them so clearly that we shall not only see them but never lose sight of them nor let them escape from us.

We know that we were attacked on December 7, 1941, by a dastardly enemy, greedy for conquest and power. As a part of the same assault, Germany and Italy and their satellites declared war upon us. Of course, we would defend our soil and our integrity, and we had no alternative but to accept the gage of battle to the death with the strongest enemies we have ever faced led by the evilest

men who ever wrought their satanic wills into war.

Yet, we cannot say that these attacks were unforeseeable, for the world, for decades, had seen the Japanese engaged in a war of conquest upon unoffending China and had observed that this yellow snake was coiled ready to sink its fangs into any prey which it might be able to strike down.

And for nearly a decade the world had listened to the fiery words of the monster Hitler. All who could see and hear knew that these wretched creatures were bent upon war upon the world and upon civilization. They wanted to uproot and turn over the way of life we know, with its satisfying freedoms and privileges, and put the yoke back on man's neck and the shackles upon his feet and his mind; the clutch of tyranny about his throat and his conscience. War was a-borning long ago.

So when we took the gage of battle with these enemies, we took up the fight not only for our own security but against the tyranny they would impose upon mankind. Moreover, we entered the fight not only against such dictatorship in the present but against the wars such dictatorships would torture mankind with in the years ahead.

With high purpose and pure resolve our might was mobilized and hurled into the path of these on-rushing foes, with a single determination in us all that neither they nor their wicked purposes nor their accursed aims should pass.

We have marvelously progressed in the struggle. We have grown from weakness to strength. We have moved from defense to offense, with but a little bend in the line upon a battle front that circles the earth and winds about over the continents and the oceans and reaches from the thin air to the dark ocean depths.

If there are signs of weakness in our lines they are not along the battle front, for there men and women are strong in courage and purpose. They are not afraid. Indeed, in all those millions, our American men and boys who have, day and night, in the mountains, on the rivers and deserts, on the oceans and in the skies, faced dangerous and desperate foes, not one, by the records of our armed forces, has flinched or turned his face from his antagonist—not one American has been a coward, it is officially reported by our Government in this war.

But there are unmistakable evidences of weak places in our might and armor.

The corrosion is in the moral sphere, in the field of our thinking and our feeling.

In the first place, confusion about the high aims for which we fight has crept into our understanding. Men throughout all history have fought best when they had a great cause for which to fight, even a cause which was greater than their own preservation. Men are never such irresistible warriors as when they fight for sheer right. We fought another war a generation ago against this warrior-hearted Germany under the moving impulse not only to keep our land safe but to make the world safe for democracy. We had seen a series of unhappy circumstances steal away the realization of that high aim from those who gave their lives and their limbs, their futures and their families to achieve it.

There were many of us, therefore, who felt that when we entered this war it was to carry on the great crusade to which those gallant boys from homes and firesides of America gave their fresh lives in 1917 and 1918. We thought we could almost say again, in the sentiment of Lincoln, that we rededicated ourselves to the completion of the unfinished work to which they gave the last full measure of devotion.

We, in our hearts, felt that we would not let this scourge of war continue to come again and again and again to generation after generation of guiltless boys. We felt that if by our failure to win the last peace we had to pay the price of the terrible war this, at last, must be the last war.

Accordingly, on New Years day 1942, when the shock and shame of Pearl Harbor was still stirring us, there was organized in our White House, under the inspiration of our President, the United Nations, twenty-six, I believe, solemnly subscribing their names to a document without precedent and covenanting not only that they would wage war to victory against the common enemy and not make a separate peace, but that they subscribed to the high purposes and principles of the Atlantic Charter declared unto the world by two great hearts and gallant spirits in our own Western Hemisphere in August 1941. It was also in the spirit of the "four freedoms" which our President had taken out of the hearts of good men and women everywhere and declared to the Congress on an early day in 1941: freedom of conscience everywhere in the world, freedom of speech and expression everywhere in the world, freedom from fear everywhere in the world, freedom from want everywhere in the world.

This was the spirit which moved America to a single unity and purpose against the enemy in those dark days.

Now the war has progressed. The enemy has been pushed back veritably to his own shores and borders. He has been cut down and weakened. We know we have made great strides, therefore, toward victory.

And we have also gone far toward realizing a concert of nations through which the security and the well-being of the good peoples of the world may be preserved and advanced. We have organized the United Nations Relief and Rehabilitation Administration, through which many nations are working as one to feed and clothe and shelter and repair the broken world. We have, in a common conference, drawn the outlines of an international bank to stabilize world currencies and prevent the sort of collapse which produced Hitler in the chaotic Germany which came after the last war. We have set up a council of the United Nations to promote the revival of learning after the war. And we have set up a council through which some common expression has been achieved of the United Nations.

Far more significant, the representatives of Great Britain, Russia, China, and the United States have gathered in our own National Capital and for weeks have labored upon the draft and outline of an organization to be called the United Nations, which will translate into reality our unity as nations and be the machinery and the force through which we may preserve the peace and promote the welfare of the nations and the peoples of the world.

We called this the Dumbarton Oaks Conference. We have wisely striven to draw up and to set in motion this international organization while we are fighting in order to help us fight better together and to be the means through which we shall effectively win the peace as well as the war.

But before this organization has been consummated, and because we have not had it, there are ominous signs of our falling apart as United Nations and there are clouds upon the horizon which dangerously obscure the high aims, for which so many have already died and so many others are yet to give themselves.

In Europe, separate alliances are being entered into between nations for mutual defense in the future. So-called regional arrangements are being made. Spheres of influence are being set up and recognized. Large nations are interfering in the kind of government little nations have for the ordering of their own lives and destinies. The smell of the old order is in the air already. The seeds of future wars are swelling and sprouting.

Those who in the new days of this year are to lay themselves upon the altar of the future have a right, before they surrender themselves up, to know that we shall keep the faith we have declared to them. They have a right to know that we are capable of building upon their altars those institutions which shall be worthy of their sacrifice.

As we resolve that a nation shall gird its loins for the final stages of this awful struggle, holding back nothing, giving everything needed to speed the victory, can we not also resolve that we shall call upon those who speak for us to redeclare the high aims for which we fight and without further delay to progress the forming of that organization upon which we pin our faith for peace in the future? Is it not right that we in America for this new year shall also resolve that there is but one place for this mighty Nation in world affairs and that is at the front, showing and leading the way to all others, pressing for and never yielding on the principles of right and justice among nations as among men willing to fight for those things because we know that at one time or another we shall have to fight for them?

As I speak to you, therefore, under the auspices of the United Nations Educational Committee, established jointly by the League of Nations Association and the committee to study the organization of peace, I believe I speak the sentiments of us all when I say that it is our new purpose in this new year, God helping us, not only to undo the enemy, but to move on toward the greater victory, the kind of true victory of which Abraham Lincoln spoke 78 years ago when he said: "With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle and for his widow and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

American Leadership in Foreign Policy

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1945

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "American Leadership in Foreign Policy," delivered by the distinguished junior Senator from New Jersey [Mr. SMITH] before the Kiwanis Club of Atlantic City, N. J., on Thursday evening, January 4, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On November 7 last I was honored by the voters of New Jersey in being elected to the United States Senate to fill the unexpired term of my close friend, the late W. Warren Barbour. As I was filling an unexpired term, I was duly sworn in as a Member of the Seventy-eighth Congress on December 7. Consequently, I served in the Senate during the closing days of that session. As a freshman Senator I had the responsibility of being called upon to vote on some vitally important legislative matters, and also to participate in the confirmation of certain Presidential nominations. I want to speak particularly

of the nominations made by the new Secretary of State, the Honorable Edward R. Stettinius, Jr., of his assistants in the new State Department reorganization.

In spite of objections made by a few Democratic Senators, as well as certain Republican Senators to some or all of the nominations submitted by the Secretary of State, I voted to confirm all of them. During the recent campaign, and in fact long prior to it, I took the position that the development of an American foreign policy should be a nonpartisan matter and that Republicans as well as Democrats should cooperate fully with the Executive in the declaration of it. Immediately after the reelection of President Roosevelt and my election to the Senate, I stated:

"The election is over and the people of the United States have made their choice.

"I am happy to extend my sincere congratulations to President Roosevelt on his reelection and to pledge him my full loyalty and support in the all-American job that faces us.

"Our first objective is a speedy final victory with the return of our men and women from the front as soon as possible.

"Our second objective is the writing of the peace and the establishment of a world organization including all nations, large and small, to preserve that peace. Partisan politics must not, in any form, enter into these important negotiations, nor should in any way interfere with the effective setting up of this world organization to prevent future aggressions."

In light of this statement and my deep conviction that the times are far too serious for us to inject partisan politics into foreign policy issues, I felt that I should support the President and the new Secretary of State in their nominations, though I was urged even by left-wing new dealers in the Senate and by the CIO-PAC group to hold them up.

This action of mine was the logical consequence of a consistent attitude which I have taken even before Pearl Harbor, advocating the removal of the foreign policy issue from the late campaign and urging a bipartisan approach to the determination of the fundamental position of the United States. As a member of the Republican National Committee in 1942, as a member of the Republican Post-war Advisory Council which met at Mackinac Island in 1943, and as a candidate for the United States Senate in 1944, I have supported the policy of international cooperation by the United States with other nations to preserve the peace of the world. This is the same policy as that incorporated by Secretary Hull in the Moscow Conference of 1943, and adopted by the United States Senate by an overwhelming bipartisan vote in the now well-known Connally Resolution.

I feel it is proper at this time to digress for a moment to acknowledge my indebtedness to President Woodrow Wilson who was Professor of Political Economy when I was an undergraduate at Princeton University some years ago. Woodrow Wilson's international idealism, both during my undergraduate days and during and after World War No. 1, made a profound impression on my thinking during those periods, and left me with an eagerness to contribute what I might toward the establishment of the rule of law for the rule of force in international affairs. I admit to my own disappointment when the United States failed to join the League of Nations after World War No. 1, although I was keenly aware of the limitations of the League of Nations covenant, of the mistake in attaching it to the Versailles Treaty, and of the unfortunate and much misunderstood controversy in the United States Senate over its adoption. This is no time to attribute blame to either one of our parties or to individuals; this is the time to profit by the mistakes of the past and to think constructively and positively of the future.

With this evolution of my international thinking, it was natural that I should have taken the side of a liberal foreign policy, as evidenced by the Connally resolution and the Moscow Agreement. It was natural also that I should have found myself in general sympathy with the principles laid down by the so-called Atlantic Charter which seemed to express the ideals of an international philosophy which might be the ultimate goal of international collaboration. Therefore, I felt it consistent, during my campaign for the Senate, to insist that we stand for these declarations of principle, and to support the President and Secretary Hull so far as they represented this position, as opposed to what seemed to me to be the narrower, hands-off attitude of some members of both the Republican and Democratic Parties.

With these convictions as the foundation of my attitude toward the participation of the United States in foreign affairs, I am compelled now to admit a feeling of disillusionment and discouragement over what seems to be a lack of leadership on the part of the President in not seizing the opportunity for placing the United States in the forefront of the nations of the world in establishing as post-war international policies those principles for which we have claimed the war is being fought. We have before us an amazing example of inconsistency in the conduct of our foreign relations, especially in light of the adoption of the Connally resolution and the prior declarations of the Atlantic Charter.

Our military and naval cooperation with the other United Nations and particularly with those who are carrying the major burden of the war effort, namely, Great Britain, Russia, and China, has been magnificent. We worked effectively through conferences between the military leaders of the United Nations for the joint prosecution of the war. We determined our military objectives and we went after those objectives vigorously.

But when it came to the political problems of Europe and other parts of the world, which will inevitably involve the future peace, the President thus far has failed to accept the responsibilities of leadership. Much has been accomplished by the destroyer-base exchange, the lend-lease policy, and our participation in international conferences, such as the food conference of a year ago, the Bretton Woods monetary conference, the relief and rehabilitation set-up, and the most recent Dumbarton Oaks proposals. But these policies and activities, as important as they are, are not adequate in themselves if we are once and for all to put an end to the traditional power politics of the past.

In light of the strategically strong position we were in from the moment we declared war and joined Britain and Russia in the Allied offensive, we should have insisted through the President, who was our spokesman, on the setting up of a United Nations Council which would deal with the political problems of Europe and of the world in the same united way in which the joint Chiefs of Staff deal with the military problems.

By failing to insist that such a council be set up, we have left the impression that our policy was to postpone the decision of major political questions until after the terms of the peace have been determined upon. Nothing could have been more disastrous for the future peace of the world than this policy on the part of the United States. The President should have conferred with the leaders of both parties in the United States Senate and should have insisted on the setting up of the joint council before what has now happened could possibly have taken place. Had there been such a joint council to consider and attempt to solve these problems, it would not have been possible for England and Russia to tackle them unilaterally, or for both England and Russia to tackle them together.

America must fight for morality in international affairs. The Atlantic Charter gave us the hope of open covenants openly arrived at and of people having the right to choose their own governments without the tyrannies of power politics. A United Nations council, with its policies made known to the peoples of the respective countries, would be a step toward the realization of a lasting peace based on justice and understanding. No system of world organization, however, can be a substitute for integrity and trust. With the right united spirit we can go forward. Let us demand team play as between the nations. If other nations refuse to cooperate, if they prefer the old game of world power politics, they will have to take the consequences at the bar of world opinion.

What actually has happened? Instead of open covenants or understandings openly arrived at, according to the sound Wilson doctrine, there apparently have been star-chamber conferences between President Roosevelt, Churchill, and Stalin, out of which have grown all sorts of uncomfortable rumors, especially, for example, as to what was decided at the Tehran Conference. It looks now as though the President agreed to give Russia a free hand in determining the boundary questions of central Europe, or else told Russia and England to determine those questions together, and that it was no concern of the United States. Whatever happened at Tehran, the principles of the Atlantic Charter seem to have been forgotten in light of the most recent developments. These developments which were obviously inevitable in the absence of the interest of or participation by the United States were brought to light by the most recent incidents which seem to threaten the future cordial relations of the United Nations leadership.

For example:

The British single-handed action in Italy and Greece—apparently with Stalin approval;

The Stalin determination of the Polish boundary question—apparently with Churchill approval; and then following these a belated and feeble announcement by the President through the new Secretary of State that the United States favored the fundamental right of small countries to determine their own future governments.

In light of the way in which the situation has developed, I feel that the President, representing the United States, was to blame in letting these issues drift, leaving Britain and Russia, who are most intimately concerned with the problems, to act alone. In view of our failure to act promptly with our allies in developing a policy in these matters, we cannot blame Great Britain for seeking single-handedly to maintain order in the Mediterranean area which is so vital to the British life-line to India, nor can we blame Stalin for seeking a solution to the problem of the western boundary of Russia which means so much for Russia's future security.

Had the action taken by Great Britain in Italy and Greece been taken by a United Nations Council the uproar and even bloodshed might readily have been avoided if it had been clear that the motive was the preservation of the peace in these areas and the protection of the people in their right to self-determination. Britain's unilateral action was bound to be suspected as a part of British imperialistic designs. The same might be said of the Polish boundary question. Had a United Nations Council sought a fair solution to this question, which would have recognized the independence and safety of the Polish Nation, as well as Russia's security problem, it might have been possible to come to an amicable solution with regard to the boundary. A Council decision might even have accepted the Curzon line in light of the other changes proposed, without leaving the feeling that it was a grab by Russia.

The United Nations Council could have been aware of the legitimate problems of England and Russia and the fact that there may be spheres of influence for important nations which need not threaten the security or peace of the world. We have a similar sphere of influence in the Western Hemisphere, which we are inclined to forget when we criticize other nations. These are policies which I am convinced could and should be tackled immediately by the United Nations Council and not allowed to drift.

What have these incidents meant to the American people as a whole? It is my judgment that they have definitely undermined our confidence in our national leadership. As one who has been eager to see an aggressive and well-rounded foreign policy developed, I feel that we have been woefully let down. It is even more serious than that. I fear that the American people, unless we check the present trend, will definitely lose faith in any program for world cooperation and that we may move promptly toward an isolationism which it will be difficult to resist.

The spectacle of the Atlantic Charter is illustrative of what I have in mind. All of our people rejoiced when in 1941 the principles of the charter were enunciated, which was followed by the United Nations agreement incorporating the charter. Everyone thought that the charter was a declaration of principles, agreed to by both Great Britain and the United States through their Chief Executives. In the CONGRESSIONAL RECORD of August 21, 1941, we find the terms of the charter set forth with what appear to be the signatures of both Prime Minister Churchill and President Roosevelt. Yet, in a recent press conference, the President states that any document such as the Atlantic Charter never was in existence, that the principles were simply contained on separate, scribbled slips of paper, that there were no signatures and it was merely radioed to the world, apparently as sort of a pious declaration. If now it has been destroyed and there is to be no joint effort to see that its terms are carried out, our people will ask, What is the war for anyway? Are we simply drawn in to strengthen the dominance of imperialistic nations? Are we simply a cat's-paw to perpetuate the traditional European power politics?

Our people do not know what it is all about and they are entitled to know. Those of us who represent them in the United States Senate, which has a joint responsibility with the President in determining our foreign policy, must insist that the facts be disclosed immediately, and furthermore that prompt action be taken. Our people have always been able to accept the truth when they know it, but they have always resisted and they always will resist misrepresentation or falsehood or vacillation in leadership. It is perfectly obvious that unilateral action by any one of the great powers is today a definite threat to world security, and the same is true of bilateral action by any two of the great powers where the rest of the world has not been consulted.

And so we come to the question of what can be done and should be done immediately, and I submit that this is a question which must be answered by the statement that we must act and act at once. How must we act?

I propose:

1. A United Nations Council to act with our joint military forces as trustees of the peace until the permanent world organization is set up.

2. This United Nations Council to deal with political issues no matter how difficult.

3. This United Nations Council to act promptly to prevent misunderstandings between members of the United Nations which may endanger the prosecution of all-out war to final victory.

4. This United Nations Council to set up military governments in the occupied countries as fast as they are released from Axis domination, until properly regulated plebiscites can be held to determine the will of the people of those countries as to their future governments.

5. This United Nations Council to merge its identity as soon as possible with a new world organization for peace.

As we cannot wait for the detailed completion of our world organization plan, there must be prompt action in the setting up of a United Nations Council under the initiative of the United States to prevent the disintegration of the United Nations and to preserve the immediate peace of the world after the present war is terminated.

America will emerge from this war the most powerful Nation in the world and must definitely and courageously accept its responsibility to lead in the perilous years that lie immediately ahead. In recognizing this responsibility, this does not mean that we will paternalize the world, nor does it mean that we are to establish international W. P. A.'s for world rehabilitation. We could not finance the restoration of the world if we would. That is not what the world needs. What the world needs is the preservation of order until it emerges from chaos. What the nations of the world need, and especially the little nations, is assistance to help them help themselves and to determine their own forms of government.

In conclusion, let me suggest that we do not complicate this immediate demand for prompt action by the raising of irrelevant issues. Let us make it clear that we are prepared to participate in these international settlements, not in the interest of power politics, but in the interest of the future peace of the world. Let us make it clear that we will do our share in the trusteeship that we are insisting on establishing, and in the facing of the economic, political, and social adjustments that the post-war world calls for. Let us make it clear that we believe these things can be accomplished, and that we will never accept a philosophy of despair or a turning back hopelessly to the power politics and alliances of former periods.

Democracy has a moral and spiritual foundation. If we expect to see democracy become the pattern for world government, we must strengthen its moral foundations at home. And let us believe, and dare to say that we believe, that there is an overall purpose moving in the world which has a divine foundation and which mankind can find if they will submit to its leadership, submerging purely national selfish considerations to the larger objectives of peace on earth to all men of good will without regard to race, creed, or color.

And let me close finally with the insistence with which I opened: We must act and act now.

The Manpower Situation

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1945

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "More on Manpower," published in the Washington Post of January 5, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MORE ON MANPOWER

The tapping of the pool of farm-labor deferments is the latest action to relieve the manpower crisis. It is evident that all means will be explored before resort to a request for national-service legislation. The reason is not far to seek. The coutnry has long been painfully conscious of inefficiency in the use and administration of manpower. For that reason a national-service law would mean at best a protracted debate. But needs are urgent, and must be met, therefore, by a program which has a chance of early enactment. As we se it, that program falls into three parts:

1. Enforcement powers for the W. M. C.: The man-hours lost by the hoarding of labor in the factories and the turn-over of labor can no longer be afforded. They can be saved for the war effort by the delegation of statutory authority to the W. M. C. and the use of existing sanctions against recalcitrants. In respect of employers, the W. M. C. should be enabled legally to fix and hold ceilings of employment. Sanctions in the form of the power to allocate raw materials to recalcitrant employers should be employed. The same power should be invoked against plants whose nonessential products we can dispense with.

Hitherto sanctions have been divorced from controls. As Mr. Baruch said 18 months ago, in the report on west-coast shortages of airplanes, "the proper handling of manpower has been made impossible by the failure of Government agencies to work as a team with a clear, uniform program." Mr. Byrnes' new assistants seem to constitute such a team for the purpose of dovetailing controls and sanctions. In respect of employees, turn-over could be arrested by rigid control of hiring and by application of veto power on the acquisition of new jobs by quitters for 2 months. These are already W. M. C. rulings. They should now be given the force of law.

2. Better utilization of manpower by the armed services: There is probably as much waste of manpower in the armed services as in civilian life. Examples are plentiful in everybody's experience of men in uniform who are not being used, whose services are merely formal, who are doing inappropriate jobs. Senator KILGORE is the latest complainant. As he said, IV-F's could replace the many able-bodied men who are doing desk jobs and post duties. If work or fight applies to the civilian front, fight or work should apply to the military front.

The armed services could likewise save a good deal of manpower in industry by more efficient procurement. The latest report of the Mead committee, which got no attention at all because it was issued on the last day of the Seventy-eighth Congress, contains a devastating bill of particulars against the Army procurement authorities. Lack of standardization of materials is noted both as between the armed services and as between military and civilian needs. The committee says there is no reason known to them why there should be different sizes and specifications for towels, blankets, sheets, and hundreds of other items. There is no reason known to anybody else. The committee also cites for condemnation overbuying, acceleration of delivery dates, carelessness in negotiating prices, indirect buying, and decentralized control of procurement. Case after case of waste is given. Added up, they show dissipation of manpower, and Mr. Byrnes might well call attention to this mote in the service eye while attending to the beam in the civilian eye.

3. Use of French manpower: The drain on our manpower for the armed services might be eased considerably by arming the French. This was requested by the French 5 months ago. At that time General Eisenhower refused the request, not because the French

would not make excellent soldiers, but because he had no need of more men. The situation since then has changed drastically. The military estimate proved wrong, and the military now have to revise their budget for manpower and materials as a result of the German offensive, coupled with the tremendous drain caused by the operations in the Philippines. The French request might usefully be reviewed. The French want to save our manpower, and use of the French would be a demonstration of an efficient and economical as well as a proper utilization of manpower, since the French are in Europe, eager to fight, and in varying degrees of training.

Abolition of Jackson Hole National Monument

EXTENSION OF REMARKS

OF

HON. EDWARD V. ROBERTSON

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1945

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD three editorials dealing with the President's veto of House bill 2241, a bill to abolish the Jackson Hole National Monument. These editorials come from widely separated points in the Nation. The first, entitled "Minority Rule," is from the Waterloo Daily Courier, of Waterloo, Iowa, of January 1, last. The second is from the Charleston News and Courier of Charleston, S. C., and is entitled "Wiping Out Wyoming." The third is from the Los Angeles Times, of December 30, 1944, and is entitled "President Sets Judgment Above Congress and People."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Waterloo (Iowa) Daily Courier of January 1, 1945]

MINORITY RULE

President Roosevelt's pocket veto of the bill to abolish the Jackson Hole National Monument in Wyoming raises a fundamental issue in American Government.

Regardless of the desirability of the project, the fact remains that Congress refused to authorize a national park in the area and the President, by a subterfuge, set aside these 222,000 acres as a monument. Congress during the last session then approved the bill to abolish the monument and the President has let the bill lapse without signing it. If the legislature wants to enforce its will, therefore, it will have to approve a new bill and then pass it again by a two-thirds majority over an expected veto.

In other words, the process used here permits the President with the approval of a minority of Congress to thwart the will of the majority. Congress is reduced to the status, not of passing laws permitting the President to do certain things, but of attempting by two-thirds vote to prevent the President from doing things. That is entirely antagonistic to the theory of American Government and representative democracy.

Under an independent court system, the judiciary might prevent the President from using a subterfuge of this kind to thwart the will of Congress. But the President has now been in office so long that the majority of judges are his own appointees, personally loyal to him and imbued with his own philosophy. Thus the whole process of Government has ben perverted.

The Jackson Hole monument is a relatively minor issue. But if the President is successful in using the method in this instance, he will dare to attempt it in others. Eventually, that will result in the President passing the laws and keeping them in force as long as he retains sufficient support in Congress to prevent Presidential vetoes from being overridden. This question is every bit as important as the President's earlier court-packing scheme.

[From the Charleston (S. C.) News and Courier of January 3, 1945]

WIPING OUT WYOMING

One reads and hears much about State's rights, and one is not convinced that they will not fade out completely. The President, Mr. Roosevelt, has vetoed the act of Congress abolishing the Jackson Hole Monument, created by him, under some queer law or other, whereby some millions of acres of land in a State called Wyoming have been seized by the Federal Government.

A newspaper of New York City, the Times easily understands that no one would wish the entire State of Wyoming or the entire State of Arizona bought up and set aside as a national monument, but it reassures—as if it knew—this is not threatened. The New York City publication defends the veto, saying that beyond the State's borders are millions of Americans who will benefit if a few notable spots of scenic and historic significance can be set aside for the general use and that it does seem that in this as in many similar instances, the good of the greater number will be served if the reservation stands, and that no injustice will be done to anyone."

The argument of the New York Times is entirely consistent with the Rooseveltian, the urban, notion that the right of a State to veto appropriation of millions of acres of its lands by the Federal Government no longer exists. Jackson Hole, be it noted, is not coveted for the national defense, the President, the New York Times, and other liberalities, would have it set aside and federally owned for the reason that Julius Caesar bequeathed his orchards and gardens "this side Tiber," as read in his will by Mark Antony, namely, for the enjoyment of the Roman populace.

Of the American populace 7,300,000 are dwellers on Manhattan Island and in its vicinity, while in the State of Wyoming the inhabitants are about 260,000. Should a fourth-term President heed the voice of an American State when the populace of great cities and people-packed regions covet spots of scenic and historic significance? King Ahab's coveting of a vineyard was equally defensible.

It is the State right of Wyoming to dismantle, to destroy, its monuments if that be its foolish will and pleasure.

Had the Virginians foreseen that one day the United States could and might seize the notably scenic monument known as the Natural Bridge and had the hard-headed people of Massachusetts suspected that the Federal Government would set up that it could take possession of Plymouth Rock, those two independent commonwealths would not have entered the American Union. Has the poet's phrase My Maryland meaning nowadays? Whose Maryland is it?

Whether the seizure of Jackson Hole is expedient or not for the American people or beneficial to them has nothing whatsoever to do with the case. Has Wyoming the right to existence as a sovereign State? If the answer be "Yes," its right is to hold its land against the world, except and only except when it may be needed to defend the Republic against foreign enemies. To save the Republic from foreign enemies the right of the United States to take possession of every acre of South Carolina we concede.

Rights of no State will be defended against the encroachments of the Washington Government as long as the people of the States can be bought or hired with offices and subsidies to surrender them.

[From the Los Angeles Times of December 30, 1944]

PRESIDENT SETS JUDGMENT ABOVE CONGRESS AND PEOPLE

In his veto of the bill to abolish the Jackson Hole National Monument, President Roosevelt again set his judgment above that of Congress, and of the people of Wyoming who unquestionably are opposed to having this great area locked away from its accustomed use. Congress has twice spoken on this subject, once when it refused to add the Jackson Hole area to the Teton National Park and again when it sought to set aside the creation of this monument; and both times it acted in consonance with the opinion of Wyoming.

The President says the region is "an outstanding example of a valley formed by block-faulting and glacial action and has as significant a story to tell of these great forces of nature as has the Grand Canyon to reveal of erosive processes." These features would remain if it were not a national monument.

The worst aspect of the veto is the President's calm assumption that he knows what the States and people should have better than they do. Yet democracy itself is based on the theory that the judgment of a great many people is better than that of one.

Freedom of the Press in the New World Peace

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1945

Mr. BUTLER. Mr. President, the two daily newspapers which are published in the city of Lincoln, Nebr., combine their publications on Sunday and issue a joint newspaper known as the Lincoln Sunday Journal and Star. Recently, in connection with the Sixth War Loan drive, they offered a prize of $1,000 for the best article submitted by a student on the subject of Freedom of the Press in the new world peace. The prize was won by Robert C. Pfeiler, a young student in the Lincoln High School. I believe that the essay is of such quality that it merits a place in the appendix of the RECORD, and I ask unanimous consent to have it printed there.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

FREEDOM OF THE PRESS IN THE NEW WORLD PEACE

(By Robert C. Pfeiler)

(Fifteen-year-old Robert C. Pfeiler, of 1627 Woodsview, Lincoln, is a twelfth-grade student at Lincoln High School. The following is the essay which won for him the first price of $1,000 in War bonds in the Lincoln Sunday Journal and Star Sixth War loan contest.)

The United Nations are engaged in a life-and-death struggle to bring about a world in which all men are free, and in which all nations are at peace. Unless a peace is made which includes the freedom of the press, the objectives of this war will be lost. The press is the means of representing the unrepresented. The voice of those in the minority and of those who are downtrodden can be heard only through a free press.

We are all familiar with the fact that dictators get into power and remain there through the control of public opinion. Goebbels dictating the day's news at a morning press conference represents the high-water mark of controlled opinion. The people of these dictatorships have been presented with this type of news which is distorted and often has no basis in fact. They and the rest of the world have suffered terribly and will continue to do so until the "slough of ignorance" is cleaned up. In the countries occupied by the Nazis, people have endured torture and death in order to print the true facts. In France, in spite of the Gestapo, newspapers and books were published which ultimately played an important part in the liberation of Paris. We learn from Jan Karski's book, Story of a Secret State, how the Polish people learned of the true situation even under German rule. In Bucharest, Rumania, recently freed from Nazi control, the number of newspapers has increased to 20, 10 more than they had previous to the war. Correspondents say the demand for honest newspapers is now insatiable. This proves that people thirst for the truth.

It will be the responsibility of the United States and the other United Nations to see that freedom of the press is established in the peace plan and preserved. This will not be easy. Many people will have lost confidence in their government. Civil war has been raging in Greece, and threatens in Italy, Belgium, and France, and may break out in other countries at any time. Nothing will do more to rebuild the confidence of the people in themselves and in their government than freedom of expression. Since the United States has long been known as the citadel of democracy, suppressed peoples will expect us to take the lead in sponsoring its principles. Suppression of the press makes people suspicious that something is being put over on them. The functions of a free press are to inform the people about the facts, and to stimulate constructive criticism about governments and existing conditions. A free press also educates the people in the principles of democracy by promoting free and open discussions of problems. People kept in ignorance and given only one side of an issue tend to lose their sense of discrimination and become less able to decide a question on its merits.

An indirect cause of war is false or incomplete presentation of international news. During the peace conference after the last war the people were not kept completely informed of the proceedings at the peace table. At the coming peace conference the representatives should know the people's wishes and the people must be kept up to date on all questions and actions of the conference. This can be done only through a free press.

Without knowledge of facts, and with confusion and suspicion within and between nations, fear of the uncertain and the unknown leads to distrust, hatred, and eventually to war. If countries are well informed of conditions within their own borders and throughout the rest of the world, there is no problem which could not be settled peacefully by arbitration. Men are made free by truth, and freedom of truth makes permanence of peace.

Thus two things are to be done. First is to see that freedom of the press is a part of the peace plan of the world, and the second to make sure that this freedom is preserved everywhere. All countries must cooperate in achieving these ends.

But what are the concrete steps to be taken? There should be no governmental or monopolistic control of the press. It must not be under the thumbs of certain individuals or interests. Great news cartels must be broken up. They should no longer stand in such a position as to control the news. News organs must be free to print the facts. There should be no censoring of the news or information in peace years, unless it is proved to be scandalous or fraudulent. The source of all information should be known and given in order to check rumors and propaganda which either intentionally or unintentionally would throw fear or hatred into the people. There should be a free and unlimited exchange of news in all countries, and the foreign correspondents should have the right to send any news without being restricted or censored. Throughout every country all reporters should have an equal chance to search for, to gain access to, and to transmit news at equal and reasonable rates. To guarantee these fundamental conditions a strong international organization should be created with the power to enforce this plan.

The Associated Press, under the management of Kent Cooper, and the United Press are leading the way toward a free international press. A word of praise should be given to these organizations, as well as to the American Society of Newspaper Editors, for the manner in which they have set the example and have launched the program of preparing the world for freedom of information in the coming world peace.

That the men and women who die in this war shall not have died in vain we must have a free press, which is indispensable if we are to achieve a just and lasting peace.

Eulogy of Seventy-eighth Congress by Fulton Lewis, Jr.

EXTENSION OF REMARKS

OF

HON. EDWARD V. ROBERTSON

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1945

Mr. ROBERTSON. Mr. President, in recent years it has been considered somewhat the smart thing to belittle the Congress, and it is refreshing to find a gentleman who is a close student of national and political affairs who sums up the Seventy-eighth Congress in most complimentary language. I ask unanimous consent to have printed in the Appendix of the RECORD that portion of the broadcast by Fulton Lewis, Jr., on Wednesday, December 20, 1944, eulogizing the Seventy-eighth Congress.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Here in Washington, the Capitol was cavernously empty today. It is almost miraculous the way those 531 Senators and Representatives, with their respective families in many cases, were able to clear out of here last night, when the Seventy-eighth Congress adjourned, sine die, shortly after 8 o'clock.

In the estimate of average American thinking, and from the standpoint of average American tradition and principles, it was a good Congress, a very good Congress. I think the Washington news correspondents, who have seen Congresses come and go over years past, would agree that it probably is the best and most courageous Congress that we have known since the days of the last World War, and perhaps for even longer than that.

It probably made mistakes, but the Congress is the people, and it's the right of the people, in a free self-government, to make mistakes, if they want to. That, as a matter of fact, is one of the great tests of free self-government.

This much is certain: It did more to revive and restore the dignity and integrity and the prestige of the legislative branch of the American Government than any other Congress in many, many decades. And, as if it were conscious of that very fact, and had almost made a crusade toward that end, one of its last acts was the setting up of a special, bipartisan joint committee of the Senate and House of Representatives, to make a thorough study and present a definite program for the reorganization of the machinery of Congress, and the modernization of its procedure, to further continue that building in the future.

If it had done nothing else, that one act justified its 2 years of existence.

Incidentally, that special committee, headed by Senator FRANCIS MALONEY, of Connecticut, as chairman, and Representative MIKE MUNRONEY, of Oklahoma, as vice chairman (they being the two gentlemen who sponsored the resolution authorizing this study) held its first meeting today, and Senator MALONEY told me that in that opening session they made a general review of the various fields of study that are to be undertaken, and in a preliminary way, mapped a general program of procedure. However, no active investigating will be done until after the holidays, one simple reason being, among others, that the funds of the committee do not become available until January 1.

On at least two occasions, this Seventy-eighth Congress passed major legislation over a Presidential veto—first on the Smith-Connally Act, and second on the new tax law, both of which bills you may have disagreed with. The essential point, however, is that they asserted their independence. They proved, not only in this case, but in numerous others, that they were not supine, rubber stamps, like the yah-yah process of a Reichstag. They stood up and fought for what they thought was the right thing—whether it was or not—on numerous occasions, including among others, the issue of the roll-back subsidy. Sometimes the President overrode them, and made it stick; sometimes they won out. But the important thing was that the processes of American Government, under this Seventy-eighth Congress, were functioning and functioning effectively. When that is true, you can count on it reliably, that the ultimate outcome will be 90 percent right.

There was just one more striking contribution, and that was the manner in which this Congress wrote its legislation. Unlike many that came before, it did not blindly issue a lot of blank checks, either for money or for power. This Congress wrote specific legislation, saying in the name of the people, exactly and in detail what the people wanted done about this or that; specifying in much greater detail than before, just what appropriations were to be used for, and how. And once again, that is good government.

So, having done its job, we might well give it a salute of a job well done, and we might dub it, in congressional history, the Great Seventy-eighth.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1945

Mr. KEEFE. Mr. Speaker, the city of Milwaukee has an advisory council to the mayor, which represents some 46 civic groups. The public service committee of this advisory council recently submitted a report and resolution relative to the St. Lawrence seaway, which was unanimously adopted by the council.

For the information of the Congress and the people of the country, I am pleased to incorporate this report as part of these remarks:

To the Advisory Council to the Mayor of Milwaukee.

GENTLEMEN: The Public Service Committee of the Advisory Council was directed on Wednesday, January 12, 1944, to review and make recommendations relevant to the Great Lakes-St. Lawrence seaway and its relative potentialities to the port of Milwaukee and to make recommendations to bring about its realization if the project were in keeping with the best interest of the city of Milwaukee.

Your committee has diligently pursued its assignment. It has reviewed the history of the controversy which dates back to the last quarter of the nineteenth century. It has reviewed the opinions of the various Great Lakes port authorities. Your committee has also collected the statements and opinions of the United States Senators and Congressmen who have given their expressions to this enterprise. They have also interviewed several Members of Congress. Your committee has also considered the expressions of various interested parties representing industry, labor, transportation (both maritime and rail), local and State officials, and the military and naval departments of the Federal Government. Your committee has taken full cognizance of the more than four decades of controversy during which the people of both the United States and Canada and especially in the regions of the Great Lakes and Upper Mississippi Valley have been evaluating the benefits of bringing the ocean to the doorway of the Middle West.

The proposed St. Lawrence seaway project consists of:

1. Twenty-seven foot navigation in reaches of the St. Lawrence River where shipping is now restricted to vessels which can use 14-foot canals, enabling ocean cargo vessels to reach all Great Lakes ports.

2. Two million two hundred thousand horsepower of the most economical power on the continent, to be developed at the navigation dam in the International Rapids section of the river. Half this power will belong to the United States and half to Canada.

3. The net cost to the United States of providing oceangoing navigation into the Great Lakes after deducting what the State of New York would pay for power development will not exceed $200,000,000, which includes 25 percent for contingency. These estimates are from the United States Army engineers.

The current motivating force now sponsoring this project centers around the enabling legislation known as the Aiken-Pittenger bill (S. 1385) jointly introduced by Senator AIKEN of Vermont and Congressman PITTENGER of Minnesota. Much of the discussion in Congress evolves around the issue whether the act should be consummated by treaty which requires a two-thirds vote of the Senate or by executive agreement which requires a majority vote of both Houses of Congress.

The committee is of the opinion that the St. Lawrence Seaway should not be viewed as a narrow and sectional demand. What is good for the Great Lakes region is good for the Nation as a whole. If the prosperity and commerce of the Great Lakes region is enhanced the benefits will be Nation-wide. As we in the Great Lakes region recognize the economic benefit of projects such as the T. V. A., Boulder Dam, and Grand Coulee, which we have helped to finance, we ask that other parts of the Nation recognize the national benefits to be derived from the St. Lawrence project.

The committee is convinced that had the St. Lawrence Seaway been available at the opening of World War No. 2, the military efforts of United States and Canada would have been far more effective and the war could have been undoubtedly shortened. Despite the fine harbors, the great industrial plans, and the shipbuilding equipment of this area, less than 2 percent of the tonnage constructed in the United States has been built in the Great Lakes Basin. Had the seaway been available, 10,000 cruisers and liberty ships could have been constructed in sheltered Great Lakes harbors and sent directly into service. Great economies in the national defense effort could have been achieved through mass movement of raw materials and finished equipment via the seaway. The future safety of our country requires that national defense industries be located in interior areas and this further emphasizes the need of the seaway for mass transportation of raw materials and finished goods. Stock piles of strategic materials could be concentrated in Great Lakes harbor if the seaway were open to permit their movement in mass quantity.

The committee is of the opinion that the construction of the St. Lawrence seaway during the immediate post-war period will aid in providing tens of thousands of jobs in useful and productive work and the favorable economic effects of the seaway will undoubtedly create thousands of additional jobs in harbor cities of the Great Lakes region. The project, therefore, is a necessity to assure full revival of post-war employment.

The committee concludes and is unanimous in its opinion that the St. Lawrence seaway will be a great and lasting benefit to the United States of America and to each and every portion thereof. That the areas of and adjacent to the Great Lakes and upper Mississippi Valley will be benefited by having a sea road and removing its present landlocked limitations. That the port of Milwaukee and its metropolitan area will be afforded immeasurable foreign trade opportunities. It will benefit through the removal of restraints upon the transportation of raw materials and products by excessive freight charges. It presents great possibilities for shipbuilding and drydock facilities in this area. It will provide full use of our natural harbor. It will provide efficiency in distribution for our commerce on a world-wide competitive basis. It will provide Milwaukee with new employment and economic benefits in this city's position as one of the outstanding ports of a territory which is considered the industrial and agricultural heart of the Nation.

The committee, therefore, concludes and unanimously recommends that the advisory council to the mayor of Milwaukee adopt the attached resolution:

"Be it resolved, That the advisory council to the mayor of the city of Milwaukee hereby endorses without reservation the Great Lakes-St. Lawrence seaway and recommends that the Honorable John L. Bohn, mayor of Milwaukee, shall exercise the authority and influence of his office to aid in bringing about enabling legislation in the Congress of the United States; and be it further

"Resolved, That the interested Senators and Congressmen be advised of this action and that they be encouraged to exercise the authority of their office in consummating this project; and be it further

"Resolved, That copies of this report and resolution be printed and be placed in the hands of the delegates to the advisory council and other interested parties for the purpose of aiding in the passage of Federal legislation which will bring about immediate consideration of the Great Lakes-St. Lawrence seaway project."

B. H. BARG, *Chairman*,
ARTHUR G. APLIN, *Vice Chairman*,
HARRY SCHACHTSCHNEIDER,
WALDEMAR STECHER,
O. V. HANSEN,
CHAS. E. BALDWIN,
CHESTER V. SALOMON, *Ex Officio*,
Public Service Committee.

Rendezvous With Destiny

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. PATMAN. Mr. Speaker, the Honorable J. H. Blundell, regional information executive, Office of Price Administration, of Dallas, made a very interesting and instructive speech before the Lion's Club at St. Louis, Mo., November 15, 1944.

It contained such interesting information relative to wartime problems and post-war problems, I am inserting it herewith.

It is as follows:

This generation has had its rendezvous with destiny—the generation that was too soft, too weak; the generation that was bred in the lap of luxury; that Hitler bet would never fight found its soul at Pearl Harbor.

How surely, how courageously, how eagerly this generation of Americans kept its rendezvous with destiny has already been written indelibly upon the pages of history. On Bataan Peninsula, at Guadalcanal, Salerno, and Anzio, on the beaches of Tarawa and Saipan and among the hedgerows of Normandy—there is history's evidence. Every day new chapters are being written—today in the Philippines and at the Siegfried line—tomorrow in Berlin and Tokyo.

But Berlin and Tokyo will not be the final chapters in this brilliant history. Strange as it may seem, the gallant authors of these magnificent chapters will not have the privilege, or opportunity of writing the closing and final chapter. Destiny has assigned that rendezvous to you and me.

Despite the fact that history repeats itself, it has taken the American people a long time—a century and a half and six wars to learn that wars must be won at home after the enemy has been defeated abroad.

Throughout our history we've never lost a war—nor won a peace.

It has taken us 168 years to learn that war is inevitably followed by inflation; that inflation is inevitably followed by deflation; that deflation is inevitably followed by depression; and that depression loses wars always won.

War, inflation, deflation, depression—that's the history lesson it took us so long to learn. Let's take a quick glance at a few pages of history.

Valley Forge! Does it make you proud when you hear the words? Every American should hang his head in shame because Americans and not the British were responsible for what happened at Valley Forge. Why? Listen to a part of a committee report written in 1776: "This committee, taking into consideration the unbounded avarice of many persons, by daily adding to the now almost intolerable exorbitant price of every necessary and convenient article of life * * * which at this time of distress, unless a speedy and effective stop be put thereto, will be attended with the most pernicious and fatal consequences."

It was the greed of some of our own American people who caused the little handful of patriots at Valley Forge to freeze, hunger, bleed, and die. General Washington could have had food and clothing and heat for his men except that a wagon-load of supplies cost a wagon full of paper money.

Did we learn anything from Valley Forge? Listen:

"The houses of the most prosperous planters were found denuded of almost every article of furniture and in some sections women and children accustomed to luxury begged from door to door * * *. In the larger towns the weary soldiers found business prostrate except with the sutlers in full possession now that the merchants were ruined and these sutlers were amassing fortunes through profiteering without shame." (I had never heard the word "sutler" before. We call them war profiteers and black market operators now.) "There was no shipping in the harbors where the piers were decaying rapidly. Cows were feeding on the vacant lots and grass was growing between the paving stones in the principal streets. Warehouses were deserted. Banks had closed their doors. The insurance companies had failed. The one hope for restoration was the resumption of old normal activities in the country, the cultivations of the plantations as of old."

Eighty-nine years after Valley Forge, that was the America to which those brave soldiers on both sides came home after the War between the States.

By 1914 we had grown up as a Nation. Little business had become big business. We were smart in the ways of money and economy. We knew how to produce and provide jobs. Let's see how smart we were.

We finally learned that war always caused inflation and we decided to do something about it. So we set up a few brakes on the American economy for war. Only a few.

From 1917 to 1920 the American war costs were $32,000,000,000 actually spent. But calculations based on 1913 prices or 1930 prices indicates that little more than half of that amount would have been spent had it not been for wartime inflation. Without such inflationary price increases the taxes during the war and the Government indebtedness after the war would have been much lower.

Do you remember those $25 silk shirts? Four dollar shoes you paid $20 for? The long lines at the grocer's waiting to get sugar and to pay 29½ cents per pound for it when they could get it? Had we learned anything?

No. We even did away with the few brakes we had immediately on the signing of the Armistice. Prices went higher. Anticipating continued increases, merchants scrambled for inventories, bid against each other in order to stock their shelves and storerooms so they could benefit and profit from the higher prices.

Inflation didn't end with the Armistice. The cost-of-living index continued to rise, until in 1920 it reached 200 from a 1914 level of a hundred. When the Armistice was signed, the cost of living stood at 160. It rose 40 more points after the war had ended.

Now some businessmen may say, What's wrong with high prices? Let's see what happened as a result of these good prices. In 1919 corporation profits were six and a half billions of dollars; in 1921 there were no corporation profits in this country. In two short years the reserves built up during the war had not only been wiped out but profits had turned to losses. Factory pay rolls which increased greatly during the war continued to increase through 1918 and in the year following amounted to $240,000,000 per week; within 1 year the weekly take-home pay of factory workers was reduced to 150 million, or nearly a hundred million less in 1921 than in 1520.

Let's see what happened to the farmer who could and did get one to two hundred dollars an acre for his land during the war. When the farmer prospers, everybody prospers, so we should be able to learn something from looking at the condition of the farmer's income.

He was pretty well off during the war. Annual farm income in 1918 amounted to $9,000,000,000. This income held fairly firm until the latter part of 1919. But when the cost of living and wholesale and industrial prices had not quite reached their peak, and when corporation profits and factory pay rolls were still increasing, the farmer's income began to drop. That should have been warning enough that something was about to pop, but apparently it wasn't. For farm income really started down in a hurry. During 1919 and 1920 it fell from the peak of 9 billion to 3 billion.

That's the story of how well we learned our lesson. When the war ended we went back to our economic philosophy that Providence had blessed this Nation with unending security and we went merrily on our way. We hadn't learned that inflation brings on deflation and that deflation is followed by depression.

There are some experts who maintain that war without inflation is an economic impossibility; that it is inevitable; too much money competing for too few goods; this is the explanation offered by some of those who insist nothing can be done to avoid inflation. Even after a century and a half and six wars, they maintained that we should allow the natural laws of economics—supply and demand, etc.—to take care of things.

But there were some who said it must not happen again and who were determined to do something. With more money and fewer goods we would have been on the high and wide road to inflation had it not been for the far-sightedness of the Congress and the Chief Executive.

For more than 2½ years we have all been trying to maintain a stable economy and in general our efforts have been successful. Since the spring of 1942 industrial prices have risen only 3 percent. During the same period the cost of living—prices of items purchased by the average middle-income family—has risen only 9 percent. Nearly all of this 9 percent occurred during the early days of the war when we were trying to get our economic feet on the ground. For the past 18 months there has been little or no increase.

There were some who said this might be done, but only at the expense of many of our economic groups. Let's see about that:

While prices have been held in line, corporate profits have increased nearly $5,000,000,000 over 1939—and that's after taxes. Farm income last year was thirteen billion compared to four and a half in 1939! Last year, in spite of wage controls, factory workers in this country took home every week of the year $800,000,000.

Now who's been hurt by price control?

The Office of Price Administration has the responsibility for the actual pricing of 8,000,000 products and services and the establishment of rents for 14,500,000 dwelling units. Without past experience and in many instances forced to use trial and fail, trial and success methods, it has been a tremendous job. Naturally there have been mistakes, delays, and irritations, but the job has been done and prices and rents have remained stable.

We have come a long way but we've got a long way to go before the over-all job is complete. Like every businessman in America you are interested more in the future than the past. Like every father in America you are interested in what can be done to provide a better country for those younger Americans who are every day meeting their destiny without hesitation. Like every citizen in America you are interested in making this country one in which all four freedoms, including the freedom from want, can be enjoyed by even the humblest among us.

Our job here at home is twofold.

We must, first of all, continue to hold the line. The danger is not past. That danger is complacency on the part of our people. With victory in sight there may be a tendency to let up, to ease off, to let go, to cash our bonds, buy another car (if we can find one), spend our savings, maybe even pay a little more than the ceiling price for some things. We dare not. What would you say if our soldiers, sailors, or marines should conquer the Philippines, get to Manila, and say it looks like it's about all over so maybe we can take it easy from here on? Or, if the boys in Germany should say we're nearly to Berlin; it's only 300 miles farther, so let's take it easy and coast the rest of the way?

The answer is apparent. Suppose those same boys hear that we are letting up, that because of our apathy and complacency the cost of living starts up, and they know that every cent increase means fewer cents in those small allotment checks which are keeping their wives and kids from having to accept charity! You know what they would say. They wouldnt like it either.

We owe it to them to see that the line is held until all danger to their monthly allotments is past.

The second part of this twofold job is to discharge the trust and confidence those boys have placed in us to make certain they will return to a secure nation. Secure from want, from unemployment, breadlines, bonus marchers, and all the other evil results of the unpardonable sins of apathy and complacency we committed after the last war.

That's our job.

In the first place, you as individuals can refuse to buy anything above the legal ceiling and everything you buy has a ceiling. In order to do that you must compare the prices quoted you with top legal prices and refuse to pay more. And you can get your families to do the same thing. That's the first part of the job. But it is not enough if we just hold the line. We have to remember the lessons of history.

Do you think for a moment that we could live with ourselves, go to sleep at night with a clear conscience if we permit a repetition of what has happened after every war in which this Nation has engaged? Are you willing to welcome back our boys from the fighting fronts after they have finished their job and have them find business prostrate, with the war profiteers in full possession, amassing fortunes through profiteering without shame; or do you want them to return to this country to find no shipping in our har-

bors, piers decaying, cows feeding on the vacant lots, and the grass growing between the paving stones in the principal streets?

If we permit even a small part of the 4,000,000 men now fighting overseas to come home and find that we have forgotten them, may the Lord have mercy upon us.

Many people have said that we should see to it that our boys come back to the things they left and the kind of country they sailed from to fight for. You and they are going to want and demand a better America than the one they knew before.

What does all this mean? It means that we have a sacred responsibility, that we too have a rendezvous with destiny.

And that brings us to what we must do to get the second part of our job done. According to the Department of Commerce, if we produce only as much as we produced in 1940 we will have 19,000,000 unemployed in this country. For in 1940 we produced 30 percent less than we are now producing. We don't want to go back to 1940 in any respect. In fact, we cannot go back. We have to go forward.

There is only one answer and that is full production in our factories and on our farms. Without full production in our factories, labor cannot purchase the products of the soil. Without full production on our farms, farmers cannot purchase the products of our factories.

This is not the vague dream of economic theorists but it is the cold-blooded calculation of farsighted businessmen.

If we are to go forward, achieve full production—which will mean full employment, there are several steps which must be taken.

We must continue the teamwork of industry, labor, and agriculture and government, which has been developed during the war. We must not go back to the days of open warfare between labor and capital, between agriculture and labor—the days of monopolies, cartels, and other practices which prevent free enterprise and full production.

Second. During the critical period of reconversion and the period immediately following the peace, we must continue to maintain a stabilization program so long as the threat of inflation is even remotely apparent; until the natural laws of economics can again become operative.

Third. The Congress must enact tax laws which will encourage the greatest possible investment of risk capital and which will discourage the hoarding of savings of corporations and individuals.

Fourth. Competitive free enterprise must be protected and encouraged in every possible way.

Fifth. Particular encouragement must be given to small business because small business is the heart of competition.

Sixth. Farm income must be kept at its present high level.

Seventh. Social-security benefits must be increased and broadened.

Eighth. We must provide for a broad and vigorous program of housing and slum clearance.

Ninth. Major works program must be developed to provide for reforestation, flood control, irrigation, highways, medical centers, hospitals, schools, and recreation facilities.

Tenth. Exports must be given every encouragement because one of our three greatest markets in the post-war era will be our exports to foreign countries, many of which are so badly in need of the products of our factories and our farms.

Eleventh. We must get rid of restrictive controls, so necessary during the war and post-war period, as soon as it is safe to do so.

If we are to maintain full production, provide jobs, avoid a depression, and create a prosperous America, this program must have the assistance and backing of businessmen throughout the country.

With full production in this country we can increase consumer expenditures to such an extent that the American people can purchase 40 percent more food than was purchased in 1940. We can buy 45 percent more clothing than we bought in that year. We can increase our purchases of electrical equipment by 55 percent, household furniture by 70 percent and the farmers of America will be able to purchase 50 percent more farm machinery than they did in 1940. We will be able to construct 250 percent more new buildings than we built in that year.

If we go back to 1940 production, if we operate on the theory of minimum production at a maximum price instead of maximum production and distribution at the lowest possible cost per unit, we will have a situation in this country which will exceed the depression of the early 1930's.

In 1940 there were 9,000,000 unemployed. Since 1940 the growth in our population has provided us with 2,500,000 additional workers. In the meantime, productivity of industry and technological improvements have grown steadily, enabling us to produce our 1940 volume with 8,000,000 fewer workers. On this basis, if we go back after the war to 1940 production we will find ourselves with 19,000,000 unemployed.

That's the final chapter yet to be written in the history of this generation, which had a rendezvous with destiny. That's the chapter which has been left for you and me to write. If we keep our rendezvous as well, as courageously as the younger members of our generation have kept theirs, we will deserve and receive the gratitude of the millions of young Americans whose sacrifices have caused our meager contributions to pale into insignificance.

On the other hand, if we do not keep that rendezvous, if we become complacent and apathetic, the blood will be on our hands, and I pray again that when we meet those boys face to face, the Lord will have mercy on us.

Statement of Dr. Andrew F. McBride, of Paterson, N. J., on His Seventy-sixth Birthday

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1945

Mr. CANFIELD. Mr. Speaker, Dr. Andrew F. McBride, often referred to in the Paterson (N. J.) press, as that city's No. 1 citizen, reached his seventy-sixth birthday last Thursday and reporters who sought him out found him working as usual.

Dr. McBride has a distinguished record. He was thrice mayor of Paterson, and during World War No. 1, he was a lieutenant colonel in the Medical Corps. In 1923 he became our State's first commissioner of labor. Presently he is chairman of the Paterson Savings Institution Board, Passaic County chairman of War bond drives, Passaic County chairman of the Selective Service Appeals Board, a trustee of the Medical Society of New Jersey, and a delegate to the American Medical Society. Besides these activities he has a very active medical practice.

Last Thursday he gave the press the following statement bearing on his philosophy on kindness:

Life at best is short. If God gives one good health and a reasonable mind and a desire to work, He has richly endowed that individual. Now if that person in turn fails to appreciate these gifts by sharing them with his less fortunate brothers, then he, indeed, misses much in life that is worth living for. We are our brothers' keepers. We should bend our every effort toward helping people who really deserve and need to be helped.

In my humble opinion, those entrusted by their fellows with the operation of government have the greatest opportunity possible to do service to mankind generally. I sincerely believe in honest, efficient, economical, and intelligent government, believing as I do that if all the peoples of the world had this manner of government, there never would be wars. It is only through governments of nations seeking something to which they are not entitled that wars breed and are fomented. Therefore, I believe that people generally should be most careful in the selection of those whom they place in prominent positions and public offices.

My sincere and fervent hope is that this terrible war may soon be over and that a just and lasting peace will follow—a peace that will mean equal opportunities and the right of the individual to life, liberty, and the pursuit of happiness. If such a peace can be assured the people of the world, then I am certain everybody will be benefited thereby and then indeed we will have the ideal world.

My further hope is that a miracle will develop from the terrible conflict and that a chastened and better group of nations will emerge because of the terrible loss in human life and materials.

These are my thoughts as I mark this anniversary.

What We Owe to the Wounded

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1945

Mr. McKENZIE. Mr. Speaker, the following editorial from the St. Louis Post-Dispatch of January 8, 1945, is so timely and pertinent that I hope it can be brought to the attention of every civilian in this country. It charges us with a great responsibility, an everlasting debt. May we not forget.

WHAT WE OWE TO THE WOUNDED

(By Maj. Gen. Norman T. Kirk, Surgeon General of the United States Army, in the New York Times Magazine)

(Disabled or disfigured ex-servicemen are neither freaks to be stared at, nor seekers of pity, says Army general in charge of hospitalization and rehabilitation; they dread the family's tears; civilians must let them do things for themselves and avoid misplaced solicitude.)

There are some wounds that doctors cannot cure—wounds to the spirit caused by curious or shuddering stares, prying questions, pity and misplaced solicitude. This type of wound concerns the staffs of our Army hospitals and convalescent centers because they see men who have been disabled

leave for their convalescent furloughs with high hearts and eager spirits—and all too often come back disheartened, pugnacious, or bitter.

Some men joke about it to hide their real feelings. One man tells this story: He had been standing on the corner waiting for a traffic light to change when he heard two women whispering behind him. One said, "I'm sure it's artificial—I heard it squeak."

He turned around and said, "Yes, lady, it's a wooden leg. Want to see it?" and pulled up his trouser leg. To use his own expression, "They squealed and ran like hell."

NOT WOODEN FEELINGS

Of course, these women hadn't expected their remark to be overheard. I hope it taught them a lesson. Soldiers may have wooden legs, but it doesn't follow that they have wooden feelings.

Tears and pity are harder than curiosity for the men to take. The elderly gentleman who dolefully patted a disabled man on the shoulder and said, "My poor boy, I feel for you," and the motherly lady who burst into tears as she asked, "Where did you lose it?" were both, no doubt, motivated by honest sympathy. But think how the soldier trying to enjoy his furlough felt.

Some of these very people who are the most inconsiderate when they meet these men outside the hospital might be shocked if they were to visit a convalescent center and see the rugged treatment these convalescents take—and like. The insistence on a man's getting along "on his own" after adequate instruction is all part of a carefully planned medical program that aims to restore the disabled soldier's confidence in himself and his independence of those around him.

But merely restoring a handicapped soldier to physical independence is not enough. Measures must be taken to help these men back to a healthy, normal outlook and imbue them with the spirit to become an asset to their community when they return to civilian life.

HOW PUBLIC CAN HELP

The real test comes after the soldier leaves the hospital and returns to the world of civilians. He leaves the hospital with his chin up. He thinks of himself not as a handicapped ex-soldier but as Johnny Jones, or whatever his name happens to be. He thinks about going home again, and getting out and having fun again, and eventually of going back to work again.

What happens to Johnny Jones and the thousands of other handicapped ex-servicemen whom the war is sending home—will eventually be up to you. How can you help?

First of all, control your emotions when you see a disabled or disfigured man on the street. Remember that this soldier wants only to be accepted as the individual he is. He does not need or want your pity. He expects and is entitled to decent consideration. He is not a freak in a side show to be stared at and whispered about. Chances are he does not want to be reminded of the circumstances under which he was injured—whether his injury was received in combat overseas or in an accident.

If the man is your son or husband, your attitude will have a lasting effect on his future. More than anything else when he leaves the hospital, a soldier dreads his family's tears and pity. Don't think of him as a cripple and he won't be. Let him do things for himself. Smoothness and skill come only with practice and may take years to acquire. An overanxious or overly protective attitude can undermine all the good that has been accomplished in the hospital, and even reduce him to a dependent state again.

RIGHT JOB IMPORTANT

This does not mean that families should go to the other extreme of appearing unconcerned about the disabled soldier's problems or his future. But he should be treated like a normal, mature man.

Next to this social reassurance, economic reassurance is most essential to the disabled soldier's future. This means something more than financial compensation for his injury, or Federal aid, or even job preference. He not only wants a job but wants the best he can handle. To give him less is sorry payment for the sacrifice he has made. To give him work for which he is not qualified is equally an injustice; it foredooms him to failure.

The disabled soldier who applies for a job and who never worked before entering the Army fresh from school has matured, learned to take orders and overcome difficulties, and probably acquired skills that have commercial value.

SELECTIVE PLACEMENT NEEDED

The man who was employed before he entered the Army may return with a higher earning power than before. He may have increased his earning power by taking one of the vocational or educational training courses open to veterans.

Many offices and factories already have a number of disabled men on their pay rolls. Some are taking former employees back without regard to their disability. This is just as much a mistake as to turn them away. Selective placement is not only essential to the successful utilization of this highly valuable man power; it is a debt that business and industry owe our handicapped soldiers.

After employment, during the period of adjustment to civilian life and the new job, understanding on the part of the employer is just as essential to the handicapped ex-soldier as understanding on the part of his family.

Every handicapped soldier has made a very great sacrifice. It is the grave responsibility of us all to see that this sacrifice does not limit his way of life in the future.

Resolution of Polish-American Democratic Organization of Chicago

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1945

Mr. GORDON. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include a resolution adopted December 20, 1944, and presented on January 2, 1945, to the Honorable Edward R. Stettinius, Secretary of State, by a delegation representing the Polish-American Democratic Organization of Chicago, Ill., headed by Victor L. Schlaeger and Joseph P. Rostenkowski:

We, the undersigned, have the honor to transmit to you the following resolution unanimously adopted by the Polish-American Democratic Organization.

As American citizens of Polish lineage, we earnestly reaffirm our allegiance to our country, the United States of America; we pledge our unyielding and ceaseless support in the winning of the World War, in which our kinsmen are actively engaged on all fronts; and we adopt the following resolution:

Whereas recent statements by officials of other governments have made it appear that the fate of Poland, our first ally, has been prejudged; and

Whereas the Secretary of State of the United States has unequivocally reiterated the steadfast policy of the United States Government, to preserve, maintain and restore the independence of the United Nations; and

Whereas we conceive it to be of paramount importance to concentrate all our energies upon the successful prosecution of the war; Now, therefore, be it

Resolved, That we, the Polish-American Democratic Organization, hereby express our sincere hope and trust that controversial matters appertaining to Poland as an independent and sovereign nation, shall be resolved upon the cessation of hostilities in Europe, in accordance with the policy of the United States Government, with the ultimate objective of preserving the territorial integrity of Poland as it existed September 1, 1939.

Polish American Democratic Organization: Frank Bobrytzke, president; John Prystalski; Stephen Love; Peter H. Schwaba; Victor L. Schlaeger; Ludwik Lesnicki; Leo Kocialkowski; Joseph P. Rostenkowski; Casimir Griglik; John A. Szumnarski, executive committee.

I had the pleasure of introducing this group of prominent Americans of Polish descent, and expressed to the Secretary my appreciation and deepest interest in his pronouncements regarding the Polish-Russian controversy, and urged the upholding of the principles embodied in the Atlantic Charter, concerning Poland.

I further reiterated that the exiled Polish Government in London is the only representative body of the Polish Nation that is being recognized by the United States and other democratic powers who are allied together to defeat our common enemy.

I also presented this group to the Honorable TOM CONNALLY, chairman of the Foreign Relations Committee of the Senate, and to the Honorable SOL BLOOM, chairman of the Foreign Affairs Committee of the House of Representatives, who received them very cordially.

The Ship-Air Transport Issue

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1945

Mr. WELCH. Mr. Speaker, the American merchant marine is at the crossroads. It is at the most crucial period of its entire history. It cannot meet the competition of foreign maritime nations unless it is given the opportunity to meet them on common ground.

Our merchant marine must be given the right to operate overseas air transport in identically the same manner as Britain and other competing maritime nations. Those nations have no civil aeronautics board to make restrictive rulings detrimental to their merchant-marine interests.

Because it is a merchant-marine matter of supreme importance to which the

House Committee on Merchant Marine and Fisheries has given close attention in the last Congress, and because it has been forcefully presented in a splendid editorial which recently appeared in the San Francisco Examiner, under leave to extend my remarks and include it therein, I invite the attention of every Member of the House of Representatives to that editorial:

THE SHIP-AIR TRANSPORT ISSUE

The Merchant Marine Committee of the House of Representatives has unanimously recommended to Congress that American steamship companies be given the right to augment their services with supplementary air lines after the war.

This is a realistic recognition of the conditions under which American foreign commerce will have to be conducted when peacetime competition is resumed.

"All the other great maritime powers," the committee reports, "have already cleared the way for combined ship-air operations by their merchant fleets. * * *

"The American merchant marine should not be handicapped by denying it the right to use aviation service."

The United States has, of course, a great opportunity in the field of post-war foreign commerce—but it must first get in a position to take advantage of its opportunity.

The plain truth, as this alert committee of Congress has pointed out, is that other nations, while lacking our present equipment in ships and planes for foreign trade and other capacities for producing more and better ships and planes in the future, are offsetting these factors.

British interests, for instance, are getting out ahead in several important ways.

In the matter of ship-air operations, as we learn from the report to Congress, the British already have an advantage.

They are constantly making other advantages.

In evidence of this is the British program, as the London Daily Mail recently said, for:

"A national pool of air lines from which companies, whether publicly or privately owned, could charter the planes they need for air-line operations all over the world."

That provides a measure of the ambitious competition British foreign-trade interests are contemplating.

The same British publication further discloses:

"The organization might be expanded still further for the convenience of dominion air-line operators and even for foreign lines wishing to use British planes and equipment."

In fact, says the Daily Mail:

"A powerful cooperative scheme between Empire air services all over the world is * * * being worked out quietly behind the scenes."

Plainly, American foreign-trade planners are going to find themselves competing with experts in the post-war field of international commerce.

It will stand them in good stead to become experts on their own account, for it is the considered and competent opinion of American authorities best informed about this situation that 5,000,000 Americans will depend on foreign trade for their post-war living.

And much more than American prosperity will depend on realization of our advantages and opportunities in our future commerce with other nations, for as Mr. John W. Davis, vice president and trustee of the Carnegie Endowment for International Peace, has said:

"Our exports of American goods after the war, with their related imports, will not only assure us an expanding trade that will be reflected in prosperity at home—such trade will serve in a practical way to cement our friendly relations with the nations of the world."

The House Merchant Marine Committee, in its advocacy of an American ship-air foreign trade policy preserving the advantages and opportunities accruing to us by reason of our present great maritime and aviation establishments and our even greater productive capacities, has demonstrated commendable understanding of its responsibilities.

On Foreign Policy

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1945

Mr. HARRIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of yesterday:

ON FOREIGN POLICY

There was nothing either exceptional or exceptionable in the rather brief statement on foreign policy that President Roosevelt included in his message to Congress. Its generalities have met with widespread approval both at home and abroad. Certainly no one could disagree with the President in arguing that we must stand together with the United Nations in war and peace; that the period of readjustment following liberation will be as hard for the freed peoples as it was for us after the Revolutionary War; that differences among the victors are certain to arise; that we must not let these differences divide us, but that international "cooperation on which enduring peace must be based is not a one-way street."

The President took note of the current agitation against power politics which is engaging both perfectionists and obstructionists in somewhat astonishing fellowship. Power is a fact. It has to be used, as the President said, in international no less than in national affairs. It is against the "misuse of power" implied in the term "power politics" that we stand, not, as he implied, the organization of power which will enable the great powers to meet their responsibilities in peace as in war. In our view the Atlantic Charter serves as the only restraint pending the codification of world law against the misuse of power. And we were accordingly glad to see that the President reaffirmed his stand foursquare on the principles of the Atlantic Charter; that it is "our purpose to respect the right of all peoples to choose the form of government under which they are to live" and that we intend to use our influence to the end that "no temporary or provisional authorities in the liberated countries block the eventual exercise of the people's right freely to choose the government and institutions under which, as freemen, they are to live." All those positions have been generally applauded.

There was particular gratification to be found in his announcement that steps are now being taken to equip large new French forces with the most modern weapons. This is a move which the Post had strongly advocated. It would be absurd to call for total mobilization in the United States while leaving the French half-armed. The pity is that the step was not taken when General de Gaulle asked for arms. But, better late than never; the arming of the French will relieve the pressure on American manpower while giving the French themselves a chance to make themselves count against the German militarily. The need is to put more French in the firing line without delay. It is to be hoped that General de Gaulle will give proof of French determination to fight to the full by allowing French regiments to be brigaded with their Allies as soon as they are armed and trained. The war will not wait for whole armies or even divisions to be put in fighting condition. French prestige would be further acknowledged by widening the scope of the impending meeting of the big three to include General de Gaulle.

That the President did not descend from the general to the concrete is doubtless due to the impending meeting of the big three. In several respects this country has been overtaken by events. When the meeting occurs, it is to be hoped that the statesmen will come to grips with the problems at issue, particularly the future of Germany; and, what is even more important, give the people an accounting of their decisions. There would not be today the dubiety over the existing power decisions if there had been some foreknowledge and understanding of the power system that the grand alliance has worked out.

The True Spirit of Unity

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1945

Mr. KEEFE. Mr. Speaker, I was recently privileged to participate in a program sponsored by the Institute for American Democracy, Inc., upon the occasion of the unveiling of the first of a series of historic posters designed to graphically portray the true spirit of unity.

Local municipal officers, representatives of the clergy of various denominations and faiths, and representatives of civic and patriotic groups were in attendance at this ceremony.

I was privileged to make the following address on that occasion:

The Institute for American Democracy, Inc., sponsors of this program, is composed of people of all faiths, creeds, races, and colors who earnestly believe that unity among our people is essential to decent American life and the preservation of true democracy in this Nation. Its sponsors and members fervently believe that real unity among our people can be achieved only by sympathetic understanding of the fundamental principles upon which this democracy was founded. Because I subscribe to that belief, I am pleased to participate in these ceremonies and to briefly refer to some of the principles for which this organization stands.

It is well to recall that the able and religious men of the original Colonies wrote a Declaration of Independence that through the years has clearly stated the aims, purposes, and ambitions of all people seeking liberty and freedom. It is well to recall the ringing declaration incorporated in that immortal document wherein is expressed in a

few terse words the underlying doctrine of democratic government.

Listen: "We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness."

True Americans and true believers in human rights, human liberty, and human freedom have clung to this declaration as fundamental in any democratic society. In these days of great trouble, stress, uncertainty, and sorrow more and more people are turning to the faith of our fathers for inspiration and guidance. Americans as never before now realize, as did the framers of the Declaration of Independence, that regardless of race, color, or creed, we as a free people hold certain fundamental principles in common trust. We cling to the ancient doctrine that Almighty God intended that any noble purpose can be achieved only by unity of thought, action, and deed. Time and again in the historic utterances of our great men attention has been called to the necessity for unity among our people if we are to achieve the ultimate ends of human freedom under a democratic form of government.

Here tonight we reaffirm the great moral principle quoted from the Declaration of Independence and declare without equivocation that every citizen, regardless of race, color, or creed, has fundamental rights that are guaranteed and protected not only by the grace of God but by imperishable principles grounded in the fundamental law of this land. What are some of these principles?

First. The equality of men with respect to their fundamental rights.

Second. The sacredness of human personality, and

Third. A proper conception of a government instituted to preserve, protect, and defend those rights.

Each of these fundamental principles finds its source in the moral law. Today, amid the trials and tribulations of the most devastating catastrophe in the world's history, our people in amazing numbers are turning to God for guidance and comfort. If we are to achieve real unity, we must carefully avoid circulation of baseless rumor. We must learn to segregate subversive propaganda from truth. We must spike every effort to divide us on the home front. We must be vigilant in seeing to it that no canard, no half-truth, no vicious insinuation, is circulated unchallenged. We must educate and persuade Americans everywhere to think straight on basic American principles. We must all at all times realize that this great country which we all love is composed of people of all faiths, colors and creeds and that any person who agitates for the persecution or suppression of any racial or religious group is doing so in violation not only of the great moral law upon which our country is founded, but in violation of the common conscience of the millions of Americans who on the battle fronts of the world are fighting and dying to preserve liberty and freedom. Faced by a common enemy, they stand or fall together, Catholic, Protestant and Jew—they are joined in a common bond of brotherhood.

We on the home front owe it to them to face the complex problems here with the same courageous unity of purpose. We are Americans, and pulling together we shall face the future unafraid—secure in the knowledge that a renewed and inspired faith in the moral concept upon which our Government was founded will lead us through, not only to victory on the battle fronts, but to victory here at home.

It is in this spirit that there will shortly be unveiled the first of a series of historic posters graphically portraying the basic philosophy, the true spirit, of unity.

Butter Production Drops Off as Result of Unwise Government Program

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1945

Mr. HAGEN. Mr. Speaker, the Minnesota State Department of Agriculture has recently released some interesting figures on the production of butterfat in Minnesota for the year 1943.

In spite of the great demand for butter, it is rather surprising to note that Minnesota, one of the outstanding butter-producing States in the Union, is falling short of the production of previous years.

As compared with 1941, the 1943 production of butter in Minnesota has decreased every month. During May 1943, production had dropped approximately 6,000,000 pounds from the production peak for that same month in 1941.

According to the Modern Dairyman, a publication published by the National Creameries Association, butter production for October of 1944 fell to the lowest level for that month since 1925, the Bureau of Agricultural Economics announced recently.

Production for the month totaled only 100,135,000 pounds for the Nation. This was 6.4 percent less than the October 1943 figure and was 22.6 percent under the 10-year October average.

For the first 10 months of 1944 the output of creamery butter was 1,312,425,000 pounds. This is 11.5 percent under the 1943 production for that period and 13.3 percent under the 10-year average for the period.

Despite an increase of 361,000,000 pounds in total milk production for the month, the butter decrease was registered. Observers see in this evidence of the inroads made upon the raw materials of butter by other products.

On the other hand, total dry-milk production jumped from approximately 35,000,000 pounds in 1937 to about 48,000,000 pounds in 1940. As a result of the war demands, the production figures jumped from 48,000,000 pounds in 1940 to over 127,000,000 pounds in 1943 and the trend was upward for 1944.

Partly responsible for this increase is the larger subsidy payments being made by the Government to farmers producing whole milk for milk-drying plants, compared to the butter subsidy being paid to farmers producing butterfat for production. Butterfat prices should be increased to 75 cents per pound.

During the past few months I have been receiving increasingly large numbers of letters from farmers and also from persons engaged in the operation of creameries in my district on the subject of butterfat prices and production.

Following is a letter from Mr. Maurice Sorensen, of Pelican Rapids, Minn., one of the outstanding creamery operators in the country and director of the ninth district of the Minnesota Association of Local Creameries, which outlines in part some of the dangers menacing creameries because of present Government policies:

PELICAN RAPIDS, MINN.

Hon. HAROLD C. HAGEN,
Member of Congress, Washington, D. C.

DEAR HAROLD: Thank you for your reply to my letter about the leveling of the prices of butterfat and milk.

This subsidy paid by the A. A. A. for milk is almost twice as much as is being paid for butterfat in cream. It is resulting in the building of more milk-drying plants, and these plants will eventually help close up many of our smaller creameries, thus making our State more of a centralized affair than cooperative, which we have prided curselves on in the past. I blame this situation more or less on our Government agencies which are now, and have been for some time past, favoring milk over butter in subsidy payments.

I think they are overdoing it when there are milk-drying plants being constructed in territories like Roseau, Ada, Fosston, and towns or territories where we know for sure that there is not enough milk to supply them.

We have been drying buttermilk for human consumption for some time and at present we are not able to sell it within about from 3½ to 4½ cents under the ceiling prices set by the O. P. A. Skim milk will soon follow and by the time these plants now in process of building get going, it is going to take a lot of subsidy to cover them all.

We have the following places near here under construction: Fergus Falls, Perham, Sebeka, Fosston, Ada, and Roseau. Browerville, Alexandria, and Brainerd are already going. If it were not for this special subsidy offered at present for milk over butterfat, it is doubtful if any of these plants would ever have started.

M. SORENSEN.

Streamlining Congress

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1945

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I submit herewith an article which appeared in the American magazine recently by that eminent statesman and experienced legislator, Mr. Justice James F. Byrnes. While it is true that this article was written by Justice Byrnes while he was under the impression that he was retiring as assistant to President Roosevelt, its force, logic, and effect are the same. And while the Members of Congress and the public generally may not agree in toto with the conclusions reached by Mr. Byrnes, I am confident nevertheless that the article is very timely and contains many constructive thoughts.

The article follows:

STREAMLINING CONGRESS

(By James F. Byrnes)

The new Congress will face decisions perhaps as fateful as any in our history. And

yet it convenes in a certain atmosphere of doubt whether a legislative body, many of whose procedures and techniques date back to the gaslight era, is equipped to deal with the swift-moving complexities of modern government. More and more frequently, in recent years, people have been asking:

"What is the matter with Congress?"

It is not so generally known that Congress itself is asking the same question. Last August the Senate passed a resolution, sponsored by Senator MALONEY, of Connecticut, providing for the creation of a joint bipartisan committee of House and Senate to explore the whole question of "strengthening the Congress, simplifying its operations, improving its relationships with other branches of the United States Government, and enabling it better to meet its responsibilities under the Constitution."

A similar resolution was introduced in the House by Congressman MONRONEY, and awaits passage.

Here is a matter of deep concern to us all. Our system of representative government cannot function properly without a strong, vital, efficient, well-informed, and vigilant Congress. Writing not as a public official, but as a citizen, I venture to make some comments based on my 25 years' experience in the House and Senate.

I disagree with those critics who believe that Congress is lacking in intelligence or patriotism. But I agree that there is opportunity for reform of the legislative machinery just as there is opportunity for reform in the executive and judicial branches of the Government. Here are some of the ways in which I feel that Congress can be streamlined and its efficiency increased:

The individual Senator and Congressman should be given adequate staff assistance to allow him more time for legislation, and should be better paid in accordance with his heavier modern duties.

The entire committee system should be revised in accordance with present needs. The number of congressional committees should be reduced. Chairmen of committees should constitute a congressional cabinet to meet with the President, thereby promoting a closer relationship between the White House and Capitol Hill. This would permit an allocation and concentration of responsibility which would bring out existing qualities of leadership in both Houses, and promote both a stronger and closer relationship with the White House.

A permanent staff of trained career men should be built up to aid and advise the committees on legislation.

An improved procedure should be devised for handling and checking on appropriations of funds.

And finally, for the better information of the legislators, members of the Cabinet should be authorized to appear upon the floor of Congress on invitation to answer questions.

Such changes as these would help the Members of Congress, already able as individuals, to rise to their full responsibilities as a group.

Many factors have contributed to the lessened influence of Congress. For one thing, when in 1911 the House increased its membership from 387 to 435, its effectiveness was impaired and its power lessened. Legislation can be enacted only as a result of debate and compromise, and obviously it is more difficult to secure an agreement of 435 men than it is of 387 men. As a practical matter, this cannot be remedied by Congress, since to do so the House would have to reduce its membership by voting its Members out of office. The State legislatures would have to do the job by redistricting, thus taking out of Congress' hands the determination of which Members should go.

Again, with each passing year there was transferred to the Federal Government powers previously exercised by the States. One would think this would increase the power of the Congress and of Congressmen. As a matter of fact, it lessened the influence of Congressmen as legislators. The Congress could only enact laws fixing general policies; it could not determine in advance just how these general policies should be applied to many varied situations arising in all sections of the country. It became necessary to delegate to the executive branch of the Government the power to issue regulations in order to carry out the general purposes of laws.

As an example, when the States, in order to augment their funds for public roads, agreed to the Federal Government supervising the expenditure of Federal-aid funds, Congress, in turn, delegated this supervision to the Bureau of Public Roads.

The necessary effect of such delegations was to leave to the executive departments considerable discretion in determining how these laws should be applied in individual cases. This resulted in greatly increasing the business of citizens with the executive departments in Washington. This might have lightened the work of the Congress, but it did not lighten the work of the Congressmen. On the contrary, it so increased the demands made by citizens upon the national legislators as to make it almost impossible for a Senator or Congressman to find the time necessary to attend to his legislative duties.

The people of a congressional district have come to look upon a Congressman not as their representative in Congress, but as their representative in Washington. The average man who has business with a department of a State government seldom thinks of communicating with the State legislators, but if he has business with the executive departments of the Federal Government he calls upon the Senator or the Congressman to attend to his business with the Government.

It is now not unusual for a Senator to have 25 or 30 people a day come from his State to Washington on business with departments. They ask the legislator to leave his duties at the Capitol and accompany them to various departments to attend to their business. The people who come are people of political influence. If they are not personally known to the legislator they bring letters from personal and political friends, and it is difficult to refuse their requests.

If the legislator should attempt to comply with all requests to visit departments, the only way he would know what is going on in Congress would be by reading the newspapers. He would never get an opportunity to read or answer any of his mail, and the average Congressman each day receives at least 100 letters, many of them requiring not only answers, but the writing of other letters.

This does not include the inspired propaganda which the Congressman soon learns to detect. It is nothing new. I recall the day I became a Member of the House, Speaker Champ Clark, addressing the new Members, stated that each day we would receive so many letters advising us how to vote on every pending question that we would be apt to conclude every voter in our district was writing. He declared, however, that not more than 5 percent of the people would ever write a Congressman, but that 5 percent would constantly write, and it was the duty of a Congressman always to remember the 95 percent who attended to their business and trusted him to represent their interests properly.

So, if you think the trouble with Congress is that Congressmen do not devote enough time to legislative problems, the answer is that the people who elect men to serve in the Congress then work diligently to keep them from doing what they were elected to do.

The appropriations for the staff of a Senator or Congressman should permit the employment of one person at a salary of at least $6,000 to enable the legislator to secure someone to help look after the business of constituents with departments. The Congressman should also have sufficient funds with which to employ an efficient office staff. In increasing its clerk hire fund, Congress should take steps to protect itself against criticism because of nepotism.

Senators and Congressmen should receive higher salaries. The Washington representatives of labor, farm, and business organizations as a rule receive higher salaries than the Senators and Congressmen who represent all the people. In addition, they have expense accounts. Congress authorizes the payment to officials in the executive departments of salaries higher than their own salaries. But daily men are leaving the executive agencies to accept appointments in private corporations at three and four times their Government salaries.

Having voted for the stabilization law preventing any increase in the compensation of private citizens, Congressmen would not at this time vote to increase their own salaries. But with the termination of wage control, Congressmen should promptly increase the salaries of Senators and Congressmen from $10,000 to $15,000 a year.

It is in the interest of good government that the retirement law which covers other officials and employees of the Government should be extended to cover Members of the Congress on the same terms and with the same contributions to the retirement fund.

Congressmen come from every walk of life, and necessarily from every section of the country. The thing about these men that has impressed me is their absolute honesty. Daily they are subjected to temptations, and yet of the 2,000 men with whom I have served I know of only 2 who were convicted of dishonest acts. These 2 were political accidents, elected in political landslides. But I can give you the comforting assurance that political accidents are seldom reelected to Congress.

Another criticism of the Congress is that it is subservient to the Executive because of the desire of Senators and Congressmen for patronage. The fact is that Members of Congress get few jobs in Washington for their constituents. Such few jobs as they do get may make a few of their constituents happy, but many more of their constituents are likely to be unhappy because their friends did not get those jobs. You can appoint any man, even an ex-member of Congress, head of an executive department, and that individual, anxious to make a record for himself, will appoint in his department the persons he believes most competent. He takes little interest in the political welfare of the Members of Congress. In the regular departments the selection of personnel is left to the chief of a personnel division who is a civil-service appointee. He will hold his job under Republican and Democratic administrations, and he has little interest in the legislative program of the administration and less interest in the political future of the Senators and Congressmen.

Since the postmaster and practically all other employees have been placed under civil service, the idea of patronage controlling the Congress is a myth.

Congress really legislates in committee rooms. When a Member of Congress drops a bill in a legislative hopper it has to clear many hurdles before it goes to the White House for approval. Committees, in most instances, hold the power of life or death over proposed laws.

If a House committee, for instance, reports on a bill, it goes to the calendar. If there is no opposition, it can be passed.

Otherwise, in practice it cannot be considered unless the House Rules Committee reports a special rule, making it in order to consider it. Then the measure is debated on the House floor and voted on. If passed, the bill then goes to the Senate, and again is referred to a committee. If the committee favors the bill, it is reported to the Senate calendar for consideration. If passed, the bill in most cases is amended, which sends it to conference to iron out differences. When both the House and Senate accept the conference report, the bill is engrossed and goes to the President for his signature. If it is vetoed, it requires a two-thirds majority by both Houses for the legislation to become law.

During the present Congress approximately 9,289 bills and resolutions have been introduced, but only 867 have become law.

While legislation for the most part is written in committees, no one will seriously attempt to justify the number of committees in Senate and House. The Senate has 33 permanent committees. Some of them meet only once or twice in a session. Some Senators are on so many committees that they would not be able to name all of them.

The jurisdiction of the Senate committees is not clearly defined, nor is care taken to insure that the composition of the committees is such as to make them a fair cross-section of the Senate. As a result, if a Senator has a bill in which he is particularly interested, when he introduces it he asks that it be referred to a committee of which he is a member. The rule of courtesy in the Senate is so adhered to that no Senator objects to this reference, even though it is obvious it should be considered by some other committee.

The House has 45 committees. More rigid rules govern the reference of bills to committees in the House than in the Senate, but no greater care is taken to insure that the committees fairly represent the views of the House as a whole. As a consequence, even more in the House than in the Senate the fate of a bill may depend upon the particular composition of a particular committee.

The number of committees in each House could be reduced to 10—certainly not more than 12. The jurisdiction of a committee should correspond to the jurisdiction of the executive departments. In the House, the Committees on Foreign Affairs and Agriculture should be continued with their present jurisdiction.

The Ways and Means Committee should have jurisdiction of bills now referred to the Banking and Currency Commitee and the Committee on Coinage, Weights, and Measures.

A Committee on National Defense could combine the work of the Committees on Military and Naval Affairs, and consider bills now assigned to the Commitees on Pensions, World War Legislation, Invalid Pensions, and War Claims, which should be abolished.

The Committee on Immigration and Naturalization and the Committee on the Revision of the Laws could be abolished and their functions conferred upon the Judiciary Committee.

A Committee on Commerce could assume jurisdiction of matters now referred to the Interstate and Foreign Commerce Committee, the Merchant Marine Committee, the Patent Committee, and the Census Committee. A Committee on Labor and Public Welfare could well handle matters now referred to the Committee on Education and matters affecting social security, which are now considered by the Ways and Means Committee.

There could be a Committee on Interior and Public Works and it should absorb the jurisdiction of such Committees as Public Lands, Mines and Mining, Irrigation, Indian Affairs, Insular Affairs, and Territories, all of which subjects are under the jurisdiction of the Interior Department. It should also have jurisdiction of Public Buildings and Grounds, Rivers and Harbors, and Flood Control.

The Post Office and Post Roads Committee should take over the Committee on Roads.

The Rules Committee could take control of such matters as are now considered by 3 election committees, the Committee on the Election of President, Vice President, and Representative in Congress, and the Committee on Memorials. It could also assume the work of the Accounts Committee and the Committee on Enrolled Bills.

Such committees as Civil Service and the Committee on Disposition of Executive Papers could be abolished. The Committee on Expenditures in the Executive Departments should be abolished and the work performed by the Appropriation Committees and by the committees having charge of legislation for the various departments.

Instead of the two Houses of Congress having committees on the District of Columbia, there should be a joint committee, so that one City Council would handle District legislation.

The Committee on Claims should be abolished. The Government is now doing business in so many fields, and so many departments are operating automobiles and trucks, that there is a great increase in the number of claims presented to Congress. Senators and Congressmen do not have time to consider them properly, and the Court of Claims should be empowered to consider all claims.

The committees of the Senate, of course, should be reorganized along the same lines.

This reduction of committees would concentrate responsibility. It would lessen competition between committees for control of bills. It would lessen the demands upon the time of busy officials in executive departments, who are constantly called to appear before committees. I recall in the spring of 1941, when General Marshall was building the great army we now have and initiating the program for its equipment, one morning he attended the Senate Appropriations Committee. He informed me that as soon as he had answered the questions of various committee members, he had to appear before two more committees that morning. He had arrived by plane from the West coast at 9:30 a. m. and it was certain he would not be able to reach his office before 1 p. m. This was not an unusual day for General Marshall.

It may be argued that in order to assign the entire membership of Congress to only 10 committees, the committees would be large and unwieldy. However, the House Appropriations Committee has 43 members. It is better to have the entire membership on 10 committees that consider all legislation than to have, as at present, half the membership on 10 committees that consider important bills and the other half on 33 other committees that seldom get a chance at significant legislation.

In each House of Congress the majority party now has a steering committee, to guide the course of legislation. These committees seldom meet and never steer. They should be abolished, and the 10 committee chairmen should constitute a steering committee which meets regularly with the majority leader.

In addition, the steering committees of the two Houses should meet with the President at least once a month. The President now has frequent conferences with the four congressional leaders. This is not enough. If at stated intervals the President met with this congressional Cabinet, it should eliminate much of the friction between the legislative and executive branches of the Government. These meetings, however, should not prevent the President's continuing to invite members of both political parties on a committee to consult with him when an important matter is pending before that committee.

Much of the friction is due to lack of appreciation of problems. Not only does each committee go its own way, but each member of the committee goes his own way. When the majority leader of either House expresses an opinion as to pending legislation he realizes that it is binding only on as many of his colleagues as value his judgment. He does not assume to speak for all members of his party. This is equally true of the minority party.

The more responsibility is thus divided, the farther we get away from the two-party system and the greater encouragement is given to groups and blocs. The agricultural bloc of the Senate within recent years has met more often than has the Democratic membership of the Senate. Closer cooperation between the executive and the legislative branches would better enable the people to place responsibility for the Government's policies.

Much of the complaint of Executive domination of the Congress, as I have said, is unfounded. The Congress needs more, not less, leadership. In many cases the Executive is forced to assume leadership because congressional leadership is lacking. That does not mean that the Congress lacks individual leaders. There are many able leaders in both Houses, but neither House is so organized that its leaders can speak or act for the House as a whole. And until the Congress does so organize itself it is very unfair to the executive branch to put upon it all the blame for the lack of better cooperation between the two branches of Government.

In addition to the permanent standing committees, the Senate has 10 special committees and the House has 7. If there is a reorganization of committees and competent staffs are provided, there is little excuse for continuing special committees.

In recent years effective investigations by two or three special committees have resulted in remedial legislation. But there are many special committees that have contributed nothing in the way of legislative accomplishments. And that is the only object of an investigation.

One objection to a special committee is that frequently it is difficult to end the investigation. For example, a Senate Special Committee on Conservation of Wild Life Resources was created April 17, 1930, directed to ascertain facts upon which legislation might be based. It is still in existence. It has no authority to report a bill. A House special committee on the same subject was created in January 1934, and is still investigating. If there is need for a separate committee on the subject, it should be made a regular standing committee. If not, it should make a final report.

The special committees have been given the right to call on executive departments for assistants. When Congress adjourned in September there were detailed to congressional committees 105 employees of Government agencies who were drawing salaries at the annual rate of $382,927. Congress should hire its own employees and stop a practice that is bad for many reasons.

You cannot expect an independent investigation of the executive departments to be made by employees who, when their job is done, must return to the executive branch of the Government. It prevents the Congress and the public from knowing what is the actual cost of the investigation. It gives to the executive departments from which the employees are taken, an argument to justify additional appropriations for clerical workers to replace those loaned to Congress.

It tends to place the legislators under obligation to officials of executive departments for the services of particular employees.

There are other objections. Some ambitious young lawyer in a department will seek the assignment to an investigating committee. He wants the opportunity to promote

a cause dear to his heart. If, as counsel, he is given the power to cross-examine the citizens who are summoned as witnesses and to influence the thinking of Senators, he has all the power of a Senator, without any of his responsibility.

Only members of the committee should be allowed to interrogate witnesses. This would insure that committee members would keep posted as to the scope of the investigation.

Many of these objections could be avoided if the Congress had a permanent staff of career men selected for their qualifications.

Each House now has an Office of Legislative Counsel. No important bill is reported without a representative of this drafting service assisting the committee. The public has never complained about the cost of this splendid service.

In the Congressional Library the Congress now has a legislative reference service with about 75 employees. It has a number of very efficient men engaged in research work, but this service is not used as much as it should be. It should have an office on each side of the Capitol so that the legislators would have opportunity to consult the most capable men on its staff. The personnel should be augmented and should include outstanding economists, career men who would make studies of the subjects engaging the attention of a committee and be able to advise committee members.

The joint committee on internal revenue taxation employs a staff of tax experts. They confer wtih the tax experts of the Treasury, study the operation of the tax laws, and advise the Ways and Means Committee of the House and the Finance Committee of the Senate on necessary amendments to existing laws. This staff is doing a splendid job and the committees of both Houses are enthusiastic about its work.

A similar staff of experts on appropriations should serve the Appropriations Committee of the House and Senate. The Appropriations Committees of the two Houses are divided into many subcommittees having charge of the appropriations for the various departments.

The House Appropriations Committee has as its chief clerk Mr. Marcus C. Sheild. He has been with the committee for nearly 35 years. All Republicans and Democrats who have served in the House in recent years will agree he is the best-informed man at the Capitol as to the business of government. The Senate Appropriations Committee has, as its chief clerk, Mr. Everard Smith, second only to Mr. Sheild in knowledge of the Government's business.

These two men could organize one staff to serve the Appropriations Committee of House and Senate. If they were given the needed assistants, they could, during the year, check the manner in which the appropriations are expended. When the department officials came to justify their estimates for appropriations, the committees would be well informed by this staff of experts as to the inside workings of the departments. This would be an effective way to control the purse strings.

The staff should be adequate so that when a bill passed the Congress the employee who had assisted with that bill could, during the rest of the year, keep in touch with the department concerned to watch how the money is being spent. He could also keep in touch with the official of the Budget Bureau charged with the preparation of the budget for that department, so that the following year, when the committee hearings were started, he would be able to advise the committee where appropriations could be reduced.

It is a mistake to believe that a careful investigation is not now made of appropriations. The hearings of the House Appropriations Committee on any one of the bills appropriating large amounts continue daily for many weeks.

Some years ago, when Theodore Roosevelt, Jr., had been Assistant Secretary of the Navy for some months, he attended the naval hearings along with the chiefs of several bureaus. After hearing the cross-examination of the bureau chiefs, he told me that he had learned more about the Navy Department that day than he had learned since his appointment. Thereafter for 3 weeks he daily attended the hearings. His example might well be followed by other assistant secretaries.

It is urged that the seniority rule in the selection of chairmen of committees should be abolished and committees be allowed to elect their own chairmen. This may be wise, but I do not think it would prevent the election of the members with longest service. In order to be elected, the Congressman has to convince his constituents of his ability. The selection as chairman of the man who has served longer than any other Member will not affect the standing of the other Congressmen with their constituents. But if a man who has just been elected to the committee should be made chairman, it would reflect upon the qualifications of those who had served on the committee for years. The Member with longest service would, as a rule, still be made chairman, but in those instances where his selection would be particularly unfortunate, the fact that there was no inflexible rule as to seniority might be helpful in securing the selection of a better-qualified Member.

The principal vice of the seniority rule is not the premium it places on experience, but the obstacle it presents to the development of leadership representative of and responsible to the House as a whole.

An innovation is being urged by Congressman KEFAUVER, of Tennessee, who wants Cabinet members to appear on the floor of the House and Senate upon the invitation of committees. From time to time this proposal has been made, but never before has it received the support it is now receiving. Members of the Cabinet now attend committee hearings. I have heretofore thought this was sufficient opportunity for the Congress to acquire information on any particular subject, but I am now inclined to think that it would be wise to give to Cabinet members the privilege of the floor.

The Secretaries would be informed in advance of the subject on which information was desired, so that they could prepare. Written questions would be submitted by the committee. But provision would be made for some oral questions. The rule should provide that questions must be relevant to the question under discussion. If the Secretary deemed the question irrelevant or that the quesion was of such character that it should not be answered as a matter of public policy, he could decline to answer.

It would be helpful to the average Congressman who is not a member of the committee having jurisdiction of the subject and would not otherwise secure first-hand information. At the same time it would give to the Secretary an opportunity to present accurate information which might prevent a lot of misunderstanding.

There is no place where accurate information is of greater value than on the floor of a legislative body. This is because Representatives and Senators have so many duties to perform that it is difficult for them to acquire information on subjects not within the jurisdiction of the committees to which they belong, and also because there are always a lot of people anxious to give legislators misinformation, provided it suits their purpose

Seldom can individuals function as a group with the same efficiency and responsibility that they function with as individuals. But group responsibility is essential in a democracy. The trouble is not with our Congressmen but with the Congress. The Congress falls too far short of being the sum of all its parts. To work together responsibly the Congress must be better organized and better staffed.

Minnesota's Career Service in Congress

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William P. Kennedy, native of Lake City, Minn., and dean of the Capitol Press Galleries:

MINNESOTA'S CAREER SERVICE IN CONGRESS

(Written for the Minnesota Historical Society by William P. Kennedy, Litt. D., native of Lake City, Minn., and dean of the Capitol Press Galleries)

Minnesota—thirty-second State to enter the Union, May 11, 1858, when Henry Mower Rice, who had previously served as a Delegate in the Thirty-third and Thirty-fourth Congresses, and James Shields, native of County Tyrone, Ireland, who had previously served as United States Senator from Illinois (and later from Missouri) were elected as first Senators from the Gopher State—is maintaining its career service record in this Seventy-ninth Congress.

Minnesota's outstanding career employee of Congress, Marcellus C. Sheild, clerk of the House Appropriations Committee, resigned at the close of the year, after having served 37 years. His resignation was accepted only with the understanding, written into the House records, that he would be subject to call as an esteemed House adviser, especially on fiscal matters. The House extolled him for hours in the closing days of the Seventy-eighth Congress, and 80 fellow employees, with terms of service running to upwards of half a century, tendered him a banquet, presented him with a gold watch and a parchment scroll of tribute which was prepared by another veteran Minnesota employee, of both House and Senate, Ansel Wold, clerk of the Joint Committee on Printing, of which Senator CARL HAYDEN, of Arizona, is chairman.

Mr. Wold is now in his forty-fifth year of Government service, of which 42 have been at the Capitol. Seventeen years ago he compiled a monumental work, that is considered the most valuable book of reference the Government ever printed—the Biographical Directory of the American Congress, from 1774 to 1927. In the present Seventy-ninth Congress Mr. Wold will still be carrying on, for he will be making another revision of this valuable compilation, which will bring the work up to date at the close of this Congress. It will include an authoritative biographical sketch of every man and woman who ever served in Congress.

(Career sketches of Marcellus C. Sheild and Ansel Wold will be found below.)

Representative HAROLD KNUTSON, of St. Cloud, Wadena, and Manhattan Beach, Minn., has advanced in the new Congress to ranking Republican member of the most important Ways and Means Committee (since "the power to tax is the power to destroy") and as

such becomes the spearhead of popular opposition to excessive taxation by the party in power. Mr. KNUTSON, who was for years the Republican whip, is now dean of the Minnesota delegation after 28 years of consecutive service. He has brought to the Capitol as his chief aid in his taxation, duties and revenue work James A. Tawney, Jr., son of the late Congressman James A. Tawney, who when chairman of the Appropriations Committee in 1908 brought Marc Sheild from Winona, Minn., to become his right-hand man. Thus James A. Tawney the second begins another generation of career service at the Capitol.

The Minnesota delegation and the entire Nation suffered a severe loss in the fall elections in the defeat of Representative Melvin J. Maas, after 16 years of service, who was ranking Republican member on the Naval Affairs Committee, and did excellent teamwork with Chairman CARL VINSON, of Georgia, in the amazing upbuilding of the long-neglected American Navy into a two-ocean navy to meet war needs. Mr. Maas had for years warned against the Japanese menace; and had vigorously protested against including the island of Yap in the Japanese mandate, because of its proximity to Guam and the Philippines, under the Versailles Treaty. Other seasoned men in the delegation are Representative AUGUST H. ANDRESEN, with 18 years, and WILLIAM A. PITTENGER, with 12 years of valuable experience.

Another veteran loss in which Minnesota is especially interested is the defeat of Representative Usher L. Burdick, at large from North Dakota. He is in the eighth generation of descendants of Robert Burdick, one of the Roger Williams followers. The Burdicks were early western pioneers. Congressman Burdick graduated from Minnesota University, during his school days interviewed pioneers and historic Indians, and has written many western books from these notes. He has cooperated for years with the Minnesota Historical Society.

Not only in Congress and at the Capitol has Minnesota given career service but its sons have given foresighted leadership, especially in promotion of agriculture and cooperative assistance to the farmers. From Revolution days the "feeding farmers" have expressed discontent; before the Civil War a mutual protection meeting was held in Centralia, Ill. But it was a Minnesota man, a member of the Lost Kelley Tribe, who spark-plugged the National Grange and kindred organizations, while a Government clerk in Washington, in 1867. Far from the farms, in the National Capital, the first national organization of farmers was instituted, officially known as the Order of Patrons of Husbandry. O. H. Kelley, of Sherburne County, Minn. (where a monument today marks the site of his former home) with six of his fellow workers started the Grange movement, and established a school of instruction. The following February Kelley resigned his position and devoted his entire time to organization work. The first State Grange was organized in Minnesota in 1869, by Kelley and D. A. Robertson of St. Paul. Some of the most successful farm organizations in the country today have their headquarters in Minnesota, and a former Congressman, Sidney Anderson, has taken prominent part in bringing farm cooperative organization work up to date, especially as it concerns Minnesota interests.

Within 10 years after Kelley of Minnesota organized the Grange, another Minnesota man, who had been working for a quarter of a century to attract farmers to Minnesota, William G. Le Duc, of St. Paul, became Commissioner of Agriculture, and it was a direct result of his administration that this agency of Government service was given Cabinet rank. Le Duc had been commissioner to the World's Fair in New York in 1851, displaying a remarkable bull with Indian attendants. He continued to promote immigration, and railroads. He laid out West St. Paul; projected the company that built the first bridge over the Mississippi River; laid out Hastings, Minn., and engaged extensively in farming.

Le Duc was promoted from Captain to Brigadier General in the Civil War; returning to Minnesota projected and in part constructed the Hastings and Dakota Railway. While he was United States Commissioner of Agriculture, 1877-1881, he established a tea farm in Summerville, S. C.; introduced from foreign countries olives, tea, Japanese persimmons and other plants which have become acclimated in the United States. He organized the Bureau of Animal Industry and the Division of Forestry and generally built up the Federal aid to, promotion of and recognition of agriculture as one of the industries most important to national welfare.

Minnesota is represented in Statuary Hall in the Capitol by a statue of Henry Mower Rice (1816-94); pioneer, Delegate in Congress from Minnesota Territory, United States Commissioner in making Indian treaties, and one of the first Senators from the State of Minnesota. The unveiling exercises were held in Statuary Hall, February 8, 1916. Miss Matilda Whitall Auerbach, a granddaughter of Mr. Rice unveiled the statue. Mrs. Charles R. Davis, wife of the veteran Congressman, represented the Daughters of the American Revolution of Minnesota. Speeches were made by Senators Knute Nelson, who presided, and had been chairman of the Rice Statue Commission, and Moses E. Clapp, and Vice President Thomas R. Marshall. In the Senate acceptance exercises were held on February 19, 1916, when addresses were made by Senators Nelson, of Minnesota; Underwood, of Alabama; Harding, of Ohio; Gallinger, of New Hampshire; and Clapp, of Minnesota. The acceptance services in the House were on March 11, 1916, when the speakers were: Representatives Davis, Steenerson, Miller, Volstead, Smith, Lindberg, Van Dyke, Schall, Anderson, and Ellsworth, all of Minnesota.

At the unveiling ceremonies Vice President Marshall said: "In blazing paths for others to follow he made the first survey of the Sault Ste. Marie; he aided in forming the friendly alliances with the Indians; with Stephen A. Douglas he drew up the act authorizing Minnesota to form a State constitution preparatory to admission to the Union, and fixed he boundaries of the new State. His services as a Senator were painstaking and patriotic and without desertion of his party he remained a defender of the Union of the States."

Washington has another memorial to Senator Rice in what has for 88 years been known as Minnesota Row—a row of three 4-story brick houses, on the north side of I Street near Second NW., which when erected were the most spacious homes in the Capital City, with a frontage of 48 feet and gardens extending 300 feet north to K Street. Associated with Senator Rice in this enterprise in 1857 were Stephen A. Douglas, then Senator from Illinois, and John C. Breckinridge, of Kentucky, then Vice President. These three made these their homes, Rice occupying the middle structure, was later occupied by the Washington City Orphan Asylum for a time, and was later rented to the District government for use as a school. The Breckinridge home was successively bought by friends of General Grant, and presented to him, and when he became President was bought by friends by General Sherman and presented to him. General Sherman divided the house, and the last mayor of Washington, Matthew G. Emery, lived in one half. The Douglas house was the home of Richard Wallach while he was mayor of Washington, was later occupied by Justice Bradley, and was at one time the Papal Legation.

Senator Rice and his brother, Edmund, who 30 years later also served in Congress, were real Minnesota pioneers. They were both born in Waistfield, Vt., Henry in 1817 and Edmund 2 years later. After residing for a time in the Territories of Iowa and Wisconsin, Henry Rice moved to Minnesota in 1839; was post sutler for the United States Army at Fort Atkinson; engaged in the fur business; settled in St. Paul in 1848; negotiated a treaty with the Winnebago and Chippewa Indians in 1847. Through his personal influence he secured the consent of the objecting Sioux Indians to confirmation of the treaty of 1851 whereby all Minnesota west of the Mississippi River and south of Ojibway County was opened to white settlers. He was a member of the board of regents of Minnesota University from 1851 to 1859; was a candidate for governor in 1865. He was president of the State historical society. He served as United States commissioner in making several Indian treaties in 1867 and 1868.

Edmund Rice, after having served as a first lieutenant and acting assistant quartermaster in the Mexican War, moved to St. Paul in 1849, when he was clerk of the Supreme Court, member of the Territorial Legislature, commissioner of Ramsey County in 1856, president of the Minnesota & Pacific Railroad Co. (1863-72), and of the St. Paul & Pacific Railroad Co. (1863-72; president of the St. Paul & Chicago Railroad (1863-77); served in both branches of the State legislature; was mayor of St. Paul, 1881, 1883, 1885, and resigned when elected to Congress in 1887.

James Shields, one of the first two United States Senators from Minnesota held the unique distinction of having been elected to the United States Senate from three States, and the first time before he had been a citizen the number of years required by the Constitution. He was a general in both the Mexican and Civil Wars, appointed Governor of Oregon Territory by President Polk, was adjutant general and railroad commissioner of Missouri. His uncle, James Shields, also born in Ireland, served in the Twenty-first Congress from Ohio.

The first elected Representatives in Congress from the State of Minnesota, whose credentials were presented on May 13, 1858 and who were sworn in on May 22, were James M. Cavanaugh, of Chatfield and William W. Phelps of Red Wing. Cavanaugh was born in Springfield, Mass., July 4, 1823, engaged in newspaper work, studied law, practiced in Davenport, Iowa, and moved to Minnesota in 1854. His election to Congress from Minnesota was his first public office. He served only one term, moved to Colorado where he was a member of the State Constitutional Convention in 1865, and later returned to Congress as a Representative from Montana (1867-71).

William W. Phelps was a lawyer and register of the United States Land Office at Red Wing before coming to Congress in 1853, at the age of 32. He remained in Congress less than a year.

Here is a brief summary of some Members of Congress who have given Minnesota outstanding service and prestige:

Cyrus Aldrich, appointed by President Lincoln in 1863 as a commissioner to examine claims for indemnity of those who had suffered in the Sioux War of 1862.

William Windom, who served in both House and Senate, and served as Secretary of the Treasury in the Cabinets of both Presidents James A. Garfield and Benjamin Harrison.

Ignatius Donnelly, said to be the most erudite man who ever sat in Congress, one of the founders of the Populist Party, and its candidate for Vice President.

Alexander Ramsey, appointed by President Taylor as Territorial Governor of Minnesota on April 2, 1849, and who served until 1853,

had previously been a Representative in Congress from Pennsylvania (1843–1847) and later was elected Governor of the State of Minnesota (1860–63) and United States Senator (1863–75). He was the first to tender State troops to President Lincoln at the outbreak of the Civil War—the First Minnesota Regiment, which had a large part in ending the fratricidal strife by turning back Pickett at Gettysburg, July 2, 1863, when Hancock sacrificed Colonel Colvill's regiment in order to save time. Of the 262 officers and men in the charge 215 were killed or wounded. He was appointed Secretary of War in the Cabinet of President Hayes (1879–81); was chairman of the Edmunds commission, dealing with the question of Mormonism in Utah (1882–83). He was president of the Minnesota Historical Society (1849–63 and 1891–1903). He was a delegate to the centennial celebration of the adoption of the Federal Constitution in 1887.

In the Forty-first Congress, Minnesota had four Senators, due to filling a vacancy by death. Again in the Forty-seventh Congress there were four Senators, for the same reason.

William S. King, who was Postmaster of the National House of Representatives from 1861 to 1873.

William D. Washburn, one of four brothers who served in Congress from as many States, who was both a House and Senate Member, was appointed United States surveyor general of the State by President Lincoln in 1861, and engaged for many years in different manufacturing industries and railroad building.

Knute Nelson, born in Norway, Member of both House and Senate, and Governor, who, on his eightieth birthday, received congratulatory messages from the King of Norway, the president of the Norwegian Congress, President Harding, and addresses of felicitation in the Senate.

Years ago Senator Nelson told the writer an interesting story of how he was paid two pigs by a Yankee farmer in the then wilds of Minnesota, in 1871, when he migrated to the State, for winning his first law case, which had previously been decided against his client. He had to pay $3 hire for a horse to drive 20 miles to argue the case. He also told of eating mule meat while a prisoner of the Confederates after he had been shot during the storming of Port Huron.

John Lind, born in Sweden, who served in the Spanish-American War, was Governor, president of the board of regents of the University of Minnesota, appointed by President Wilson as his personal representative to investigate the affairs of this Government in Mexico in 1913.

John B. Gilfillan, born in Vermont, moved to Minneapolis after holding minor political offices, was a member of the State senate for 10 years, and regent of the University of Minnesota 8 years; then served in the Forty-ninth Congress (1885–87).

Cushman K. Davis, during the Civil War, had been assistant adjutant general on the staff of Gen. Willia A. Gorman (1862–64) before he moved to St. Paul, and 2 years later was in the State legislature. He was Governor of Minnesota (1874 and 1875). He then served in the United States Senate until his death (1887–1900). He was a member of the commission which met in Paris, France, in September 1898 to arrange terms of peace for the war between the United States and Spain.

Darwin S. Hall, familiarly called "Dar," had served in the Civil War before moving to Minnesota and engaging in agriculture. He founded a newspaper, the Renville Times, in 1873, and was register of the United States land office at Benson (1878–86). After service in the State senate he was elected to the Fifty-first Congress. He was appointed chairman of the Chippewa Indian Commission by President Harrison in 1891 and served until 1893, and again in 1897. He helped to nominate Harrison and Reid at the Republican National Convention in Minneapolis in 1892. He was manager of the Minnesota State Agricultural Society (1905–10).

Kittle Halvorson, born in Norway, moved to Minnesota after he had served through the Civil War, and engaged in farming. He was conspicuous in the Fifty-second Congress (1891–93) as the only Farmers Alliance Member from Minnesota.

James T. McCleary, born in Canada, president of the Minnesota Educational Association, Second Assistant Postmaster General in the administration of President Theodore Roosevelt, secretary of the American Iron and Steel Institute, New York City.

Charles A. Towne was a Representative and Senator from Minnesota and a Representative from New York. He was judge advocate general of Minnesota (1893–95); was elected as a Republican to the Fifty-fourth Congress. Then three times he was unsuccessful as the Democratic candidate. He declined nomination for Vice President on the Populist-Silver Republican ticket in 1900. He was appointed to the United States Senate to fill the vacancy caused by the death of Cushman K. Davis, and served less than 2 months. He died while on a speaking tour for the Smith-Robinson ticket in Tucson, Ariz., October 22, 1928.

Frank M. Eddy, who had taught in a rural school and been a land examiner for the Northern Pacific Railroad Co., was the first native of Minnesota to be elected to Congress. He served 8 years as a Republican (1895–1903). He was a member of the Minnesota Immigration Bureau in 1916, and later a clerk in the office of the secretary of state of Minnesota. He was quite a wit, and on one occasion, when accused of being "two faced," answered, "If I had another face, do you suppose I'd be wearing this one?"

Joel P. Heatwole had been a school superintendent, editor, and publisher before he moved to Minnesota from Indiana. After being employed by various newspapers he established the Northfield News. He was appointed a regent of the State University in 1890. He was president for three terms of the State Editorial Association. He served four terms in Congress (1895–1903).

Frederick C. Stevens was born in Boston, educated in Maine, studied law in Iowa, and admitted to the bar in Minnesota. He served in nine Congresses (1897–1915).

R. Page W. Morris was born in Lynchburg, Va., home town of the venerable CARTER GLASS. He taught mathematics in the Virginia Military Institute and the Texas Military Institute, and was professor of applied mathematics in the Texas Agricultural and Mechanical College. He returned to Lynchburg to practice law in 1880. After serving as municipal and district judge he was elected to Congress and served from 1897 to 1903. Thereafter he was United States district judge for Minnesota (1903–23), when he retired from public life.

Moses E. Clapp, attorney general of the State, vice president and general counsel of the North American Development Corporation.

Charles R. Davis was born in Illinois but moved to Minnesota with his parents when he was 5. He was prominent in law practice and became prosecuting attorney of Nicollet County (1879–89 and 1901–3). He served as captain in the Minnesota National Guard; served in both branches of the State legislature. He was elected to Congress as a Republican and served from 1903 to 1925, the longest service of any Minnesota Member until Congressman HAROLD KNUTSON surpassed his record.

Andrew J. Volstead is best known as author of the prohibition law.

James Adam Bede, of Duluth, was a former teacher, Washington newspaper correspondent, editor and publisher, lecturer, author and wit. After an absence of 32 years from Congress he was again advising House Members in 1941. At the age of 85 Mr. Bede prepared an authoritative historical statement regarding the St. Lawrence seaway project pending in Congress which was presented by Representative WILLIAM A. PITTENGER. While a House Member, Mr. Bede introduced legislation proposing to "swap the Philippines for Ireland, and let's raise our own policemen."

Halvor Steenerson, Member of Congress for 20 years, vice president of the American group of the Interparliamentary Union.

Charles A. Lindbergh, born in Sweden, father of the famous aviator.

Sydney Anderson, Spanish War veteran, chairman of the Congressional Joint Commission of Agricultural Inquiry (1921–22); chairman of the National Wheat Conference in Chicago (1923); president of the Wheat Council of the United States (1923–24); vice chairman of the research council of the National Transportation Institute (1923–24); president of the National Millers Federation.

Thomas D. Schall, the blind Representative and Senator.

Carl C. Van Dyke, commander in chief of the United Spanish-American War Veterans.

Frank B. Kellogg, United States Senator, Ambassador to Great Britain, President Coolidge's Secretary of State, negotiated the Kellogg-Briand Treaty, judge of Permanent Court of International Justice, awarded the Nobel Peace Prize for 1929, Grand Cross of the French Legion of Honor, Honorable Bencher of the Middle Temple, Order of Olive Branch of Argentina.

Walter H. Newton, regent of the Smithsonian Institution, private secretary and administrative assistant to President Hoover, member of the Federal Home Loan Bank Board, author of The Hoover Administration (1936).

Magnus Johnson, born in Sweden, succeeded Senator Knute Nelson in the United States Senate.

Marcellus C. Sheild was born in Bellevue, Ia., April 13, 1885, moved to Sycamore, Ill., in 1889, and to Winona, Minn., in 1902. He attended Winona High School, graduating in 1904. He was captain of the high-school football and baseball teams and coach of the girls' basketball team. He attended the University of Minnesota academic and law departments, and later the National Law School in Washington, D. C. He is a member of Phi Delta Theta academic college fraternity, and the Phi Delta Phi legal fraternity. His brother, Rexford M. Sheild, a graduate of the University of Minnesota Law School, is practicing law in Salem, S. Dak., and a member of the State Senate.

While in Winona Marc Sheild stayed out of school between college and high school and was employed at the Chicago Great Western Railway shops, and was employed as a stenographer at the freight offices of the same railroad.

At the University of Minnesota he served as steward of the fraternity chapter house, as stenographer and typist for the head of the department of electrical engineering, and as "masseur" in the football training quarters. His father was general agent for the Chicago Great Western Railway Company in Winona.

Marc Sheild entered the employ of the House Appropriations Committee on January 1, 1908 by appointment of Chairman James A. Tawney (Republican) representing the First Minnesota District. He served 8 years as a stenographer and assistant clerk. He served his apprenticeship under James C. Courts, who was clerk of the committee for 32 years and previously assistant clerk for 7 years—a total of 39 years.

Promoted to be clerk of the committee after the death of Mr. Courts in 1916 by Chairman John J. Fitzgerand (Democrat) of New York, Mr. Sheild served continuously in that capacity for 29 years, making a period of total service with the committee of 37 years.

The Appropriations Committee was established in 1865—60 years ago. In that time it

has had only three clerks—Robert J. Stevens for 19 years, appointed by Chairman Thad Stevens of Pennsylvania (Republican); James C. Courts for 32 years, appointed by Chairman J. D. C. Atkins (Democrat) of Tennessee, and Mr. Sheild for 29 years, appointed by Chairman Tawney of Minnesota (Republican). Courts and Sheild together have held the clerkship of the committee for 61 years.

Mr. Sheild served under 11 of the 22 committee chairmen who have headed the committee—6 Democrats and 5 Republicans: Tawney, Minnesota; Fitzgerald, New York; Sherley, Kentucky; Good, Iowa; Madden, Illinois; Anthony, Kansas; Wood, Indiana; Byrns, Tennessee; Buchanan, Texas; Taylor, Colorado; and the present Chairman Clarence Cannon, Missouri.

He served as clerk and adviser to the Select Committee on the Budget of the House in the Sixty-sixth Congress, which prepared the legislation resulting in enactment of the Budget and Accounting Act of 1921 and the inauguration of the National Budget System. He participated in the conference and assisted in formulation of the procedures which rearranged the supply bills and prepared the way for the submission of the Budget under the new plan.

He also served as clerk to several joint committees of the Senate and the House charged with the readjustment of salaries and employments for Congress. Similarly he served as clerk to the special subcommittee of the Appropriations Committee which conducted an investigation into the operations of the War Projects Administration.

During his 37 years of service the appropriations have increased from $1,000,000,000 in the first session of the Sixtieth Congress to the high war total of $147,000,000,000 in the second session of the Seventy-seventh Congress.

The Committee on Appropriations is the only House committee which, since its inception, has had a continuous policy of training its own personnel and retaining an experienced force without regard to the political complexion of the House or committee or the political predilections of the employees. Democratic and Republican chairmen, alike, have retained the experienced personnel and in filling vacancies have endeavored to keep the staff at a high level of experience and competency. One attempt, in this long record, was made to remove an experienced clerk and substitute a political appointment. A Republican chairman endeavored to remove James C. Courts, who had been appointed by a Democratic chairman. Joseph G. Cannon, of Illinois, affectionately known as Uncle Joe and at one time denounced as Czar, then a member of the committee resisted his own chairman's action and was sustained by a majority of the committee in preserving the committee policy of keeping experienced personnel.

The very important and exacting task ahead of the veteran career man, Ansel Wold, in this Congress is to bring up to date as of January 1, 1946, a thorough revision of the dictionary of the United States Congress and the general Government published in 1859, and again revised in 1869 by Charles Lanman; the Biographical Annals of the Civil Government of the United States in 1876, by Charles Lanman and James Anglin, and the Lanman edition of 1876 as corrected by Joseph M. Morrison in 1887; the Political Register and Congressional Directory of 1878, by Ben: Perley Poore; the Biographical Congressional Director of 1903, by O. M. Enyart, and the Biographical Congressional Directory in 1911.

The present volume contains 1,740 pages—and nothing like it was ever produced before. It is a compilation of 9,000 biographical sketches, and yet there are only about 12 Senators out of the 96, and 40 House Members out of the 435 whose biographies appear in that volume. The revision is long overdue, and when the work is completed this session it will be in such shape and under a system so that it can be kept current.

Ansel Wold, whose Big Book is rated as a best work of reference in all libraries and colleges throughout the country, was born in Madelia, Minn., September 17, 1881. He was a clerk in a country general merchandise store under his father until he was 18 years of age. He was appointed from the Second Congressional District of Minnesota as a clerk in the Census Office by Gov. William R. Merriam, of Minnesota, who was then Director of the Census, upon the recommendation of Senator Knute Nelson. He was employed in the Census Office until February 19, 1902, when he resigned to accept a position as clerk in the document room of the Senate.

Transferred to the Office of the Secretary of the Senate in May 1902 he served in various capacities until February 1910 when he was appointed printing clerk of the Senate and served until April 20, 1921, when he was unanimously elected by the committee, without solicitation, clerk of the Joint Committee on Printing to succeed George H. Carter, who was appointed Public Printer.

Mr. Wold is a member of Madelia Lodge No. 66, F. and A. M., and a member of the City Club and National Press Club of Washington, D. C.

The Allegiance of an Idaho Editor to the Constitution

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. WHITE. Mr. Speaker, the human race, coming down through the murk of war of the ages and the anguish of misrule and oppression, have prayed for a guide to righteousness and good government. When at least the founders of this Nation, guided by the experience of the ages, devised and gave us a charter of good government, they gave the greatest boon that mankind could receive—the Constitution—the charter we are all sworn to preserve and defend; a charter that should be emblazoned on the clear blue of the sky for all to see and to follow.

In the murk of war and uncertainty of our day it is heartening to hear the clarion call of a country editor to preserve this priceless boon for ourselves and our posterity. I submit for the consideration of my colleagues an editorial from the pen of E. M. Ohmstead, of the Idaho County Free Press, of Grangeville, Idaho:

THE CONSTITUTION

No matter what may happen to the Atlantic Charter, the Dumbarton Oaks Conference or the coming meeting of the "Big Three," thank heavens the Constitution of the United States still stands as our original guide post to our Nation. It has been plastered with mud, shot at by brain trusters, and in instances has been superseded by bureaucratic and Executive orders, but like a great tree, the branches still cover the 48 States with the roots firmly imbedded in the minds and the traditions of the greatest Nation on earth.

The Constitution still divides the Government in three separate and yet interlocking divisions—the Congress, or the voice of the people, the Executive, whose duty is to see that the laws of Congress are properly and impartially executed; the Supreme Court, that is to rightly judge that the Congress does not overstep its limitations.

The Constitution of the United States, the greatest human document we proclaimed—built to defend and protect the rights of the people, and the greatest obstacle to the insane ideas of tyrants or the whims of those in power.

So, no matter what happens in 1945 or in 1946, let us stick to the Constitution, believing in its justice and integrity, and defying any and all who would attempt to emasculate that document that gives us the right to "life, liberty, and the pursuit of happiness," is the firm belief and hope of one who simply signs himself—

POP.

Decay of the Atlantic Charter

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, January 11, 1945

Mr. REED. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Decay of the Atlantic Charter," which appeared in the December 28 issue of the St. Louis Post-Dispatch.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

DECAY OF THE ATLANTIC CHARTER

When the Atlantic Charter was first made public, in August 1941, it was hailed far and wide as a new charter of human liberties. Winston Churchill, addressing the House of Commons, grew eloquent in describing his conference with the President and the signing of the document:

"This was a meeting which marks forever in the pages of history the taking up by the English-speaking peoples, amid all this peril, tumult, and confusion, of the guidance of the fortunes of the broad, toiling masses in all the continents; and our loyal effort without any clog of selfish interest to lead them forward out of the miseries into which they have been plunged back to the broad high-road of freedom and justice. This is the highest honor which could ever have come to any branch of the human race."

It was accepted eagerly by the oppressed and embattled peoples. Chinese, Belgians, Frenchmen, Poles, Czechs, Russians, Filipinos and others voiced their endorsement and gratitude. The Greek statement, by Prime Minister Tsouderos, is typical, and ironic today:

"This declaration officially recognizes that the war aims of the Allied Powers remain on the same high level which they have occupied in the conscience and soul of the free democratic countries of the world since the beginning of the struggle. We are all fighting for an ideal; to destroy the violent and brutal method of force used by the aggressors and to liberate the peoples of the world. Inspired by these ideas, and with an unshakable confidence in the triumph of our cause, I accept the resolution now proposed."

The United Nations formally embraced the charter as the basis of their alliance in the joint declaration signed January 2, 1942. The text of this document, together with that of the charter, is reprinted on this page today.

Mr. Roosevelt now says that the charter never existed as a formal signed document, although the signatures appear on every copy of the text, wherever published. Yet in his statement of August 14, 1943, he spoke of that date as "the second anniversary of the signing of the Atlantic Charter." A few days later he vigorously attacked its critics, and in terms strikingly different from his recent off-hand remarks about its objectives being a long way off. He said in 1943:

"I am everlastingly angry only at those who assert vociferously that the "four freedoms" and the Atlantic Charter are nonsense because they are unattainable. If those people had lived a century and a half ago, they would have sneered and said that the Declaration of Independence was utter piffle. If they had lived nearly a thousand years ago, they would have laughed uproariously at the ideals of Magna Carta. And if they had lived several thousand years ago, they would have derided Moses when he came from the mountain with the Ten Commandments."

Praise for the charter continued to ring and fresh pledges of its enforcement. Thus, Viscount Cranborne, Lord Privy Seal, reiterated the British view in June 1942:

"The British Government regards itself as absolutely pledged to carry out all the articles of the Atlantic Charter."

And Clement R. Attlee, Secretary of State for the Dominions, said much the same: "The Atlantic Charter remains the basis of His Majesty's Government's policy."

From American spokesmen, too, came new endorsements. Said Vice President WALLACE:

"The Atlantic Charter provides the broad base of general principles to safeguard our decisions. It is a charter of faith that must be worked out to endure; and the American people intend that it shall work and that it shall endure."

Said Sumner Welles, then Under Secretary of State, on November 11, 1941:

"Those high objectives set forth in the charter of the Atlantic must be realized. They must be realized, quite apart from every other consideration, because of the fact that the individual interest of every man and woman in the United States will be advanced consonantly with the measure in which the world where they live is governed by right and by justice and the measure in which peace prevails."

But even while the first hosannahs were ringing, the process of limiting the charter began. When it was asked if its principles of self-determination applied to the Orient, particularly to British holdings there, Churchill gave this interpretation, barely a month after the charter was framed:

"The joint declaration does not qualify in any way the various statements of policy which have been made from time to time about the development of constitutional government in India, Burma, or other parts of the British Empire. * * * At the Atlantic meeting we had in mind primarily the restoration of the sovereignty, self-government, and national life of the states and nations of Europe now under the Nazi yoke."

This, although the charter spoke of "the right of all peoples to choose the form of government under which they live." Mr. Roosevelt said he did not agree with the Churchill amendment. When Wendell Willkie returned from his world tour in 1942 and reported that the oriental peoples doubted our good faith in applying the charter to them, the President authorized this quotation: "The Atlantic Charter applies to all humanity, as the Secretary of State and I have said several times before."

Again, Churchill modified the charter by saying that it did not apply to Germany, though, in point 4 of the charter, mention is made of "all states, great or small, victor or vanquished." A few days ago, he gave a purported quotation from the charter which proved not to be in the text. A secretary hastily explained that the Prime Minister had suffered a lapse of memory.

Seldom if ever in world history has a document within a short time been so highly praised, so variously interpreted by its authors, so lightly and offhandedly treated and virtually disowned.

Is it any wonder that all around the world people are seriously disturbed by the apparent decay of what they had regarded a charter of freedom and fair play, by the confusion as to what the Allies' war aims really are?

It is still time to abate the cynicism now provoked when the Atlantic Charter is mentioned. Mr. Roosevelt can speak out candidly. The Big Three can meet again and re-define its provisions—with, let us hope, a signed document this time as the result of their deliberations.

Constructive Moves in Foreign Policy

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, January 11, 1945

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Constructive Moves in Foreign Policy," written by Mr. Arthur Krock and published in the New York Times of today. Mr. Krock refers to my observations made yesterday in the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—CONSTRUCTIVE MOVES IN FOREIGN POLICY

(By Arthur Krock)

WASHINGTON, January 10.—The contribution made by Senator VANDENBERG today toward the solution of foreign-policy problems should be measured by three yardsticks to determine its importance.

1. He is the most influential Republican spokesman in Congress on matters of foreign policy; and the leader of a "middle" bloc of former anti-interventionists whose votes conceivably can make or deny a two-thirds Senate majority on treaty proposals.

2. He committed himself and those who follow him to what has been known as an entangling alliance by proposing an interim and immediate military agreement of the United States, Great Britain, Russia, China, and France to demilitarize Germany and keep it demilitarized by the use of force which can be employed by the Executive without recourse to Congress. (At present any treaty policing Japan must lack the signature of Russia.)

3. On behalf of the Republicans in the Senate—or those who can form the voting balance of power—he supplied the President with political material for his next meeting with Prime Minister Churchill and Marshal Stalin on which a satisfactory four-power entente can be founded if fear of future German aggression is the true source of unilateral action in Europe.

THE PROPOSED PROGRAM

The administration was nervous in advance of today's debate because what was expected was a reiteration of demands for information on the Government's foreign policy, present and future, and denunciations of Allied acts which would erect more obstacles to the goal set at Dumbarton Oaks.

But Mr. VANDENBERG's speech was a very different affair. He offered a program. He gave to Mr. Roosevelt detailed measures whereby the immediate purpose of Dumbarton Oaks can be carried out without recurrent congressional obstruction and debate. He lent hope to liberated peoples who have political decisions made for them by powerful neighbors of future review and revision in normal times, and in an atmosphere free of the threat of the Axis. And this program came, not from a Senator of the party which received a favorable popular mandate last November for its interventionist position, but from a Senator whose party was attacked for opposition to that view.

THE MAIN DISPUTE

The main dispute over the world security organization was revealed at Dumbarton Oaks to center on the proposals that permanent members of the Security Council shall be judges of charges of aggression against themselves and each have the power to veto the use of force. Thus, the United States, Great Britain, Russia, China, or France, if anyone were accused of threatening world security and force were proposed as a remedy, could not only vote itself not guilty but by its single ballot prevent the application of that remedy in any case.

The failure of the United States to fight these proposals has raised new doubt that the United States expects to participate in the use of force against a new German menace after the war has been over for some years. This doubt is based on our past performance. The dispute is unsettled and has delayed the formulation of a security treaty for approval by all the United Nations. If the single right of veto remains in the finished draft, the doubt of our enduring participation will remain.

Senator VANDENBERG's program goes to the heart of this trouble. For if the chief Allies at war with Germany, and those at war with Japan, preliminary to the general security treaty make a military alliance by which Germany and Japan will be kept demilitarized, with the use of pledged force at Executive disposal, the chief fear of other powers will be removed. Insofar as the main problem—future German and Japanese aggression—is concerned, this country will be committed to keep it down by swift and strong measures in concert with the cosignatories of such treaties.

MR. VANDENBERG'S ARGUMENT

Senator VANDENBERG pointed out that the unilateral actions in Poland and Greece, of which we complain as violative of our policies and of the Atlantic Charter, are all justified by the argument that security against Germany and local fascism require them. But, as he also said, our signature with those of the others on the treaties he proposes will dispose of the argument and therefore will aid in the eventual establishment of political and territorial integrity for the immediate victims.

His other two proposals were equally constructive, but dependent for their value on the acceptance of the first. For, if German and Japanese aggression are held down by the treaty powers, including the United States, it will be much simpler for the victim of a current unilateral decision to seek and receive redress from the new world security organization. And if the demilitarization treaties are signed, there will be more persuasion for the German people in his suggestion that the Allies announce the price of unconditional surrender will be the cheaper the sooner. Also, the entire program tends to remove the cause for the recent bilateral treaties among our allies.

This view is founded, of course, on the premise that Great Britain and Russia are sincere about Dumbarton Oaks. Those who disbelieve in that will find no solution for the world's misery in anything.

The Proposed Labor Draft

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. MASON. Mr. Speaker, in a report to James F. Byrnes made on September 17, 1943, Barney Baruch said:

Proper handling of manpower has been made impossible by the failure of agencies to work as a team with a clearly defined program. Measures undertaken by one agency have been undone by the conflicting actions or inactions of other agencies. * * * The war manpower and draft acts and the priority and commandeering laws have never been adequately used.

In the face of this indictment by an administration supporter how can the President justify his recommendation for a universal service act? Why does he not make use of the laws now on the books?

Under leave to extend my remarks, I include the following editorial from the Chicago Tribune. It is worth careful consideration by Members of Congress before we act upon the President's recommendation:

THE LABOR DRAFT

Mr. Roosevelt says he wants a labor draft to win the war, which up to November 7 he wanted the voters to believe was virtually won. He wanted a labor draft last year, and Congress thought his arguments for it unconvincing. His present reasons are, therefore, of interest.

"There are three basic arguments," he says, "for a national service law.

"First. It would assure that we have the right number of workers in the right places at the right times.

"Second. It would provide supreme proof to all our fighting men that we are giving them what they are entitled to, which is nothing less than our total effort.

"And third. It would be the final, unequivocal answer to the hopes of the Nazis and the Japanese that we may become halfhearted about this war and that they can get from us a negotiated peace."

The last two arguments can be considered jointly. We are told that the way to convince our enemies and our own armies that we are in earnest is to permit Mr. Roosevelt and his bureaucrats to beat us over the head a little harder than they are already doing. We are supposed to be suffering from complacency and the cancelation of ration stamps to offset the Nazi break-through at Christmas time was not enough to change our mood. We are supposed not to know there's a war on. We never read the casualty lists, or receive telegrams from The Adjutant General.

Incidentally, it hasn't been the failure of more people to go to work in war plants that has angered and embittered the soldiers. It has been the conduct of the people already in the war plants, the strikes, slow-downs, and absenteeism of some of Mr. Roosevelt's C. I. O. pets.

The primary argument for national service—a labor draft—is that with it we shall have the right number of workers in the right places at the right time. As evidence, Mr. Roosevelt offers reported shortages of various type of munitions. He carefully avoids mention of the billions of dollars' worth of surpluses, some of which are already being liquidated, and the bulging warehouses all over the country.

Those surpluses were accumulated by the same people who would supposedly put labor in the right places at the right time. Is there any reason to believe that the Roosevelt bureaucrats would be any more efficient and effective in allocating slave labor than they have been in buying the right war materials?

Already fearsome measures are being hinted at in Washington, pending the enactment of the labor draft. Men who refuse to take war plant jobs are to be drafted into the Army. They won't get veterans' benefits. They won't fight. They will be, in some bureaucrat's phrase, "permanent kitchen police," assigned to so-called work battalions.

The Army hasn't said it has any use for work battalions. The men might as well be in jail for all the good they will do the prosecution of the war. They are, by this account, to be given their choice of signing up with Sidney Hillman and sitting out the war in some munitions plant, or of being inducted into the Army where they will neither fight nor help sustain the civilian economy.

And for many of them, if a labor draft is passed, their compulsory employment would literally mean sitting out the war. Strikes and absenteeism are not the only reasons why war production suffers. Some unions are still applying peace time limitations on production, designed to spread employment, in times of war manpower scarcity. Mr. Roosevelt has done nothing to end that. Neither has he done anything to stop the hoarding of labor in some war plants, of which there is considerable evidence. Instead of making efficient use of the present labor supply, he would put more people to work under the same wasteful conditions.

War plant labor is not fully efficient, but American labor is still the most efficient in the world. It outproduces, by far, the workers of both our allies and our enemies. It does so because it is free labor. Mr. Roosevelt would sacrifice this advantage.

The plea for a labor draft is typical. Instead of seeking ways to increase the efficiency of the war plants and his procurement organization, Mr. Roosevelt aims to make a slave of every American citizen. It is the same old song. If he were only given more power, he wouldn't fall down on the job.

Great Record of Fifty-sixth Fighter Group, Eighth Air Force

EXTENSION OF REMARKS

OF

HON. JAMES P. RICHARDS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. RICHARDS. Mr. Speaker, it is only fair that tribute be paid where tribute is due.

Last fall while on a visit to England and France I had occasion to visit the station of the Fifty-sixth Fighter Group, Eighth Air Force, and to become acquainted with some of its officers and men. The Fifty-sixth is one of the finest groups of men and air fighters anywhere, and its record for enemy planes destroyed is unexcelled. The group includes many aces and many strikingly interesting characters. Its commander is Lt. Col. Dave Schilling, of Traverse City, Mich. Dave Schilling is a dashingly attractive and competent fellow who does not care for hell or high water. He is now, according to late newspaper reports, the leading ace on the European front.

My old friend, Maj. Dave Robinson, of Columbia, S. C., is getting a little along in years now, and they will not let him fly; but he is doing a grand job as administrative officer and is imbued with all the esprit de corps of the Fifty-sixth. Dave Robinson, admittedly one of the best lawyers in South Carolina, did not have to get into this war but went anyway and has been separated from his devoted wife and family for more than 2½ years.

To this air group belonged Lt. Roach S. Stewart, Jr., of my home town, Lancaster, S. C., a fine young fellow who gave his life in air battle over France. There was also Maj. Mike Cladych, "the flying Pole." I wish to insert at this point an Associated Press article from the Washington Star concerning his exploits:

FAMED POLISH ACE WITH YANKS LACKS LEGAL STATUS AS FLYER

AN EIGHTH AIR FORCE FIGHTER BASE, ENGLAND, December 28.—The exploits of Maj. Mike Cladych, the Flying Pole, are becoming legendary among Allied fighter pilots.

Major Cladych has been serving with the Fifty-sixth Thunderbolt Group—which has a record of 800 Nazi planes to its credit—for more than a year without any official status. The American pilots chip in each month to give him spending money, and meanwhile he goes on taking Thunderbolts over Germany to shoot up anything bearing the hated swastika.

The story of this amazing airman has been pieced together, bit by bit, by other flyers. It forms one of the most fantastic tales to come out of the war.

Major Cladych, now 35, was a member of the Polish Air Force when the Nazis overran Poland, killing his parents, his sweetheart, and many of his friends. He escaped by plane to France and joined the French Air Force. Shot down in a German-occupied area, he was hidden by a French doctor in an insane asylum while the Gestapo searched for him.

WAYLAID IN PARIS

Later he was waylaid in a Paris alley by the Gestapo, who left him for dead after beating him on the head with lead pipes, but the French doctor managed to get him back to the asylum and treated him there for months.

He did not fully recover until after all France had been occupied by the Nazis, and then was smuggled to Britain. He joined the R. A. F. and fought in the battle of Britain, later becoming a member of the Polish squadron formed by the British.

A year ago he was assigned to the Eighth Air Force for detached duty. He asked to be sent to the 56th Thunderbolt Group after hearing of its reputation for knocking enemy planes from the sky.

Major Cladych checked in with the 56th for 48 hours, has stayed a year and wants to stay another.

SILENT ON EXPLOITS

Garbed generally in a gray uniform with the Polish eagle insignia, Major Cladych will not talk of his exploits. Apparently all he wants to do is kill Nazis, but the men of the fighter group, intent on keeping up their record of kills, have a hard time pumping from him the number of his victories.

"Maybe I get two planes," he says unconcernedly when asked to report on the outcome of a dogfight. "But I cannot count

because I am too busy shooting what's ahead of me instead of looking back to see what I left behind me."

His wing cameras show he has shot down at least 11 enemy planes, but his buddies say he actually has accounted for at least 15 more. During his time with four different air forces his total is believed to run to perhaps 45.

The following is an Associated Press dispatch about the great record of Dave Schilling. I believe he is a full colonel now; if not, he ought to be.

FIGHTER GROUP LEADER BECOMES LEADING ACE

LONDON, December 23.—Col. Dave Schilling, who commands an ace fighter group in Europe, became a leading ace himself today by getting 5 German planes, making his total bagged 34½—of which 24½ were in the air and 10 on the ground.

The 26-year-old Traverse City, Mich., pilot led his group into one of the fiercest dogfights of the war when they tangled with 250 German Messerschmitts and Focke-Wulfs and shot down 35 of them.

I understand that since this dispatch Schilling has been credited with still more air victories.

There are many others of the group who deserve to be mentioned; but it would take volumes to tell their whole story.

My hat is off to the Fifty-sixth Fighter Group of the Eighth Air Force.

Permanent F. E. P. C.

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. HOOK. Mr. Speaker, as I join my Republican and Democratic colleagues in sponsorship of this permanent F. E. P. C. bill, I want to enter an urgent plea that it be pushed to the top of the list of win-the-war legislation.

Congress now faces the grave responsibility of manning our war machine to the hilt, of improving manpower regulations so that every war job is filled by a man or woman competent to fill it. Every minute we lose in removing every obstacle that now stands between a worker and his job may cost the lifeblood of an American boy.

We have got to face the fact that the greatest single obstacle that now impedes our war production is that of racial or religious prejudice. And we owe it to that American boy overseas and to his brother working overtime here to call upon labor and management to remove that altogether unreasonable, unjustifiable, and un-American obstacle wherever it still exists.

The man who fires the bullet does not care whether it was made by a Protestant, or a Catholic, or a Jew, a Negro, or a white person, so long as he has that bullet when he needs it. Yet the Western Cartridge Co., of Alton, Ill., will not hire a Negro.

The man who stands guard on the deck of the convoy ship does not care who built that ship, so long as it holds together and sails the sea. Yet the Houston Shipbuilding Corp., of Houston, Tex., imports white welders from other parts of the country rather than hire Negro graduates of a Houston welding school.

Add these up, and add to them scores of other cases on record in Washington, and the total of man-hours lost would be appalling, if the injustice alone were not deplorable enough.

Our minority citizens are not being fully utilized in this war effort. A permanent F. E. P. C. with statutory and legal authority will go a long way toward shortening this war. We cannot let our minority citizens down—they want to do their share. We cannot let our soldiers down—they want to get it over with and come home. Let us bring that day of victory closer.

Mr. President and Congress: Speak Up!

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the La Crosse (Wis.) Tribune of January 4, 1945:

MR. PRESIDENT AND CONGRESS: SPEAK UP!

The Seventy-ninth Congress convened yesterday in an anxious Nation, with a world looking on just as anxiously, awaiting its momentous decisions.

Probably the greatest issue to unfold will be reaction to recent emasculation of the Atlantic Charter—the Casablanca pronouncement which for a time seemed to bind all United Nations, but which now appears not to have been a document at all to insure the liberty and freedom of all peoples.

Both President Roosevelt and Prime Minister Churchill, at the first real approach to the Polish boundary question raised by Marshal Stalin, fell limply away from its tenets and in one stroke erased the idealism to which it held forth for all peoples who were to be guaranteed boundaries and a form of government of their own choosing.

And just as quickly, isolationism again popped up in this Nation as something not to be as much ashamed of as it was considered to be during the heat of the recent Presidential campaign. This will be one of the major differences argued when the new Congress gets fully under way—a real issue superimposed on the momentous issues of war itself.

President Roosevelt will come in for severe criticism on his failure to be specific, or to state at all, the policy of this Nation with regard to differences among major allies on the shape of things to come in post-war Europe.

The President has said there is little hope that all Allied differences can be composed at the projected meeting of the Big Three, but vigorous voices will be heard in Congress demanding that the United States assert itself plainly and unmistakably on peacetime policy, to take issue with both Stalin and Churchill who are bent upon carving our spheres of influence which set the stage for World War No. 3.

On the other side of this question lies the road back to isolationism in the United States, the feeling that once more we shall let European problems remain European, and retire in the mood of being "fed up," to our own side of the world.

These are the dangerous and precarious problems we face—problems which cannot with the hope of amicable settlement in the spirit of fair dealing to all nations, await the end of the war. Our position must be made clear now, so that when the hand of victory is turned face up, the world shall know where we stand in the face of temptation to let matters slide after the shooting is over.

America is not a nation to claim selfish credit nor to boast of its achievements in this war, but neither has it been, up to now, a nation which has had great say about the ways and manner of the peace. We simply have said nothing, affirmatively. The one occasion when we did speak was only to renege on the Atlantic Charter pronouncement and thereby emphasize our vacillation.

People or nations do not claim credit for saving their own lives and way of living, which is precisely what we are fighting for, in the first instance. To save our national life is the job of the American serviceman—and he is delivering in the best tradition, as the world knows.

But in the second instance, it is likewise the job of American diplomacy to follow up American brilliance in the field by stating now, and holding tenaciously to a position which guarantees, so far as it is possible to guarantee it, that American sons of another generation shall not have to go back for the third time.

That is what this war is about. That is the phase the American soldier is giving his life to win and to assure. But unfortunately, the phase we seem too timid to win, or to assert ourselves in, is that which will seal up permanently the job which the doughboy and flyer and sailor is doing.

The new Congress has this work upon its hands. It has the responsibility of prying a courageous course for peace from President Roosevelt if he persists in failure to enunciate it—to settle now, while we have the arms and the gear to back it up, the problems which shall inevitably come back to involve us again if we don't.

The gallantry of the American soldier, who believes in what he is doing, certainly is worthy to be matched by diplomatic gallantry. Anything less is not only to cheapen, but to make mockery of every American life lost, to say nothing of the fakery of honest dollars and honest effort put into the war by every citizen living.

It is time to speak up—if, indeed, we are not already tardy.

German Savagery Verified by British

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of January 4, 1945:

GERMAN SAVAGERY VERIFIED BY BRITISH—TWENTY-FIRST ARMY GROUP PUBLISHES DOCUMENTED ACCOUNT OF TORTURES IN BELGIUM

TWENTY-FIRST ARMY GROUP HEADQUARTERS, January 3.—The British Army, in its first

official account of German atrocities, published today a document disclosing that Belgian civilians had been subjected to tortures rivaling those of the Spanish Inquisition.

It said that some prisoners in their agony and despair had frequently scratched crude drawings of the head of Christ on the walls of their cells. The document declared that every statement taken from surviving prisoners had been carefully checked for veracity.

It deals with the notorious Breendonck concentration camp near Malines, the Tir National in Brussels—where Nurse Edith Cavell was executed in the First World War—and 16 other prisons and torture or execution depots in Belgium. Witnesses were quoted as saying that approximately 1,000 persons had been shot at the Tir National during the German occupation and at least 350 had been executed by firing squad or hanging in Breendonck.

An imprisoned Austrian doctor said that more than 500 men had died during the 3 years that he spent in the moated Breendonck Prison, including 300 shot, 15 hanged, and about 200 who succumbed from starvation and other ill treatment. Six methods of torture outlined in the document included: Blows across the face or body, particularly below the belt, with a truncheon or cat-o'-nine tails; binding the victim across a table and thrashing him; hoisting him to the ceiling by a pulley and lashing him in midair, or releasing him to fall on sharp-pointed wooden blocks; burning with cigar ends; crushing fingers in a medieval-style screw press, and burning with a four-pointed electrical needle instrument.

A typical daily menu in Breendonck was given as: Breakfast, one slice of dry bread and a mug of coffee; lunch, a bowl of scalding, watery soup; dinner, one slice of bread, sometimes with a small piece of butter or margarine, occasionally a potato or a salted sardine, and a mug of coffee.

Forty-eight prisoners were jammed into rooms 45 feet long, 21 feet wide and 13 feet high, with blue painted windows at each end of a series of triple-decker bunks and a few small tables and stools. There were also iron-barred cells 6 feet 8 inches by 4 feet 5 inches, equipped with wall shackles.

"All rooms and cells were lit by electricity, but that was used only for inspection by the guards," the document added. Orders were given in German and prisoners who did not understand were punished by the guards, who invariably carried whips or crops.

The "more dangerous" prisoners were kept in handcuffs or shackles night and day and forced to eat dog fashion on all fours. Black hoods were thrown over their heads when they were taken out for 4 or 5 minutes daily.

People Should Rule Our Foreign Policy

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. MICHENER. Mr. Speaker, the future foreign policy of the United States is now being considered and debated in the Senate. The people of the world, as well as our own people, are tremendously and vitally interested in what the foreign policy of the United States is to be. Even the smaller weekly newspapers are expressing their views through their editorial columns. My attention has been called to an editorial appearing in the Manchester (Mich.) Enterprise, a weekly newspaper, which editorial apparently meets with the approval of a number of my constituents. Pursuant to the privilege given to me, I present the editorial to Congress. It is as follows:

PEOPLE SHOULD RULE OUR FOREIGN POLICY

There is a vast difference between the creation and maintenance of a foreign policy, and the day-by-day conduct of foreign affairs. There have been but two foundation stones in what might be classed as America's foreign policy structure. The one was Washington's warning against involvement in European entanglements, and the other was Monroe's demand that Europe keep out of Western Hemisphere affairs.

In peacetime these two have constituted our foreign policy. When war has come we have invariably gone on the day-by-day basis of conducting foreign affairs. That has been in line with the wishes of the American people and no administration dared challenge such wishes.

If, as it would seem, the time has come to change or enlarge upon America's foreign policy, the American people should have opportunity for discussion of what that future policy shall be. It would seem we can no longer think and act only on our day-to-day interests. We must lay down a new line that we can, and will, hew to in both peace and war times. What that line shall be should be debated pro and con, by the best minds of the Nation, and the findings be so presented to the people generally as to win unqualified and, as near as possible, unanimous approval. When that has been done, when a definite and continuing foreign policy has been decided upon, we should hew to that line regardless of all partisan politics. It should be considered a fixed policy, not subject to partisan squabbles. If it is time to change from the President Washington pronouncement, let us make the new policy as fundamental as that one has been.

Future Defense Roads

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. WELCH. Mr. Speaker, on January 8, 1945, I called the attention of the House of Representatives to the vital need for the construction of adequate highways and bridges in defense areas to meet any national emergency involving national defense. Among other things, I invited attention to the failure of the last Congress to include a provision in the Post-war Federal Road Act allocating specific funds to important defense areas; that under some State laws, including California, a special act of the State legislature is necessary to include some of these important highways and bridges in the State road system in order that Federal aid might be given; and I urged that the Public Roads Administration take cognizance of these facts and use its good offices to influence State highway commissions to see to it that these important links of our national defense be included in their programs.

Under leave to extend my remarks and include therein an excellent editorial which recently appeared in the San Francisco Call-Bulletin dealing with this subject, I invite the attention of Members of the House of Representatives to the following:

FUTURE DEFENSE ROADS—HIGHWAY COMMISSION SHOULD PLAN FAR AHEAD FOR FIRST PRIORITY ROADWAYS TO VITAL POINTS

The State highway commission expects to hold hearings with local officials throughout the State to plan post-war construction projects under provisions of the $3,000,000,000 Federal Aid Authorization Act passed by the recent Congress.

The legislation does not actually appropriate any money; it merely authorizes a later Congress to make the funds available for matching by the States on a 50–50 basis. California's share would be about $22,000,000, with an equal amount to be provided by the State.

The highway commission should be ready to get started on this construction program immediately after the war is over. That means extensive planning now, and that is the purpose of early conferences with local officials.

The law does not include an amendment proposed by Representative WELCH, of San Francisco, requiring that a certain percentage of the allotment to each State be allocated for roads and bridges leading to areas of national defense. That, in our opinion, is a serious mistake.

But the individual State highway commissions can remedy that by adopting a policy of giving priority rating to such projects. That is a necessary safeguard against bottlenecks that might delay, at critical times, the movement of troops and supplies.

The Golden Gate, Carquinez, and Bay Bridges, together with connecting roads, are local examples. The linking of port and other facilities here with military and naval establishmentts, such as Mare Island and Hamilton and McClellan fields; with coast and inland plants producing war materials, and with food collection and distributing areas in valley points, have been the means of expediting shipments to our troops overseas.

More such links will be needed in the San Francisco Bay area and in other districts of the State. These should be a part of our national preparedness program. They are important adjuncts to our Army, Navy and merchant marine.

The California State Highway Commission should give consideration to these matters and it should make certain that such projects are placed at the top of the list of its construction program.

Letter From Sgt. Roland Martino

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. TABER. Mr. Speaker, the following letter was written by Sgt. Roland Martino, a son of Mrs. Mary Martino, of 12 Grove Avenue, Auburn, N. Y., from a hospital at Cherry Point where he is recovering from wounds received in action. It is addressed to his aunt, Mrs. Charles DeAnglis, whose son was killed in the invasion of the Normandy coast:

I know it is hard to take and a stunning blow. It is to me and I can imagine what

it is to you. Vince was a boy any parent or family would be proud of. He was a typical example of good American youth and won the admiration of many. We were all proud of him and now at this moment more proud as we know he chose to fight and knew what he was fighting for—you, his sisters, and what he thought was right.

We are all fighting for that. He gave his life for us and we admire him now more than ever. He faced death like a champion and there is no doubt he fell like a champion.

There are many mothers, fathers, and sisters facing the same news you received. There are more to receive such news every day. Now, more than ever, we must all take this sad news and hold our heads up in pride and prayer and try and finish what he started.

He gave his life so we all could live in peace and merriment and without fright. He is gone now, but you can still help him by showing courage and a continuance of his ideals of life. We all know what they were—to see that you and his sisters received every opportunity to have what you and they want.

War is a horrible dream of reality, and someone must always get hurt. God chose Vince as many others. I am sure he left us prepared and hoping we would carry on for him. I intend to, now, more than ever before. He gave his life and I am ready to do likewise for the same reason.

God bless you all for I know you are taking the news like Vince would want it, proud of him at a time when he especially desires you to be proud. Now is the time to be strong, not only in mind but heart. You must know now where he inherited his unsurpassed courage and bravery. Don't let him down.

Answer to Mr. Rich, of Pennsylvania, on Wool Situation

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. PATMAN. Mr. Speaker, in a colloquy with the distinguished gentleman from Pennsylvania [Mr. RICH] last Monday, Mr. RICH made the following statement concerning wool:

When the Government took over the wool for this period and set the price on domestic wools, it embarked upon an operation under which the Government is today accumulating all the domestic wools. The foreign wools are coming into this country, and all we can do is buy foreign wools, because the domestic wools are 18 to 20 cents a pound more than the foreign wools. The fact is that the Government is holding the bag now. We are not using domestic wools. All the manufacturers are buying foreign wools because they can buy them more cheaply.

My investigation of this matter discloses:

In March 1941 the War Department decided to grant price premiums on wool textiles made from domestic wool. Accordingly, the price of domestic wool began to move upward and on March 28, 1941, domestic wools were selling at $1.09 a pound with Australian of comparable grade at $1.03 to $1.08. This was a reversal of the normal situation with domestic wools selling below imported. O. P. A., in the first quarter of 1942, froze the situation as it found it at that time. The War Department purchase program had been in effect for some time and the Office of Price Administration simply accepted the price structure as it found it. Now—as of January 5, 1945—domestic wool is at $1.19, Australian averages about $1.07, with an average difference of 12 cents per pound. There is a further differential due to the difference in put-up or preparation for market. Australian wools are skirted so that each fleece has removed from it the belly roll, neck and leg pieces, and so forth, giving it a greater degree of homogeneity than the unskirted domestic wools. The market normally reflects this difference by a price differential of 5 to 8 cents per pound. If we add this to the 12-cent differential noted above, the total differential runs between 17 and 21 cents.

Since April 25, 1943, the Commodity Credit Corporation has taken practically all of the domestic wool. This means that between that date and the present time they have acquired 577,000,000 pounds. Of this they have sold approximately 48 percent so that they now hold about half of the total which they have acquired.

As for the statement that all manufacturers are buying foreign wools because they can buy them more cheaply, this can be said: Manufacturers have shown a preference for the foreign wools because they have felt that such wools were better graded and for other reasons were easier and cheaper to work. The manufacturer who acquires domestic wool and uses it can obtain an offsetting premium price himself on sales to the War Department so that from the price viewpoint there would not appear to be any incentive in the existing arrangement which would lead manufacturers to use foreign wools if there were no considerations other than price involved.

In summary, the Government is acquiring nearly all the domestic wools and, rather than holding the bag, it has already disposed of about half of the total it has acquired. The manufacturers are using foreign wools because they consider them better to work with, not because they are cheaper. The lower acquisition price on foreign wools is offset by the fact that the manufacturer can obtain a higher price on his product if he uses the more costly domestic wool.

It is my prediction that within a few months practically all of the domestic wool will be consumed. If I am right in that prediction, and I believe it can safely be made, the gentleman from Pennsylvania [Mr. RICH] does not, to my mind, have a complaint that is justified.

Census Department Fees

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. BECKWORTH. Mr. Speaker, on May 11, 1943, I introduced H. R. 2687 to exempt certain persons from the requirement for paying fees for certain census data. I have reintroduced the bill. One of the requirements which must be met before an aged person can receive old-age assistance is the proving of the age of the individual who desires to receive the assistance. Many of our aged do not have sufficient records to prove their ages and it becomes necessary that they call on the Census Department for age proof. The Census Department now charges $1 to search the records for an individual who desires to prove his age and $3 if the given individual desires that the search be made more rapidly than the usual searches are made. There are several States which pay on an average of less than $12 per month to their aged who receive old-age assistance. Obviously $1 or $3, with living costs high as they are, is a very significant sum for these individuals. In my opinion, the Government should furnish this information to them free. Furthermore, I would extend the provision of this bill to enable veterans, widows of veterans, and service people to obtain proof of their ages without having to pay the Census Department these fees. I hope the Census Committee will report soon this legislation, and that the Congress will pass it, thereby helping materially our aged and perchance in some cases our veterans and service people.

I wish to include in the RECORD a letter I received from Mr. Paul V. McNutt on June 15, 1944; also the bill I introduced:

FEDERAL SECURITY AGENCY,
Washington, June 15, 1944.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: I believe that the legislation that you propose would result in a service to applicants for old-age assistance or old-age and survivors' insurance who need to utilize the Bureau of the Census as a resource in establishing proof of age.

However, the Social Security Board encourages the use, in the administration of both old-age assistance and old-age and survivors insurance, of the most reliable evidence as proof of age which is readily available to the applicant or claimant. It has been the experience of the Board that in most instances persons have in their possession information that can be considered satisfactory proof.

Nevertheless, legislation which would enable applicants for old-age assistance or claimants of old-age and survivors insurance who are obliged to have recourse to the Bureau of the Census for proof of age to receive the necessary information free of charge, would, we believe, be desirable.

We believe the bill should provide for the obtaining of the information on behalf of an individual by the administrative agency concerned in instances in which the person is unable to request the information himself.

I believe that we can say with assurance that the State agencies administering old-age assistance will agree with us in this opinion.

I am advised by the Bureau of the Budget that legislation to discontinue charges for age and citizenship certificates should not be considered as being in accord with the program of the President.

Sincerely yours,

PAUL V. MCNUTT,
Administrator.

H. R. 358

A bill excepting certain persons from the requirement of paying fees for certain census data

Be it enacted, etc., That section 18 of the act entitled "An act to provide for the fifteenth and subsequent decennial censuses

and to provide for apportionment of Representatives in Congress," approved June 18, 1929 (U. S. C., 1940 ed., title 13, sec. 218), is amended by inserting before the period at the end of the first sentence the following: ": *And provided further*, That no charge for supplying a certificate shall be made and no payment of the cost of searching the records shall be required in any case in which the individual requesting the data is a member of the land or naval forces of the United States or has been honorably discharged therefrom, or has been retired therefrom, or relieved from active duty therein, under honorable circumstances, or in any case in which the data is requested by an individual as proof of his age for the purposes of his eligibility for old-age assistance or old-age and survivor insurance benefits."

Clare Hoffman Gives Warning

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. HOOK. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the New York PM of January 10, 1945:

CLARE HOFFMAN GIVES WARNING

Certain remarks were made on the floor of the House of Representatives last Thursday by CLARE HOFFMAN, of Michigan. The leadership of the Democratic Party cannot afford to ignore them.

These remarks clearly indicate the use which anti-administration elements, Republicans and southern Republicrats, intend to make of the newly authorized permanent Dies committee.

HOFFMAN said those who voted for the Rankin resolution to make the Dies committee permanent "are neither bigoted nor prejudiced, but they do believe it is their duty to keep those who would destroy constitutional government from boring from within."

Whom did HOFFMAN have in mind? Was he thinking of the pro-Nazi termites and rats who assiduously spread the Goebbels line in this country, who spread race hatred and defeatism, who send poisonous letters to the mothers of men who gave their lives for their country?

Not at all. HOFFMAN'S attack was upon "the Reds and the radicals." If there is anyone so naive as not to understand what HOFFMAN means by "Reds and radicals," let him read HOFFMAN'S own explanation on the floor.

HOFFMAN attacked "left-wingers, parlor pinks, New Dealers—who advocate the remaking of America, who prophesy the destruction of private business and hope the procedure will be bloodless; any or all of those who do not believe in constitutional government."

The intent of the Republican-Republicratic coalition which supported the Rankin resolution is to use the new Dies committee to harass the administration, to smear the New Deal, to weaken the President and the Democratic Party with the country.

The leadership of the Democratic Party in the White House and in Congress cannot weakly ignore this intention. It should hardly be news to them.

The Dies committee was established in May 1938. That was 2 months after Munich, and the direction from which peace and democracy were menaced was plainly visible.

The main purpose of the committee was thought to be an inqury into Nazi activities in this country. This was indicated by Dies' assurance that his investigation would not be aimed at German-Americans as a group. It was also indicated, in reverse, by the fact that both Social Justice and the Chicago Tribune were at first very wary of the Dies committee, though they later became its ardent supporters.

Within a few months, the real direction of the committee's efforts was made clear. In a series of unfair and sensational hearings that year the committee helped defeat two New Deal gubernatorial candidates, Murphy in Michigan and Benson in Minnesota, and tried to defeat a third, Olson in California.

Dies declined to call off hearings until after the election, as requested by HEALY and Dempsey, two Democratic members of the committee. And on October 14, THOMAS of New Jersey, the leading Republican member, made a Nation-wide broadcast, linking the New Deal with communism and pointing to evidence obtained by the Dies committee as proof of a "plan to sabotage the capitalistic system by placing upon that system burdens of restrictive legislation and staggering taxation."

In every election since, whether congressional or Presidential, the Dies committee has been used to hurt the President, his supporters, and the Democratic Party.

The HOFFMAN speech on the floor, the anti-New Deal coalition which voted the Rankin resolution, the fact that MARTIN of Massachusetts made support of the resolution a matter of party discipline, all indicate that the new Dies committee is to be used in exactly the same way.

The question we want to ask Democratic leadership is whether it intends weakly to stand aside and permit the enemies of the party and of the New Deal to reestablish the Dies committee.

If the leadership contains men of courage and resolution, they will act now—for the fight is by no means lost. A shift of 11 votes would have defeated the Rankin resolution and a vigorous fight could force out of the Rules Committee and through the House the Hook resolution to revoke the Rankin resolution and to kill the Dies committee before it can get started again.

Past experience amply illustrates that neither changes in personnel—several times made—nor pledges of fair procedure—often given and as often broken—are likely to prevent the committee from slipping back into the old familiar pattern.

We ask Democratic leadership to take its courage in its hands and act now, when something can still be done.

I. F. STONE.

A Department of National Health in the Cabinet

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. MILLER of Nebraska. Mr. Speaker, the bill to provide for a Department of National Health in the Cabinet is being introduced in order to bring all of the Federal activities relative to health under one umbrella.

The Federal Security Agency has 12 different Government services concerned primarily or secondarily in some phase of health. The main one is the United States Public Health Service, and then we have the Office of Education, the Office of Vocational Rehabilitation, the Office of Community War Service, Committee on Physical Fitness, the Food and Drug Administration, and several others.

In addition to the programs under the Federal Security Agency, we have some 20 other Government agencies having programs relating to some phase of health. We have the Veterans Administration concerned with the welfare of returned members of the armed forces. The Army and Navy have specific programs for their personnel. The Department of Agriculture has a Bureau of Home Economics, Bureau of Nutrition, Bureau of Dairy Industry, Farm Security Administration, and the Extension Service. These agencies are all dabbling in some phase of health.

In the Labor Department we have the Children's Bureau and the Women's Bureau. The Children's Bureau was originally set up to look after child delinquency, hours of labor for children, and infant mortality, and has now branched out into a good-sized health department dealing with all phases of health. They have a definition that a child is a person under 18 years of age. They have a crippled heart division and a crippled children's division. They have a division which administers the maternal health of the wives of the military in the fourth, fifth, sixth, and seventh grades. The Children's Bureau administers grants and aids to the States for crippled children and maternal services. They conduct programs of immunization. They have a prenatal delivery and post-natal care for the mother, including hospitalization with medical and nursing care as needed for the infant during the first year of life.

There are many other agencies dealing with health which should be administered under a secretary of health. This should help reduce expenditures, increase efficiency, and could consolidate and reduce the number of agencies having similar functions. Some agencies that are not necessary could be abolished. This would eliminate overlapping and duplication of effort. It should provide a better service for the people with a saving of funds. The bill does not include the War or Navy Departments of Government.

Preference for Veterans and Farmers Under Surplus Property Act

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. BECKWORTH. Mr. Speaker, when the Congress passed the Surplus Property Act it was the desire and purpose of many of the Members that veterans and farmers receive special consideration in their need for and in their efforts to procure available surplus property. Thus far, in my opinion, they have

received little if any extra consideration in the disposition of surplus property. It is my sincere hope that the new Surplus Property Board will issue rules and regulations in the near future which will carry out the intent of the law in the reference to certain preference for veterans and farmers.

I wish to include two letters I have recently received concerning the disposition of surplus property and also a short statement I placed in the CONGRESSIONAL RECORD November 27, 1944:

SURPLUS PROPERTY BOARD,
Washington, D. C., January 4, 1945.

Congressman LINDLEY BECKWORTH,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR MR. BECKWORTH: Please pardon my delay in answering your letters of December 20 and 27, which was occasioned by the fact that I took my oath of office only yesterday. You may be certain that the Board will shortly consider how to help farmers and veterans in the disposal of surplus property and will issue appropriate regulations.

I shall be very happy to keep in touch with you.

Very truly yours,

EDWARD H. HELLER,
Surplus Property Board.

TREASURY DEPARTMENT,
PROCUREMENT DIVISION,
Fort Worth, Tex., December 20, 1944.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: Reference is made to your letter of December 21, 1944, requesting information as to what is being done for the servicemen and veterans in connection with surplus property.

Pending the issuance of regulations by the Surplus War Property Board described in the Surplus War Property Act of 1944, the Procurement Division is selling consumer items through normal trade channels, with special emphasis being given to the encouragement of small businesses.

Under the provisions of the Surplus War Property Act, it is anticipated that certain preferential treatment will be given to veterans as well as other specified categories.

If there is further information which we can furnish you regarding the policy of this office with respect to the sale of surplus property, we shall be glad to develop such information as you may require.

Very truly yours,

HAMILTON MORTON,
Regional Director.

DISPOSITION OF SURPLUS PROPERTY

(Extension of remarks of Hon. LINDLEY BECKWORTH, of Texas, in the House of Representatives, Monday, November 27, 1944)

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a letter I have received concerning the disposition of surplus property:

TREASURY DEPARTMENT,
Washington, November 21, 1944.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BECKWORTH: Your letter of November 17 addressed to Secretary Morgenthau has been turned over to me for reply since I am in charge of the Office of Surplus Property here at Treasury Procurement. To the several questions in your first paragraph, the answer at the present time is in the negative. In other words, we give no preference to soldiers, farmers, or soil-conservation districts. We do not sell direct to consumers but through regular dealers. We do have an arrangement whereby a farmer who can obtain a letter from his county A. A. A. agent to the effect that he is badly in need of a truck can take this note to a dealer and obtain priority over other prospective purchasers who do not have similar notes.

The situation will change as soon as the Surplus Property Board has been appointed and set up regulations. In other words, according to section 16 of the Surplus Property Act, the Board shall prescribe regulations which will result in aiding veterans. Section 17 of the act directs that farmers and farmers' cooperative associations shall have equal opportunity with others to purchase surplus property. We are selling to farm cooperatives at the present time but not directly to farmers. What regulations the Board will establish under this section remains to be seen.

With regard to the size of profits which dealers are permitted to make, this is controlled somewhat by the fact that surplus property must be sold in accordance with O. P. A. regulations. We, too, are bound by O. P. A. regulations. Since we have experienced businessmen at the head of our various merchandise divisions, we obtain what our ceiling price is for the property we sell. Those who buy from us must sell at or under O. P. A. ceilings and in this way their profits are presumably held to reasonable limits. On a percentage basis, profits will vary considerably from transaction to transaction and from type of merchandise to type of merchandise. It is impossible to give you any one figure.

Businessmen in your State who desire to purchase surplus property should write to our Fort Worth office asking to be placed on the mailing list to receive notices regarding available property in the lines which they usually carry.

Requests should be addressed to Mr. Hamilton Morton, regional director, Procurement Division, United States Treasury Department, 609 Neil P. Anderson Building, Fort Worth 2, Tex.

We are issuing a surplus reporter to all interested parties on our mailing list. The copy which is sent out of the Fort Worth office will list not only the property available in that region, but also throughout the country.

I hope that this information is what you wanted and that it will be helpful to you.

Sincerely yours,

E. L. OLRICH,
Assistant to the Secretary.

Furthermore, I wish to quote sections 16, 17, and 12 of the Surplus Property Act which the Congress passed not long ago. So far I fear section 16 and section 17, insofar as it pertains to individual farmers have been meaningless:

"DISPOSITIONS TO VETERANS

"SEC. 16. The Board shall prescribe regulations to effectuate the objectives of this act to aid veterans to establish and maintain their own small business—professional or agricultural enterprises—by affording veterans suitable preference to the extent feasible and consistent with the policies of this act in the acquisition of the types of surplus property useful in such enterprises.

"DISPOSITION IN RURAL AREAS

"SEC. 17. The Board shall devise ways and means and prescribe regulations in cooperation with the War Food Administrator providing for the sale of surplus property in such quantities in rural localities and in such manner as will assure farmers and farmers' cooperative associations equal opportunity with others to purchase surplus property: *Provided, however,* That in cases where a shortage of trucks, machinery, and equipment impairs farm production, a program shall be developed by the Board in cooperation with the Agricultural Adjustment Agency whereby a reasonable portion of the surplus supply will be made available for sale in rural areas to farmers and farmers' cooperative associations.

"UTILIZATION OF SURPLUS PROPERTY BY FEDERAL AGENCIES

"SEC. 12. (a) It shall be the duty of the Board to facilitate the transfer of surplus property from one Government agency to other Government agencies for their use; and the transfer of surplus property under this section shall be given priority over all other disposals provided for in this act.

"(b) It shall be the responsibility of all Government agencies, in order to avoid making purchases through commercial channels, continuously to consult the records of surplus property established by the Board and to determine whether their requirements can be satisfied out of such surplus property. It shall also be the responsibility of the head of each Government agency to submit to the Board such estimates of the needs of the agency and such reports in relation thereto as the Board may deem necessary to promote the fullest utilization of surplus property. It shall be the responsibility of the Board to determine whether Government agencies are acquiring surplus property to the fullest possible extent, and to notify agencies whenever, in its judgment, they are not so doing.

"(c) The disposal agency responsible for any such property shall transfer it to the Government agency acquiring it at the fair value of the property as fixed by the disposal agency, under regulations prescribed by the Board, unless transfer without reimbursement or transfer of funds is otherwise authorized by law."

It seems to me the time to do something to materially assist all veterans, servicemen, our farmers, who compose soil-conservation districts, who compose Agricultural Adjustment Agency units, and individual farmers, is when there is something available they need, can advantageously utilize and perchance could not otherwise procure.

This country is committed time and time again to endeavor to assist our Spanish-American War veterans, our World War veterans, our service men and women, and all our farmers. The intent of Congress with reference to helping these groups should not be evaded.

There definitely is a place for dealers and retailers in the orderly disposition of surplus property. I feel they should have reasonable profits, too; however, I feel the first thing the new board should do is to set up rules, regulations, and machinery whereby a serviceman or veteran or farmer may buy when they are available if he wants just one, a jeep, a truck, a tractor, or a bulldozer without having to pay an unconscionable profit.

Noted Commentator Flays Committee for Constitutional Government—Says Passage of Proposed 25 Percent Tax Limitation Amendment Would Be "a Tragedy for Every Farmer and Wage Earner and Small Businessman in This Country"

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. PATMAN. Mr. Speaker, Stanley Dixon, able commentator who broadcasts for the Mutual Broadcasting System every Sunday, has again picked up

the cudgels to assail the activities of the Committee for Constitutional Government in seeking passage of the proposed nefarious twenty-second amendment to the Constitution. In his regular Sunday broadcast on December 31, Mr. Dixon warned his listeners to be on the look-out for the activities of this group within their own respective States.

Because of Mr. Dixon's reputation for clear thinking and because we cannot be warned too often of the disastrous effects which the passage of this amendment would have upon the veterans and their dependents, upon those who now receive old-age assistance from the Government, and upon all farmers, wage earners, and small businessmen who are in the low-income brackets, I quote below from Mr. Dixon's broadcast of the 31st, as follows:

There is something State legislatures must not do, and that is to adopt a resolution favoring a proposed amendment to the Constitution which would limit the income tax to 25 percent. The Committee for Constitutional Government is promoting the plan, one of the most dangerous ever conceived. It would mean that millionaires who now pay about $800,000 on a $1,000,000 income would only pay $250,000, while people with small incomes would pay at least one-quarter of their income; a man with a $2,000 income who now pays about $175 would have to pay $500 with no exemptions. Remember that this would be a glorious windfall for the war profiteers who have made incredible billions of profits out of this war. It would be a tragedy for every farmer and wage earner and small businessman in this country. Furthermore, inheritance taxes would also be limited to 25 percent, which would mean huge losses to the Treasury in taxes on vast fortunes.

The loss in revenue due to this amendment would be so tremendous that the Government would have to follow one of two courses: either impose a large sales tax on everything, including food, perhaps a 20 percent tax to cover the costs of Government, or else they would have to repeal all veterans' aid bills, including the G. I. bill of rights. All pensions to veterans and old people would be stopped. All social security would be abolished. All veterans' hospitals would have to be closed. The Committee for Constitutional Government is trying to get 32 States to pass this resolution. It is being done very quietly. Some of the legislators don't even know that it has gone through, but if 32 States should pass the resolution a Constitutional Convention would have to be called. And if it were, all the money powers in the country would be behind this infamous proposal.

Sixteen legislatures have adopted this resolution, but these can be withdrawn. If you are a wage earner, or a veteran, or an old-age pensioner, or a small businessman, or a small farmer, anyone in fact with a small income, this is your fight. For full information about this racket, write to Congressman WRIGHT PATMAN, Washington, D. C., or write to me and I will forward your letter. Contact your union and get them working. Contact the local branch of your political action committee. Contact the Farmers Union. If possible, write to your State representatives and State senators and let them know that you want none of this proposal. But don't dally, for if you do you may find that America has been turned into a paradise for millionaires, and "you know what" for the little man, the veteran, and the pensioners.

The President's Epitome of His Annual Message

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, January 15, 1945

Mr. BARKLEY. Mr. President, on the evening of the 6th of January the President delivered over the radio an epitome of his message delivered to the Congress earlier in the day. I ask unanimous consent that the radio address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today, in pursuance of my constitutional duty, I sent to the Congress a message on the state of the Union—and this evening I am taking the opportunity to repeat to you some parts of that message.

This war must be waged, it is being waged, with the greatest and most persistent intensity. Everything we are and have is at stake. Everything we are, and have, will be given.

We have no question of the ultimate victory. We have no question of the cost. Our losses will be heavy.

But we and our allies will go on fighting together to ultimate total victory.

We have seen a year marked, on the whole, by substantial progress toward victory, even though the year ended with a set-back for our arms, when the Germans launched a ferocious counter attack into Luxemburg and Belgium with the obvious objectives of cutting our line in the center.

Our men have fought with indescribable and unforgettable gallantry under most difficult conditions.

The high tide of this German attack was reached 2 days after Christmas. Since then we have reassumed the offensive, rescued the isolated garrison at Bastogne, and forced a German withdrawal along the whole line of the salient.

The speed with which we recovered from this savage attack was possible primarily because we have one supreme commander in complete control of all the Allied armies in France. General Eisenhower has faced this period of trial with admirable calm and resolution and with steadily increasing success. He has my complete confidence.

Further desperate attempts may well be made to break our lines, to slow our progress. We must never make the mistake of assuming that the Germans are beaten until the last Nazi has surrendered.

And I would express a most serious warning against the poisonous effects of enemy propaganda.

The wedge that the Germans attempted to drive in western Europe was less dangerous in terms of winning the war than the wedges which they are continually attempting to drive between ourselves and our allies.

Every little rumor which is intended to weaken our faith in our allies is like an actual enemy agent in our midst, seeking to sabotage our war effort. There are, here and there, evil and baseless rumors against the Russians, rumors against the British, rumors against our own American commanders in the field.

When you examine these rumors closely, you will observe that every one of them bears the same trade-mark, "Made in Germany."

We must resist this propaganda—we must destroy it—with the same strength and the same determination that our fighting men are displaying as they resist and destroy the panzer divisions.

In all of the far-flung operations of our own armed forces, on land and sea and in the air, the final job, the toughest job, has been performed by the average, easy-going, hard-fighting young American who carries the weight of battle on his own shoulders.

It is to him that we and all future generations of Americans must pay grateful tribute.

But, it is of small satisfaction to him to know that monuments will be raised to him in the future. He wants, he needs, and he is entitled to insist upon, our full and active support—now.

Although unprecedented production figures have made possible our victories, we shall have to increase our goals in certain weapons even more.

Our armed forces in combat have steadily increased their expenditure of ammunition. As we continue the decisive phases of this war, the munitions that we expend will mount day by day.

I shall not go into the details of war production and the requirements of war materials. They are contained in the message that I sent today, and I hope that many of you will have an opportunity to read that in full.

But there is one very human need that I do want to mention.

We need 20,000 more trained nurses for our Army and Navy.

Those nurses that we have, are rendering gallant service to our sick and wounded men, but they have been called upon to do more than their share. More than a thousand nurses are now hospitalized themselves, and part of this is due to overwork. At Army hospitals in the United States there is only one nurse to 26 beds, instead of one to 15 beds, as there should be.

Since volunteering has not produced the number of nurses required, I asked the Congress in my message, to amend the Selective Service Act to provide for the induction of registered nurses into the armed forces.

The need is too pressing to await the outcome of further efforts at recruiting. However, I urge registered nurses throughout the country to volunteer immediately for this great service.

The only way to meet our increased needs for more weapons and new weapons is for every American now engaged in war work to stay on his war job—for additional American civilians, men and women, not now engaged in essential work, to go out and get a war job. Workers who are released because their war production is cut back should get another job where war production is being increased. This is no time to quit or change to less essential jobs.

There is an old and true saying that the Lord hates a quitter. And this Nation must pay for all those who leave their essential jobs—for all those who lay down on their essential jobs for nonessential reasons. And that payment must be made with the life's blood of our sons.

Last year, after much consideration, I recommended that the Congress adopt a national service act as the most efficient and democratic way of insuring full production for our war requirements. This recommendation was not adopted.

I have again called upon the Congress today, to enact this measure for the total mobilization of all our human resources—men and women—for the prosecution of the war. I urge that this be done at the earliest possible moment.

It is not too late in the war. In fact, bitter experience has shown that, in this

kind of mechanized warfare where new weapons are constantly being created by our enemies and by ourselves, the closer we come to the end of the war, the more pressing becomes the need for sustained war production with which to deliver the final blow to the enemy.

There are three basic arguments for a national service law:

First. It would assure that we have the right numbers of workers in the right places at the right times.

Second. It would provide supreme proof to all our fighting men that we are giving them what they are entitled to, which is nothing less than our total effort.

Third. It would be the final, unequivocal answer to the hopes of the Nazis and the Japanese that we may become half-hearted about this war, and that they can get from us a negotiated peace.

National service legislation would be used only to the extent absolutely required by military necessities. In fact, experience in Great Britain and in other nations at war indicates that use of the compulsory powers of national service is necessary only in rare instances.

National service would provide against loss of retirement and seniority rights and benefits. It would not mean reduction in wages.

The contribution of our workers in this war has been beyond measure. We must now build on the foundations that have already been laid and supplement the measures now in operation, in order to guarantee the production that may be necessary in the critical period that lies ahead.

The Secretary of War and the Secretary of the Navy have written me a letter in which, speaking of present war needs, they said:

"In our considered judgment, which is supported by General Marshall and Admiral King, this requires total mobilization of our manpower by the passage of a national war service law. The armed forces need this legislation to hasten the day of final victory, and to keep to a minimum the cost in lives."

That is the testimony of those best qualified to know the situation which confronts us.

Pending action by the Congress on the broader aspects of national service, I have recommended that the Congress immediately enact legislation which will be effective in using the services of the 4,000,000 men now classified as IV–F in whatever capacity is best for the war effort.

In the field of foreign policy, we propose to stand together with the United Nations not for the war alone but for the victory for which the war is fought.

It is not only a common danger which unites us, but a common hope. Ours is an association not of governments but of peoples, and the people's hope is peace. Here, as in England; in England, as in Russia; in Russia, as in China; in France and through the Continent of Europe and throughout the world; wherever men love freedom, the hope and purpose of the people are for peace—a peace that is durable and secure.

It will not be easy to create this people's peace. We have seen already, in areas liberated from the Nazi and the Fascist tyranny, what problems peace will bring. And we delude ourselves, if we attempt to believe wishfully that all these problems can be solved overnight.

The firm foundation can be built—and it will be built. But the continuance and assurance of a living peace must, in the long run, be the work of the people themselves.

We ourselves, like all peoples who have gone through the difficult processes of liberation and adjustment, know of our own experience how great the difficulties can be. We know that they are not difficulties peculiar to any continent or any nation. Our own Revolutionary War left behind it, in the words of one American historian, "an eddy of lawlessness and disregard of human life." There were separatist movements of one kind or another in Vermont, Pennsylvania, Virginia, Tennessee, Kentucky, and Maine. There were insurrections, open or threatened, in Massachusetts and New Hampshire. We worked out for ourselves these difficulties—as the peoples of the liberated areas of Europe, faced with complex problems of adjustment, will work out their difficulties for themselves.

Peace can be made and kept only by the united determination of free and peace-loving peoples who are willing to work together—willing to help one another—willing to respect and tolerate and try to understand one another's opinions and feelings.

In the future world, the misuse of power, as implied in the term "power-politics," must not be a controlling factor in international relations. That is the heart of the principles to which we have subscribed. In a democratic world, as in a democratic nation, power must be linked with responsibility, and obliged to defend and justify itself within the framework of the general good.

In our disillusionment after the last war, we gave up the hope of achieving a better peace because we had not the courage to fulfill our responsibilities in an admittedly imperfect world.

We must not let that happen again, or we shall follow the same tragic road again—the road to a third world war.

We can fulfill our responsibilities for maintaining the security of our own country only by exercising our power and our influence to achieve the principles in which we believe, and for which we have fought.

It is true that the statement of principles in the Atlantic Charter does not provide rules of easy application to each and every one of the tangled situations in this war-torn world. But it is a good and a useful thing—it is an essential thing—to have principles toward which we can aim.

And we shall not hesitate to use our influence—and to use it now—to secure so far as is humanly possible the fulfillment of the principles of the Atlantic Charter. We have not shrunk from the military responsibilities brought on by this war. We cannot and will not shrink from the political responsibilities which follow in the wake of battle.

To do this we must be on our guard not to exploit and exaggerate the differences between us and our allies, particularly with reference to the people who have been liberated from Fascist tyranny. That is not the way to secure a better settlement of those differences, or to secure international machinery which can rectify mistakes which may be made.

I must admit concern about many situations—the Greek and Polish for example. But those situations are not as easy or as simple to deal with as some spokesmen, whose sincerity I do not question, would have us believe. We have obligations, not necessarily legal, to the exiled governments, to the underground leaders, and to our major Allies who came much nearer the shadows than we did.

We and our Allies have declared that it is our purpose to respect the right of all peoples to choose the form of government under which they will live and to see sovereign rights and self-government restored to those who have been forcibly deprived of them. But with internal dissension, with many citizens of liberated countries still prisoners of war or forced to labor in Germany, it is difficult to guess the kind of self-government the people really want.

During the interim period, until conditions permit a genuine expression of the people's will, we and our allies have a duty, which we cannot ignore, to use our influence to the end that no temporary or provisional authorities in the liberated countries block the eventual exercise of the peoples' right freely to choose the government and institutions under which, as free men, they are to live.

It is our purpose to help the peace-loving peoples of Europe to live together as good neighbors, to recognize their common interests, and not to nurse their traditional grievances against one another.

But we must not permit the many specific and immediate problems of adjustment connected with the liberation of Europe to delay the establishment of permanent machinery for the maintenance of peace. Under the threat of a common danger, the United Nations joined together in war to preserve their independence and their freedom. They must now join together to make secure the independence and freedom of all peace-loving States, so that never again shall tyranny be able to divide and conquer.

International peace and well-being, like national peace and well-being, require constant alertness, continuing cooperation, and organized effort.

International peace and well-being, like national peace and well-being, can be secured only through institutions capable of life and growth.

One of the most heartening events of the year in the international field has been the renaissance of the French people and the return of the French nation to the ranks of the United Nations. Far from having been crushed by the terror of Nazi domination, the French people have emerged with stronger faith than ever in the destiny of their country and in the soundness of the democratic ideals to which the French nation has contributed so greatly.

Today, French armies are again on the German frontier and are again fighting shoulder to shoulder with our sons.

Since our landings in Africa, we have placed in French hands all the arms and material of war which our resources and the military situation permitted. And I am glad to say that we are now about to equip large new French forces with the most modern weapons for combat duty.

I am clear in my own mind that, as an essential factor in the maintenance of world peace in the future, we must have universal military training after this war, and I shall send a special message to the Congress on this subject.

An enduring peace cannot be achieved without a strong America—strong in the social and economic sense as well as in the military sense.

I have already set forth what I consider to be an American economic bill of rights, and the most fundamental of these is the right to a useful and remunerative job in the industries or shops or farms or mines of the Nation.

In turn, others of the economic rights of American citizenship, such as the right to a decent home, to a good education, to good medical care, to social security, to reasonable farm income, will, if fulfilled, make major contributions to achieving adequate levels of employment.

In the message that I sent to the Congress today, I discussed the general approach to the program that we have in mind for the provision of close to 60,000,000 jobs.

Although we must plan now for our post-war economy, and enact the necessary legislation, and set up the appropriate agencies for reconversion from war to peace, and lay the foundations for that transition period—all of which we are now doing—it is obviously impossible for us to do anything which might possibly hinder the production

for war at this time, when our men are fighting on the frontiers of Germany and dropping bombs on the war industries of Japan.

In these days, our thoughts and our hopes and our prayers are with our sons and brothers, or loved ones who are far from home.

We can and we will give them all the support of which this great Nation is capable. But no matter how well they may be equipped with weapons and munitions, their magnificent fight will have been in vain if this war should end in the breaking of the unity of the United Nations.

We need the continuing friendship of our allies in this war. Indeed, that need is a matter of life and death. And we shall need that friendship in the peace.

I quote from an editorial in the Stars and Stripes, our soldiers' own newspaper in Europe:

"For the holy love of God let's listen to the dead. Let's learn from the living. Let's join ranks against the foe. The bugles of battle are heard again above the bickering."

That is the demand of our fighting men. We cannot fail to heed it.

This new year of 1945 can be the greatest year of achievement in human history.

1945 can see the final ending of the Nazi-Fascist reign of terror in Europe.

1945 can see the closing in of the forces of retribution about the center of the milignant power of imperialistic Japan.

Most important of all, 1945 can, and must, see the substantial beginning of the organization of world peace—for we all know what such an organization means in terms of security, and human rights, and religious freedom.

We Americans of today, together with our Allies, are making history—and I hope it will be better history than ever has been made before.

We pray that we may be worthy of the unlimited opportunities that God has given us.

That Spurious Atlantic Charter

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1945

Mr. JONKMAN. Mr. Speaker, the people of the United States were astonished and shocked when, at his press conference of December 19 last, President Roosevelt is alleged to have made what he himself called an amazing statement. That statement gave the impression that the so-called Atlantic Charter which had constantly and repeatedly, for more than 3 years, been represented and held out to the American people and the peoples of the world as the hope of the world under a signed agreement between the leaders of the two great democracies, was merely a myth, that there was no such agreement, nor had one ever been signed by Mr. Churchill and Mr. Roosevelt.

One of the daily papers in my district reacted with the following editorial:

SO IT IS ONLY A JOKE

A country heartsick over the war's mounting casualties and the certainty that present reverses will add immeasurably to the deadly toll is in no mood to echo the President's uproarious laughter over his disclosure of what recent world events had already hinted—that there really is no such thing as the Atlantic Charter.

It was just something scribbled, he said, on scraps of paper—a phrase ominously reminiscent of von Bethmann-Hollweg's description of the way European agreements were treated when it became convenient to discard them. Neither Mr. Roosevelt nor Prime Minister Churchill signed anything nor agreed other than verbally to adhere to its principles. The fact remains, however, that on August 14, 1941, at the conclusion of Roosevelt's and Churchill's dramatic mid-Atlantic meeting—an event hailed at the time as of historic significance—the two enunciated eight common principles in the national policies of their respective countries on which they base their hopes for a better future for the world. (The agreement on Polish boundaries violates principle No. 2; intervention in Greece, Italy, and Belgium No. 3.) Furthermore, the President announced to the world that the agreement had been signed.

The fact remains, also, that these eight principles, widely promulgated throughout the world as the hope of oppressed peoples everywhere, especially those then under the Nazi heel, lent to the allied cause the aura of a holy crusade. It was under that guise that the war we went into the following December was being fought until the familiar pattern of spheres of influence, power politics, and armed intervention began to emerge.

The fighting is bitter on the western front. The winter cold is bitter, too. But they are no more bitter than the sacrifice of our fighting men and their loved ones at home will be if the cause they are bleeding for turns out to be the aggrandizement so piously forsworn in principle No. 1 of the Atlantic Charter.

The President assured the Nation that he personally still subscribes to the principles of the Atlantic Charter. But perhapr he has not made that sufficiently clear to the British. That explanation of the confused state of allied policy over liberated Europe is suggested in Anthony Eden's statement that "there was no question of Britain's armed intervention in Greece without consulting our allies."

Certainly, nobody blames Mr. Roosevelt for what goes on in Europe. It is not his fault that allies, like relatives, are sometimes inclined, when given an inch, to take a mile. No doubt the President went into this war as thoroughly imbued with the high-minded principles of the Atlantic Charter as the rest of the country. But now that this idealism stands starkly revealed as capable of whatever interpretation suits the expediency of the moment—now that the Atlantic Charter is disclosed to be as mythical as its principles—please, Mr. Roosevelt, don't laugh about it. Dying for a misrepresented cause is no laughing matter.

That editorial stated a fair example of the reaction heard in the pulpit, the home, the office and the street throughout the District. And I am still receiving letters and telegrams from the District asking for a reaffirmation of the pledges contained in the Declaration of Peace Aims as uttered and published over their alleged signatures in the Atlantic Charter on August 14, 1941, by Messrs. Roosevelt and Churchill.

Now I am also going to make what may be considered by some as an amazing statement, and that is that in my opinion the joint declaration of principles and peace aims, a copy of which was transmitted to the House of Representatives and incorporated in House Document No. 358, was in fact signed by President Roosevelt for the United States, and by Prime Minister Churchill for the United Kingdom.

It would seem conclusive that an opposite opinion would have to accuse Messrs. Roosevelt and Churchill of falsehood, fraud, deceit, and a betrayal of the American people, as well as accusing President Roosevelt of uttering and publishing a forgery, and that we cannot believe.

Let us examine the evidence. First we have Document No. 358 of the House of Representatives' Seventy-seventh Congress, first session, which I ask unanimous consent to include in my remarks, which was a confirmation of a similar release from the White House on August 14, 1941. It reads as follows:

To the Congress of the United States:

Over a week ago I held several important conferences at sea with the British Prime Minister. Because of the factor of safety to British, Canadian, and American ships, and their personnel, no prior announcement of these meetings could properly be made.

At the close, a public statement by the Prime Minister and the President was made. I quote it for the information of the Congress and for the record:

"The President of the United States and the Prime Minister, Mr. Churchill, representing His Majesty's Government in the United Kingdom, have met at sea.

"They have been accompanied by officials of their two Governments, including high-ranking officers of their military, naval, and air services.

"The whole problem of the supply of munitions of war, as provided by the Lend-Lease Act, for the armed forces of the United States, and for those countries actively engaged in resisting aggression, has been further examined.

"Lord Beaverbrook, the Minister of Supply of the British Government, has joined in these conferences. He is going to proceed to Washington to discuss further details with appropriate officials of the United States Government. These conferences will also cover the supply problems of the Soviet Union.

"The President and the Prime Minister have had several conferences. They have considered the dangers to world civilization arising from the policies of military domination by conquest upon which the Hitlerite government of Germany and other governments associated therewith have embarked, and have made clear the steps which their countries are respectively taking for their safety in the face of these dangers.

"They have agreed upon the following joint declaration:

"Joint declaration of the President of the United States of America and the Prime Minister, Mr. Churchill, representing His Majesty's Government in the United Kingdom, being met together, deem it right to make known certain common principles in the national policies of their respective countries on which they base their hopes for a better future for the world.

"First, their countries seek no aggrandizement, territorial or other;

"Second, they desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned;

"Third, they respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them;

"Fourth, they will endeavor, with due respect for their existing obligations, to fur-

ther the enjoyment by all states, great or small, victor or vanquished, of access, on equal terms, to the trade and to the raw materials of the world which are needed for their economic prosperity;

"Fifth, they desire to bring about the fullest collaboration between all nations in the economic field with the object of securing, for all, improved labor standards, economic advancement, and social security;

"Sixth, after the final destruction of the Nazi tyranny, they hope to see established a peace which will afford to all nations the means of dwelling in safety within their own boundaries, and which will afford assurance that all the men in all the lands may live out their lives in freedom from fear and want;

"Seventh, such a peace should enable all men to traverse the high seas and oceans without hindrance;

"Eighth, they believe that all of the nations of the world, for realistic as well as spiritual reasons, must come to the abandonment of the use of force. Since no future peace can be maintained if land, sea, or air armaments continue to be employed by nations which threaten, or may threaten, aggression outside of their frontiers, they believe, pending the establishment of a wider and permanent system of general security, that the disarmament of such nations is essential. They will likewise aid and encourage all other practicable measures which will lighten for peace-loving peoples the crushing burden of armaments.

"(Signed) FRANKLIN D. ROOSEVELT.
"(Signed) WINSTON S. CHURCHILL."

The Congress and the President having heretofore determined, through the Lend-Lease Act, on the national policy of American aid to the democracies which East and West are waging war against dictatorships, the military and naval conversations at these meetings made clear gains in furthering the effectiveness of this aid.

Furthermore, the Prime Minister and I are arranging for conferences with the Soviet Union to aid it in its defense against the attack made by the principal aggressor of the modern world—Germany.

Finally, the declaration of principles at this time presents a goal which is worth while for our type of civilization to seek. It is so clear-cut that it is difficult to oppose in any major particular without automatically admitting a willingness to accept compromise with nazi-ism; or to agree to a world peace which would give to nazi-ism domination over large numbers of conquered nations. Inevitably such a peace would be a gift to nazi-ism to take breath—armed breath—for a second war to extend the control over Europe and Asia, to the American Hemisphere itself.

It is perhaps unnecessary for me to call attention once more to the utter lack of validity of the spoken or written word of the Nazi government.

It is also unnecessary for me to point out that the declaration of principles includes, of necessity, the world need for freedom of religion and freedom of information. No society of the world organized under the announced principles could survive without these freedoms which are a part of the whole freedom for which we strive.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, *August 21, 1941.*

It will be noted that over his signature Mr. Roosevelt not only states that the joint declaration has been signed by them, but by the "signed Franklin D. Roosevelt" and the "signed Winston S. Churchill;" he represents to the Congress and the American people that these are copies of original and genuine signatures to that identical document.

It will further be noted that over his signature in the second paragraph on page 1, President Roosevelt says:

At the close—

Of their several important conferences at sea—

a public statement by the Prime Minister and the President was made. I quote it for the information of the Congress and for the record.

Now, I ask in the name of reason, how could the President say over his signature that at the close of these several conferences at sea a public statement by the President and the Prime Minister was made, if in reality nothing had been done except to make inconsequential scribblings on scraps of paper? How could he say that it was a public statement by the Prime Minister and the President when it was in reality only scribblings by the Prime Minister, the President, Sumner Welles, and Sir Alexander Cadogan? How could the President say, "I quote," when what he purports to quote had no reality? And why would he make the statement that he quotes it for the information of Congress not only, but for the record?

It is a reasonable inference that at least a part of the consideration for which Prime Minister Churchill signed this declaration of principles was the aid proposed to be extended to the United Kingdom, Soviet Russia, and other nations through lend-lease.

At least, the President, over his signature, says on the last page of Document No. 358:

The Congress and the President having heretofore determined, through the Lend-Lease Act, on the national policy of American aid to the democracies which East and West are waging war against dictatorships, the military and naval conversations at these meetings made clear gains in furthering the effectiveness of this aid.

Furthermore, the Prime Minister and I are arranging for conferences with the Soviet Union to aid it in its defense against the attack made by the principal aggressor of the modern world—Germany.

The last paragraph above quoted was undoubtedly the inducement for Soviet Russia later to declare, through its Ambassador in London, Ivan Maisky, that Russia was in agreement with the fundamental principles of the declaration and would defend the right of every nation to independence, territorial integrity, and form of government of its own choice. This was on or about September 24, 1941.

At all events, if there is any question about whether Lend-Lease was a consideration for the acceptance of the Atlantic joint declaration of peace aims and an agreement to be obligated thereby, I point to article VII, contained in all the master lend-lease agreements. It says:

To the end * * * to the elimination of all forms of discriminatory treatment in international commerce, and to the reduction of tariff and other trade barriers; and in general, to the attainment of all the economic objectives set forth in the joint declaration made on August 14, 1941, by the President of the United States of America and the Prime Minister of the United Kingdom.

Again I ask, If there is no such joint declaration made by President Roosevelt and the Prime Minister, then of what effect and validity is the above clause in all our lend-lease agreements? There must be a joint declaration.

Then in the next paragraph on that page the President said over his signature:

Finally, the declaration of principles at this time presents a goal that is worth while for our type of civilization to seek. It is so clear-cut that it is difficult to oppose in any major particular without automatically admitting a willingness to accept compromise with nazi-ism, or to agree to a world peace which would give nazi-ism domination over large numbers of conquered nations.

And the next paragraph on that page is significant. It reads:

It is perhaps unnecessary for me to call attention once more to the utter lack of validity of the spoken or written word of the Nazi government.

If it was not one cohesive statement, how could the President say:

It is so clear-cut that it is difficult to oppose in any major particular without automatically admitting a willingness to accept compromise with nazi-ism.

Again—and I say it with all respect—how can we believe that the President would be so loose with his written word over his own signature and yet call attention to the utter lack of validity of the spoken or written word of the Nazi government?

House Document No. 358 in itself is convincing evidence that the declaration of principles therein enumerated were so enumerated and written by Messrs. Churchill and Roosevelt. And, as I said before, a contrary conclusion would lead to the inevitable admission that President Roosevelt and Prime Minister Churchill are guilty of fraud, deceit, and betrayal of the American people; and that President Roosevelt, in uttering and publishing an instrument as signed by Winston Churchill, when in truth such instrument was not signed by him, is guilty of forgery. The American people rely upon that signature by Churchill as at least one advantage to be gained from lend-lease, namely, that the United Kingdom acknowledged and subscribed to the fundamentals of a just peace, and that we thereby had overcome at least one of the serious obstacles which, regardless of who may be to blame, constituted a failure of the League of Nations after the First World War.

To believe that this document as represented in House Document No. 358 was not signed would leave no other conclusion than that Mr. Churchill had put over a fast one on Mr. Roosevelt—in fact, had sold him a gold brick—and that Mr. Roosevelt let Mr. Churchill put this over on him, selling him a gold brick, in the belief that he had a signed agreement, when in fact he had gotten nothing but scraps of paper with noble sentiments scribbled on them. The American people can never accept nor believe such a conclusion.

We are further fortified in our inability to accept and believe that there was no such joint statement of peace aims by a proclamation of President Roosevelt on August 14, 1943, the second anniversary of the Atlantic Charter, when he said:

> Today, on the second anniversary of the signing of the Atlantic Charter, I would cite particularly two of its purposes and principles on which we base our hopes for a better future for the world.

This was 2 years after the event, and the President specifically emphasizes the signing as well as its form as one cohesive instrument.

Next, in examining the evidence as to whether there was a cohesive statement signed by Messrs. Churchill and Roosevelt, let us examine what Prime Minister Churchill said about it 10 days after its execution. In a broadcast made on August 24, 1941, Prime Minister Churchill said:

> We had the idea when we met there, the President and I, that without attempting to draw final and formal peace aims or war aims it was necessary to give all peoples, and especially the oppressed and conquered peoples, a simple, rough-and-ready wartime statement of the goal toward which the British Commonwealth and the United States mean to make their way.

This speech was made 3 days after Mr. Roosevelt had published House Document No. 358 to the Congress and to the world. Would anyone be so naive as to claim that Mr. Churchill was not acquainted with that message proclaimed 3 days before when he speaks of "a simple, rough-and-ready wartime statement of the goal toward which the British Commonwealth and the United States mean to make their way." Does he make any reference to heterogeneous wishes or sentiments scribbled on scraps of paper by several persons?

Moreover, if my memory serves me well, there was considerable discussion in the newspapers at the time of the execution of the Atlantic Charter, so-called, about Prime Minister Churchill's inserting in paragraph 4 the clause, "with due respect for their existing obligations" Paragraph 4 reads:

> They will endeavor to further the enjoyment by all states, great or small, victor or vanquished, of access, on equal terms, to the trade and to the raw materials of the world which are needed for their economic prosperity.

The words "with due respect for their existing obligations" were inserted after the first three words, "They will endeavor", and, of course, protected the favored or preferential trade agreements between the various units of the British Empire.

Now why, I ask, would such an insertion be made unless it was a cohesive statement, signed by the parties, in which one of the parties made an exception reserving certain rights to itself?

Again, Prime Minister Churchill, in his famous speech in the House of Commons, as late as December 15, 1944, made the statement:

> It must not be forgotten that the words are inserted in the Atlantic Charter, "No changes before the peace table except changes mutually agreed."

It is true that the Prime Minister was in error in that quotation, and, as one of his private secretaries said, he had a lapse of memory in speaking of Poland on December 16, and confused the wording of the Atlantic Charter with a British Government statement on foreign policy drafted in 1940.

But again I ask, why did Prime Minister Churchill speak of words inserted in the Atlantic Charter when the so-called Atlantic Charter consisted of mere scribblings on separate pieces of paper by different persons which were never drawn together in one formal statement? It is simply inconceivable.

But let us go a little further in our examination as to whether the so-called Atlantic Charter was one cohesive statement of facts, and whether or not it was signed by Messrs. Roosevelt and Churchill, as President Roosevelt uttered and published the document and signatories to the world, and especially in House Document No. 358. Following is a quotation from Geoffrey Crowther, editor of the London Economist, found in Foreign Affairs, volume 20, No. 1, October 1941, page 1 and following pages:

> If the declaration of the Atlantic Charter * * * is taken merely as a restatement of the democratic faith in international relationships, nine-tenths of its significance will be lost. The ideas are not particularly new nor its language unduly inspired. Its true signifiance lies in the identity of the signatories and in the place where it was signed. The declaration marks, in effect, the assumption of two great English-speaking democracies of the leadership of the free world. It serves notice that, when the victory has been won, the ideas that will be dominant in the world will be the faiths and the aspirations and the doctrines that are common to Britain and America. The fact that its only date line is the Atlantic Ocean is as significant as the signatories.

How are we going to believe that this important statement in this important organ of the English press, that "Its true significance lies in the identity of the signatories and the place where it was signed," was false and misleading, and that both Messrs. Roosevelt and Churchill let it go unchallenged? It was the fact that it was signed by the leaders of these two great nations rather than the inspirational nature of its wording that gave hope and encouragement to the people of the United States as well as the peoples of all peace-loving nations.

Again, how could Messrs. Churchill and Roosevelt encourage Ivan Maisky, the Soviet Ambassador in London, to express Russia's official attitude when on or about September 24, 1941, he declared that Russia was "in agreement with the fundamental principles of the declaration and would defend the right of every nation to independence, territorial integrity, and form of government of its own choice" if they themselves were not bound by a written agreement to that effect, and when there was no such declaration in truth and in fact?

Furthermore, it may well be asked now as it surely will later, of what validity is the United Nations declaration of January 1, 1942, except of course on the common determination to crush the Axis Powers, if the so-called Atlantic Charter is a myth and never existed? The only reference to the peace aims is in the first paragraph, and then refers to something which does not exist. For the text reads:

> Having subscribed to a common program of purposes and principles embodied in the joint declaration of the President of the United States and the Prime Minister of the United Kingdom of Great Britain and Northern Ireland dated August 14, 1941, known as the Atlantic Charter—

Is it not just common sense that if there is no joint declaration known as the Atlantic Charter, then there is no binding joint declaration of the United Nations on war aims? If there is no definite, cohesive statement and declaration signed by Messrs. Churchill and Roosevelt, then who is going to say what is binding and what is not binding, what was included in the discussion and alleged understanding and agreement, and what was not? And can anyone believe that our administration was so inept, stupid, and negligent as to base such an important, vital, and fundamental agreement affecting the whole world to its very foundation, on a nonexistent myth? What have the 23 nations who signed it originally, and the additional 13 nations agreed to? Nothing. On the other hand, if the signed agreement does exist or has existed, it prescribes an obligated course of conduct on the part of all the United Nations in the Dumbarton Oaks proposed international organization. Why forego so great an advantage to peace-loving and suffering humanity?

Yes, Mr. Speaker, in my opinion the so-called Atlantic Charter, properly called the Atlantic peace aims, was in the form of a connected and cohesive statement, signed by President Roosevelt and Prime Minister Churchill in the order named.

President Roosevelt could make the unequivocal statements that there is no Atlantic Charter, and the Atlantic Charter was never signed, and in each statement he would be speaking the absolute and unvarnished truth. A charter is a grant from a sovereign to a subject, the first great example of which was perhaps the great Charter of St. John to the barons. The signatories to this joint agreement were neither empowered to give anything, nor did they have anything to grant. That will be the function of the international organization after the war is won. That declaration of August 1941, which Churchill properly called "a simple, rough-and-ready statement of the goal toward which the British Commonwealth and the United States mean to make their way," was no more a charter or an Atlantic Charter than night is day. I think I made this distinction clear in a speech in the House on February 4, 1943.

But does Mr. Roosevelt make such an unequivocal statement? No, indeed. I do not think he can be accused even of qualifying it with what another Roosevelt called weasel words. On the contrary, the President said, "and there just is not any copy of the Atlantic Charter, at least I have not one," and that it was signed in substance and all agreed to it.

Now, it is the substance and the signing of it that we are interested in, so let us turn to the record and examine the reports of a few of the correspondents

present at that conference for their respective newspapers.

Christian Science Monitor:

He said there just isn't any original copy of the Atlantic Charter as such, at least he didn't have one. * * * Mr. Roosevelt said nobody ever signed the Atlantic Charter. "It was signed in substance."

Washington Star:

President Roosevelt told his news conference yesterday that there isn't any copy so far as he knows. * * * "No one signed it," he said. Later it was said: "It wasn't a complete document, the President responded, repeating that there was no formal, complete document signed by the two chiefs of state. It was signed in substance, however," he said.

Also:

Presidential Secretary Stephen Early showed reporters the document received by radio from the *Augusta* in August 1941. The communication was signed simply "Roosevelt," but it began with instructions to Mr. Early on releasing a statement to the press and then quoted the text of the statement itself. That statement incorporated the Atlantic Charter and it was signed: "Franklin D. Roosevelt" and "Winston Churchill."

Washington Post:

Making what he called an amazing statement, the President said that nobody ever signed the Atlantic Charter. As far as he knows, there isn't any copy in the formal sense in existence. He said he didn't have one, nor did the British. Nearest thing to a formal copy may be in possession of the radio operators on the two ships, he said.

Also:

The President insisted, however, that it was signed in substance and agreed to by all present.

New York Times:

The Atlantic Charter entered the questioning with a query whether Mr. Churchill had ever signed it. Mr. Roosevelt replied that nobody ever signed it. Asked where it was now, he said there wasn't any copy of the Atlantic Charter, as far as he knew. Also, "It was signed in substance," he suggested, explaining that it was a memorandum to the press and radio.

In making these quotations, I am, of course, quoting the newspapermen or rather newspapers and not the President. The newspapermen do not pretend to quote the President, for under the rules of Presidential press conferences they are not permitted to quote the President unless he gives them express permission to do so. They may only say what they think or believe he said, or their interpretation of it.

The press conference of December 19 with reference to the peace aims was in this category, so whatever we have heard of that conference is purely hearsay and not official. This gives me an additional argument for my position, for the President has never officially denied all the documentary evidence and evidence of record preceding December 19 on the so-called Atlantic Charter. Neither the Congress, the people of the United States, the people of the world, nor Winston Churchill, nor any individual has, therefore, any official denial of the Atlantic Charter upon which any action or belief can be based. This would require at least another message to Congress or some official proclamation or similar statement from the President himself, with the same dignity and authenticity of House Document No. 358.

I repeat, in my opinion there is in existence what has been known as the Atlantic Charter, signed by President Roosevelt and Prime Minister Churchill. And neither the President nor anybody else has in substance denied it. Is it not significant that at no time has Mr. Roosevelt hinted at anything that sounds as though he has looked for it or tried to dig it up? Apparently at no time has he even ascertained what copy the commanders of the *Augusta* or *Prince of Wales* might have in their possession, as he said they may have.

Again I repeat either there must be in existence a joint declaration incorporating in one statement the peace aims signed by Messrs. Roosevelt and Churchill as represented in House Document No. 358, or we have absolutely nothing at all. For otherwise who will say what is in the declaration and what is not? If the Atlantic Charter is a myth, or if it has been conveniently and permanently lost, then it will be not only a reasonable but a sound inference from the message in House Document No. 358 that the whole world, except those believing in Nazi-inspired philosophies, have been misled and gold-bricked.

It was most unfortunate that the alleged loss or nonexistence of the Atlantic Charter should become the subject of conversation when Russia in Poland and other Central European crushed democracies, and Great Britain in Greece and Italy, are seemingly violating its express terms, and at the same time our gallant fighting forces, in a baptism of blood, were struggling in the first great setback in what they believed was a holy crusade for the principles of the Atlantic Charter.

Our beloved Speaker, on January 3 last, in response to his election to that high office, spoke of the gallantry of our fighting men, and said:

A wise man once said, "Men fight better with ideas at the end of their bayonets."

Mr. Speaker, what a let-down it must have been for all our fighting forces on all the far-flung battle lines, and especially for those in that Belgian crucible, to have the President's press conference of December 19 take all the idealism and ideas of the Atlantic Charter from the points of their bayonets. And what a let-down for their parents and dear ones, yes for all liberty-loving Americans. As I said before, disappointment, dismay, and confusion have robbed the indomitable determination to crush the Axis of those ideas at the points of those bayonets. Everywhere was heard, "What are we fighting for outside of crushing the Axis Powers?"

Mr. Speaker, the American people know that President Roosevelt is under tremendous pressure. Many of them understand the pressure upon President Wilson in the League of Nations failure. They know that the Dumbarton Oaks proposals for an international organization is as much cherished by President Roosevelt as was the League of Nations by Mr. Wilson after the last war. They are with Mr. Roosevelt in the objective this time. They are agreed that if humanly possible, the scourge of war must be stopped.

The American people realize that this is a tremendous job after we have accomplished the first step in crushing the Axis Powers. It is significant that the carrying out of the principles and ideals of the Atlantic Charter under the Dumbarton Oaks plan will be the responsibility not of the general assembly composed of all the members, but of the Security Council, composed of Russia, Great Britain, the United States, China, and later probably France, as permanent members, and a half dozen smaller nations in rotation. Already the big stumbling block is whether each of the Big Four can sit on the jury and prevent a unanimous verdict in case she is charged with aggression. It is obvious that the Atlantic peace aims as a fundamental law would be a stumbling block of the same nature for those who place sovereignty above law.

To deter or possibly prevent the scourge of war, we will in all probability have to be satisfied with something less than the ideals of the Declaration of Peace Aims. I also realize that on this rough-and-ready statement, selfish minds may differ with honest minds on its interpretation; and so in certain instances it may encourage chaos rather than curing it.

Notwithstanding these and other considerations, I believe that one of the greatest contributions Mr. Roosevelt can make toward unity of our people and all peace-loving peoples; toward the speedy winning of the war; toward a deterrent and outlawry of the scourge of war, is to dig up not an Atlantic Charter, or any charter, but what Churchill called "a simple rough-and-ready wartime statement of the goal toward which the British Commonwealth of Nations and the United States mean to make their way." And if it is really lost and cannot be found, that he ask Mr. Churchill to sign a duplicate with him.

Mr. Speaker, the American people are grimly united and determined to win this war, come what may. But it would put ideas on the points of their bayonets both on the fighting and the home fronts, and it would restore hope and faith for a better world to all peace-hungry humanity to revitalize that simple, rough-and-ready wartime statement.

Needless Strikes

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1945

Mr. KNUTSON. Mr. Speaker, frequently men in the armed service write me in protest against the many strikes on the home front. Especially do they

resent wildcat and jurisdictional strikes. Only the other day a Minnesota boy serving with General Patton wrote me that they were being held back because they do not have as much ammunition as they could use. What he had to say about the subject of strikes was illuminating but not surprising.

For 30 years I have carried a card in the typographical union because I believe in collective bargaining, and, above all, in good wages that will keep the national income up. I dare say there are millions of union members who deplore and condemn the tactics being used by some of their labor leaders. This does not apply to the typographical union, which enjoys an uninterrupted history of 120 years of constant progress largely attained through peaceful negotiation. Unfortunately for the country and the war effort all unions are not governed as wisely and ably as is the typographical union.

For more than a month the city of St. Paul has had on its hands a strike called by the teamsters union on December 13, which has not yet been settled. This strike was called to determine which union is to collect and hold the dues of those now on strike. Sounds rather silly, does it not? Silly or no, it is tragic to contemplate that the country should be torn with labor strikes and dissension at a time when there is such great need for national unity, and maximum production to supply critical needs, both on the battle front and on the home front.

A few days ago the Long Prairie Leader, a most excellent newspaper published at Long Prairie, Minn., commented editorially on the St. Paul teamsters' strike which should set labor leaders to serious thinking before it is too late. The editorial, which follows, reflects the sentiments of a vast majority of our people in all parts of the country:

THE PUBLIC IS ENTITLED TO PROTECTION

Another strike which shows the need for laws that will put an end to some of the injustices by labor unions is the teamsters' union strike in St. Paul. As long as the law permits a union to do what this union is doing in that city, no individual in America is free and no firm is safe in the conduct of its normal business.

In this strike which has been in progress since December 13, which has closed down all the plants affected, thrown 1,500 persons out of work, cost the Federal Government more than $1,000,000 in beverage taxes, and a loss to date of more than a third of a million dollars in wages, there is no issue whatever except a row between two rival unions.

Neither of the two unions involved has any wage dispute with the employing firms. There is no controversy as to wages, hours, or working conditions. Relations between the several companies and their employees are entirely amicable and friendly. There is no employer-employee dispute whatever. The plants are now unionized and have been for years.

Then what could cause this costly strike with which the city, the business firms, the State of Minnesota, and even the Federal Government in Washington seem helpless to cope?

Well, believe it or not, the trouble is this: Two unions are fighting with each other over which is to collect and keep the membership dues.

For many years the brewery workers' union has represented the employees. Recently the teamsters' union sought to horn in. It signed up some of the truck drivers and then demanded of the State conciliator that an election be held to determine who the bargaining agent for those of the employees who are drivers and helpers was to be. The older union objected to the threatened encroachment on its domain and asked the National Labor Board in Washington to call an election at which all the plant employees would vote and again choose their bargaining agent. At a hearing in Washington, the teamsters' union objected to having its case decided by a vote of all the employees and demanded that the drivers and their helpers vote separately and decide for themselves whom they wanted to represent them. The National Board decided against the teamsters' union and ordered a plant-wide vote. The election was held January 2 and out of 1,092 eligible employees, 857 voted for the old union and 139 for the new union. In the meantime the teamsters' union had held an election of its own, under an authorization by the State labor conciliator, in which only the drivers and their helpers participated. In this election, in which about 70 employees participated, a majority favored the teamsters' union.

The firms affected although involved in no controversy with their employees, were whipsawed between the two rival unions. If they had agreed to the teamsters' union demand, the brewery workers' union would have objected. If they continued the old contracts with the brewery workers' union, the teamsters' union would have objected. In the dilemma, in which they were merely the innocent victims, the firms decided to continue to recognize the brewery workers' union, that being the union that had won the election called by the National Board.

In the meantime, not waiting for the result of the National Labor Board election, the teamsters' union ordered a strike and threw a picket line around all the plants. There are other employees than the brewery workers and truck drivers. These are the craftsmen such as the carpenters, electricians, plumbers, and others. They have their particular unions. Under union rules no member is permitted to cross a picket line, so none of these employees, notwithstanding they were in no way concerned with the row between the rival unions, would pass through the picket line. This had the immediate effect of closing down the plants. They have been closed ever since.

Long Prairie is a long way from St. Paul and some may think our citizens are not concerned with this strike. But as a matter of fact we all are concerned. If a union can close a business firm in St. Paul because of a row with another union, then it can close the Long Prairie creamery for the same reason. It can close down any business firm anywhere. The public is directly and vitally interested.

The situation demands action by our lawmakers in St. Paul and in Washington. Jurisdictional strikes should be prohibited. They should not be permitted to play any part in employer-employee relations. If two unions get into a row, let them fight it out between themselves and not be permitted to injure a community or innocent business firms.

Furthermore, it would seem to be simple justice and a protection to the people to make unions responsible for what they do. Unions are now immune from prosecution. They cannot be sued for damage they cause. Hence many of the reckless and arrogant things they do. If this teamsters' union, for instance, could have been sued for damages, in all likelihood this strike with its appalling losses would never have been called.

With such a flagrant case before them, why should our legislature or Congress wait any longer in taking steps to protect communities from these irresponsible and reckless actions?

I also insert a news item which appeared in this morning's New York Herald Tribune:

TOBIN IS URGED TO END STRIKE IN CERTIFIED MILK—MEDICAL GROUP CITES NEEDS OF INFANTS AND INVALIDS—SUPPLY CUT 16,000 QUARTS

A telegram appealing to Daniel J. Tobin, president of the International Brotherhood of Teamsters, to end the strike cutting off delivery of Walker-Gordon certified milk in the New York area, was sent yesterday by Dr. J. Howard Brown, chairman of the council of the American Association of Medical Milk Commissions, Inc., 1265 Broadway.

Local 680, of the International Brotherhood of Teamsters, an American Federation of Labor affiliate, called the strike last Tuesday after failing to unionize the 150 dairy employees at the Walker-Gordon farm at Plainsboro, N. J. The union first ordered home-delivery men or their local, who work for distributors in northern New Jersey, and members of a brother local in Westchester County to refuse door-to-door delivery of Walker-Gordon milk.

The situation continued until Saturday, when, after a meeting of Local 680 on Friday in Newark, 10 drivers of the local were ordered off the job. They are employed by individual contractors who deliver the daily output of 23,000 quarts of certified milk from the farm to distributors in the New York area, southern New Jersey, and Philadelphia.

NONE REACHED MARKET

None of Saturday's production, intended for use here yesterday, reached the market, according to Alfred S. Cook, sales manager for the company. Every day the firm makes up an estimated 500 formulas of modified milk, which is prepared from certified milk and includes special food concentrates, and also ships about 5,000 quarts of raw, whole certified milk. The latter is brought into the city under a doctor's prescription, a regulation of the New York City Department of Health.

"These special milks," said Dr. Brown, who is chief of the department of bacteriology in Johns Hopkins Medical School, at Baltimore, are "medical food." Patients such as infants and invalids can "get along" without the milks but, he added, "at considerable discomfort."

The primary responsibility for these strikes rests with the President and the Congress. What, if anything, will they do to bring about the return of freedom and stability to our country. If they do not act, I can foresee anarchy and chaos in this great land of ours.

Conscription for Civilian Jobs

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

CONSCRIPTION

Mr. HOFFMAN. Mr. Speaker, because of the aggressive war in the Pacific and the ever-increasing casualties in Europe, some 900,000 men will be needed as replacements in the battle areas. Hundreds of thousands of others will be needed on the supply lines over which must go millions of tons of supplies. Hence, the call for the conscrip-

tion of all able-bodied men under 30 during the coming year.

From every countryside in this land additional young men will be called and sent to the front. As long as we are at war there is no way to avoid this heartrending procedure.

CONSCRIPTION FOR CIVILIAN JOBS

On top of the conscription of men for military service, the administration is now asking conscription of IV-F's and others for civilian jobs. Farm production must be stepped up if those at the front, we here at home, and all hungry people throughout the world are to be fed.

But, in my judgment, the drafting for service abroad of those skilled in farm work and replacing them with IV-F's will not give us an increased production, but rather a jump from efficiency to inefficiency.

Another thing, we cannot step up farm production by shipping abroad farm machinery urgently needed here at home and a scarcity of which makes it impossible to farm our own land efficiently.

The IV-F's all too often have been unjustly criticized, covertly sneered at because they were not in the fighting lines. IV-F's, as a rule, are IV-F not from choice, but because of a Government edict, though now and then some one of them may be IV-F by choice.

This war has demonstrated that voluntary effort, the patriotism of our people, will produce more of better quality and in less time than will regimentation. So why draft—regiment—men for civilian business?

The scarcities, real or fancied; the confusion, the senseless regulations of the O. P. A. convince those who know the facts that Washington is not infallible; its bureaucrats cannot successfully compete in efficiency with our workers, farmers, merchants, or industrialists.

Official Washington, insisting upon production of various items, today has on hand more than a hundred billion dollars worth of surplus material. Just one example, millions of surgical bandages, because of a change in regulations, are to be sold as dustcloths, or otherwise. There is no excuse for such waste, especially when we need every productive effort for the war.

In my judgment, giving this administration power to conscript men for civilian jobs would hinder the war effort.

So, you ask, What is your answer?

Let the Government adopt reasonable, effective measures to hold down the cost of living and then end its practice of paying wages—which come out of the taxpayer, including the farmer—in war industries which inevitably take the workers off the farms and out of nonwar jobs.

End the practice of limiting the amount of work which a man in the factory can do, which he wishes to do.

End strikes, slow-downs, work stoppages and lock-outs by paying a fair wage, freeing workers from coercion from any source.

End the practice, sanctioned by the administration, of compelling a man or a woman, as a condition precedent to getting or holding a job, to become, be, or remain a member of a union which shares in his pay check.

Quit using the officers and men who are already in the Army to seize and attempt to operate a civilian retail business like that of Montgomery Ward & Co. Let such disputes be settled by the courts.

The Meaning of Jackson Day in 1945

EXTENSION OF REMARKS

OF

HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, January 15, 1945

Mr. RADCLIFFE. Mr. President, for a number of years the outstanding dinner held by the Democrats in Baltimore each year has been called the Jackson Day dinner, and has been held under the auspices of the old and historic Concord Club. This year the guest speaker at that dinner was the senior Senator from Wyoming [Mr. O'MAHONEY]. His address was eloquent, persuasive, and timely. I ask unanimous consent that it be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We assemble tonight at the climax of the most appalling and devastating war of all time. No cataclysm of nature has ever wrought even a fraction of the destruction of life and property which is the product of this conflict among men who call themselves civilized. Whole continents have been laid waste. The earth, the sea, the waters under the sea, the sky, and even the stratosphere are the theater of battle. There are no noncombatants. There is no sanctuary from the unrestrained fury of the men and nations who have sought to bring the whole world under the domination of arbitrary power.

Obviously this meeting with such a background is not an occasion for mere partisan self-congratulation. It is not a moment to rejoice at party victory or to indulge in the polite compliments and the confident listing of political achievements which, in normal times, would be altogether fitting. We meet while men are dying. We dine while the youth of America in winter blizzard and jungle heat are making of their bodies a shield for us.

Thousands of them will never return. Other thousands will have no future because, broken in body and some in mind, they will have sacrificed all their potentialities that our future and the future of mankind may be secure.

We can best show our gratitude for what they have done, for what they are doing, and for what they are still to do by taking advantage of gatherings such as this to reexamine the principles upon which our Government was founded; to reappraise our own motives and intentions, our own actions, both public and private, and to decide what kind of a world we want to live in when this, the greatest crisis mankind has ever faced, shall have passed into history.

THE WORLD WE HAVE KNOWN IS PASSING

We are completely unaware of what is transpiring in the world if we do not comprehend the fact that the shape of the world we have known is passing. Empires are shaking to their foundations. Nations and peoples are undergoing alterations that will leave their marks for centuries to come. New forms of national, international, political, and economic structures are arising, and the relationship of man to the authority which governs him is undergoing one of its most profound tests. Unless we are firmly grounded in the historic faith of America that the people are the source of authority, that neither Government organization nor economic organization has any power save as it is derived from the consent of those whom it affects, we shall drift in the whirlpool of force now released upon the world and find ourselves the victims of power and authority which we cannot control. We shall find that the people, instead of being the source of authority, have become its subjects.

It is appropriate that we who are affiliated with the Democratic Party should choose Jackson Day for such a reexamination of principle, just as it will be equally appropriate for our friends who call themselves Republicans to use Lincoln's Birthday for the same purpose. We shall find that both of these great American statesmen drew their inspiration from the same rock of American tradition. Each of them in his time struck his rod against the barren rock and there gushed forth a new torrent of liberal humanitarianism. It is not without significance that both Lincoln and Jackson were defenders of the Federal Union, that both saw in the Government of the United States an instrumentality of the people for the promotion of freedom and human welfare.

It is not my purpose to review the story of Jackson's life, but rather to attempt to point the moral which his character, his courage, and his convictions as displayed in the crisis of his era hold for us in this momentous crisis of our time. In the most memorable and far reaching political conflict of his career, Jackson was pitted against all the strength and subtlety of central economic power. He fought against an agency which had found the way to influence most of the avenues of public information of that time, an agency that lost no opportunity to defame him. It was his battle against the bank, the conflict of the people's champion against a rich and powerful money monopoly that revealed the depth of his faith in the doctrines of popular sovereignty. So great was the power of the monopoly that even now it is scarcely possible, in reading the history of those times, to escape the effect of the false pictures it painted of Jackson and his policies.

VAN BUREN'S OPINION OF JACKSON

Long after his death, long after his friend and successor, Martin Van Buren, had himself withdrawn from the active political scene, the latter, in his autobiography drew a dramatic picture of the old general which I am sure correctly presents his figure:

"On the night of my first appearance at the White House, after my return from England," writes Van Buren, "he (the President) exhibited when stretched on a sick-bed a spectre in physical appearance, but as always a hero in spirit—an impressive illustration of his profound and unspeakable trust in the people. Holding my hand in one of his own and passing the other through his long white locks, he said, with the clearest indications of a mind composed and in a tone entirely devoid of passion or bluster, 'The bank, Mr. Van Buren, is trying to kill me, but I will kill it!'"

Again, in the same volume, Van Buren describes the General, as his friend called him until the end, in these words:

"In the course of my public life, I have not met with another man who came up to General Jackson's standard as well in respect to the strength of his belief in the certainty that a public servant, honestly laboring for the welfare of his country, would receive the good will and support of the people as long as they remained confident of his integrity as in his constant readiness to stake his

political reputation upon that faith regardless of consequences merely personal to himself."

I cite these quotations from Van Buren not for the purpose of introducing a discussion of the controversy over the United States bank, but to show the deep faith that Jackson had in the people and to illustrate the determination which he always displayed to conduct the Government in the manner best calculated to maintain opportunity for them.

JACKSON'S FAITH IN THE PEOPLE

It was not by mere chance that under Jackson the party of Jefferson came to be known as the Democratic Party. It was because his devotion to popular welfare was not the product of a pale philosophy, but the fervid conviction of a courageous heart which knew how to fight for the principles to which it gave its loyalty. He was the type of leader whom the people love, the type of which our party has produced many examples—like Wilson and Roosevelt in our own time, men who by the strength of their own faith have had the faculty of inspiring in the people a corresponding loyalty and faith in them.

Jackson's creed was made clear in the memorable veto message by which he carried out the promise made on his sickbed in the conversation Van Buren relates.

"It is to be regretted," said President Jackson in that document, "that the rich and powerful too often bend the acts of government to their selfish purposes. Distinctions in society will always exist under every just government. Equality of talents, of education or of wealth cannot be produced by human institutions. In the full enjoyment of the gifts of heaven and the fruits of superior industry, economy, and virtue every man is equally entitled to protection by law; but when the laws undertake to add to these natural and just advantages artificial distinctions, to grant titles, gratuities, and exclusive privileges, to make the rich richer and the potent more powerful, the humble members of society—the farmers, mechanics, and laborers—who have neither the time nor the means of securing like favors to themselves, have a right to complain of the injustice of their Government. There are no necessary evils in government. Its evils exist only in its abuses. If it would confine itself to equal protection, and, as heaven does its rains, shower its favors alike on the high and the low, the rich and the poor, it would be an unqualified blessing."

Again, in his message to Congress on the nullification issue, he exhibited his underlying principle in these words:

"The rich inheritance bequeathed by our fathers has devolved upon us the sacred obligation of preserving it by the same virtues which conducted them through the eventful scenes of the Revolution and ultimately crowned their struggle with the noblest model of civil institutions. They bequeathed to us a Government of laws and a Federal Union founded upon the great principle of popular representation. * * * and I fervently pray that the Great Ruler of Nations may so guide your deliberations and our joint measures that they may prove salutary examples not only to the present but to future times, and solemnly proclaim that the Constitution and the laws are supreme and the Union indissoluble."

POPULAR GOVERNMENT NOW ENDANGERED

Never were these exhortations more appropriate than now, for never was the principle of popular government in greater danger than now, and never have the people of America had a greater opportunity than now to hold forth to all the world an example of the power of a free people to deal justly with all others and to promote the welfare of mankind. The terrible trial through which the world is going in these days is the result of lack of faith in the capacity of people to guide their own destiny. Arbitrary power has arisen because of the belief held by both imperial and totalitarian governments that people are not to be entrusted to shape their own lives, that they should be controlled and guided and either patronized or exploited by those who have the power to seize authority over them or to steal their resources.

This lack of faith in democracy is exhibited in both political and economic spheres, and the danger to human freedom has multiplied in the degree that science has created new instruments by which arbitrary power may compel obedience. The technological advance which gives central power terrible weapons with which to enforce its will makes more difficult the task of free men because there is now no refuge anywhere on earth from the destructive effect of the modern instruments of warfare. It is therefore more important than ever before that men should understand precisely the thing for which they are fighting and correctly appraise the sacrifice they must be willing to make if they desire to prevail.

Surely this is clear now—there can be no permanent peace and no freedom for mankind unless the people of the world reach an unshakable determination that all future disagreements among nations, of which many are inevitable, shall be adjusted in an orderly and reasonable manner by peaceful negotiation instead of by the application of force.

INTERNATIONAL PEACE OR MILITARISM

The people of America are faced by this alternative. They must lead the world in the establishment of an international security organization or else, in self defense, they must be prepared to keep this Nation as it is now, the most powerful military force on earth The knowledge that the latter alternative is the negation of everything for which we have stood should make us stronger in our purpose to preserve national unity in the struggles and sacrifices that must be made if an organization for peace is to be achieved. It should make us beware of divisive counsels that would magnify misunderstandings among our allies, for we must know that to escape militarism in the future we must win this war and erect the structure for the preservation of world peace.

It detracts nothing from the great contribution which the people of England made to the preservation of freedom by their heroic resistance after the fall of France to point out that there is no salvation for mankind in either political or economic imperialism. It detracts nothing from the unconquerable achievements of the patriot forces in France to say that the restoration of the colonial policies of the past is not the object for which this war is being fought. It is no reflection on the courage and heroism of the Russian soldier who built a barrier of blood and flesh across the path of Hitler to say that communisim is not democracy, that mankind cannot hope to find liberty in any dictatorship whether it be the dictatorship of the proletariat or the dictatorship of vested economic power.

These are the evils of the world that is passing—imperialism, monopoly, dictatorship, the eternal and implacable enemies of liberty.

God made men free. He endowed them with a free will. He endowed them with the power to decide for themselves whether to be sinners or saints. There is no human power that can rightfully deprive them of that freedom. Dissident members of the Soviet State who died in the Red purges are just as dead as the Jews who were slaughtered by Hitler. They were both created free in the divine plan and there can be no peace in the world until this principle of individual human freedom is recognized as the very basis of human society. Without freedom, there is only force.

THE CAUSE FOR WHICH WE FIGHT

The American Revolution was fought and the Government of the United States was established by patriots and statesmen who believed in the rights of man. The new world will be built by patriots and statesmen who believe in the dignity of man.

Let no one imagine that we are in any doubt as to the nature of the objective for which we fight. We are fighting against the application of ruthless force to men. We are fighting the prostitution of science by men who have used it to forge chains for the human spirit. We are fighting anew the battle of human freedom against enemies more terrible than any that have ever been overcome in the past.

Only yesterday I received a letter from a young infantry captain who has now spent his third Christmas overseas in direct contact with the foe and whose unit even now is in the midst of the struggle along the Rhine. He had recently inspected a German concentration camp with its machine guns, its gas chambers, and its crematoria. He writes that every day makes him a better American, that every day makes more clear to him the blessings of liberty. He knows what the torture chamber and the firing squad mean in the hands of men who will not tolerate dissent from their views and their purposes.

Let every American ask himself this question: By what fortunate circumstance, by what divine providence does it happen that it was some defenseless European, some poor Ethiopian, some trembling Asiatic who endured the torture instead of me? If we tolerate arbitrary power to commit such outrages anywhere on earth, we invite it to do so here.

That is why we fight this war. That is why we labor to shape a new world in which there shall be no thralldom for the human spirit. That is why this new world for which we fight will have no place for puppet governments, whether of the right or the left, no place for totalitarian organizations by which the leaders become the masters rather than the servants of the people.

THE PEOPLE ARE WINNING THIS WAR

It was not the British Empire that foiled Hitler and preserved freedom on the beaches of Dunkerque. It was the indomitable free spirit of the people of England who were ready to die in defense of their homes. It was the little craft of the seagoing heroes along the English Channel which effected the evacuation of the escaping army. It was the heroic spirit of a pitifully few airmen who intimidated and finally drove off the aerial hordes of the Hun.

It was not the totalitarian dictatorship that defended Moscow and saved Leningrad. It was the nationalist spirit of the people of Russia defending the sacred soil of their ancestors. The dictatorship made common cause with Hitler against Poland in 1939, but it was the people of Russia following the example of their ancestors in the time of Napoleon and in previous ages who rallied to cast out the invader.

Here in America also it has been the people who have built the most powerful navy that ever sailed the seas, who have organized and equipped an army the like of which was never before beheld. In factory and on farm we have produced the implements and the food by which all of the United Nations have been helped to hurl back the tyrannical totalitarianism of both Germany and Japan. American boys who knew nothing but the arts of peace until they were called to the colors have become the most effective military force ever created. We have sent them out to every continent and every sea, under the oceans and over the mountains; and we, the people of America, have built a bridge of ships across both the Atlantic and the Pacific to keep them well supplied.

All this has been done, but not without mistakes, not without setbacks, not without flaws, both at home and abroad, but when history tells the story it will be seen that the majesty of the American effort has dwarfed into insignificance every little cause of criticism that may now be voiced.

WE ARE NOT TOTALITARIANS

To accomplish this we have been compelled to adopt the methods of the authoritarian state. All our resources of men and materials are being welded into a single instrument to win the victory, but let no one make the mistake of assuming that we have adopted the philosophy of the totalitarian. Because Germany and Japan had, with careful forethought and years of preparation, mobilized every human and natural resource for the purposes of war, we had to do likewise when confronted by their massive power. But if we are appreciative of the sacrifices that have been and are being made by the men and boys whom we have called to bear the brunt of battle, we must possess a determined will that when the survivors of this war return to their homes they will return to a country in which the people are still the masters, in which enterprise is really free, and in which authority proceeding from the citizen may be exercised by the state, not in an arbitrary manner but solely in accordance with the law which the people themselves shall prescribe.

I say this not because there is, in my judgment, any significant element of our people who consciously believe in totalitarian principles. Of course, there have been authors and orators whose words would seem to indicate a belief that democracy is outmoded and must be discarded. Such theories, when openly proclaimed, would receive few adherents; but it would be unwise to close our eyes to the fact that there is a danger, a danger of drifting into the expansion, in times of peace, of the authoritarian methods we have had to use for self-defense in time of war.

We must make up our minds not to drift, but with open eyes to pursue a policy the object of which is to restore in all our economic and political affairs the authority of the people to govern themselves. Here again we find it well to consider for a moment the character of the task that Andrew Jackson performed. When he became President he found the Government manned and directed by many who were of the belief that even in the new republic of the western world there was such a thing as a governing class. He found the whole economic system in the control of a central bank from the management of which even the Government's members on the board of directors had been excluded. He found a system which elevated efficiency and management skill above freedom. He destroyed the economic monopoly and he restored the Government to the people without division of class. He brought the Nation, both politically and economically, back to its fundamental principles as a nation, an organization of free and equal citizens with equal opportunity for all.

ECONOMIC IMPERIALISM CAUSED THE WAR

We shall have failed to understand the causes of this great war unless we realize that they are to be found in the doctrines of economic imperialism. It was because the political and business leaders of the world had not learned how to preserve economic opportunity for the masses in the highly technical industrial organization of our time that the arbitrary state rose to power. Economic centralism, which dominated world trade by the arbitrary decree of international chemical, industrial, and trade organizations, had divided the whole globe into spheres and areas of influence in which men could not freely support themselves except by the favor of their economic rulers. When this resulted in unemployment, as it could not fail to do, it resulted also in the growth of arbitrary government. Economic monopoly leads directly to political monopoly.

If we are permanently to destroy arbitrary government, we must first make up our minds to establish economic freedom, for the lesson of this war is clear—there can be no political liberty without economic freedom. The free state is the creation of the free citizen who, as an inalienable human right, can support himself and his family without seeking concessions at the hands of any central power, economic or political.

The modern world has produced what has been aptly called the managerial revolution. No longer is our economy carried on by the capital and the labor of individuals alone, but rather by the capital and labor of huge aggregations of individuals. The machine age has been marked by the development of industrial organizations which are financed in many cases by the capital contributions of individuals who exercise no actual control over the properties they own and which are operated by literal armies of employees who have no ownership stake in the enterprise. The whole aggregation of collective capital and collective labor is then directed by a small group of managerial experts whose decisions affect, for good or ill, whole communities into which they sometimes have never placed a foot. Central expert management has been the characteristic mark of economic organization in this era and it has been accompanied by a steady diminution of local economic independence. Whole communities, great regions and sometimes even States themselves have become dependent for their economic existence upon the decisions of management rendered far beyond their borders.

Some of the modern industrial organizations have been richer and more powerful than most cities and some States. Many of them, in the number of their stockholders and in the number of their employees, have industrial populations far greater than most of the communities of the land, and yet the conveniences, the luxuries and the necessities of the modern world would have been impossible without them.

This country could not have armed itself and its Allies for this war without these industrial giants. Yet, it is perfectly clear that of themselves they could not have done the job. What they accomplished was achieved because Government provided the capital necessary to purchase their output and Government also established the bureaus of central management which alone made it possible to coordinate all the skills and all the facilities of the huge industrial plant.

THE PROBLEM OF READJUSTMENT

What has been accomplished by the creation of the greatest national debt that this or any other country ever had and the establishment of Government management under central authority represents as it were the apex of central power. It presents a problem of readjustment in the days that are to follow the war of a magnitude that would be difficult to overestimate.

We know now from the huge purchasing power that has been developed by full employment for war among all the people that a high degree of economic activity can be maintained provided a new market is developed for the product of our agricultural and industrial plant when the Government stops buying the output of entire plants and sometimes of huge areas for purposes of war. The Government is now the principal purchaser of all commodities that go upon the market. When the Government ceases to be the principal market, there must be a new market or there will follow unemployment and economic distress.

The purchasing power of the people for the building of new homes, the reconstruction of cities, the development of undeveloped areas and regions, the conscious utilization of all our resources for the purposes of peace and the improvement in our standard of living, these must be the objectives toward which our minds shall turn. All this can be accomplished, not, it seems to me, by continuing the trend toward central control, but by releasing once again the capacities of the people in their local communities.

The great secret of American success in this war, the secret of the triumph of our citizen soldiers and sailors over the trained armies and navies of Germany and Japan is to be found in the natural initiative of our men. They are able to meet emergencies as they arise. They are rescurceful as well as efficient. They are capable of independent judgment as well as amenable to discipline, and when a situation develops for which there is no plan, no order, they are not at a loss because they have been trained as free men. They have become the greatest military force on earth because they have breathed the air of liberty. They are the product of the system of government bequeathed to us by the founders of this Nation, a system that was designed to preserve opportunity for men of initiative rather than to foster the growth of monopolies of any kind to exploit them.

The faith which moved Jackson in his official career to make the government the guardian of opportunity for all the people is the American ideal of government. It is the ideal which proclaims and maintains that all the organizations which men form, both political and economic, are created to serve, but not to control them. It is the ideal that America has nurtured so successfully that the whole world now knows that democracy is not outmoded.

The free man is and of right ought to be the master of his own destiny, the captain of his own soul. Andrew Jackson defended this heritage in his time. We will defend it in ours.

MacLeish's Successor

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. JUDD. Mr. Speaker, the appointment of Archibald MacLeish as an Assistant Secretary of State brings to the attention of the American public the great importance of getting the President to name as his successor a distinguished librarian.

Mr. Carl Vitz, Minneapolis librarian and president of the American Library Association, has stated:

The Library of Congress is actually and potentially the greatest library in the world and needs a top-flight administrator.

His job is to preserve knowledge, make it available, and to diffuse it on a popular level. He should be an expert in the acquisition of materials and in organizing them for the greatest usefulness—in others words, he should be a distinguished librarian.

Under permission to extend my remarks, I am including the following editorial from the Minneapolis Star Journal of December 30, 1944:

MAC LEISH'S SUCCESSOR

Carl Vitz, Minneapolis librarian and president of the American Library Association, has

appealed to President Roosevelt to name a competeat librarian to succeed Archibald MacLeish as Librarian of Congress. It is strange that such an appeal should be necessary—but it is.

Our national library is one of the two or three largest institutions of its kind in the world. Besides performing research and other services for Congress, it offers excellent facilities for the work of serious scholars the world over. It extends various important bibliographical services to libraries throughout the country and is the center of an important Nation-wide interlibrary loan system.

Yet neither the man who is leaving as head of that institution nor some of the men most prominently mentioned to succeed him are librarians at all. MacLeish is a poet. Robert Sherwood is a playwright and Carl Sandburg is another poet.

If the United States needs a poet laureate, let us by all means have one and call him that. But the job of running so important an institution as the Library of Congress should not be confused with a ceremonial honor.

We don't make the year's outstanding boxer chief of our Army General Staff nor the winner of a cake-baking contest president of a milling firm. Excellence in etching does not fit a man to be Secretary of the Treasury. Why should the fact that a person writes good, bad, or indifferent verse qualify him to direct the important and complex responsibilities of the Library of Congress?

Top librarianships call for as much academic training and practical experience as do university presidencies. We owe it both to our national dignity and to common sense to put a really competent leader in his field at the head of our national library.

The Nation's Foreign Policy

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, January 15, 1945

Mr. PEPPER. Mr. President, I ask unanimous consent to incorporate in the Appendix of the RECORD a radio address on the Nation's foreign policy which I delivered yesterday over the Mutual network on the Reviewing Stand program sponsored by Northwestern University.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Every American knows pretty well what the foreign policy of our country is and has been since the foundation of the Republic:

1. To preserve the peace of our people;

2. To promote the well-being of the Nation; and

3. In a general way to stand up for what is right and decent in the world.

What has changed from time to time—yes, thank God, in the last few weeks—is the way we carry out that policy.

Nearly all of our people came to this country at one time or another to escape from the wars or the woes, or both, of Europe. George Washington warned us against permanent alliances and Thomas Jefferson told us to stay out of entangling alliances.

Our fifth President told Europe to keep her system out of the Western Hemisphere. That was the Monroe Doctrine.

For a century, then, the way we attempted to preserve the peace of our people was to stay out of Europe's disputes and to try to keep them out of this hemisphere by the threat to fight them in the Atlantic Ocean and in this hemisphere if they tried to come over here.

To the casual observer these tactics to carry out the general strategy of our policy seemed to work well. Then came the European war of 1914 and by 1917 we saw we had to get into it or Germany would conquer western Europe and become dominant in the Atlantic Ocean instead of Britain, which for a century had worked with us in the maintenance of the Monroe Doctrine. In short, we discovered that if we were to be at peace and safe over here we had to keep Germany on the other side of the Rhine River.

President Wilson and a majority of the American people, therefore, saw that we had to change our methods of furthering our old general aim of preserving the peace and promoting the welfare of the Nation. He—that is, President Wilson and a majority of the people—saw that our old policy of doing nothing to keep the Nation at peace had failed. From then on it was clear that the only way America could stay out of a major European war or a world war was to see that no such war got started.

President Wilson, therefore, with the British, entered into an alliance with France to join her in resisting any new German aggression. The British Parliament unanimously ratified the agreement, but the United States Senate, having defeated the Treaty of Versailles, never even took up Wilson's treaty of assurance to France against certain German attack of the future.

President Wilson also took the lead in setting up the League of Nations so that all the nations might join together to keep down war in the world; but the Senate killed that. So America went back to isolation after the last war to wait for the next.

But the significant thing is that it was not the Executive nor the country which held us in the grip of isolation but the United States Senate. The big question even now is, Has the Senate changed? We are in a terrible war, which is the fruit of isolation.

Last year we had an election. The Republican Party the leadership of which for the last quarter of a century has been isolationist, thanks to such great and wise leaders as the lamented Wendell Willkie, and now Senator ARTHUR VANDENBERG, has had a new vision of this Nation assuming a new responsibility for peace through an affirmative policy of our taking our full part of the difficulties and dangers of the peace of the world.

But the Senate Committee on Foreign Relation can still hold a treaty indefinitely if it or a minority of it wants to kill it. There is still the power of filibuster on the Senate floor when another "little group of willful men" may form another battalion of death against world peace. There is still the iniquitous two-thirds rule in the Senate by which not a majority of the Senate or a majority of the Senate, and a majority of the House of Representatives as I am trying to bring into the Constitution may ratify a treaty but two-thirds of all the Senators present must agree to a treaty before it can become effective.

The future peace of the Nation and the world lies, in my humble opinion, in the last analysis, nowhere but right in the Senate of the United States.

I am hopeful. But it must be remembered that the victory can come only from the determination of the American people that we shall at last destroy this monster war, which even now is swallowing up their sons, and their daughters and their substance, and wringing out of their hearts unspeakable agony.

Conduct and Aims of the War

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, January 15, 1945

Mr. BUTLER. Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD copy of a radio address delivered by the junior Senator from Illinois [Mr. BROOKS] over the Columbia Broadcasting System from Washington, D. C., on Tuesday, January 2, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Throughout all America millions of American homes have been and are holding solemn vigil awaiting news of their loved ones who have been ordered and dispatched by their Government to fight in one of two terrible wars, each of which is being conducted thousands of miles from their main base of supplies.

I share this concern, and all that I do or say is done with the hope that it may aid our fighting men and that the great suffering and sacrifice we have been and will be compelled to make before our vicious enemies are finally beaten and disarmed will result in some definite gain.

In the last war I served humbly, far removed from high places where generals and statesmen ordered events. In that capacity I accepted orders without question and carried them out to the best of my ability until I finally fell wounded in the front line in France.

At the present time I have the honor and responsibility of serving in the United States Senate representing the State of Illinois—a State of almost 8,000,000 people who have contributed approximately 800,000 of their sons and daughters to this war. In my official capacity, I have done my level best to support the fighting sons and daughters of America. This I shall continue to do constantly.

However, I am deeply concerned about the conduct of the war, for we are, at present, carrying the brunt and burden in both the war on the western front and in the Pacific where already over 620,000 of our gallant men and women have been killed, wounded, are missing in action, or are being held as prisoners of war.

Millions of these courageous men and women have been away from their families and homes for more than a year and are now facing indefinitely prolonged wars in Europe, the Pacific, and in Asia.

The political and military leaders who are conducting the wars warn us that our greater battles and sacrifices still lie ahead.

In the face of such advice, it is difficult indeed to understand why Russia and Great Britain are diverting so much of their fighting strength to force governments of their own particular liking in liberated countries, while we face the bloody brutality of the German armies.

Certainly the battles we have fought and the sacrifices we have made alone on the western front in the last 3 weeks give force to the parting admonition of George Washington when he advised, "Europe has a set of primary interests which to us have none or a very remote relation."

We Americans know what our military aims are—they are to completely defeat Germany and Japan so decisively that they will never again threaten the peace of the world.

But what are the political aims of our allies and to what extent have we secretly been committed to these aims?

Two theories were advanced as America was led into war:

The first was, that if Hitler succeeded in overrunning all of Europe and established his new order, we would live in constant fear of invasion; and if Hitler established his new order in Europe, he would develop a completely totalitarian system that would destroy eventually our economic structure by producing with slave labor to undersell us everywhere in the world.

The second was an ideological motive so superbly pronounced by President Roosevelt and Winston Churchill in what was represented to be the Atlantic Charter under which declared that "their countries seek no aggrandizement, territorial or other; they desire to see no territorial changes that do not accord with the freely expressed wishes of the people concerned; they respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them."

These reasons and ideals, plus the natural and inherent sympathies of all Americans for the minorities and little nations who had been the subject of unbelievable atrocities, were held out before the American people as they were led and finally blown into war.

These fears and ideals were drummed into the ears and minds of the American people when Russia was fighting so desperately to save her invaded homeland and England was bombed and bleeding. They called for help—first for tools, for supplies, for food—and we sent them. Then they called for a second front, and we established that. We drove the enemy back from the approaches of England; we cleared France; we relieved the pressure from the eastern front against Russia; and today we carry the real burden of actual fighting against the German Army on the western front and the fiendish Japs in the Pacific.

On the very day when Germany's crack troops were driving and beating us back on the western front, in what may well prove to be our most costly battle in men and material in this entire war thus far, the news came that the Russian troops were successfully advancing against Budapest, where the Russians will establish their "friendly" government in Hungary, and that Winston Churchill had dramatically flown to Greece to aid in the British troops in establishing their "friendly" government in Greece.

While we must keep high and foremost our military objectives to defeat Germany and Japan and devote—every one of us—our continued best effort at whatever task we may perform to aid and strengthen our fighting forces, it is only natural that the American people should ask and demand of our leaders answers to fundamental questions.

Do our allies have the same all-out objectives to conquer at the earliest possible moment Hitler and his Nazi forces in Germany? If so, why not demand that they follow through and throw their full military and naval might against the German Army now to support our fighting forces for which they pleaded not long ago?

Will we have full cooperation and fighting support from our allies against Japan after we have supplied millions of men and billions of dollars' worth of materials to safeguard the future of the Russian and British Empires, or will we struggle on alone in the vast Pacific and in Asia?

The danger of Hitler's success of creating a new order in Europe is over. Germany has lost at least 6,000,000 men. The German cities and many industries have been bombed and ruined. Most of the invaded countries have been liberated, at least of the Nazi forces.

The danger of a Hitler totalitarian Europe is past, but will Russia and Great Britain throw their fighting might to invade and completely conquer Germany or will they let us bleed and die while they play the ancient game of European power politics in further proof of the truth of Washington's advice that "Europe has a set of primary interests which to us have none or a very remote relation."

To what extent have we, the American people, been committed in the highly secret agreements reached at Quebec, Moscow, Cairo, and Teheran?

What is the foreign policy of our Government for which so many men must die and all America, present and future, must sacrifice?

During the recent debate in the United States Senate over the confirmation of the President's nominations of the men to serve in our State Department, Senator PEPPER, of Florida, announced, after a conference with the President, that "the President authorized us to say * * * that if any of these gentlemen in the discharge of his duties did not properly carry out and express his (the President's) policies, he would be promptly removed."

The question constantly arises now, What is the President's foreign policy? To say that the policy is to defeat Germany and Japan is not enough. We know that those are our military objectives and we know, further, that we are carrying the brunt and burden of battle of both wars on the western front and in the Pacific in addition to furnishing billions in precious supplies to our allies.

Are we going to bleed America white in Europe to help advance Russia's control over all the Balkans and Baltic states and reestablish the kings to their thrones in Italy and Greece?

We hear much talk about America taking the lead in the future peace of the world; that we should lead the way in creating a world organization to stop all future aggression; that we should help create a world financial and economic organization and pledge our armed forces, our economic and monetary resources to maintain future peace.

We have all of the able-bodied men in America of military age under arms, trained, fighting, or prepared to fight throughout the world today. We have regimented our unprecedented industrial capacity to win two wars. We have imposed rigid restrictions and restraints upon our homes and private lives to win wars for future peace based upon justice.

Now is the time to use our influence and our might to demand future freedom for smaller nations. After the war it will be too late. Now is the time for the President of the United States to announce what our foreign policy is.

Are we going to continue to sacrifice so much to advance communistic philosophy in the form of controlled governments throughout the Balkan and Baltic States and help with our blood and tears to establish another totalitarian system the like of which we feared so much would be established under Hitler?

Are we going to carry the overwhelming brunt of battle against the German armies at so great a cost while the people of Italy and Greece are forced to agree to a particular government to secure the future life line of Great Britain in the Mediterranean?

We have followed the policy of letting these questions of future governments in liberated countries wait until after the war, but our allies are using our supplies and their armies to set up their sphere of influence now.

Are we to continue to make the greater sacrifices to beat back the German armies while Russia and Great Britain grab the control of these smaller nations and then join a world organization and pledge our armed forces to maintain these arbitrarily established governments?

Are we in America at long last to say to the subjugated and smaller nations of the earth that we who fought for our own freedom—now that we have grown great, prosperous, and strong as a free Nation—are we going to fight off one totalitarian power while another takes them over, and then use our forces to prevent them in the future from fighting for their freedom?

There will never be a time when our influence and force will be so powerful in world affairs as now. What is our policy?

I realize that there are those who will say that foreign policy has always been the duty of a select group, and those few have regarded it as a sort of sacred rite to mold our opinions and we must follow obediently and without quetion.

But, ladies and gentlemen, the foreign policy has reached into every home in America today. We are all a part of it. It affects the details of our living, and our loved ones will pay for it with suffering, sacrifice, and with their lives.

We are in two terrible wars at one time, and no one can tell us when they will be over. But since power politics is diverting so much of the armed strength of our allies, we have a right to know what the political as well as the military aims of our Government are, and we should demand that the complete and undiverted armed strength of both Russia and Great Britain be hurled at the German armies now.

Ladies and gentlemen, we all, each one of us, have a tremendous responsibility to support in every manner and means our fighting men and women who serve and suffer so far away from home. We must give them our level best.

The President of the United States has a much greater responsibility as President and Commander in Chief to announce to us, to our allies, and to the world, our war and peace aims and then utilize our tremendous power and influence (while we still have it) to bring about a unity of action and purpose so that our sacrifices and sufferings will not again have been in vain.

Our soldiers overseas expressed their call for this unity of action against our common enemy in an editorial in the overseas Stars and Stripes, and I quote them:

"Unity and solidarity were strong when the United Nations were militarily weak and the war was in a bad way. Well, the bugles of battle are heard again above the bickering. For the holy love of God, let's listen to the dead. Let's learn from the living. Let's join ranks again against the foe and toward the future."

Taxation and Cooperation as Affecting Western Farmers

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, January 15, 1945

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD part of the address of C. C. Cogswell, master of the Kansas State Grange, before the seventy-third annual session of the Grange, held at the Kansas State College, Manhattan, Kans., on December 12. Mr. Cogswell gives expression to some practical views on the subject of taxation and cooperation as they affect the interests of western farmers at this time.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

TAXATION

Our enormous public debt amounting to around $10,000 per family will ultimately demand an overhauling of the entire tax structure. Three important factors present themselves in connection with taxation—the levying of the tax, the collecting of it, and the expenditure of the funds. Each is important and care should be taken that no advantage is given to any class or individual.

Various groups and classes are at all times demanding favors from public funds. When the question of such favors arises the public should take due notice of who gets the favors, who pays for them, and who has the controlling voice in the distribution of them.

The unprecedented increase of Federal employees in civilian life during the past few years is just cause for alarm. In some States there are many more Federal employees within the State than there are workers on the State pay roll. This cannot be continued and States' rights be preserved.

We endorse the tax program of the National Grange and insist that the public be often apprised of the facts that debt can be paid only from wealth which has already been produced. The tax program we have heretofore submitted is as sound today as ever before and we refer you to our former declarations and to the former declarations of the State grange for study.

In our own State we should insist that the State levy on personal property shall be eliminated. Under the present taxing program the State levy has but two values. Its patronage value which enables office holders to add to their employment rolls and its "buck passing" value which enables the State tax commission and the county commissioners to keep the taxpayer confused by passing responsibility from the courthouse to the State capitol and back.

The people should be taxed as fairly and equitably as possible and tax funds used solely for the purpose of buying such commodities and services as are necessarily for the use of the public generally and which can be provided more economically through governmental agencies. Taxes should never be used as a whip nor to destroy any particular method of doing business.

COOPERATION

The cooperative effort of farmers, and other groups as well, have met with outstanding success during recent years. The year just past has brought many worthy achievements to true cooperative effort. The average individual thinks of the cooperative movement, first, as a means of saving money. Important as is this feature of the cooperative effort, there are other accomplishments which come to us as a result of cooperation that are even more important.

The cooperative effort of farm organizations made possible the enactment of cooperative laws for the protection of those desiring to transact business under these principles. Some business cooperatives have made the mistake of forgetting the service rendered them by the general farm organizations, but always their memory is revived when threatened with danger. An outstanding example is in the fight now being waged against cooperatives by big business interests that would deprive cooperatives of their right under the law in the exemption of patronage dividends which certain groups, unfriendly to cooperatives, have attempted to classify as profits. The value of general farm organizations to the cooperatives in this attack was immediately recognized. Because of the soundness of the principle at stake the general farm organizations, without exception, rallied at once to the support of the cooperatives.

The cooperative effort of the general farm organizations in molding public opinion, in promoting sound legislation, and in discouraging unsound legislation, in the Kansas legislative bodies, is recognized throughout the Nation. The farm organizations of no other State in the Union have surpassed those of Kansas in this field. Some capable Kansas farm leaders have been taken from this field through employment by groups whose purposes were in conflict with those of agriculture. Scarcely a State-wide farm spokesman remains today who has not refused employment, at greatly increased pay, from one or more of these groups. Farm organizations in other States have long been inquiring of the Kansas farm organizations for detailed information regarding their cooperative legislative activities.

Shall We Have More T. V. A.'s?

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, January 15, 1945

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article appearing in the New York Times Magazine, Sunday, January 7, 1945, entitled "Shall We have More T. V. A.'s?" The author of this article is David E. Lilienthal, Chairman of the T. V. A., through whose successful direction the T. V. A. has demonstrated a new and distinctive method for the development of the great river basins of our country, thereby making one of the most notable contributions to our American economic system in its history.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHALL WE HAVE MORE T. V. A.'s?

(By David E. Lilienthal, Chairman of the Tennessee Valley Authority)

MUSCLE SHOALS, ALA.—During its far from tranquil existence since June 1933, a good many words have been used to characterize the T. V. A. Some have been sulphuric, some extravagantly enthusiastic. But the expression most commonly applied has been "experiment."

Congress and the President did launch the T. V. A. as an experiment, and from the outset we have administered it in that spirit. The chief importance of the T. V. A., it seems to me, is as a demonstration of a new and distinctive way for a people to develop their natural resources of rivers and waters, land and minerals and forests. After a decade the T. V. A. is now able to throw the light of actual experience—not just theories or talk—upon a fundamental problem of universal concern.

The stakes of such an experiment, in a new way to perform an old task, are high. For not only in the Tennessee Valley, but in a thousand valleys the world over the hopes and aspirations of all peoples rest upon their natural resources, the universal foundation stones of economic life.

What have T. V. A.'s new methods demonstrated? What lessons are there in T. V. A.'s story that other valleys and natural regions may profit by? More specifically, does the record of this pilot plant in the Tennessee Valley bespeak the creation of more T. V. A.'s?

A substantial body of American opinion seems to think so.

In the vast Missouri Valley, for example, a region extending from the Mississippi River to the Great Divide, bills to create a T. V. A. on the Missouri, an M. V. A., sponsored by a Senator from an Upper Basin State (Senator JAMES MURRAY, of Montana) and a Congressman from a down-river district (Representative JOHN J. COCHRAN, of St. Louis) have the vigorous support of some of the most influential newspapers of the region, the Farmers Union in seven Missouri Basin States, labor organizations, and a number of civic and business leaders.

Support has come from outside the valley as well: Collier's magazine in an editorial, Let's Try an M. V. A.; the Washington (D. C.) Post, the Christian Science Monitor, and so on. In a recent editorial entitled "The T. V. A. Principle," the New York Times has stated: "The best argument, in principle, for T. V. A. developments on the Missouri, Arkansas, and Columbia Rivers, recommended by the President in a special message to Congress, is the record and present status of the Tennessee Valley Authority."

On April 10, 1933, President Roosevelt, recommending to Congress the creation of T. V. A., said: "If we are successful here, we can march on, step by step, in a like development of other great natural territory units within our borders." On September 21, 1944, the President, referring to the T. V. A.'s record, urged that the time had come to march on in other valleys by the creation of agencies similar to T. V. A.

Opposition to the idea is equally ardent. And so today, throughout the valley of the Missouri, Members of Congress, Governors, civil leaders, and newspaper editors are actively studying and debating the T. V. A. and its possible application to their region.

Interest in the T. V. A. is not confined to regions of the United States; the Tennessee Valley is being visited these days by a constant stream of men from almost every other part of the world. Sometimes they come for a few intense days; often as resident students for a year or more. They come from Brazil and New Zealand, from Poland and Norway and France and Czechoslovakia, from Calcutta and Sydney and Tegucigalpa, from the distant valleys of the Yangtze, the Dnieper, the Ganges, and the Sao Francisco. There are officials and businessmen, as well as many technicians, covering the score or more special fields within the scope of the T. V. A.'s undertaking.

They speak many languages and are from the most diverse points of the globe, but they come to see the Tennessee Valley to try to answer the same question that is in the minds of the men from St. Louis and Billings: Can we adapt the T. V. A. idea to our region?

What is the answer? Will this work elsewhere? Should there be more T. V. A.'s?

Without bothering to examine the evidence the dogmatists of both "left" and "right" have entered a confident verdict of "no." Everyone else will want to appraise the demonstration before reaching a conclusion. An adequate statement, such as I endeavored to make in a recent book, T. V. A.—Democracy on the March, is of course quite beyond the limits of this article. But for those interested in results rather than abstract doctrine, in judging whether the T. V. A. idea should be and can be adapted elsewhere, I would invite scrutiny and consideration of the following four distinctive and essential characteristics of this undertaking.

I. DEVELOPMENT OF NATURAL RESOURCES IN A UNIFIED WAY

The T. V. A. idea represents a departure in American national policy, in this, that one Federal agency, the T. V. A., not a dozen or so (as is customary), is responsible for the

unified, not the divided, development of resources in a natural region.

These new principles of unity of resources and unity of responsibility for their development are now, after more than 11 years of work, written into the very landscape and the life of a resurgent region.

As one concrete result of this new way of doing things, a major river has been made to do what it is told to do, by a unique control of its waters for the benefit of men.

America for over a century has puttered at the job of developing her rivers; the work has lagged far behind our proud technical standards in almost every other field. Last month, when the largest of the T. V. A.'s new structures—Fontana Dam and Kentucky Dam—went into service, modern, unified river control became an accomplished fact on an American river—the first river in the world of which this can be said. I venture the assertion that it will not be the last.

The Tennessee River system has been dealt with by T. V. A. as a comprehensive whole, not as a series of unrelated sites for dams. Each dam was seen as a part of that whole, made to yield all of its potential value—not a navigation channel alone, or flood control only, or power as a separate asset, or recreation. The series of T. V. A. dams—the largest job of engineering and construction undertaken by one organization in American history—has made all those assets available from each dam.

By this system of dams, designed and operated almost as if they were one dam, the waters of the Tennessee River system can now be turned on and off from the T. V. A.'s central water dispatcher's office with almost the same precision with which you handle vessels of liquid in a laboratory.

When rainfall is heavy and floods threaten, the reservoirs hold back the excess till the crisis is past—and that crisis may be at Cairo on the Ohio River, hundreds of miles away. When the dry season comes in the fall and the water is needed to keep deep-water navigation moving, enough water can be let down to maintain a nine-foot channel. (We have ample rainfall in this valley, so irrigation is not one of the multiple uses made of the water; it could be, if that were needed.)

As water is released from behind the dams, it turns water wheels that produce electric power in great quantities. T. V. A. is today the largest electricity-producing system in the United States, the paying partner of the enterprise with an annual gross revenue of over $35,000,000 from sales of electricity, that (through 130 locally owned and operated distribution systems) serves 550,000 homes, farms, and factories in 5 States. At the levels of the past 5 years it will take only 30 years to repay Uncle Sam the total power investment, with net income remaining after operating expenses, depreciation, taxes to local agencies, and other costs.

The success of the idea of unified development is written not only on the river but on the changed face of the land of the region, and in the forests and woodlots. The land was not dealt with separately from the river, the customary method. In nature land and streams are a unity. Everyone knows that what farmers do on their land affects the flow of waters both on the land and in the rivers. Minerals affect the fertility and hence the water-holding ability of land; the same is true of forests.

The T. V. A. principle required that the same unity of resources that in fact exists in nature should be reflected in the way men develop those resources.

The results of the new method are to be seen on every hand, as one travels through the region. Farmers, many thousands of them, work on their own acres, with the aid of science, to restore the fertility and security of the soil of their farms and the growth of their timber. They are consciously paying heed to the oneness, in nature, of land and river, of forests and minerals.

A half-dozen or more different Government agencies, having separate responsibilities and policies and different sources of authority, could hardly perform such a unified task. In any event, they never have done so. Congress had to create a new kind of government tool, the T. V. A. This regional development corporation was to have "the flexibility and initiative of a private enterprise"; so it was not put within any of the old-line Washington departments and bureaus. It was to function under a congressional charter explicitly defining its duties and prescribing the policies its administrators were to follow.

That charter fixed responsibility for results squarely upon T. V. A. for an entire undertaking of many parts, all interrelated. This was, and still is, almost a revolution in Government administration, though to a manager it seems the plainest sense. In the development of the river, not flood control alone, or navigation or power, but all the water's uses, together, were made the responsibility of one public agency, the T. V. A. Not water resources in one compartment of government, dealt with separately from soil or forests, nor farming separately from industry, not industry separate from transport and electricity.

The T. V. A. has responsibility to see that things happen—but no powers of compulsion. We were given no power in 1933, and we want no power in 1944, to issue orders to farmers, owners of forest land, businessmen—citizens generally—or to local or State governments. Coercion will not do a democratic job.

The fact is that the changes one sees in this valley are chiefly due to T. V. A.'s record in successfully enlisting the active participation of the people, their private enterprises, and their local and State public institutions. That federation of interests was achieved and is held together by a common understanding, one that is growing in this valley—and to me this is more impressive than the massive dams or even the new green-clad slopes. That understanding is this: That our natural resources are the region's entire capital, and their development must be in accordance with the unity of those resources in the plan of nature.

II. THE INCREASE OF INDEPENDENT ACTIVITY AND ENTERPRISE BY PRIVATE CITIZENS

In the early days of the T. V. A. a notable adversary said over and again that private business would decline in the Tennessee Valley because men and investors would fear and avoid a region where Government played so important an economic role.

The contrary has been the case. What T. V. A. has accomplished in stimulating and encouraging private undertakings in manufacturing, commerce, farming, transportation, forestry, and other fields is now widely known. As the Baltimore Sun said editorially on November 16, 1944, "Far from withering private enterprise, T. V. A. has afforded the means for a variety of new businesses to spring up in the valley."

By the presence of abundant low-cost electricity and a new 650-mile waterway, by industrial research in new uses of the region's raw materials in private industry, by protection from floods that damage business, and by making available facts about resources in a form that businessmen require for their decisions, there has developed in this region a unique relation between T. V. A. and small and large business. This has been expressed in large private investments and plans for continued expansion.

Since T. V. A. was created the figures show that private enterprise in this region has made greater progress than in the United States as a whole during the same period—whether the measure of progress be increase in retail sales, number of new manufacturing establishments, bank deposits, value added by manufacture and persons engaged therein, or any other index. The New York Times summarized the matter in accordance with the facts when it said editorially recently: "There is abundant evidence in big as well as little businesses in the Tennessee Valley that private initiative has been encouraged, not stamped out."

That Government activity can nourish and encourage the expansion of industry, commerce, and agriculture is no new idea, of course. But in the Tennessee Valley the demonstration affects so many varied kinds of business activity and has resulted in such huge permanent private investment that with the fair-minded it should lay to rest any notion that public investment and public technical leadership necessarily exclude private investment and initiative.

The important question is, What kind of public activity? It is now clear to most observers that the T. V. A. is the kind that helps and multiplies private activity, investment, initiative, and profit.

III. A METHOD OF ACHIEVING GENUINE DECENTRALIZATION OF THE FEDERAL GOVERNMENT'S ROLE IN RESOURCE DEVELOPMENT

Congress and the President created T. V. A. as an autonomous corporation rooted in a region rather than as a remote bureau of a Washington department. This is the first major exception in more than 50 years to the trend toward centralized administration of Federal functions.

T. V. A.'s administrators, engineers, and technicians were selected from all parts of the country. But they live and work in the Tennessee Valley. That is where the problems of the people are; that is where the decisions are made. Local delegations don't have to go to Washington to get an answer where the T. V. A. is involved. The men they want to see are right in the valley.

This experiment in government in the open air has developed a body of experience of general usefulness. The T. V. A. has shown, under none too easy circumstances, that in the field of resource development there is an alternative to ever larger departments in Washington and to cumbersome, top-heavy, overcentralized government.

This decentralization from Washington made it possible for T. V. A. in turn to decentralize within the region. To that end we have entered into scores of contracts with State and local agencies and private groups. As a consequence of this deliberate policy, most of the changes wrought in this valley are not affected directly by T. V. A. at all.

They result from the combined efforts of hundreds of local, State, and private agencies, such as farmers' associations, State universities, rural electric cooperatives, and city power boards, State and community planning boards, State and local conservation agencies. It is this aspect of the T. V. A., this citizen partnership and participation, that strongly impressed visitors who are wisely fearful of bureaucratic domination.

IV. A DEMONSTRATION THAT POLITICS CAN BE KEPT OUT OF THE ADMINISTRATION OF AN IMPORTANT PUBLIC ENTERPRISE

Congress itself, in a rare provision of law, prohibited politics in the administration of T. V. A. We took that direction literally. Furthermore, we have observed the corollary—that we of T. V. A. keep strictly out of politics.

No technical enterprise can possibly succeed on any other basis. It is more than a matter of patronage; the integrity of every decision on a technical or business question would be in doubt were any other rule observed.

The significant thing in the T. V. A.'s experience is that the public has fought off any attempt to tamper with T. V. A.'s uncompromising position on this matter of politics. Whenever someone, however powerful, seeks to inject political considerations into T. V. A.'s operations, there are widespread public expressions of protest from almost every quarter.

The people understand the issue: T. V. A.'s broad policies are matters for Congress and political institutions; but they don't want political administration of their business.

The general assumption of public apathy concerning the conduct of public business we have not found to be true; quite the contrary.

It will be apparent that all T. V. A.'s accomplishments are due to the distinctive methods it has employed. It is coming to be recognized in many parts of the world that it is those methods that embody what is known as the T. V. A. idea.

After 11½ years of observation it is my opinion that these methods, adapted wisely to the variety of circumstances in a thousand regions of the world, can be made to work elsewhere.

It is obvious, of course, that the T. V. A. pattern is no cooky cutter, not something to be copied. The T. V. A. idea will be useful elsewhere by the process of intelligent adaptation.

The results in the Tennessee Valley led the Wall Street Journal to observe a few days ago: "President Roosevelt's proposal for T. V. A.'s in every important watershed in the country has a certain logical foundation—no doubt about that. If T. V. A. has been a good thing for the Tennessee River region, it should be a good thing for every other river region."

Similar developments elsewhere will be a good thing only if it is clearly recognized that the distinguishing features of T. V. A. that I have here summarized are essential—one agency doing a unified job; that agency decentralized, adapted to stimulate private development at the grass roots and free from politics. These essential characteristics are not dependent upon the physical circumstances peculiar or distinctive to the Tennessee Valley. They can be adapted to other regions and other problems.

Surplus Property Disposal

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, January 15, 1945

Mr. JOHNSON of Colorado. Mr. President, last fall the Senate and the Congress spent much time and effort on the all-important problem of surplus-property disposal, which resulted in legislation and the appointment of a surplus-property board.

Prior to the enactment of the surplus-property bill Mr. Bernard M. Baruch, at the request of the President, made a comprehensive report on this subject to Justice Byrnes. Since time and the war effort have not stood still, on January 5, last, I wrote Mr. Baruch a letter asking him some specific questions on this subject, in the light of present-day developments. I believe that his reply is very important, and I therefore ask that my letter and his reply may be incorporated in the Appendix of the RECORD.

There being no objection the correspondence was ordered to be printed in the RECORD, as follows:

JANUARY 5, 1945.

Hon. BERNARD BARUCH,
New York, N. Y.

DEAR MR. BARUCH: Having in mind your experience with the problem of surplus property following World War No. 1 and your more recent surveys and studies of the current problem, I am anxious to have your views.

As a member of the Military Affairs Committee, I know of your deep concern and your devoted and painstaking study of it, and I am familiar with the report you made to the President which was a forerunner and formed the basis for the legislation recently enacted by Congress. No one has taken a more constructive interest than have you.

Much has happened lately to modify some of the aspects of this problem. Property that appeared to be surplus a few months ago seems now to be critically short. Then, too, property that may be surplus to the Army and Navy may be extremely short insofar as civilians are concerned.

No one can deny that the volume, velocity, and manner of disposal of the huge amounts of surplus property that will be on hand at the end of the present war will have a tremendous impact upon the economy of this country, but what are some of the details?

What about our supplies of low-grade ores and improved methods of processing them—a subject in which the West is tremendously interested? What do your studies indicate as to the short- and long-range supply of vital resources of metals?

What about the effect of so-called surplus property upon the future economy of America?

What is surplus property? Is property surplus when civilians need it desperately, even though the armed forces have no military use for it?

There are many additional angles to this whole subject upon which I should like your viewpoint.

Sincerely,

ED C. JOHNSON.

NEW YORK, N. Y., *January 12, 1945.*

Hon. EDWIN C. JOHNSON,
United States Senate,
Washington, D. C.

DEAR SENATOR JOHNSON: The following are comments that occur to me as a result of your letter of January 5.

Suggestions for the Surplus Administrator are made in the report on war and post-war policies made by John Hancock and me. They still hold good and are, as follows:

1. Sell as much as he can as early as he can without unduly disrupting normal trade.

2. Listen to pressure groups but act in the national interest.

3. No sales, no rentals to speculators; none to promoters.

4. Get fair market prices for the values, with proceeds of all sales going to reduce the national debt.

5. Sell as in a goldfish bowl, with records always open to public inspection.

6. As far as practicable use the same regular channels of trade that private business would in disposing of the particular properties.

7. No Government operation of surplus-war plants in competition with private industry.

8. No monopoly, equal access to surpluses for all businesses; preference to local ownership, but no subsidizing of one part of the country against another.

9. Scrap what must be scrapped, but no deliberate destruction of useful property.

10. Before selling surplus equipment abroad, assure America's own productive efficiency on which our high wages and high living standards rest.

In other parts of the report we repeated what I consider very important, and must never be lost sight of:

"The business of all the disposal agencies should be conducted in a goldfish bowl, with the facts on all sales open to public inspection at the point of sale and each agency submitting reports, summarizing these sales regularly to Congress through the Surplus Administrator."

In dealing with the question of a surplus, the first decision that must be made by a Government agency is what constitutes a surplus to it. Then the surplus must be transferred to the Surplus Administration, where it will have to be considered from the standpoint of national interest.

Any surplus of nonperishable items produced outside of the United States continental area, which have been acquired for war purposes, should be retained unless it can be sold with the idea of preventing inflation and then with the understanding it could be repurchased.

These surpluses should be kept for two purposes:

1. In case of war.

2. To prevent combinations, cartels, quotas, or other barriers to our economy.

The mere possession of these things, produced outside the United States continental area, will be worth more to us in the way of self-confidence and respect from others than the money we would get from the sale.

So far as the other nonperishable surpluses and plants are concerned, each should be considered from the national and international standpoint. For instance, we will have a large supply of copper metal. Inquiry should be made as to what the resources of copper in this country are in ore and the facility or ability to turn that into copper metal, and how many years this ore will last. Then we should take the ore plus such surplus metal and determine what, if any, copper should be retained; and if not retained, how much should be sold each year.

The same should be done in regard to every other metal. In this way we will determine from a national standpoint what is surplus and what is not.

In coming to a conclusion, consideration will have to be given also to American holdings in other countries and what freedom of movement there will be in case of war, and whether there is a possibility of any other country or countries combining together in a cartel, quota, or any other form of barrier against us.

The same inquiry should be made with regard to agricultural products, whether they be perishable or not. Efforts should be made to have this country develop self-containment in a very short time. This would not be done for the purpose of injuring any other country, but of giving constant evidence of our ability to take care of ourselves if we are forced to do so. It is not a threat to a peace. It is a threat against war.

One of the matters that should be inquired into immediately by the Surplus Administration is the necessity for a continuing research under the Bureau of Mines of the various low-grade ores necessary to our economy. This should include production of oil from coal and shale.

In addition, the Department of Agriculture should be pressing an inquiry into the use of farm byproducts. Both of these should be done in connection with a research council for peace activities such as is now conducted by Dr. Vannevar Bush for war.

Until you know all these factors you cannot decide what is surplus raw material.

Things like trucks, tires, and all kinds of machinery that can be used in road-building, farm and civilian life should be turned loose in order to bridge over the hiatus between the great demand and the ability to get ready for production.

One more thought—the retention and nonuse of plants too long will lessen their value to anyone for any use.

These are my general views. I should be glad to give further particulars if you desire.

Yours very truly.

BERNARD M. BARUCH.

The Charter Not a Hoax

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1945

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks, I include the following column by George E. Sokolsky which appeared in the New York Sun and other papers under date of December 26, 1944:

THESE DAYS
(By George E. Sokolsky)
THE CHARTER NOT A HOAX

Mr. Roosevelt's Atlantic Charter was not a hoax. He may now believe that it was a mistake. He perhaps has discovered that it is an impediment to improvisation. Too many remember it and believe in it. Too many want it to be true. But it was never a hoax.

Once I was debating Leon Henderson on the Wake Up America forum, and he said authoritatively that Maxim Litvinov had signed the Atlantic Charter. Well, I suppose I should not have done it, but thrilled at catching a famous New Dealer, I handed him a volume containing the Atlantic Charter and asked him to show me Litvinov's signature. It wasn't there. Nothing was there but Roosevelt and Churchill. Mind you, they were both present in this officially published document but no Litvinov. And no Stalin. Not there. Henderson was puzzled and I was petty about it. He knew a signature should be there, but he had said "Atlantic Charter," and I stuck to that.

Now, we were looking at page 114 of my particular official book. Had Henderson turned a leaf, he would have had me by the heel, for there, on page 116, is the declaration by the United Nations, signed in Washington, January 1, 1942. This is a very different document from the declaration by two elderly gentlemen at sea thinking great thoughts. For when the Atlantic Charter was given to a panting world, the United States was not at war with anybody; that is, not officially. The President of the United States is not permitted by the Constitution to declare war all on his own or even in private converse with Mr. Churchill. The Congress declares war. And the Atlantic Charter, by its nature, could only be issued by a pair of belligerents in time of war. So Mr. Roosevelt is right when he insists that there is no such legal document, for its very nature is illegal—in fact, illegitimate.

However, the declaration by the United Nations is different. The United States was, upon its issuance, actually at war. It was the focal country by a group of belligerents associated against a common enemy. And these associated nations pledged themselves:

"Having subscribed to a common program of purposes and principles embodied in the joint declaration of the President of the United States of America and the Prime Minister of the United Kingdom of Great Britain and Northern Ireland dated August 14, 1941, known as the Atlantic Charter, being convinced that complete victory over their enemies to defend life, liberty, independence, and religious freedom, and to preserve human rights and justice in their own lands, as well as in other lands, and that they are now engaged in a common struggle against savage and brutal forces seeking to subjugate the world, declare:

"1. Each government pledges itself to employ its full resources, military or economic, against those members of the Tripartite Pact and its adherents with which such government is at war.

"2. Each government pledges itself to cooperate with the governments signatory hereto and not to make a separate armistice or peace with the enemies."

There you have the Atlantic Charter in unquestionably official form. No matter who wrote it on what scraps of paper, once incorporated in the declaration by the United Nations, it ceased to be the private conversation of a pair of amateurs in English composition, but the formal declaration of nations at war. And all signed officially as representing nations, as, for instance, the United States of America, by Franklin D. Roosevelt; the United Kingdom of Great Britain and Northern Ireland, by Winston Churchill; on behalf of the Government of the Union of Soviet Socialist Republics, Maxim Litvinoff, Ambassador; the Republic of Poland, by Jan Ciechanowski—and many others. That is official, terribly official. It was even official so far as Poland is concerned. And that cannot be killed by Mr. Roosevelt or the O. W. I. or the humiliations of Churchill or the elations of Stalin. It will not be killed, because it is the only statement of war aims issued by this association of nations—or by anybody officially to date.

The Patent Grant: Remedies To Prevent Its Monopolistic Abuse

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1945

Mr. VOORHIS of California. Mr. Speaker, on December 18, 1943, I addressed the House on H. R. 3874, An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes. I have again introduced the bill as H. R. 97. This bill would provide that a patent holder can no longer enforce his patent if he is found in regular judicial proceedings to have illegally used his patent in restraint of trade and commerce. Briefly, the bill would:

First. Authorize the United States to intervene in Federal court proceedings involving the infringement or validity of patents. This is to assure representation to the courts of the public interest, so often disregarded in patent litigation.

Second. Require registration of patent agreements. This proposal has been advanced by industry and Government agencies.

Third. Render unenforceable patents which are illegally used to restrain trade or commerce. This is the heart of the bill.

Fourth. Permit determination of the validity and scope of patents in antitrust proceedings.

In many respects this bill is an extremely conservative measure. It does not interfere with the validity of the patent grant. It does not provide for compulsory licensing of patents. It is not intended to diminish in any way the basic rights of a patent holder. This bill would strengthen the patent system. In providing for the cancelation of a patent which has been employed as a part of an illegal conspiracy or monopoly, the bill will give assurance to the public that patents will be used for the purposes within the constitutional grant, namely, for the promotion of science and the useful arts. The bill adopts a principle frequently applied by the Congress in other legislation. A patent, after all, is only a monopoly grant from the United States Government. The Supreme Court refers to the patent as a property right but it is after all a property right which has been created by Government action and which would not exist without that action. A lease granted by the Government as to valuable mineral properties, for instance, is also a property right, but it is common practice in all legislation authorizing such leases to provide—to quote from a typical statute:

> If any of the lands or deposits leased under the provisions of such sections shall be controlled by any device so that they form a part of or are in any wise controlled by any combination in the form of an unlawful trust or form the subject of any contract or conspiracy in restraint of trade the lease thereof shall be forfeited by appropriate court proceedings.

The bill which I have introduced would attach to the patent grant this customary limitation in the public interest. In view of the thoroughly documented history of the abuses of patents in restraint of trade during the last decade, I doubt very much whether a patent system can survive without this kind of protection.

The necessity for this bill is made all the clearer because of the decision of the Supreme Court in the case of the Hartford-Empire Co. against United States which was handed down a week ago. In that case, more than 600 patents have been used in a joint conspiracy to restrain trade. The entire glass-container industry is controlled through a gigantic patent pool. The result of this patent pool is to make consumers pay more for food products put up in glass jars. It has kept new companies from going into the glass-container industry. By keeping new firms out of the business, the Hartford-Empire Co. has indirectly kept people out of work. In other words, here is a price-fixing conspiracy in a field of necessities and the very basis of the conspiracy is the intentional misuse of patents. Or to put it another way, this very conspiracy has been made possible, or at least has been built upon grants by the United States Government of valuable property rights.

In establishing and utilizing its patent position, the monopoly failed to disclose information which it was obligated to reveal to the Patent Office, established private patent tribunals, practiced fraud on the courts, and carried on a continuous campaign of threats of infringement suits. Its real objective was to maintain control of producers, production, and technology. The conspiracy upon which the monopoly was built encompassed a gross abuse of the patent privilege before the Patent Office, in the courts, and in business practices.

There is no doubt whatsoever about the facts in the Hartford-Empire Co.

case. The majority opinion of the Supreme Court, given by Justice Roberts, states:

The district court found that invention of glass-making machinery had been discouraged, that competition in the manufacture and sale or licensing of such machinery had been suppressed, and that the system of restricted licensing had been employed to suppress competition in the manufacture of unpatented glassware and to maintain prices of the manufactured product. The findings are full and adequate and are supported by evidence, much of it contemporary writings of corporate defendants or their officers and agents.

He further stated:

It is clear that, by cooperative arrangements and binding agreements, the appellant corporations, over a period of years, regulated and suppressed competition in the use of glassmaking machinery and employed their joint patent position to allocate fields of manufacture and to maintain prices of unpatented glassware.

Justice Black, in his dissenting opinion, in describing the efforts of the conspirators to monopolize the glass-container industry, states:

Their efforts were rewarded by complete success. They have become absolute masters of that domain of our public economy. They achieved this result largely through the manipulation of patents and licensing agreements. They obtained patents for the express purpose of furthering their monopoly. They utilized various types of restrictions in connection with leasing those patents so as to retain their dominance in that industry. The history of this country has perhaps never witnessed a more completely successful economic tyranny over any field of industry than that accomplished by these appellants. They planned their monopolistic program on the basis of getting and keeping and using patents, which they dedicated to the destruction of free competition in the glass-container industry.

The conspirators had a definite program to misuse patents; that is to misuse public grants from the Federal Government. They stated that they acquired patents with an intention "to block the development of machines which might be constructed by others, and to secure patents on possible improvements of competing machines so as to 'fence in' these and prevent their reaching an improved state." As Justice Black states:

These patents were the major weapons in the campaign to subjugate the industry.

The Supreme Court found that Hartford-Empire had grossly violated the antitrust laws. Nevertheless, the majority four judges—since three judges did not sit—felt that it did not have the power under the existing antitrust statutes to keep Hartford-Empire from enforcing in the future the 600 or more patents which it had acquired for the very purpose of misusing them in restraint of trade. The Supreme Court referred to the fact that the Congress had failed to pass supporting legislation providing imposition of a penalty as to patents used in violation of the antitrust laws. My bill, H. R. 97, would correct that.

I am not a lawyer and I do not wish to pass any judgment upon whether the majority opinion or the dissenting opinion was correct on the issue of whether the Court in the absence of legislation could have provided for this forfeiture. I do know, however, that it is completely anomalous for the Federal Government to remain powerless when the very grants which it gives are used as weapons in an illegal conspiracy against the public interest. The use made of these patents is illegal under our present laws; it takes no amendment of the antitrust laws to make this use in restraint of trade illegal. As the majority Supreme Court opinion states:

Little need be said concerning the legal principles which vindicate the district court's findings and conclusions.

The opinion quotes a case decided in 1912—the Standard Sanitary case—in which it is said:

Rights conferred by patents are indeed very definite and extensive, but they do not give any more than other rights a universal license against positive prohibitions. The Sherman Act is a limitation of rights, rights which may be pushed to evil consequences and therefore restrained.

The only question, therefore, is whether admittedly illegal conduct in the use of a patent should not result in the loss of the patent. The majority four of the Supreme Court did not think that they had the power to grant this public relief. If that is so, then Congress should make it clear that the courts have such power.

It would be a great and a tragic mistake to think of the abuse of patents as though it were an ordinary criminal act. It is more than an ordinary criminal act. It goes to the very heart of our economic system. The Supreme Court was writing about patents but the effect of its decision will be felt when this country has to provide for 60,000,000 jobs and it will also have far-reaching implications in the foreign economic relations of this country. The abuse of the patent system has been the very foundation on which international cartels have been built in order to restrain American production and to keep American companies from selling their goods in other parts of the world. The Hartford-Empire case reminds us that the patent system has also been used to restrain technology at home and to keep out those new companies and new enterprises which we must have if we are going to have high levels of employment. The question is really whether we are going to make a free and competitive enterprise system work.

The patents in the Hartford-Empire case and in the more than 30 international cartel cases brought by the Antitrust Division during the last few years were used as instruments in the derogation of one of the most fundamental policies of this Government. The letter of the President to Secretary Hull, dated September 6, 1944, sets forth this fundamental policy. The President said:

During the past half century the United States has developed a tradition in opposition to private monopolies. The Sherman and Clayton Acts have become as much a part of the American way of life as the due process clause of the Constitution. By protecting the consumer against monopoly these statutes guarantee him the benefits of competition.

This policy goes hand in glove with the liberal principles of international trade for which you have stood through many years of public service. The trade-agreement program has as its objective the elimination of barriers to the free flow of trade in international commerce; the antitrust statutes aim at the elimination of monopolistic restraints of trade in interstate and foreign commerce.

Unfortunately, a number of foreign countries, particularly in continental Europe, do not possess such a tradition against cartels. On the contrary, cartels have received encouragement from some of these governments. Especially is this true with respect to Germany. Moreover, cartels were utilized by the Nazis as governmental instrumentalities to achieve political ends. The history of the use of the I. G. Farben trust by the Nazis reads like a detective story. The defeat of the Nazi armies will have to be followed by the eradication of these weapons of economic warfare. But more than the elimination of the political activities of German cartels will be required. Cartel practices which restrict the free flow of goods in foreign commerce will have to be curbed. With international trade involved, this end can be achieved only through collaborative action by the United Nations.

I hope that you will keep your eye on this whole subject of international cartels, because we are approaching the time when discussions will almost certainly arise between us and other nations.

The President has repeated this policy most recently in his message to Congress on the state of the Nation. He said:

We must make sure that private enterprise works as it is supposed to work—on the basis of initiative and vigorous competition without the stifling presence of monopolies and cartels.

If one of the major policies of this Government for 50 years has been to prevent restraints of trade in an effort to maintain a free-enterprise system, then, surely, monopoly grants by the Federal Government—which can only be given to promote science and the useful arts—should be withdrawn if these grants are used against the fundamental policy of this country. Take the basic patents in the synthetic rubber field, for instance, through a cartel agreement between the German I. G. Farben Chemical Trust and Standard Oil of New Jersey, the German Government, acting through the I. G. Farben cartel, received and retained control over valuable monopoly grants from the United States Government. They used these grants to prevent American industry from developing and producing synthetic rubber. The same thing happened with magnesium and a host of other crucial industries. Once it becomes known that these patents are being used in an illegal conspiracy, they ought to be canceled just as leases on valuable mineral properties by law today must be canceled if they are so used. Patents today have become of increasing importance because new industrial processes have been developed during the war. New industrial enterprise will not be able to survive if illegal monopolies bar access to these processes. Those who oppose increasing Government control and increasing Government operations in the field of business should think twice of the consequences of what is the present state of the law; namely, that according to the

majority of four justices even when the patents controlling these processes are improperly used for the very purpose of maintaining prices and of keeping out new enterprise, the Federal Government which gave the patents is powerless to enforce a remedy. New jobs will be forthcoming if production and new enterprise are not blockaded by monopolistic patent abuses. This is why I say that the Hartford-Empire case strikes at the very center of the free-enterprise system.

A further look at the Hartford-Empire case will show the anomalous position in which the United States Government finds itself. The Court said that the patents were illegally acquired and illegally used. There were more than 600 such patents. The Court said that this was a violation of the antitrust laws. It then decided that in the future this monopoly of patents should be able to get a reasonable royalty under its licenses. In plain terms, this means that it should be able to charge admission before allowing the public to go into the glass-container industry. Its right to charge admission is based on the illegal combination of patents. In other words, the defendants are to be permitted to make what is called a reasonable profit out of their illegal acts. When a bank robber is caught in the act of robbing a bank, we do not customarily say to him that he will be permitted to get a reasonable amount out of the bank and no more. Yet, to a layman, that is precisely what the Supreme Court has permitted in the Hartford-Empire case and the defendants were smart enough, apparently, to guess this is what would happen. Justice Black, in his opinion, recites a memorandum in which an officer of one of the defendant companies set forth the benefits to be obtained even though the monopoly was illegal. He states:

> Of course the Court might order that we transfer the entire Federal licensing business to some other party and turn over to that party the Federal patents. This, of course, would simply restore to a certain extent the existing situation and establish a competitor. I do not see much danger of having any of these deals upset. If they are upset, I still believe that by that time, we will be in a better position even with such dissolution than we would be otherwise; and I see no danger whatsoever of any criminal liability because the cases are necessarily so doubtful in the matter of law that they could never get any jury to convict and I doubt if any prosecuting officer would ever attempt any criminal action. Criminal action in cases of this sort, so far, has practically been nonexistent.

After this decision, the responsibility for affirmative action which will strengthen the patent system and will take the value out of illegal conduct in the misuse of patents rests with Congress. The Sherman Act has been regarded as the fundamental statement of legislative policy in the field of economic doctrine. I still regard it as such. We should reaffirm it. Erosions of the effectiveness of the antitrust law should be prevented, particularly when the danger arises from implications based on congressional action or nonaction. I offer H. R. 97 for this purpose.

This bill is in my judgment needed if the Congress is to do the job of preventing increasing monopolistic control of American industry; and Mr. Speaker, in all probability our No. 1 danger as far as our domestic problems are concerned in the post-war period will be the increasing march of monopoly until at last all of our much vaunted and highly praised economic liberty is gone in the United States. Such an eventuality we simply must prevent. The Supreme Court decision is inadequate to do so. Indeed it leaves a very wide door open for the continuance of these practices. For that reason, I must earnestly urge consideration of this piece of legislation by the appropriate committee of the House which is of course the Judiciary Committee to which the bill was referred. I hope that consideration can be given at an early date.

The Nation's Health

EXTENSION OF REMARKS
OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, January 15, 1945

Mr. PEPPER. Mr. President, recently the special subcommittee of the Committee on Education and Labor, authorized by the Senate, made a report on the health situation of the country in which it endeavored to disclose some statements of the factual situation and particularly to emphasize its relationship to the ability of the Nation to continue to wage the war. An editorial upon that report appeared in the Journal of the American Medical Association which has given some pleasure and confidence to the committee and those interested in the subject. Certain letters which the committee has received from important officials in the medical field of the Army and Navy and otherwise, and sundry editorials affecting the subject also encouraging to us, I ask to have incorporated in the Appendix of the RECORD.

I have had made an estimate which indicates that the cost of printing will be $130.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

[From the Journal of the Americal Medical Association of January 6, 1945]

THE PEPPER COMMITTEE REPORT

The Senate Subcommittee on Wartime Health and Education, a subcommittee of the United States Senate Committee on Health and Labor, has just issued its interim report. The Journal makes this report available in full in this issue. Attention should be called particularly to the emphasis on the use of Government aid in the development of medical facilities where the need can be shown, Government aid to medical education, medical research, and the development of medical prepayment plans, and Government assistance in certain situations in which the needs are clearly apparent for preventive medicine and for general health and planning toward a Nation-wide network of medical facilities.

The report makes no specific recommendation in regard to health insurance but does point out that some form of group financing is desirable. It considers voluntary prepayment plans, compulsory sickness insurance, tax-supported medical service, or various combinations of these methods as technics to be considered.

Especially significant is the following paragraph from the report, which emphasizes State planning and control:

"In order to permit local initiative and control, State programs should be drawn up by State health-planning commissions in cooperation with local authorities. In drawing up State plans the commissions should consider the needs of all sections of the State, should include in the plan all suitable existing public and voluntary hospitals, and should plot the new construction as well as the expansion or replacement of existing facilities needed for adequate service. Before Federal funds could be granted, however, over-all State plans and individual projects should be reviewed and approved by the United States Public Health Service to make sure that they meet certain minimum standards of construction, operation, and complete coordinated service. There should be reasonable assurance that a new facility will have enough patients to justify its existence. In communities where sufficient income from fees of individual patients does not otherwise appear probable, provision for group prepayment plans or tax-supported services, or both, should be required."

The report reaches us just as the Journal goes to press. The time is too short for detailed consideration of the various aspects of this report. The report, in general, would seem to be a more scientific, carefully considered document than has heretofore been available as a result of previous hearings in this field. The committee emphasizes that its findings are preliminary and that the subcommittee expects to continue its work with further hearings and with studies of the various aspects of the health problem, such as rural, industrial, and school health, the health needs of veterans, medical research, and medical education.

[From the Washington Post of January 15, 1945]

OUR BAD HEALTH

Senator PEPPER'S Subcommittee on Wartime Health and Education has delivered a diagnosis of the Nation's physical condition which is anything but reassuring. It has given us as a people, indeed, the sort of shock an individual sometimes receives when he goes belatedly to his physician for a check-up and is told bluntly that he had better begin to take care of himself. Health is no less the most precious asset of a nation than of an individual. Ours, we now know, is in a critical state. We need look no further for evidence of this than to the record of selective service rejections. "In all," says the Pepper report, "it is estimated that at least 40 percent of the 22,000,000 men of military age—between eight and nine million men—are unfit for general military duty." Illness and disability have had a serious effect upon war production, too. They cost more than 600,000,000 man-days annually, the committee estimates, observing that "this is about 47 times the amount of time lost through strikes and lock-outs of all kinds during 1943."

Certainly this condition must be attributed in part to the inadequacy of our medical facilities. "The quality of American medicine," the committee notes, "at its best is very high. Unfortunately, American medicine at its best reaches only a relatively small part of the population." Forty percent of our counties, with an aggregate population of more than 15,000,000, have no registered hospitals. Many communities, particularly those in rural areas, have too few doctors and nurses; 81 counties are reported to be without a single active physician. This finding of maldistribution of medical

care confirms a study made by the Office of War Information about 18 months ago.

As a remedy, the Pepper committee recommends a planned network of facilities. These would comprise health centers with offices for local physicians and dentists, together with emergency medical, surgical, obstetrical, and laboratory facilities; rural hospitals within easy reach of the health centers, serving areas which could not support specialists' services of their own; district hospitals; and finally base hospitals as the hub of each major medical service area, with teaching experts in every medical and surgical specialty and equipment for complete diagnostic services.

To establish these networks, the committee recommends Federal grants-in-aid to the States without delay. It withholds judgment on the controversial Wagner-Murray-Dingell bill for compulsory health insurance, although it does come to the flat conclusion that "the 'pay-as-you-go' or fee-for-service system which is now the predominant method of payment for medical services, is not well suited to the needs of most people or to the widest possible distribution of high-quality medical care." Plainly this points to some system of prepayment or insurance, especially for those in the lower income brackets. To dismiss proposals looking in this direction on the ground that they amount to a "socialization of medicine," is to fly in the face of vital national needs. We must see to it that adequate medical care is within the reach of all Americans, economically as well as geographically.

[From the Washington Star of January 8, 1945]

HEALTH IS WEALTH

The Senate Subcommittee on Wartime Health and Education, headed by Senator PEPPER, has not been winning many headlines, but that it has been doing a highly constructive job for some months past is made clear by the excellent interim report it has just issued.

As Americans we rightly take pride in our standard of living, but that standard is not nearly good enough. A few figures from the report will illustrate the point: (1) In 40 percent of the 3,070 counties in the United States there is not a single full-time local public health service, a deficiency which can be translated immediately into terms of unnecessary sickness. (2) Illness and injury—largely preventable—are costing the Nation an estimated annual loss of 600,000,000 man-days of industrial labor, or about 47 times the amount of productive effort lost through strikes and lockouts of all kinds in 1943. And (3) of the 22,000,000 men of military age in this country, at least eight or nine million, including the 3,500,000 IV-F's, are not able-bodied enough for general military duty.

Although the Pepper committee emphasizes that we are by no means a nation of weaklings and that the number of military rejects is not quite so alarming as it may sound, the figures are sufficiently shocking to indicate that we have not the slightest reason to be complacent about our physical fitness and that it demands much more attention than we have been giving to it. To this end the committee lays special stress on the importance of working out effective methods for the early treatment and correction of defects in children and outlines a far-reaching program which it regards as essential if the riches that lie in our human resources are to be properly conserved and utilized. The program, calling for local, State, and Federal cooperation—with Federal grants-in-aid where necessary—looks forward to the establishment of a great Nation-wide network of medical centers and other health facilities designed to serve individuals of every economic status and in every community, rural and urban.

The committee does not underestimate the difficulties involved in effecting such a program, and it makes clear that considerable study remains to be done, one of the problems being how best to insure that the people at large will be able to pay for more frequent visits to the doctor without establishing a system of socialized medicine. Yet the committee's report leaves little room for doubt that the old maxim holds true—that health is wealth—and that the Nation is bound to profit in the long run if it undertakes this great expansion in medical care.

[From the New York Times of January 7, 1945]

NATIONAL MEDICAL CARE

Senator PEPPER'S subcommittee on wartime health and education has submitted an interim report which focuses attention once more on the need of better medical care for the population as a whole. Because of the lack of hospitals and diagnostic laboratories in rural communities the committee proposes regional medical centers around which hospitals, nursing homes, and similar institutions would be clustered, with all the laboratory facilities necessary for practice and research, as well as schools in which nurses, internes, resident physicians, and post-graduate students would be taught. An integration of medical care, research and teaching is proposed—an integration which is essential if medicine is to be practiced in accordance with the newest approved principles. Since health depends on sanitation as well as on medical care the grant-in-aid system is to include the provision of urban sewerage and water supply and the pasteurization of milk. Such a plan can be carried out only with the aid of local governments. Hence State and other health departments would be expected to amalgamate their hospital and other facilities into the Federal system and to expand them with Federal aid if need be.

Whether such a nationally supported service is to be paid for out of taxes or out of some form of voluntary or compulsory insurance Senator PEPPER'S committee does not decide. It rightly doubts the efficacy of insurance because the unemployed are not reached, and it is convinced that the fee-for-service system will not do because it postpones a visit to the doctor or the hospital until a crisis in sickness is reached. It also believes that physicians should be freely chosen.

The evidence is strong that if cities of metropolitan size have more physicians than they need in normal times the small towns and rural districts have too few and that one reason for this is the lack of hospitals and medical schools. Community purchasing power and degree of urbanization are also essentials, but with these no medical plan can possibly cope. There is nothing cocksure about the report. The committee contents itself with making preliminary observations and recommendations, but these constitute a basis for a more detailed study out of which something better than the Wagner-Murray-Dingell bill should emerge.

[From the Philadelphia Record of January 7, 1945]

SOUND PRESCRIPTION FOR HEALTHIER AMERICA

American medical service today resembles an infant garment on a grown child.

It's sorely in need of expansion. Something must be added to meet the ever more articulate demand of the American people: Adequate medical service for all.

With that as a goal, a United States Senate subcommittee on wartime health and education recommended last week an impressively sound program.

The committee, headed by CLAUDE PEPPER (Democrat, Florida), studied a series of sobering facts, which should deflate any jingo who might be inclined to prate about the golden age of American medicine. Among the committee findings were:

Nine million men of military age, more than 40 percent of the age group, are estimated to be unfit for general military duty.

Six hundred million man-days a year are lost to industry because of illness and injury. That, incidentally, is 47 times the amount of time lost in 1943 through strikes and lockouts.

The medical profession, of course, is not entirely to blame for such a deplorable state of national health.

But had it retailed its wares over the years with the same vision and evangelical spirit of business in getting its product everywhere those figures would not be so discouraging.

PEPPER'S committee called for "more and better distributed medical facilities and services in order that all the people may benefit from modern medical knowledge."

That reflects expressed public opinion. Sixty-eight percent of Americans want social security extended to cover payment of doctors and hospitals, according to the National Opinion Research Center.

Fortune magazine, following a survey, stated the American people mean to have medical security—through cooperative prepayment plans sponsored by the medical profession, or—if the doctors fail as they have in the past to take the lead—by Government-compelled, Nation-wide insurance.

The Pepper committee recommended group financing of a health insurance program under which patients would have free choice of physicians, and democratic participation by physicians and public in policy making would be provided.

A virtue of the Pepper committee report is that it presents a well-rounded program, in which health insurance is only a part. It proposed interrelated health centers and hospitals to furnish every American community with preventive, diagnostic, and curative medicine. It called for mental hygiene clinics to serve all groups.

It covered public health construction, school health programs, medical research, and other problems related to the whole—the national health.

"We have seen what neglect of opportunities for better health has cost us during this war," stated the committee. "We must resolve now that never again, either in war or peace, will the Nation be similarly handicapped."

That, we believe, is the will of America.

[From the Tampa Morning Tribune of January 8, 1945]

WIDER HEALTH SERVICE

A soldier who is wounded in battle is taken without reasonable delay to a field hospital, where he receives preliminary treatment and his case is diagnosed and classified. Then he is transported to a base hospital for such further surgical or medical attention as he may need.

We have nothing quite like this for civilians, not even in the largest cities. However, we may have something like it in time if the recommendations submitted the other day by a Senate subcommittte are followed.

This Committee on Wartime Health and Education, headed by Senator PEPPER, has outlined a vast national-health program centered about post-war Federal-State construction of hospitals and health centers. It calls for the establishment of outlying clinics in the sparsely populated districts, small hospitals in rural communities and base medical centers in larger communities. The sick would be transferred from one to the other as disease or injuries demanded.

In addition, these clinics, hospitals, and medical centers would serve as teaching institutions and laboratories. The aim is to

bring medical schools, laboratories, and hospitals closer together so that medical knowledge and new discoveries could be put quickly into practice.

Under such a network of hospitals and medical centers, physicians who practice in small communities would be able to transport patients who need special care to the nearest clinic or hospital. Patients who could be treated at home would also benefit, because their physicians would have the assistance of local hospital laboratories.

This proposal, and it is only one of several offered by the committee, is important, of course; but there immediately arises the question whether we can afford such a program. A better question is whether we can afford not to have it.

The fact that some 4,500,000 young men in the prime of life have been rejected by the Army and Navy because of physical and mental defects certainly proves that too many of us pay no attention to physical well-being. And what of the old men and women who are not subject to examination by draft boards? Simply because they are older their condition must be worse. We all know that the Nation's health is not good enough, and it may be found that the cost of the proposed program would be less than that spent now on improper treatment, long suffering, and poor health.

The conviction is spreading that something must be done to correct the long-standing inequalities in medical care. On this all the authorities agree. At the same time, there is general opposition to the abolition of private practice. The Senate committee's suggested program should meet with the approval of even the severest critics of any form of socialized medicine.

ARMY SERVICE FORCES,
OFFICE OF THE SURGEON GENERAL,
Washington, D. C., January 3, 1945.

Hon. CLAUDE PEPPER,
United States Senate,
Washington, D. C.

DEAR SENATOR PEPPER: I wish to thank you for your courtesy in sending me an advance copy of the interim report of your subcommittee on wartime health and education. This is an exceedingly interesting document.

Nowhere have I seen a more concise statement of the health needs of this country. The discussions of some of the problems to be encountered in providing broad health services for the Nation are illuminating, and the subcommittee seems to have taken a wise view in pointing out that there is no easy formula by which some of the difficulties can be easily resolved.

I hope that your committee will continue to explore special aspects of the broad problem of national health, for by so doing I am sure it will be rendering a service to the Nation.

Very sincerely yours,
NORMAN T. KIRK,
Major General, United States Army,
The Surgeon General.

FEDERAL SECURITY AGENCY,
UNITED STATES PUBLIC HEALTH SERVICE,
Washington, D. C., January 4, 1945.

Hon. CLAUDE PEPPER,
United States Senate,
Washington, D. C.

DEAR SENATOR PEPPER: I wish to acknowledge with thanks the interim report of the Subcommittee on Wartime Health and Education, which you so kindly sent to Dr. Hoge and me.

We have studied this report which deals with the many wartime and post-war health problems with much interest. Our reaction is that the report is an excellent piece of work. In particular, we feel that the sections relating directly to my testimony ably reflect the ideas and opinions which we tried to express.

I feel sure that the information which has been assembled here will enable your committee to exert a profound influence in bringing about the many needed improvements in our public health, as demonstrated in your report.

Sincerely yours,
THOMAS PARRAN,
Surgeon General.

VETERANS ADMINISTRATION,
Washington, D. C., January 4, 1945.

Hon. CLAUDE PEPPER,
United States Senate,
Washington, D. C.

MY DEAR SENATOR PEPPER: Receipt is acknowledged of your letter of December 29, 1944, with which you forwarded an advance copy of the interim health report of the Senate Subcommittee on Wartime Health and Education.

I have read the interim report with interest and believe that the approach to the problem under consideration is sound. The recommendations of the subcommittee if put into effect would contribute materially to improvement and protection of the health of the Nation.

Very truly yours,
FRANK T. HINES,
Administrator.

THE AMERICAN PUBLIC
HEALTH ASSOCIATION,
New York, N. Y., January 3, 1945.

Senator CLAUDE PEPPER,
Chairman, Subcommittee on Wartime Health and Education,
United States Senate,
Washington, D. C.

DEAR SENATOR PEPPER: I have read with much interest the material which you enclosed with your letter to me of December 28 including the interim health report of the Senate subcommittee on Wartime Health and Education.

It seems to me that you and your committee have done a very commendable public service in bringing these matters out in such succinct and readable form. I am hoping that there will be wide coverage in the press and that the report itself may be the basis for study by many groups across the land.

It is gratifying to see that the work of the American Public Health Association, in proposing the creation of sufficient full-time public health districts to cover the country, is recognized. I would wish that mention had also been made of the declaration which the American Public Health Association adopted last October setting forth some principles on medical care in a national health program. I enclose a copy of the association's report which I think illuminates certain of the declarations made by your subcommittee.

The public health profession, by and large, will find themselves in agreement with the conclusions which your group has reached and in particular will approve the plan to continue the hearings, especially while the country is in this very dynamic phase of its interest. We stand ready to lend any assistance we can to make your studies most productive.

Faithfully yours,
REGINALD M. ATWATER, M. D.,
Executive Secretary.

Encl.

CHAMBER OF COMMERCE OF THE
UNITED STATES OF AMERICA,
Washington, January 9, 1945.

Senator CLAUDE PEPPER,
Chairman, Committee on Education and Labor, United States Senate, Washington, D. C.

DEAR SENATOR PEPPER: Thank you very much for sending me a copy of the interim health report of the Subcommittee on Wartime Health and Education. I attended most of the hearings of your committee and have read the report carefully.

May I say as a personal expression and not on behalf of the health advisory council of the chamber since that council has taken no action in the matter, that I feel the committee has done an outstanding job, and that its preliminary recommendations are sound and if put into effect should carry us a considerable distance down the road to sound national health.

May I say, too, that I was particularly impressed with the manner in which you have presided over the hearings. You were dispassionate and fair in your attitude and you were, I think, exceedingly skillful in bringing out through your questions the essential thinking of each witness.

I hope the committee will continue its studies and will eventually bring in definite recommendations for medical care plans and organization.

Sincerely yours,
HOWARD STRONG,
Secretary, Health Advisory Council.

James F. O'Connor, Late Congressman From Montana

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 15, 1945

Mr. WHITE. Mr. Speaker, Montana and the entire Pacific Northwest has suffered an irreparable loss in the passing of our distinguished colleague, the Honorable JAMES F. O'CONNOR. He was so truly a part of the great outdoors which he had the honor to represent, and actively participated in every endeavor for the upbuilding of his State—agriculture, mining, banking, and the development of all natural resources. He gave to every interest his best, and the regard and respect of all his associates came back to him. This trait was indicative of the man who knew life at first-hand and who was able and eager, out of his own experience, to devise ways for smoothing the pathway of those who needed most the help of kindly hands. Always he mingled with strong men in crowded places. Always his hand was outstretched to aid his fellow men.

The people of Montana, as well as his colleagues in Congress, will long remember JIM O'CONNOR, lawyer, banker, rancher, and statesman.

Home Owners' Loan Corporation

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 16, 1945

Mr. PATMAN. Mr. Speaker, a few days ago there was some discussion on

the floor of the House about the Home Owners' Loan Corporation. This organization has made a wonderful record. The Commissioner, Mr. John H. Fahey, has commented on the remarks that appeared in the CONGRESSIONAL RECORD in letter to me of date January 13. It discloses a remarkable record of orderly liquidation. The letter is as follows:

NATIONAL HOUSING AGENCY, FEDERAL HOME LOAN BANK ADMINISTRATION,
Washington, D. C., January 13, 1945.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington 25, D. C.

DEAR MR. PATMAN: My attention has been called to your explanation and defense of the work of the Home Owners' Loan Corporation this week on the floor of the House. It is very evident that your colleague from Pennsylvania, whom you answered, was unfortunately misinformed. Your helpfulness in bringing the facts to his attention and to the attention of Members of the Congress is greatly appreciated.

No one is more fully aware than I that the record of the Corporation, like all other business operations, has not been perfect. Having been associated with its work from its beginning in June 1933 to date, I am keenly conscious of that fact. Nevertheless, and largely because of the wise plan Congress incorporated in the law to make possible assistance to millions of distressed home owners, it has accomplished great good for the country. While the record of the Corporation is fairly well known, its full significance is not generally realized. I should like briefly to call a few of these facts to your attention.

As provided in the terms of the Home Owners' Loan Act of 1933, the Corporation made loans only to those home owners who were unable to retain their loans with original lenders or to refinance elsewhere. Thus only defaulted loans or those which no private institution would take could be refinanced by Home Owners' Loan Corporation. By taking over these loans the Federal Government, through H. O. L. C., not only saved the homes of these owners but by stopping the mortgage panic it prevented hundreds of thousands of additional foreclosures and saved large numbers of financial institutions from bankruptcy.

You will recall that the Corporation received nearly 2,000,000 applications for loans involving over $6,000,000,000. During its lending period from June 13, 1933, through June 12, 1936, it closed 1,017,821 loans having a dollar value of $3,487,656,260, including advances chiefly for insurance, taxes, and repairs.

In the 10½ years of its operations the Corporation has collected more than $3,000,000,000 in principal and interest, and, at the same time, has saved its borrowers more than $600,000,000 in loan charges and other carrying costs. During fiscal year 1944 it collected from its borrowers at a rate in excess of $1,185,000 every working day. The Corporation has carried out its operations at a lower cost per loan account and a lower cost of administration than has any other large-scale mortgage financing institution in the history of our country. In addition, the loan plan the Corporation has employed, as directed by Congress, has led to the general adoption of the simple long-term, low-interest rate, direct-reduction amortized mortgage, which is now accepted as one of the most practical aids ever offered for safe, gradual acquisition of debt-free home ownership.

Since June 1936 the Corporation has concentrated on the orderly liquidation of its assets. As of January 1, 1945, its mortgage investments and acquired properties had been reduced by over 68 percent. If conditions continue to be favorable, instead of costing our taxpayers half a billion to a billion dollars, as predicted when it began operations, the Corporation will conclude the work without costing the Government or taxpayers one cent.

Sincerely yours,

JOHN H. FAHEY,
Commissioner.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I include a letter from the West Side Association of Commerce, Inc., in opposition to the proposed St. Lawrence seaway. The letter is as follows:

WEST SIDE ASSOCIATION OF COMMERCE, INC.,
New York, N. Y., January 9, 1945.

The members of the West Side Association of Commerce a membership corporation incorporated under the laws of the State of New York, in regular session assembled on the 9th day of January 1945, herewith reiterate the position which the association has consistently held since 1933 in opposition to the proposed St. Lawrence seaway. A continuing study of this proposal made over a period of more than 10 years offers evidence that it is economically unsound and undesirable and that once and for all it should be disapproved by the varicus interested agencies of Government.

We take this opportunity to express our commendation to the United States Senate for the decisive rebuke which on December 12, 1944, it gave to a limited number of its Members who endeavored, without hearings or other consideration, to force the adoption of the proposal by attaching it to another Senate bill. We hope the Seventy-ninth Congress will be just as decisive in 1945 if the proponents again advance this undesirable undertaking. We likewise commend the work of the National St. Lawrence Project Conference, with which this association is affiliated, for the dignified and businesslike manner in which it has kept Members of Congress informed as to the reasons why the seaway should not be approved.

The association at this time expresses its disapproval of the recommendation recently made to the New York State Legislature by Gov. Thomas E. Dewey to the effect that New York should initiate construction of the seaway if early action is not taken by Congress. It must be evident to everybody that New York will not initiate construction of this waterway which is opposed by the public in every part of the State except in the immediate area of the St. Lawrence River. We may presume, therefore, that recommendations of this nature are part of the proponents' plan to frighten Congress into taking action. We are convinced that this strategy will not accomplish its purpose. The country as a whole has made it clear that it is opposed to this seaway, which has failed of adoption every time it has been presented to Congress, and we do not believe that the congressional leaders from other States will be frightened into reversing their position through any fear of New York's possible participation.

It is inconceivable to this association that anyone, particularly a New Yorker, would recommend that this State should spend the hundreds of millions of dollars necessary to make the St. Lawrence a navigable waterway west of Montreal when the said proposal, which would have to be paid for by the taxpayers, would benefit only a limited number of growers and shippers in the Middle West. This association remains convinced, as it has for more than a decade, that the seaway could not be an economic success and that the expenditure on it of more than a half billion dollars would be an unconscionable waste of public funds. On the other hand, if it were as successful as its proponents claim, then it would injure practically every commercial, industrial, labor and transportation interest in the State of New York. We estimate, on the basis of figures of the Department of Commerce exhibited by the proponents of the seaway, that New York City alone might lose from 20 to 25 percent of its foreign and intercoastal commerce, while Buffalo, one of the Nation's greatest inland shipping centers, would be bypassed by practically every incoming and outgoing steamer. We cannot comprehend the logic of a proposal which asks the State of New York to pay hundreds of millions of dollars for a proposal which either is economically unsound or which would divert a large part of the trade of its municipalities, waterways and railroads with consequent heavy losses in employment.

Anyone who believes that New York is interested in initiating construction of this seaway should take note of the fact that nearly 50 labor, trade, and commercial organizations in every section of this State from Buffalo to the end of Long Island have joined with 175 similar groups in 29 other States in opposition to the project. It must be evident to any impartial observer that there is something radically wrong with a proposal which has aroused Nation-wide opposition from coal miners, longshoremen, railroads, steamships, chambers of commerce, municipalities, governors and other diversified groups.

JAMES W. DANAHY, *Secretary.*

Protesting Against the Scrapping of the Atlantic Charter by Our Allies

EXTENSION OF REMARKS
OF

HON. RICHARD F. HARLESS

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to the President of the United States:

DECEMBER 23, 1944.

HIS EXCELLENCY, THE PRESIDENT
OF THE UNITED STATES,
White House, Washington, D. C.

DEAR SIR: I am addressing you as the father of two boys on the western front and an American citizen and one of your supporters in all four campaigns; and I am writing you because I am very much disturbed about the conduct of our allies and the very evident intent to scrap the Atlantic Charter. It appears now that our boys are fighting to restore the status quo of 1938 and prior.

It disturbed me very much when the French assumed the right to take back their north African colonies just as nonchalantly as if we had acquired no say so in the matter

whatsoever by virtue of having expelled the Germans.

It disturbed me very much to read from time to time how British, Dutch, and Belgian civil authorities stepped into the management of the islands and territories of the Pacific as quickly as we were able to expel the Japs.

The conduct of our allies in Belgium, Poland, Greece, and Italy seemed to me to be very highhanded to entirely disregard any right to determine the future of these countries by reason of our sacrifices and to express an evident intent to revert to the same sort of international politics and diplomacy which in the past has proven a fertile seed bed for wars.

To show you how the boys who are fighting the battles feel about this, I am going to quote from a letter received from my son, who is a private in the Sixty-second Coast Artillery, written from north Africa on February 3, 1943:

"Mr. Sanchez is more or less a big shot here and is very enthusiastic about the richness of north Africa and its capacity for producing instead of exporting raw materials and importing manufactured goods. The miles upon miles of fertile soil, the mines, the latent water-power sources and the multitudes of cheap intelligent workers are truly an opportunity for someone who could convince post-war France that a rich colony is an asset in itself and even more so than a rich source for its own industrial supply. If France, through possession or low international tariffs has the Saar, surely she could allow north Africa to develop on her own.

"I'm really interested in the Arabs and Moros as laborers. They seem to work very hard for their meager existence and have no inclination to get fat and nasty or to engage in anything but defensive politics. If they were treated squarely from the beginning in an industrial revolution, I'll wager they'd make one of the finest groups of civilized people. They are a clean, fierce, and self-respecting lot when you see them away from the softening effects of the city. Even here there are many. Of course it is pure heresy as far as they are concerned, for an upstart Christian with only 1,943 years of civilization behind him to speak of introducing them into the civilized world. I would like to know just how worldwide the knowledge of their ruling class and their upper class is. Probably quite capable of taking its place immediately. Their church is still quite orthodox and I wonder if its leaders are open to the civilization of its people.

"Seeing little, old, nothing-at-all north Africa certainly impresses on my mind the responsibility of nations after this war toward the exploited and undeveloped parts of the world. The cry for an advanced policy on these matters in the American press is well founded, and I know I'd be willing to fight harder for those people and others (as well as our men) if I knew that they were going to get as much of a chance as the big imperialistic countries who make the peace after the war. They are all so friendly and grateful for liberation and the little we have done for and are giving to them it might be of enormous help in actually winning the war if they were assured of their proportionate place after the war."

These boys feel that they are fighting, and dying if need be, to restore the right of self-determination to the underprivileged peoples of the world. We cannot afford to let them down and it is not too late to tell Britain and Russia that we are fighting for this, and if we cannot get it, we will step out.

It is not too late to withdraw our forces from European theaters. I imagine Germany would be only too glad to give us time to get out. What is the use of going on if we are going to revert to the same situation we had before the war started? The United States has played the role of sucker internationally entirely too long. Let us call a halt.

Wishing you the compliments of the season, I beg to remain,

Respectfully yours,

MATT S. WALTON.

Cancelation of Ration Points—With Reference to Fulton Lewis, Jr.

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. HOLIFIELD. Mr. Speaker, on January 10 I addressed the House on the subject Cancelation of Ration Points by O. P. A. Justified. At that time I quoted parts of two broadcasts of Mr. Fulton Lewis, Jr. These quotations, which were furnished to me by a third party, strongly condemned the O. P. A. for its procedure. On the strength of these quotations I stated that, in my opinion, Mr. Lewis was guilty of irresponsible, biased reporting on this subject.

It has been brought to my attention more recently that the full text of Mr. Lewis' broadcasts also contained arguments in support of the O. P. A.'s procedure. In fairness to Mr. Lewis, I feel that an apology for my inadvertent mistake is due him. Although I frequently disagree with Mr. Lewis in his comments and conclusions, and think that in many instances during the past campaign his comments were slanted in favor of the Republican Party, I would not knowingly be unfair to him. I regret a lack of the full text of Mr. Lewis' broadcasts on this subject caused me to err in my evaluation of the fairness of his comments.

Unconditional Victory

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. HARRIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely editorial from the Washington Post entitled "Unconditional Victory," which I think should be considered by every citizen in this Nation. It follows:

UNCONDITIONAL VICTORY

To speak of conditional surrender is to speak of something that is no surrender at all. It is an acknowledgment of stalemate, of mutual defeat, of a situation in which neither warring power can achieve a decisive victory. Senator BURTON K. WHEELER may not have intended such an acknowledgment when he broadcast his attack against the Allied unconditional-surrender policy toward Germany. He has since denied that he ever advocated a negotiated peace. But there can be little doubt as to the accuracy of Secretary Stettinius' assertion that the Senator's remarks "will be understood in Germany and in Japan as meaning that if these countries can resist long enough and can kill enough American soldiers, the will of the American people to achieve a complete victory will be broken and a negotiated peace can be secured."

Senator WHEELER announced his own peace terms for Germany, and we doubt that they will promote the conditional surrender he seeks. He insists, for example, that the German people "should get rid of Hitler, Goebbels, and Himmler." But this is bound to be altogether unsatisfactory to these worthies who hold absolute dominion over Germany and will expend its last resources to protect themselves from punishment. We could have peace even more quickly on still less exacting terms. Such a peace would mean, however, that American lives would have been not only lost but utterly wasted. And the American wives and mothers for whom the Senator presumes to speak would be called upon to sacrifice still another generation of their husbands and sons to resist aggression in the future.

Unconditional surrender carries with it no implication of enslavement. We take it to mean simply what Prime Minister Churchill said it means, "No bargaining with the enemy." The term is employed today in the sense that it was employed by General Grant when he was asked for an armistice by General Buckner at Fort Donelson: "No terms except an unconditional and immediate surrender can be accepted." General Buckner thereupon surrendered unconditionally, because he was unconditionally defeated. Just such a surrender must be wrested from the Germans because just such a defeat must be inflicted upon them if we are to be secure against another attempt at conquest by them.

Senator WHEELER might profitably read the account, in Marshal Foch's own words—recorded by his aide de camp, Maj. Charles Bugnet, in the volume, Foch Speaks—of the marshal's interview with the German emissaries seeking an armistice at Rethondes on November 8, 1918:

I asked them: "Who are you?" They gave their names. "Have you any papers? We must examine them." Then I asked them: "What do you want?"

"We wish to know your proposals."

"I have no proposals to make."

"We would like to know upon what conditions an armistice would be granted."

"I have no conditions to give you."

Erzberger wished to read me a paper—President Wilson's note—but I stopped him. "Do you wish to ask for an armistice? If so, say so."

"We ask for an armistice."

"Good."

It is, to be sure, fundamental to the policy of unconditional surrender that the Allied governments should know what terms to impose upon the Germans when the surrender comes. And it is here that a vacuum of policy appears to exist. If we do not come to an understanding with our allies as to the kind of situation we intend to promote in Germany when the Germans have laid down their arms, we shall lose the opportunity to capitalize our victory. Unconditional surrender is merely the prerequisite of this opportunity. It is at once an expression of the moral indignation of mankind and an essential condition for the re-creation of an orderly world. It is neither brutal, as Senator WHEELER called it, nor unreasonable nor unjust. Indeed, it would establish the only condition under which we could afford to deal generously with the Germans.

Letter From Mrs. Annie B. Nicholson, Oakland, Calif., 90 Years of Age

EXTENSION OF REMARKS
OF
HON. JOHN H. TOLAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 16, 1945

Mr. TOLAN. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I am including a letter from Mrs. Annie B. Nicholson, of Oakland, Calif., my congressional district. Mrs. Nicholson is 90 years of age, and the reason I am inserting her letter in the CONGRESSIONAL RECORD is that during my 12 years in Congress, having received thousands of letters, I deem this letter of Mrs. Nicholson's one of the best written, clearly expressed, without an error in the spelling, and an intelligent letter. It is one of the best I have ever received during my tenure in office.

I think it is very salutary for us to consider the valuable experiences and suggestions contained therein, for it gives us an insight into the views of the other people who made this great country. They have never lost interest in it, and, God bless their souls, we owe them an everlasting debt of gratitude.

Her letter is a strong argument that we cannot afford to be penurious or overlook the welfare of these great Americans. Never in the history of the world has any child lived to see the day that he regretted taking care of his father and mother and neither will any nation go into decay by taking adequate care of the aged and by providing adequate old-age pensions. I am proud of this letter and proud to have it spread on the RECORD of the House of Representatives of the United States so that it will endure forever:

OAKLAND, CALIF., *January 8, 1945.*
Congressman TOLAN, of California,
Washington, D. C.

DEAR SIR: I am an old lady, my name is Annie Brown Nicholson; I came from Indianapolis, Ind. I am now 90 years old. All my people having passed away, I came here to be with my niece, who was a widow, and the only one left of my family.

I am now going to talk to you, not verbally but by pen and ink, in behalf of the old people and myself.

I see in the paper and hear over the radio that the taxpayers are very much aroused over the President asking for a raise to 2 percent on the Social Security Act.

I wonder if this generation ever stops to think who built this Nation, and paved the way for a better world. Now, they are reaping the benefits of our hard labor. We are weakened from all the hardship, tears, pain, and sorrow we have had to bear. Having very little schooling, the rule of three being as far as we could go, those living in town had a better time than we in the rural district.

Edison invented the electric light that you see by today. He worked for years on it; he did not sit around wasting his time.

Elwood Haynes was a dear neighbor of mine; he was a fine man. He invented the automobile that you all ride around in.

The young people now have a chance to improve and finish our work.

I have lived to see the fruit of our labor.

In 1861 President Lincoln called for men to defend this Nation; my father, with hundreds of other men, flew to the colors. I was about 7 years old when he left for the battlefields of the South; he joined the cavalry. He had a fine horse, and carried dispatches from one general to another. He fought under General Burnside. My father loved the Stars and Stripes, and laid down his life for this Nation.

My mother was left with two little girls and a baby boy; life was one battle after another, with no help from the Government.

I am now old and feeble, and the niece that I came to live with passed away 2 years ago.

After I was here 5 years, President Roosevelt passed the Security Act, and gave me a pension of $35; the first dollar I had ever had from the Government.

At that time I noticed an article in the Oakland Tribune by a Mr. Dwyer, who made a speech to a class of college students, that any old person who asked help from the Government should be exterminated, and the money taken to build playgrounds for children to play on. It struck me like forked lightning. I said, "Oh, God, is that what our colleges are teaching?" No one, except a rabbi answered him, and said it would cause a revolution. His speech was a disgrace to every star and stripe in the flag.

Our great and grand President, Franklin D. Roosevelt, stands as a monument to a cause so grand in its scope, so glorious in its certain ultimate issue, as a security act. His name will go down in history as the greatest humanitarian that ever lived in the White House. His heart is with the poor and needy, and helps to uplift humanity. He stands for the man who carries the bucket, and pays the big house rent.

I hope and trust that you will read this, as I stamped the ballot three times for you. In God I trust.

Sincerely,

ANNIE B. NICHOLSON.

P. S.—You may let any Congressman read this who cares to, so that they may know how the old people feel on this subject.

International Trade Agreements and Cartels

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 16, 1945

Mr. CLASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gilbert H. Montague, of the New York bar, before the Connecticut Valley branch of the Foreign Policy Association in Springfield, Mass., on December 2, 1944:

The United States is now feeling its way toward an American national policy regarding international trade agreements and cartels.

After World War I American businessmen thought they knew what that policy was.

Broadly, that policy seems to be this: That the philosophy of free and unrestrained competition governing our domestic economy and expressed in our antitrust laws stops at the water's edge; that international trade should follow the old adage that when we are in Rome we should do as the Romans do; that accordingly our nationals in foreign trade should meet foreign cartels and foreign competitors with the foreigners' own style of foreign trade customs, arrangements, and competition; provided always that nothing be done by our nationals abroad that would so react upon the American domestic economy as to impair within our own borders the continued operation of our antitrust law philosophy of free and unrestrained competition.

To American businessmen after World War I this policy appeared to be plain and simple.

It was expressed in the Federal Trade Commission's report in 1916 on cooperation in foreign trade, and was reiterated by President Wilson in several messages to Congress, and it was the policy on which President Wilson and Congress acted in 1918, when Congress enacted upon President Wilson's insistence the Webb-Pomerene Export Trade Act of 1918.

Quite a different prospect, however, confronts American businessmen now facing the post-war world after World War II.

Webb-Pomerene associations that for years have been reporting to the Federal Trade Commission are now being drastically investigated by the Commission and the Attorney General's Antitrust Division.

One of the oldest of these associations is today being prosecuted by the Attorney General on the charge of restraining and monopolizing foreign and domestic trade of United States in violation of the antitrust laws.

On similar charges dozens of indictments and injunction suits have recently been filed by the Attorney General against a number of the largest and best regarded corporations and businessmen in the United States and Great Britain.

Since 1938 the Supreme Court has been narrowing its interpretation of the patent laws, and stretching its interpretation of what the antitrust laws forbid, so that today there is legal doubt about limitations and conditions in patent agreements which before 1938 rested securely on Supreme Court decisions in which had concurred such precursors and stalwarts of the New Deal as Justice Holmes, Justice Brandeis, and Justice (now Chief Justice) Stone.

In many of these criminal indictments and injunction suits recently filed against American and British corporations and businessmen, the Attorney General is attacking international trade agreements which at the time they were made rested upon Supreme Court decisions whose authority was unquestioned before 1938.

Antitrust laws are in a real sense ex post facto laws.

Defendants in these cases are judged, not by the law as it was judicially interpreted at the time they were doing their acts, but by later judicial interpretations of the law current at the time of the trial and in many instances laid down by the Supreme Court and other Federal courts long after their acts were done.

This has always been characteristic of antitrust cases and is greatly intensified when, as now, the Supreme Court and other Federal courts are repeatedly expanding the interpretation of the law and bringing within its penalties a rapidly expanding area of transactions.

In wartime all these characteristics are accentuated.

Agreements that were normal and highly beneficial to this country when entered into years ago between our nationals and nationals of other countries then at peace with this country can years later be unfairly distorted so as to appear sinister or even unpatriotic after war has broken out between this and other countries.

In the heated politics of wartime the temptations to this distortion are well-nigh irresistible.

Foreign trade that in no way involves patent agreements is also engaging the attention of the Attorney General.

A typical foreign-trade pattern is this:

An American national gets a foothold in a foreign country and its success attracts competition in that country from other American nationals, and from nationals of that country and from nationals of other foreign countries.

American nationals continue competing in that foreign country with one another, and with nationals of that country, and with nationals of other foreign countries, until the nationals of that country, or the government of that country, or both, become restive and critical of the extent to which American nationals are winning the market in that country.

Thereupon the nationals of that country, or their government, or both, intimate to these American nationals that unless they consent to an arrangement restricting their proportion of the market in that country, or limiting their competition in that country with one another and with nationals of that country and with nationals of other foreign countries, the government may enact a tariff, or impose import quotas, or establish a government monopoly, or take other measures to prevent American nationals from continuing the business they have built up in that country.

On other continents outside North America, arrangements for limiting competition, pooling profits, and allocating or dividing markets are customary, lawful, and encouraged by governments, and by public opinion, and by generations of judicial decisions and trade custom.

Arrangements analogous to these have repeatedly been upheld by judicial decisions of the House of Lords and the Judicial Committee of the Privy Council, which are the highest courts of Great Britain and the British Commonwealth of Nations.

Not as a complaint against our Supreme Court and our antitrust laws, but as a plain statement of fact, it is axiomatic that American nationals doing business abroad must frequently condition themselves to customs and pressures of foreign governments, foreign-public opinion, and foreign competitors, compelling arrangements which, if made and operative within the United States, might be contrary to recent decisions of our Supreme Court and other Federal courts.

Viewing this scene, Milo Perkins, formerly Vice President WALLACE's chief aide and Executive Director of the erstwhile Board of Economic Warfare, declares in the November 1944 Harpers Monthly in italicized language that "pressure of circumstances will tend to make us accept cartels, because other nations accept them."

"Our opposition to them is really a half-hearted opposition, says Mr. Perkins. "We Americans preach free competition, but we don't really practice what we preach."

Without mentioning Vice President WALLACE or Vice President WALLACE's anticartel speeches, Mr. Perkins continues:

"Our support of it (i. e. free competition) is stronger in our speeches than in our action," says Mr. Perkins, "We love to tell each other with a good deal of righteousness that free competition is the 'American way.' But in the market place there's a wide gap between our oratory and our actions."

The elder J. P. Morgan once remarked, "Never sell America short."

Can it be that Mr. Perkins is now "selling short" the true viewpoint of American businessmen regarding cartels?

American antitrust laws are peculiar in this respect, that nobody seems to like them, and nobody enjoys having to comply with them, but everyone seems to want to have them observed by everyone with whom he deals or competes.

Occasionally some pressure group, like labor or the farmers, is politically strong enough to get a special exemption from the antitrust laws.

With these minor exceptions, the antitrust laws after 50 years now seem to be so tenaciously rooted in the American way of life that they appear to be practically irrepealable and almost unamendable.

Nine-tenths of American business is domestic, and therefore has long been obliged by law to comply with the philosophy of free and unrestrained competition expressed in the American antitrust laws.

Partly because American businessmen have so long been enured to these laws, and partly because the achievement of American business in all-out war production has been so astounding, many American businessmen now seem to be confident that they can prosper wherever this American antitrust law philosophy prevails, whether at home or abroad.

Highly significant is the recent episode of the British-American Petroleum Agreement signed in Washington on August 8, 1944.

For more than a year the preparation and negotiation of this agreement occupied officials of the British Government, the British Embassy, the British Treasury, and the British Oil Board, and officials of the United States Department of State, the Petroleum Administration for War, the Foreign Economic Administration, and the War and Navy Departments.

Executives of British petroleum companies participated in these negotiations, but no executive of any American petroleum company was a participant.

When this agreement was finally announced, it was stated that it was negotiated for Great Britain by Lord Beaverbrook and several other high officials of the British Government, the British Embassy, the British Treasury, and the British Oil Board, and that it was negotiated for the United States by Secretary of State Hull, Petroleum Administrator for War Ickes, Secretary of the Navy Forrestal, Under Secretary of War Patterson, and Foreign Economic Administrator Crowley, and several other high officials of the Petroleum Administration for War and the State Department.

These illustrious names, British and American, are a guaranty that nothing but the public interest could have been considered in preparing, negotiating, and executing this British-American Petroleum Agreement.

In this confidence President Roosevelt on August 24, 1944, submitted this agreement to the Senate, where it is now awaiting consideration by the Senate Foreign Relations Committee and the Senate Special Committee on Petroleum.

Dealing with a natural resource that is exhaustible and absolutely necessary to the national defense and the national economy of all nations it would be hard to imagine a better subject on which to arrive at an intergovernmental agreement that at any rate would be free from objections from the standpoint of public interest.

Nevertheless it now seems likely that this agreement may not be pressed in its present form before the Senate Foreign Relations Committee or the Senate Special Committee on Petroleum, and that it may be changed in order to meet objections from the standpoint of public interest.

These objections, all of which relate to the public interest, have not been raised, be it noted, by professional watchdogs of the public interest who so often accuse businessmen of plotting monopolistic cartels, but have been raised by businessmen in the American petroleum industry itself.

If these objections are met, the British-American Petroleum Agreement may have to be clarified and changed in a number of respects.

It may have to make clear that it is not a petroleum cartel, with production and sales quotas following the lines of many so-called intergovernmental commodity agreements.

It may also have to make clear that it is not an instrument by which our Government may gain control over the domestic industry or the foreign operations of our nationals.

It may also have to make clear that it is not an instrument of force or compulsion, but is only an administration that will proceed upon a consultative and advisory basis, arriving at its recommendations upon findings of the highest technical proficiency, which recommendations shall be open to voluntary acceptance by operating units, with no restrictions imposed upon our nationals when complying with such recommendations.

Finally, it may have to make clear that government and industry will both be represented in such administration, since both are joint parties in interest.

In the International Business Conference at Rye, N. Y., in November 1944, businessmen from 52 nations listened to the cartel presentation by delegations from Great Britain and other nations, and then adopted a recommendation that is far more guarded than Mr. Perkins' conclusions:

"We therefore strongly recommend," says this recommendation, "that the governments concerned, in association with their respective business interests, should immediately take steps continuously to study and consult together on the various issues raised, and in particular to consider the effect of such agreements in relation to employment, standards of living, industrial development, prices and volume and flow of trade. Further, it is vital to economic cooperation between nations that they reconcile their views and practices in regard to these agreements over as wide an area as possible and establish rules and standards to govern such agreements in international trade."

Writing to Secretary Hull on September 8, 1944, President Roosevelt contrasted the American and foreign viewpoints on cartels:

"During the past half century," said President Roosevelt, "the United States has developed a tradition in opposition to private monopolies. The Sherman and Clayton Acts have become as much a part of the American way of life as the due-process clause of the Constitution. By protecting the consumer against monopoly these statutes guarantee him the benefits of competition."

"This policy," continued President Roosevelt, "goes hand in glove with the liberal principles of international trade for which you have stood through many years of public service. The trade-agreement program has as its objective the elimination of barriers to the free flow of trade in international commerce; the antitrust statutes aim at the elimination of monopolistic restraints of trade in interstate and foreign commerce.

Reviewing the cartel situation abroad, President Roosevelt stated:

"Unfortunately, a number of foreign countries, particularly in continental Europe, do not possess such a tradition against cartels. On the contrary, cartels have received encouragement from some of these governments. Especially is this true with respect to Germany. Moreover, cartels were utilized by the Nazis as governmental instrumentalities to achieve political ends. The history of the use of the I. G. Farben Trust by the Nazis reads like a detective story. The defeat of the Nazi armies will have to be followed by the eradication of these weapons of economic warfare. But more than the elimination of the political activities of German cartels will be required. Cartel practices which restrict the free flow of goods in foreign commerce will have to be curbed. With international trade involved, this end can be achieved only through collaborative action by the United Nations."

In conclusion President Roosevelt adjured Secretary Hull:

"I hope that you will keep your eye on this whole subject of international cartels because we are approaching the time when discussions will almost certainly arise between us and other nations."

In the same key, President Roosevelt wrote to Foreign Economic Administrator Crowley on September 29, 1944.

In November 1944 it was reported that the Interdepartmental Executive Committee on Foreign Economic Policy, headed by Assistant Secretary of State Dean Acheson, had completed 3 years' work on cartels, and was recommending that the United States take a firm stand against "restrictive" international agreements of all kinds, except for purposes of national defense, or to conserve scarce and vital commodities, or in cases involving public health and morals, such as narcotics, or in cases of acute crisis.

After all these developments, it is hardly surprising that Assistant Secretary of State Berle and the American delegation in the International Civil Aviation Conference in Chicago in November 1944 resisted so strenuously the British proposals for a post-war cartel of international aviation.

All this shows that today there is immediate and pressing need for a conference of representatives of this and other nations which will consider all phases of this subject upon a consultative and advisory basis.

Secretary Stettinius is now planning such a conference.

Such a conference, but on a permanent and continuously functioning basis, is now being urged by many important organizations and publicists.

In such a conference there can be debated, with particular application to specific problems of international foreign trade, the philosophy of free and unrestrained competition expressed in the American antitrust laws and the rival philosophies of Great Britain and other nations.

Perhaps we can convert Great Britain and other foreign nations in such a conference to accept some of our philosophy with respect to some specific problems of international trade in which we claim a special interest.

Perhaps, however, Great Britain and other foreign nations can convince us in such a conference that in our larger political and economic interest in the international and foreign field we can approve in respect of some specific problems some modification of our antitrust law policy of free and unrestrained competition without serious sacrifice to our economy.

When the recommendations hammered out on the anvil of such a conference come up for debate before the American public, it may happen, more frequently than some think, that American businessmen, as in the case of the British-American Petroleum Agreement, may line up in that debate on the side of the American antitrust law philosophy of free and unrestrained competition.

Only the President and Congress can decide what our national policy shall be regarding international agreements and cartels.

In this decision they need all the help they can get, for on it may depend the success or failure of the whole post-war world.

Another decision, even more momentous, confronted another President and another Congress in a dark hour of our Civil War.

President Lincoln's words to Congress on that occasion may well be repeated now:

"Fellow citizens, we cannot escape history. We of this Congress and this administration will be remembered in spite of ourselves. No personal significance or insignificance can spare one of us. The fiery trial through which we pass will light us down in honor or dishonor to the latest generation. We, even we here, hold the power and bear the responsibility. We shall nobly save or meanly lose the last, best hope of earth."

Magazine and Book Attacks on Boston Should Be Taken as Tribute to This City

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following article by John Griffin which appeared in the Boston, Mass., Sunday Post January 14, 1945:

MAGAZINE AND BOOK ATTACKS ON BOSTON SHOULD BE TAKEN AS TRIBUTE TO THIS CITY—CERTAIN GROUPS OF SO-CALLED LITERATI USUALLY MANAGE TO PRESENT FALSE PICTURE TO SUPPORT THEIR OWN PHONY NOTIONS

(By John Griffin)

Instead of getting angry at the most recent attack on Boston in a national magazine, the people of Boston ought to feel flattered. You don't bother attacking someone or something you consider unimportant, so it must be that Boston has something which arouses envy in certain publicists in other parts of the country, particularly New York.

The campaign against Boston has recently been stepped up to a new high. Previously the attacks were confined to a group of publicists who have access to the magazines of national circulation, to syndicated columns, and to the big New York newspapers.

Now even the Associated Press has joined in. The other day that news agency sent out a story telling about the popularity among servicemen of two novels which had been withdrawn from sale by Boston book sellers. The Associated Press made much of the fact that these novels had been taken off the shelves in Boston, yet seemed to make a great hit with the servicemen.

SAME OLD CROWD

Actually, of course, the reason so many servicemen read them is that they were on a list selected by a committee and were, therefore, sent out to servicemen. The committee was composed of the members of the same group which have been trying to ridicule Boston for some time.

The latest belittling effort is the layout of picture and text in the current issue of Life magazine. Life and Time are put out by the same outfit, which is presided over by Mr. Henry Luce, husband of Representative CLARE LUCE and known to those in the organization as Il Luce.

Both Time and Life are two of the smuggest publications that have ever seen daylight. Both apparently are operated on the theory that when they have spoken, all others should be silent for they are giving the last word on every subject.

They do manage to infuriate people on that account, but in this case it looks as if Life has become infuriated by Boston. For it has resorted to cheap, scurrilous action in order to cast ridicule on Boston.

It presents pictures, for instance, of slum areas. Of course, there aren't any such sections in New York, or Chicago, or Baltimore, or other American cities. Of course, such pictures are typical of Boston and no other city.

PHONY PHOTOGRAPHS

It presents a posed photograph of three youngsters who were asked to pose looking tough, and the caption calls them tough Irish kids. Of course, they aren't tough Irish kids at all. They are American kids, and if the war lasts a few years longer they will probably be fighting in the service of America.

It presents South Boston as a whole slum of the worst sort, and says nothing at all about the honest, hard-working citizens who comprise the majority of the residents of that district, people who do an honest day's work, live modestly, raise their children to become outstanding men and women, and, one more thing, walk and act like God-fearing men and women.

It tells about "bleak little alleys" of South Boston "where children play in the street or not at all." Perhaps the editors of Life would benefit by a visit to South Boston, and they might see the municipal beaches which are the envy of other cities of this and other countries.

The retort that Life's editors would undoubtedly make to criticism is that such scenes as they pictured do exist in South Boston. That is the half-truth which is usually resorted to by those who don't want to be completely honest but still want to be able to offer some justification for their actions.

For, although there are "bleak little alleys," there are also broad boulevards; although there are some tough kids there, they are not the majority of South Boston kids; although there are thousands of people of Irish descent in South Boston, they don't rate the slurring title of "lace-curtain Irish."

That's like the old vaudeville gags that went out years ago. Life doesn't have to be patronizing to the people of Irish descent, and those of any other blood. Especially in wartime, for it is doubtful if any area in the whole United States can show a better record of war service than the Irish kids of South Boston.

WHAT'S THE STORY?

Well, what is the story of the campaign against Boston, and where does it come from? Everybody knows where it comes from. As mentioned above, the group of New Yorkers, who dictate the literary tastes of most of the United States through their access to the source of national publications, promote the campaign.

Everything that is New York is wonderful; everything Boston is benighted and backward.

Supposing someone set out to depict New York in the same manner that Life presents Boston to the world. Certainly a false picture would be given.

ONE VIEW OF IT

New York could be presented, in that technique, as the city where the antics of drunks in night clubs are considered of such importance that they fill the front pages of the newspapers and are sent out in print and on the air by peek-hole columnists.

It would be set forth as the place where a great public issue is made over whether or not a play about perverts should be staged for the public.

It could be shown as the home of thousands of phonies, of gyps and crooks who would stoop to anything to get hold of a dollar.

But it wouldn't be New York, because New York is also the place where great businessmen, great professional men, and great scientists live and work. It is the place where great artists work. It has millions of people who never see the inside of a night club or a Broadway theater, either.

Well, perhaps it pays the politicians to get mad and issue angry statements calling for the suppression of magazines like Life. But Boston shouldn't really get too upset about it. They wouldn't all be shooting at Boston unless it represented largely what New York is not. On such a basis, Bostonians are probably content to let it go at that.

Churches, Hospitals, and Charitable Organizations Would Be Adversely Affected in Their Activities by Passage of Proposed Twenty-second Amendment—Brotherhood of Railroad Trainmen High Official Castigates Subversive Forces of Gannett-Pettengill Committee on Constitutional Government Attempting To Put Over Proposal

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. PATMAN. Mr. Speaker, it has been called to my attention that the passage of the proposed twenty-second amendment to the Constitution which is being so vigorously advocated by the Gannett-Pettengill Committee for Constitutional Government, Inc., will work an irreparable hardship upon charitable organizations.

If this amendment should be adopted, it would mean that the Federal Government would not only lack funds with which to pay veterans and their dependents, to pay old-age assistance requirements and soil conservation payments to farmers, but the Government could no longer afford to grant tax exemptions to persons on that portion of their incomes they now devote to charitable purposes.

The churches, many of our great hospitals, and many of our great charitable institutions which are impartially dedicated to the public weal rely for the most part upon substantial donations which are liberally made because they are now exempt from Federal taxation under our present tax laws.

As the Division of the Tax Research of the Treasury Department has so accurately pointed out in its careful analysis of the effects of this proposed amendment, the Government would not only be short of sufficient funds with which to meet normal revenue needs if this amendment should pass, but also practically all exemptions now granted to taxpayers who contribute to worthy charitable causes would have to be revoked.

When I first commenced my study of the possible effects of this insidious program, I was more concerned with the possible depletion of Federal funds which we all agree should be applied to necessary social security measures long since approved by the Congress. It did not occur to me that the amendment might also wreak havoc in the field of social service which is handled by our great private charitable and religious institutions. A reexamination of the maximum amount of revenue which would be collectible from taxpayers if the amendment should be adopted convinces me that the Government simply could not function in its normal administrative programs without the adoption of legislation which would revoke these tax exemption benefits now adhering to contributions to charitable and religious organizations.

To me, this is the last straw. The selfishness, the lack of consideration for anyone but themselves and their already fat purses, on the part of the sponsors of this vicious amendment is almost beyond human comprehension. To realize that they have already succeeded in foisting their ideas successfully upon the legislature of 16 sovereign States, shows only too clearly the amount of underhanded tactics and misrepresentation these men and their paid agents must have employed to have gone this far toward accomplishing their ends.

In my fight against this measure, it gives me great encouragement to know that some of the great labor organizations are fighting shoulder to shoulder with me in this fight.

President A. F. Whitney of the Brotherhood of Railroad Trainmen was the first great labor leader to my knowledge to call attention to this dangerous measure. The official publication of the Brotherhood of Railroad Trainmen has published several statements by President Whitney in opposition to this amendment.

In a letter to all State legislative representatives of the Brotherhood of Railroad Trainmen, dated November 24, this alert and far-sighted official once again urged his men to be ready for the effort that would be made by the Gannett crowd to put this matter through additional State legislatures in 1945, commencing in January of this year. In discussing this vital work, Mr. Whitney said to his State legislative officers, "begin now to fight the subversive forces that are attempting to put over this proposal. If your State has already enacted this resolution, you should at once have a repealer introduced."

The full text of Mr. Whitney's instructions to his men is worth quoting. It reads as follows:

To All State Legislative Representatives, Brotherhood of Railroad Trainmen:

DEAR SIRS AND BROTHERS: You will recall that in the past we have had a considerable amount of correspondence regarding a proposed amendment to the Federal Constitution, a twenty-second amendment, by which a ceiling of 25 percent would be placed on all income, estate, and gift taxes. I am in receipt of a letter dated November 17 from our good friend Congressman WRIGHT PATMAN, of Texas, in which he says the following:

"By the way, I hope you continue to be active in the campaign against the adoption of the so-called twenty-second amendment. The people who sponsor it do not have the nerve, or gall, or the courage, whatever you want to call it, to come right out and be opposed to World War veterans receiving pay for their war injuries or to the granting of assistance to aged, but they are willing to sneak in the back door with an amendment to the Constitution which, if adopted, will make it impossible for the Government to raise more than enough money to service the national debt and to pay skimpy operating expenses.

"The following States will be asked in the early part of 1945 to adopt this so-called twenty-second amendment: Arizona, California, Colorado, Connecticut, Georgia, Idaho, Kansas, Maryland, Minnesota, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, South Carolina, South Dakota, Tennessee, Utah, Vermont, Washington, West Virginia."

There probably never was a legislative proposal that more seriously threatened a complete break-down of our Federal Government than this vicious proposal. Its proponents are working in the most deceitful and underhanded manner, and they have been able to persuade the legislatures of some 15 States to memoralize Congress to call a Constitutional convention for the purpose of adopting this amendment. Their work has been so underhanded that very few people have known about it until it had passed the State legislatures and we have many statements in our files indicating that State senators and State representatives in those States which passed the resolution were amazed to discover that it had been enacted at the very time that they sat in the legislatures of their States.

This is a vitally important matter. Begin now to fight the subversive forces that are attempting to put over this proposal. If your State has already enacted this resolution, you should at once have a repealer introduced. Please keep this office advised and leave nothing undone in your fight to defeat the sinister forces that would place this amendment in the Constitution of the United States.

Sincerely and fraternally yours,

A. F. WHITNEY,
President.

Quentin Reynolds on the Home Front, on the War Front, and on Elected Members of Congress

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. PATMAN. Mr. Speaker, Quentin Reynolds is one of the outstanding war correspondents. I doubt that any war correspondent has been under fire in this war more than he. He is not only an outstanding war correspondent, but he is a fine example of a loyal, true, patriotic, intelligent American.

I am inserting herewith a part of the last chapter of his book The Curtain Rises, which is as follows:

I've been home for a month now and for the first time in 7 months I'm completely bewildered. It was a shock to pick up the papers and read columns of criticism of our war effort. Everything I saw in the war zone led me to believe that our matériel was the best in the world; that a military miracle had been achieved in the rapid training of our troops; that our war effort was being handled with a minimum of red tape, lost effort, and inefficiency. I knew that neither General Marshall nor General Eisenhower could wave magic wands and have the ships arrive in the Mediterranean right on time, loaded with just what we needed for combat. I felt that somebody back home must be doing a wonderful job of organization and administration to effect this result. I knew that when an American soldier set foot on an enemy beach he had the best equipment possible. He had everything that human ingenuity could give

him to protect himself and to minimize his danger. He even had two ampoules of morphine and a package of sulfa powder in his pocket. His emergency rations were the best ever devised, and they even included something which, to the G. I., is more important than food—cigarettes and matches. Somebody back home must have been responsible for all this. The Army couldn't do it alone. Yet, from the papers, one would think that Washington was a madhouse inhabited by certified lunatics, crooks, or shady politicians. It was disheartening, because when you're first home you're so filled with pride at the great job America has done and is doing that you feel like waving a flag. You get so impatient with the snide, petty criticism of our leaders that you end up by diving into the sports pages. You read the most senseless, absurd speeches by some of our duly elected Members of Congress, and you shudder and wonder why they don't inform themselves about conditions before they spout at great length and always within the framework of their preconceived political convictions. When you return you are laboring under the apparently absurd delusion that we are at war with Japan and Germany. Reading some newspapers, you might be pardoned for thinking that we are at war with Britain and with the President of the United States.

Article by Rev. Paul C. O'Connor, S. J., of Kotzebue, Alaska

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. BARTLETT. Mr. Speaker, all Alaskans recognize and pay tribute to the splendid work being done in the Territory by the Catholic missions. Without thought of self, facing many hardships without complaint, the small but devoted group of priests and nuns who staff these missions have earned an abiding place in the hearts of Alaskans regardless of religious beliefs.

One of the best known of these priests is the Reverend Paul C. O'Connor, of Kotzebue. For the Alaska Catholic, published at Juneau by my good friend, A. B. Cain, Father O'Connor recently wrote an article about aviation in the Arctic and life in the Arctic which will be of widespread interest. The article follows:

I would like to invite you to spend a Christmas with me up here in the Arctic. This invitation is no longer fantastic. Planes wing their way up here almost daily. Jump into an Army transport at Minneapolis. It will land you in Fairbanks with only one or two intervening stops in about 10 hours. From Fairbanks to Kotzebue grab some commercial plane and you will be with me in something like 8 hours. Of course, once you go beyond Fairbanks you are at the mercy of the elements. You will need all the fur accessories that belong to the Arctic. Outside shoes, no matter how warm, must be discarded for mukluks or moose moccasins. One good Army major shod in regulation galoches landed here with frozen feet.

The trip over Canada is merely routine; the plane has been in constant ground communication; there are good emergency fields everywhere. You fly high and comfortable. At Fairbanks you are amazed to find a city modern to the smallest details, where even though the weather be 30 or 40 below, heated and luxurious taxis pick you up at the airport and whisk you to a hotel with all the conveniences of life. The city itself is ablaze with light and has everything from a daily paper to an air-conditioned theater. Expenses are high, but luxury in the far North cannot be otherwise than costly.

ALASKAN PILOTS ARE EXPERTS

From now on you are on your own. Commercial planes are efficient but cold. The pilots, though, are the best in the world. The Army has come to respect our Arctic flyers, and with reason. Most of them are big fellows—thoroughly familiar with the freaks of weather and the country, generally dressed in a grease-streaked sealskin jacket and pants, not much to look at but warm just the same. Big roomy mukluks will cover their feet. When you come to the plane you will find them carrying out their oil which has been previously warmed in the hangar. A mechanic will have a warming pot hidden under the folds of a long canvas heating up the engine. The frost on the wings will unceremoniously be whipped off with a rope. It is early morning, still dark. You are timorous and reasonably so. No telling where you will land once the plane lifts from the ground. Bad weather may cause the pilot to go 300 miles out of his way and then he will stop at some village indefinite miles from nowhere. Still the pilot has carefully tabulated the weather all over the Arctic. He knows just what he is doing. You will reach your destination sometime, somehow. Time means nothing up here. A 2 weeks' lay-over in some tiny Arctic village is not a bit unusual in stormy weather.

MAGNIFICENT SCENERY IMPRESSES

You look around for other passengers. There are none. The plane, though, is loaded with all kinds of packages—all emergency stuff—medicine for some sick Eskimo, or a spark plug for some distant C. A. A. station. All available space is taken. You can hardly wedge yourself in by the pilot. He gives you a good-natured grin. The engine whirls to life. The frost on the windows is brushed off by the impact of the wind from the propeller. The pilot suddenly lifts up the tail of the plane and jars and skiis loose from the snow, and before you know it the skiis are skimming over the smooth snow of the runway. You slip into the cool air and push up into the skies. Off to the left high mountains arise. Mount McKinley, the highest peak in North America, glistens in the morning sun, and Fairbanks is left behind.

To rise gradually up from the gloom of earth and meet the rising sun as it unfolds its splendors behind steep mountain ranges is a sight whose beauty will linger in your mind long after the trip. You notice that the pilot for the most part follows the path of rivers, skirting the mountains and seldom beyond landing distance on the Tanana, Yukon, or Koyukuk Rivers. Arctic pilots are cagey. They have been forced down too often to take unnecessary chances in isolated mountain recesses.

Beyond the broad frozen ribbon of the Yukon there is a distinct change in the air. Mountains rise higher, the plane gets jumpy, and off toward the west a huge fog bank appears. It is the steam from the still open waters of the Arctic Ocean. Far up in the interior of Alaska there is no sign of villages, or any human habitation below. The sun is no longer seen. Yet, the pilot nonchalantly pushes on and on.

ONLY 45 BELOW

Finally, a tall mountain ridge is crossed with the plane jumping at crazy angles. The pilot opens his window to get a better view. As he turns you see a lake below. Down you go until the plane bounces to a landing, and staggers to a halt. The pilot grins again. A dog team shoots through the bushes. Two sturdy Eskimos jump off and grab your sleeping bag and grip, and with no more ado, you climb on the sled, Arctic taxi. What a contrast between a roaring motor in the skies and these soft-footed dashing malemutes—yet how comforting withal. In the twinkling of an eye you are brought up to a snug little trader's dwelling, all by itself, 10 miles from the nearest village.

Your host, a gray-haired man, has his room furnished with three radios which keep him well informed and up to the minute on the progress of the war. You sit down to a steaming reindeer stew that was already prepared for you. The pilot and trader are old friends. Everything was prearranged. The trader knew that the plane was coming, also that Kotzebue was shut off by a bank of fog. Radio had done it all. You inquire about the temperature. "Only 45 below" is spoken as if it were the ordinary thing.

Sleep comes without effort and you dream of endless mountain vistas covered with everlasting snow. The smell of bacon and eggs awakens you in the morning but the pilot has long since been up and warmed and serviced his plane. He has his motor idling when you round the bend in the dogsled. Up you are again with all the casualness in the world. The plane takes a good beating as it is flung back and forth by variable air currents rushing out from innumerable mountain passes. At last you leave the mountains and cross the Kobuk Lake. Dog-team trails are now discernible. The pilot points to a black streak in the distance. It is Kotzebue, the geographical center of some seven villages and the hub of the Arctic.

AIRPLANE ARRIVAL BIG EVENT

As you step from the plane you are surprised at the number of people that have popped up from nowhere to check on the new arrival. In less than an hour every soul of our 400 will know who you are, what your business is, and how long you are going to stay in the village. You may be a little dazed by the exuberant welcome. Well, remember that it is sometimes years before I see a friend from the States.

You are amazed at the coziness of my little igloo (really it is more than that). Your amazement increases when I usher you into my little church. A beautiful crib, an altar loaded down with flowers, gay streamers and tinsel floating in the air hide a little shabbiness here and there. But wait! At the stroke of midnight the church is crowded to the brim. Even shy Quakers have come and stand curiously in the rear. You hear the Latin prayers spoken loud and clear by almost half of the congregation. An Eskimo organist plays the Mass of St. Basil while every man and woman and child takes part in the singing. This is the only mass celebrated in the entire Alaskan Arctic, but it is celebrated as it should be, with priest and people combined in words, song, and act. Your one and only conclusion is that the Infant Saviour really means something to the Eskimo. You are right—the Arctic loses its gloom and its chill in the warm glow of Christ's coming on Christmas Day no matter how cold the day.

National Service Law

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the Milwaukee Journal of January 12, 1945:

NEED A NATIONAL SERVICE LAW

For nearly 2 years the War and Navy Departments and those nonmilitary leaders in the war effort who have faced the manpower question frankly have been trying to get Congress to pass a National War Service Act. They have gotten nowhere.

Again, the need for such an act is being explained by the Secretary and Under Secretary of War, the Under Secretary of the Navy, the Chairman of the War Production Board, and the Acting Chairman of the War Manpower Commission. They are trying to convince the House Military Affairs Committee that such a law is necessary now.

The delay in passing such legislation is a sign that Congress and the American people have been unwilling to face the unpleasant facts of this war, although there is reason to believe that public opinion has been far more favorable to a national service law than Congress has been.

All other great nations in this war, friend or foe, have found national service legislation necessary. Basically, such a law means that a legal obligation is created by which every person is liable to serve his country in the way that he can be of most use. The millions in the armed forces are doing their part, and more. And most of them have had no choice. Industry, also by law, has no choice as to whether it will serve in the war effort.

But the rest of us have had the choice of going merrily along, helping to the full with the prosecution of the war or doing less than our share, as we happened to choose. How can such a system be tolerated, especially in view of the sacrifices that millions of our young men and women are called upon to make?

We have met our manpower crises, so far, with threats, cajolery, and wage bribery. We have patched and improvised and stretched the Selective Service Act far beyond its intent, sometimes degrading military service by using it as a sort of threatened punishment for those who won't work.

But we have refused to adopt the obviously fair and democratic and effective approach of a national selective service act. It should not now take Congress long, if it has the moral stamina, to pass such a law. Congress does not have to start from scratch. The Austin-Wadsworth bill was painstakingly drawn and provided with safeguards against abuse. It has been before the American public and Congress for nearly 2 years. With only minor modifications in wording, it could usefully be passed now.

National service is proposed for the war only. It is to expire with the end of the war or by concurrent resolution of Congress. It would protect seniority rights of persons changing jobs and the right of workers to join, or not to join, unions.

It would be for one purpose only—to distribute the burdens of this war more evenly and help to win it sooner. National selective service is designed to shorten the war and to save lives.

Canceled Ration Stamps

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. PATMAN. Mr. Speaker, the Dallas Times-Herald, December 30, 1944, carried a splendid editorial on the subject, Before Victory We Shall Have More Inconveniences. This editorial defended the action of the O. P. A. in canceling certain rationing stamps.

The significant statement was made:

With 5,000,000 of our loved ones overseas and with the certainty that thousands of them will never return, it is hardly in order for us to fret over a few canceled ration stamps.

It is as follows:

The fact that many food ration stamps which were to be valid indefinitely were nullified suddenly by the O. P. A. has vexed many consumers, who feel that they have been deceived.

However, the O. P. A. officials in Washington bow gracefully to the criticism and admit that is is not unjustified. They express regret that they found their action necessary.

The explanation is, broadly speaking, that the volume of outstanding, unused stamps was so large that cancelation was essential to protect the dwindling supply of certain items.

It is pointed out, for instance, that sugar stocks are lower than at any time since the war started, and that the number of unused canning stamps was so great as to be enough to cause a widespread shortage of the commodity in a few weeks. It seems that boats which might have been bringing sugar to this country have been used to carry supplies to our armed forces.

In view of the fact that the war situation is far more serious than we were thinking a few months ago that it would be by this time, it is not astonishing that some of the O. P. A. calculations have gone awry. Many generals and admirals have had to revise statements they made during the summer and early fall.

It is regrettable that the O. P. A. and War Food Administration cannot devise a method of collaboration to prevent misunderstandings and miscalculations. It might be possible for them to see farther ahead than they do and avoid misleading the public. But the fortunes of war are so uncertain that long-distance planning is extremely difficult. Even the military command must frequently revise its calls for supplies and equipment.

The plain truth is that we are involved in the most terrible and most far-reaching war in history and that our enemies still have millions of well-armed and well-trained troops in the field. And, furthermore, we have only begun to be fully engaged in the struggle and to feel heavy losses in manpower and equipment. American forces have only recently come into real contact with the enemy. For many months, an increasing number of dreaded telegrams will be received in American homes.

The O. P. A. assures us that this country will have food enough, and that the only problem is even distribution. This is more than can be said by the food agency of any other major nation that is involved in the war. In spite of vexations and annoyances, some of which may be due to official bungling, we should be thankful.

So far, the only Americans who have really suffered are those who have gone into naval and military service and their loved ones. With all the inconveniences of war, the average American is better off than before the conflict. When we have endured even one-fourth as much hardship as the Russians, Britons, and Chinese, we shall know more about the tragedy of war. With 5,000,000 of our loved ones overseas, and with the certainty that thousands of them will never return, it is hardly in order for use to fret over a few canceled ration stamps.

Address by Rev. Joseph V. Demers, S. M.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following address delivered by Rev. Joseph V. Demers, S. M., formerly of St. Anne's Roman Catholic Church, Lawrence, Mass., but now pastor of the Immaculate Conception Church, Westerly, R. I., to an extremely large gathering of members of the Holy Name Societies of the Catholic Churches of Greater Lawrence, consisting of the city of Lawrence, the towns of Methuen and North Andover, in attendance at the annual union service of this organization, held in St. Anne's Roman Catholic Church on Sunday afternoon, January 7, 1945. The address of Father Demers was most interesting, inspiring, and instructive, and was exceptionally well received by all in attendance. It follows:

Reverend Fathers, men of the Holy Name Society of Greater Lawrence, in the name of the pastor of this parish and in the names of your own pastors and directors, I bid you welcome to these impressive services in honor of that name at the sound of which "every knee should bow of those that are in heaven, on earth, and under the earth." Your presence here in such large numbers, despite the stress of the times, is a sublime act of faith which is very comforting and consoling in these days when the dark clouds of hate and bitterness and unbelief hang over such a large portion of the world.

The church, the state, need more men of the caliber of the Holy Name men, men of sound Christian principles, who by their words, and still more by their deeds, exemplify the meaning of Catholic action and strive to bring about a reign of peace on earth. A few short days ago the Christmas message rang out again in the ears of a heedless world: "Glory to God in the highest, and on earth peace to men of good will." The message could hardly be heard above the din of battle and the cries of hate. The world is too pagan, too materialistic; too much taken up with greed, hatred, jealousy, and self-seeking; too busy with horrible deeds of destruction and unbounded lust for conquest to understand the things that might be for its peace and happiness. The statement may sound very trite to you—trite and commonplace for having been so frequently uttered from thousands of pulpits throughout the world and for having been embodied in so many pages of the written word—but it is nevertheless very true, that the world's greatest ills are spiritual rather than economic and political. "There are too many people in our generation who are satiated with the materialistic philosophies that fill our stomachs and starve our souls."

On His first coming Christ was unknown, ignored, despised. It was truly said of Him that "He came into the world, and the world was made by Him, and the world knew Him not; He came unto His own and His own received Him not." The world of Bethlehem and Nazareth and other Jewish cities did not know that the long-heralded and long-expected Messiah had come; and the pagan world of Rome and of Greece, like

our own modern pagan world, was oblivious of all save war, and pleasure, and the uncertainty of life, and the sureness of death.

"He came unto His own and His own received Him not." And His own still receive Him not. When they do receive Him and accept the sacred principles which He came to implant in the hearts of men and which He so beautifully set forth in His Sermon on the Mount of the Beatitudes, then—and only then—can there be peace and happiness on earth. There will be this peace of Christ on earth when individuals learn to rule their relations with one another by charity; when capital and labor strive honestly to establish the reign of social justice according to Christian principles; when rulers and statesmen determine their policies, not by the dictates of a narrow nationalism, but in the light of our common brotherhood in the Mystical Body of Christ. Then, and only then, will we no longer have before our eyes the sad spectacle of brother in arms against brother in private strife, class against class in industrial hostility, and people against people in national conflict.

Come, let us adore—such was the invitation of the church on the festive commemoration of the Saviour's birth. In the course of the years the world has been saying, and is still saying: "Come, let us adore," let us adore wealth and power, pleasure and self-seeking; but it is not in that direction that lie our peace and happiness. During these blessed days a Little Babe has been tugging at our heartstrings, the same who, when grown to sublime manhood, with arms outstretched as though He would embrace the world, said: "Come to Me all ye who labor and are heavily laden, and I will give you rest and you shall find peace to your souls." Come, let us adore. It is a cold and cheerless cave to which we are drawn, but it is only there that the world may learn anew the long-forgotten lesson of love and humility, of total self-abnegation and detachment which it so needs today; it is only there that we can adore a God who was great enough to become small, strong enough to become weak, wise enough to become a little child and thus find His way to our hearts; it is only in the cold cave of Bethlehem that we can hope to find Christ, and with Christ, peace and happiness.

But the loving invitation seems to have been all in vain. The godless, hate-blinded, war-crazed nations and their leaders will have nothing to do with the humble cave of the peace-loving Saviour. They do not want to be hampered in their lust for blood and power by such outmoded Christian virtues as meekness, poverty, self-abnegation, humility, and brotherly love. They turn a deaf ear to the stirring and eloquent appeals of the Vicar of Christ on earth to seek again the things that are God's and are intended for their peace. The last Christmas message of our Holy Father is a masterpiece on the meaning of human dignity and of democracy greater in scope and more comprehensive than the monumental Magna Carta. And yet, the atheistic press of the world, and in particular, of God-hating Russian communism, will have none of it.

The world does not seem to be looking for, nor does it seem to want, salvation—not to say salvaging. But the world is full of such enigmas and contradictions. Did you ever pause to think of the many startling contrasts presented by our modern, so-called, advanced civilization? On the one hand the nations lavishly pour forth their treasure and generously consecrate their time to ameliorate the lot of the poor, of the sick, and even of the criminal; nor is it satisfied with helping the suffering children of the human race, but it stretches its protecting arms over the brute. On the other hand, its peace is only a preparation for war, and the highest training of the citizen is for the slaughter of the soldier. Never before did history tell such appalling tales of reckless, ruthless, remorseless massacre as we read in our daily newpapers. The inspirations of military genius, the science of military destructiveness, the wealth of centuries of industry, and the valor of millions of men are being combined, concentrated, and hurled into horrible collision in order to bring about the poverty of many nations, the hatred of races, the agonizing anxiety and grief of womanhood everywhere, and the merciless butchery of the manhood of the world.

Again, there is the contrast between the paganism of our age and its religion. In part the contrast consists in this, that the modern man who is a pagan is more thoroughly pagan than ever pagan before, while the modern man who is really religious is still more really devout. In part the contrast is also evident in the fact that many modern pagans borrow not merely the language but even the ideas of religion, while many Christians or even Catholics who would resent as an insult their being called by any other name, yet act and think and speak like pagans.

There is a very evident reason for this last anomaly which we see exemplified around us daily. Men have been attempting the impossible task of separating religion from the routine of their daily lives. They want to lead a dual life, a sort of Dr. Jekyll-Mr. Hyde existence; two lives that are distinct and independent and mutually exclusive: their religious life on the one hand, and on the other their political or professional or business activities. The principle, fundamentally wrong and illogical, obtains among many Christians of our day. But religion is a necessity of every day, of every moment of our lives; as intimately united with all our actions as the soul is to the body which it vivifies. It is a power that should permeate and influence every phase of our human journeying. Charity, honesty, meekness, humility are virtues to be practiced not only on Sunday, not only in our intercourse with God, but virtues that must come into play in our daily relations with our fellowmen.

No; religion is not to be confined to cathedral or church, or chapel or meeting house. It should reign supreme in the family circle. It should be the ozone that gives life and health and buoyancy to the atmosphere of the schoolroom. It should be present in the wheatfield or vineyard, where soil and air combine to produce sustenance for man, and to fill his heart with food and gladness. The sweet breath of religion, of God's presence and all-seeing eye, should not be excluded from mine, or workshop, or factory, where matter is made to assume new form for the necessity or comforts of mankind. Its beneficent and guiding spirit should look down and guide the hand of inventor or philosopher, of poet or philanthropist or statesman, when evolving some thought or theory for the development of matter, the expansion of the mind, the alleviation of suffering, the elevation of the race. Wherever God is, and work is to be done for man; wherever the hungry one is fed, or naked clothed, or outcast saved, or solace given to the crushed and bleeding heart—there religion is and there religion should be.

As a stimulation for us in our hope for a better world, it is frequently said that war brings about a revival of religion. Have no illusions: war does no such thing. War is destructive, not constructive; and destructive of the very things that men hold most dear. It is very possible that in times of great stress such as we are undergoing there may be a temporary awakening and a perceptible tufning to God. Thus our churches were crowded on D-day with men and women who were undoubtedly most sincere in the petitions that they sent forth to their Creator to obtain peace and the early return of their dear ones. Again we are told that the boys in all the branches of the service are flocking to divine worship and to their chaplains to seek spiritual aid, and strength, and courage to carry them through the ordeal of fire and blood that they are undergoing. This is undoubtedly true and admirable.

It is not hard to believe that there are no atheists in the fox holes of Bataan. I do not mean to be cynical nor pessimistic, nor irreverent when I say that, for many, this is just a religion of emergency, of expediency, which may last for the duration; and the end of the war will again find us with the same deplorable reign of immorality, unbelief, and absolute contempt for all laws, human and divine, which we witnessed after the last war. Such religion of expediency might well be compared to the resolutions made by Sir Lançelot of the Lake when he lay in a cave, sorely wounded from the diamond joust. He made—

"Full many a holy vow and pure resolve.
"These, as but born of sickness, could not live."

Of this you may be sure: The future after the war will not bring a social, industrial, or religious millennium. Nothing is impossible to God's mercy in answer to prayer and when peace comes the nations may turn to God. But the reform must start with the individual and the family. That must be the program of every right-thinking man if we are to hope for a better and happier world. To nations, as to individuals, it has been said, "Without me you can do nothing." "Unless God build the house, they labor in vain that build it." Irreligion is fatal to true liberty and social order. A corrupt man is a selfish man; an appeal tc duty or to a higher law finds no response in his conscience. A people without a belief in God, or in a future state, cannot long remain enlightened and free. By the soul, and by the soul only, can nations preserve their greatness and their liberties.

Men of the Holy Name, by your strong faith, by your solid piety, by your conscientious discharge of all the duties of civic, social, and religious life, you will have a powerful influence on all who come in contact with you and you will thus contribute to make this a better and happier world—a world in which the Saviour of the world and His divine precepts are better known, loved, and obeyed.

Diplomatic Change-over

EXTENSION OF REMARKS
OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of January 10, 1945:

DIPLOMATIC CHANGE-OVER

(By Mark Sullivan)

ATTITUDE TOWARD RUSSIA

Our diplomacy toward Russia, to express it in a word used in Washington, is "hardening"; this spirit was guardedly expressed in President Roosevelt's message to Congress last week. This is expected to be the attitude he will take when he meets Premier Stalin, in the anticipated conference of the two with Prime Minister Churchill. We are going to ask Russia to concede something, something not for ourselves but in the interest of the whole post-war world.

This is the first time we have asked Russia for anything substantial; always heretofore we have been in the position of giving. The change is a turning point in history. To understand it, a brief recital of past relations between the two countries is desirable

Russia did not become one of the United Nations of her own choice. On the contrary, during the early period of the war, she had a treaty of amicable nonaggression with Germany. Jointly with Germany, the two seized Poland and divided it between them. That made Russia, in effect, an enemy of Britain, even though not in a military sense, for it was to preserve Poland that Britain had taken up arms. During this early period Russians and Americans said harsh things of each other. When Mr. Roosevelt began to lean toward helping Britain, he was denounced by Communists in Russia and in America. When Russia made war on Finland, Mr. Roosevelt, in February 1940, said that "American sympathy is 98 percent with the Finns"; that is, against Russia.

This period of Russian-American relations was ended in June 1941, when Germany turned upon Russia, invaded it. Russia fought back. She fought not as a member of the United Nations and not for their war aims, but wholly in self-defense. At once, however, we and Britain gave help to Russia. The spirit in which we did it was expressed by Prime Minister Churchill: "No one has been a more consistent opponent of communism than I have. I will unsay no word that I have spoken about it. But all this fades away. Any [country that] fights against nazidom will have our aid. We have offered the Government of Soviet Russia any * * * assistance which is in our power."

That is how Russia became one of the United Nations.

We, with Britain, made Russia strong. We made her strong for the purpose of defeating Germany. If now Russia uses her strength in some ways we do not like, this is merely fate. We had to make Russia strong in order to defeat Germany, and Germany is being defeated. The purpose we had in making Russia strong is justified and is being accomplished. The unintended consequence that now arises, Russia now using her strength to do things which we and Britain do not approve, is one of those turns that history sometimes takes.

It is said now, with the facility of hindsight, that before we made Russia strong, before we gave her lend-lease aid, we ought to have asked for promises—a promise, for example, that Poland should be independent. Perhaps it would have been wise. Russia, in desperate fear of being conquered by Germany, almost certainly would have given the promise. Yet it is also true that we had to give the aid, promise or no promise. Our wish that Russia be made able to stand up against Germany was as great as Russia's own. If failure to demand the promise was an oversight, there was an excuse for it. The transaction took place at a time of critical desperation, when there was acute fear that Germany might conquer the world.

We now deal with a strong Russia. By actions and utterances she intends to extend her boundaries by acquisitions of territory, and to reduce the independence of small nations along her western boundary. These steps are counter to the war aims of the United Nations, as repeatedly expressed in the Atlantic Charter and elsewhere. These steps, unless Russia is dissuaded from them, make not for a new world order but for the old. They make for the old practice of spheres of influence, power politics, maintenance of great armed forces. These old practices have never prevented war; they have led to war. Mr. Roosevelt's problem is to persuade Russia to assent to the new plan, expressed in the Atlantic Charter and in the Dumbarton Oaks proposal, for an international organization to prevent war.

Why the Haste?—Can't We Wait on Peacetime Conscription Until Peace Conference?

EXTENSION OF REMARKS

OF

HON. MERLIN HULL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. HULL. Mr. Speaker, Hon. William T. Evjue, editor and publisher of the Capital Times, is one of the most prominent public speakers of the Northwest. He long has been a strong supporter of the present administration, but he has always reserved the right to differ with it when he disagreed with its program.

Very recently, Mr. Evjue sent the following telegram to the President:

I regret your announcement in favor of universal military training. Are we now going to adopt the very thing we are fighting?

On January 7, Mr. Evjue delivered a radio address over a State-wide hook-up of nine radio stations on the same subject. His able address merits the attention of Senators and Congressmen. It was as follows:

For 169 years the United States has followed a tradition of antimilitarism. Throughout its entire history the United States has never approved military conscription in a time of peace. Is this tradition of peace now to be thrown overboard at the very time we are fighting a war to end wars and aggressions based on the Prussian pattern of military conscription?

These questions are inspired by persistent reports emanating from the Nation's Capital that a strenuous effort is to be made to jam through the new Congress a bill providing for compulsory military training for American youth following the endorsement of such a proposal by President Roosevelt. It is said that congressional leaders plan to rush the bill through before American sentiment can be mobilized against such a proposal and before the millions of young men now in service return to the pursuits of peace with their hatred of war and all its works. Under the bill proposed in Congress every American boy, upon reaching the age of 17, will be conscripted for 1 year's service in training camps under the supervision of United States military authorities.

I believe that the adoption of such a proposal by the United States Congress in advance of the peace conference to follow this war will be a national tragedy and a blow to the cause of world peace. Millions will be shocked by the President's approval of peacetime conscription. We will be serving notice upon the nations of the world that we have abandoned all hope of a world peace based on international agreement and understanding, and on a world organization that will promote peace, that will exalt such concepts as decency, justice, and good will above those of brute force, terror, and aggression.

When the time comes for taking part in the peace conference, will we be able to convince other countries that we are sincere in our desire to become a member of the family of nations while back home, for the first time in 169 years, we are inaugurating a system of peacetime military conscription based on the Prussian pattern which we have been fighting as a threat to mankind?

Are we now going to publicly admit that after the horrible slaughter of American boys in this war that we are not going to alter the system under which war will remain, as the only means for the settlement of disputes between nations? Will not military conscription in a time of peace in this country make a mockery of all that we have been fighting for in this war?

Strangely enough, the cause of isolationism will be advanced by these advocates of peacetime conscription who have been denouncing isolationists throughout this war. How can any American citizen consistently advocate a peace based on international action and a system of peacetime conscription at one and the same time? Doesn't one contradict the other? If we are to support peacetime conscription now doesn't it mean that we have but little faith in any program of international agreement and understanding? Aren't we in effect saying that international action may be all right, but it is better to depend on our own military might and power? Isn't that exactly what the isolationists have been telling us?

We seem to live by slogans in America. There are two plausible slogans which will bring the support of thousands to the cause of peacetime conscription. There is the argument: "Future Hitlers will think twice before starting trouble if the United States is prepared." There is the other argument which will bring thousands of recruits to peacetime conscription: "Do we want to be caught again as we were at Pearl Harbor?" But does history bear out the claim that aggressors have withheld their attacks because the countries they picked upon were well armed? In the last World War the Kaiser did not hesitate to attack France and Russia simultaneously, although France had a splendid army and the Russian Army was the largest in the world and not suspected of being as weak as it was.

The world is still wondering why Hitler attacked Russia when he had not yet conquered England and the United States was beginning to get into the picture. In 1903 Japan atacked Russia in what at the time seemed overwhelming odds. In this war Japan launched a naval atack upon the United States despite the fact that Japan had nothing like our resources when it struck at Pearl Harbor. All history reveals that physical might and power have never been guarantees against attack.

After all, is there such a thing as preparedness for modern war? If we are to agree now that we must prepare for war because another war is possible what will the pattern of the next war be? Who knows? Are we going to train these young men for the infantry? Are we sure that there will be any infantry of present-day standards in future wars? What type of air warfare will come? I have always remembered what George Bernard Shaw said when war broke out in Europe and the military might of Nazi Germany was being compared with an unprepared England. Mr. Shaw pointed out that England would at least start from scratch and that as soon as her new planes were placed in the air the planes built by Hitler in 8 years of military preparedness would start to become obsolete. How quickly that very thing happened.

Remember how that little band of R. A. F. fliers stood off all that German air might could send against them in that historic battle over London? Within a year, because of the tremendous strides made by English and American plane builders, the planes built by Hitler during 8 years of military preparedness became so much junk. Today, right in the midst of a war, we are witnessing the likelihood that the latest fighters and bombers designed by American and British engineers are becoming obsolete because of new developments in V-bombs and jet propulsion planes. Today a B-29 Fortress is manned by 10 or 12 men, but at this moment we are witnessing the development of jet propulsion, radio-controlled planes that can attack an enemy hundreds of miles away without a man aboard. In all

of the countries engaged in this war there are undoubtedly billions of dollars of war material lying around because it is obsolete.

If military preparedness is the answer to national security then what is the explanation for the fact that Germany, after having reared the greatest array of military armament in human history, is now going down to defeat?

Those who know of the traditional opposition of the American people to peacetime militarism and conscription are seeking to disguise the bill in Congress as much as possible. Instead of stressing the military phase of the bill they are emphasizing the benefits which they say will come to American youth through physical-fitness training for citizenship and discipline. It is obvious that no individual is going to be physically fit at 19 who neglected or was deprived of opportunities for physical fitness up to 18. The years of adolescence are crucial years.

But there is a good way to test the sincerity of those who maintain that physical fitness is a primary purpose of this military program. Go back over the years and you will find that the National Association of Manufacturers, the United States Chamber of Commerce, and other big corporate interests that are now supporting peacetime conscription and voicing their solicitude for the physical well-being of youth were the same interests that fought nutritional programs in the schools, child-labor legislation, community health centers, better medical care, higher standards of living, and all other activities designed to protect and to promote the physical well-being of youth.

Peacetime conscription as an instrumentality for promoting good citizenship and discipline can also be challenged. Our whole educational process is designed to afford self-expression and to develop self-reliance among the millions who come within its reach. Military training is authoritarian. Military training demands a slavish obedience to a military caste that makes decisions and the regulations—a training that is antagonistic to self-expression and self-reliance.

Think of the opportunity that powerful privileged interests would have to indoctrinate youth with their own economic ideology and to insulate youth against any social proposals distasteful to the entrenched economic order under a system of compulsory military training. I do not think that anyone will deny that the professional military caste is conservative in its political and economic thinking and is the defender of the status quo. Have you ever thought of the implications in the large number of military officials who upon retirement take big salaried jobs with big business? There is significance, too, in the fact that the Members of Congress who are supporting these peacetime conscription bills are the Members who will be found voting against labor and all bills designed to promote the social welfare, including that of youth.

I wonder if labor is aware of the danger that confronts it in compulsory militarism during a time of peace? The enemies of labor have always favored a large military establishment as insurance against unions and strikes. Labor should remember that under this plan members of unions could be forced to become strikebreakers.

There is another phase of this program which is important. The Negro problem is now looming as one of the most serious problems that will confront this country. During this war we have witnessed how the Negro has been segregated and reduced to a menial status in the armed services. He has been excluded from many branches of the service. Increased tension between the whites and the Negroes has resulted. The treatment we have given the Negro is a black mark against our professions of democracy. While the spokesmen for compulsory military training are trying to sell the idea to the American people on the representation that if we will promote democracy, good citizenship, and physical fitness among youth, is there any reason to believe that the professional military caste will treat the Negro any differently under peacetime conscription than under wartime conscription? Will not such a system continue to aggravate the tension between white and black?

But I repeat that it will be a national tragedy if peacetime conscription is jammed through Congress in advance of the peace conference. What a blow that will be to the efforts that have been made to build a structure of peace based upon the determination of the nations of the world to join together to abolish the ugly institution of war. If we now hurriedly jam through Congress this proposal for peacetime conscription we will be telling the rest of the world that the "four freedoms," the Atlantic Charter, and Dumbarton Oaks represent nothing more than empty rhetoric. We will be notifying the world that we still believe that war will continue to be the method by which nations will settle their disputes.

Is it too much to ask Congress that action be withheld on this bill until after the peace conference? Is it too much to ask that action be withheld until the millions of our boys who have been fighting militarism in other parts of the world can return and their viewpoint learned? Where is there any mandate from the American people for peacetime conscription and the abandonment of a tradition that this country has stood for for 170 years?

Today I would like to make an earnest appeal to every listener within sound of my voice. Write to your Congressman and to our United States Senators at Washington. Tell them that action on peacetime conscription should be held up until after the peace conference. If you are a member of a religious, fraternal, civic, or labor organization make an effort to get your organization to adopt resolutions against this proposal and forward these resolutions to your Congressman and United States Senators. We lost the peace in 1920 because we torpedoed the attempt that was then made to get the nations of the world to join together to outlaw war. If the American people are now going to take the position that war will continue to be the method of settling disputes what are we going to say to American boys in the service when they return? What have they been fighting for?

Insurance for Old-Age Recipients

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. MILLER of Nebraska. Mr. Speaker, under permission to extend my own remarks in the Appendix of the RECORD upon the subject of insurance for the recipients of old-age assistance, I am suggesting, Mr. Speaker, that the Federal Government make additional funds available for use by the States in providing an insurance policy, either private or State operated, which will guarantee the recipients of old-age assistance adequate medical, surgical, dental, hospital, and nursing care.

There are several insurance companies interested in such a plan.

At the present time the States give some additional funds to the recipients of old-age assistance, but only after a careful check-up by some social-service worker to establish the need. These additional funds amounting to from $4 to $10 a month can be used for the necessary health protection. The recipient does not always use it for health. They frequently need more acutely the necessities of life.

Many of the illnessses which the older people now have are due to worries—worries about their health, about medicine, and whom to call should they become ill.

The moneys now being expended for supposedly health facilities could provide an excellent insurance policy which could be operated by the States in much the same manner as that of the compensation courts. I believe that such an insurance policy could be written under a limited profit basis and could be operated in most part by private insurance companies.

The patient-physician relationship should not be disturbed. This should be scrupuously maintained. The old-age beneficiaries should have the right to call the physician of their choice.

Such a plan can be put into operation with little additional expense. It would meet the growing needs of additional care for the recipients of old-age benefits.

The President's Message

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of January 8, 1945:

THE PRESIDENT'S MESSAGE

President Roosevelt's annual message to Congress, only 2 weeks before his inauguration as the man chosen to lead the country through 4 years to come, is too largely a recounting of recent history. The time and the occasion demanded that we look forward—all of us—as a nation. The only way we can look forward intelligently on such complex problems as foreign affairs is for the President to be specific and revealing. He was not that.

On the domestic side, Mr. Roosevelt asks for service legislation to meet many manpower needs. This is on the principle which many have come to recognize of "the duty of every citizen to do his or her part in winning the war," as the letter he quotes from Secretaries Stimson and Forrestal puts it. All must realize that the magnificent work being done is not evenly shared; that while many are working overtime, many others look on war work as the job of someone else.

It is recalled by some observers that, although the President asked for a national service act, he did not fight for it as he has for many of his recommendations, and Congress left the business to one side in a session showing little leadership worthy of the national emergency.

Mr. Roosevelt fails to give the explanation and discussion most hoped for—the statement on international policy, for which the country has been waiting. This is the most significant omission in the longest message he has sent to Congress. He says some excellent things, particularly his warning that "It will not be easy to create this people's peace." He warns also against those who criticize proposals because the set-up is not perfect. "Perfectionism," he says, "no less than isolationism or imperialism or power politics, may obstruct the paths of international peace." He adds that after the last war we "preferred international anarchy to international cooperation with nations which did not see and think exactly as we did."

This is well said and will be remembered. Nearly all Mr. Roosevelt says is well said. Yet one reads and rereads the message with a sense of something missing—of much missing—that ought to have been said. We are ordinary people. When something occurs that shocks us, when the promises of the Atlantic Charter seem to be lightly treated by the President, we need something definite about it. We are thinking of the future—the future for which so many millions are working and fighting and hundreds of thousands are dying.

It was an occasion for the President to restate the principles which motivate—must motivate—this Nation in its greatest war. That was needed more than history.

Waste and More Waste

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. KNUTSON. Mr. Speaker, letters that come to my desk indicate an increasing uneasiness on the part of the people back in the district over the manner in which the home front is being governed. From these communications I have decided to insert in the RECORD one that discusses the entire subject calmly, fairly, and without bitterness. The writer is a very successful farmer who has done his full share in the war effort back here. For obvious reasons the writer's name and address are omitted:

MINNESOTA, *January 3, 1945.*

Congressman HAROLD KNUTSON.

DEAR SIR: I am writing you for two reasons.. First, I want to express our deep appreciation for the service you rendered us last summer which enable us to obtain a power cultivator in time to care for our crop. We received the power lift in the fall so will be fairly well equipped for the coming year. We are very thankful.

Secondly, we want to lift our voice against the move to draft IV-F and civilians for war work. It seems that nearly every civilian possible has already pulled up and gone into war work, and with rationing being tightened all the time. In rural districts the largest percentage of draftees are being taken off of farms now and the production will naturally have to go down.

But back to war workers. There is hardly a day but we meet and talk with someone who is either in war-production factories or closely connected with it and we always hear the same story regardless of what part of the United States they come from. They all tell of days whiled away without any work accomplished. Big wages and no labor. Most of them would much rather work but are not allowed to by their bosses. Then why draft more men? Why not pass some legislation to get at the heads of these labor rackets. My brother has traveled for 2 years doing electrical wiring with these construction workers. He says many days six workers only three lengths of pipe in a day. If he were working on his own he could do that much alone in less than one-half day. Out in Pasco, Wash., seven carpenters put on one 16-foot board in a day. One man we talked to a couple of days ago who has been working for a long time in California, and was back here to dispose of his farm before going back to work, when asked about it said, "No; we sure don't do much." I have heard them tell of sitting with large torches heating up piles of iron to keep warm. Men tell of being told by their bosses to keep out of sight when not busy so they do a little bit and then sit in a basement and talk. I could go on for hours rehearsing the reports direct from those who see and know; I am sure you have heard them from other sources. My brother-in-law, who is now in the armed services, worked for a long time at the Rosemont plant and at the shipyards in Portland and he surely told many stories of waste, both in material and manpower. He said the truckers of which he was one, driving large semitrucks, would read a magazine a day while they sat in their trucks with the motors running.

What is this United States of America coming to when labor unions are allowed to run everything. The Government continually calls for War bond sales to support these loafing millions while the boys die and die and die. It seems to me they are endeavoring to dislodge every civilian in the country.

Another thing that raises our indignation is the Government seizure of Montgomery Ward & Co. Where is the free America that the boys are giving their lives for? If a company cannot hire a person that does not belong to a union, then people cannot earn an honest living unless they join the union. The Bible says, "The servant is not greater than his Lord," but this administration gives the servant the right to tell the owner who he can hire, what he has to pay, and how much work they have to do. If he doesn't cooperate they go into his place of business and do thousands of dollars' worth of damage and the Government supports them and seizes the business.

We have been in hopes that Congress could do something to halt this mad rush to destruction. I Thessalonians v tells us that when they shall say "peace and safety, then sudden destruction cometh upon them. Therefore, let us not sleep as do others, but let us watch and be sober." The way things are going, it need not be long before we "cannot buy or sell without the mark of the beast," as the Scripture tells us.

I just heard a report on the radio that the President believes agriculture can be carried on by older men and all agriculture deferments should be taken away from young men. In my mind, they cannot expect top production on farms where only older men are left. Farming is a lot of very hard labor and hundreds of men will just retire from their farms rather than try to kill themselves producing. I don't believe these men know anything about the work on farms where hay has to be put up and crops cared for and harvested. The farms will become, as they already are starting to, the property of land agents and bankers and held for speculation. What kind of a famine will we be seeing. In some cases, it seems, draft boards use their powers to favor banks and land sharks. I don't know if it is too late to do anything or not, but I do believe our only hope is in the acts of Congress.

Yours for a better country and with best regards to your personally,

P. S.—Farmers as a whole greatly resent the Government expecting them to do the work of 4 men and buy bonds to pay big wages to war workers that sit and talk and waste their time. If people believed their money was helping the boys, they would give to the limit and without reserve, but they are tired of making millionaires and being played for suckers.

Build Now for Peace

EXTENSION OF REMARKS

OF

HON. ROBERT L. RODGERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. RODGERS of Pennsylvania. Mr. Speaker, the question of America's foreign policy is now being carefully considered by our people in all walks of life, intent as they are upon seeing to it that the peace which follows this war is not only just and honorable, but enduring and enforceable as well.

In this connection, Mr. Speaker, I call attention to an address entitled "Build Now for Peace," which was delivered by Pennsylvania's former United States Senator, James J. Davis, on January 14, 1945, before Philadelphia Lodge, No. 54, Loyal Order of Moose, which has an enrollment of approximately 10,000 members.

This is Mr. Davis' first public address since his retirement from the United States Senate. It is an address which might well be read by every American citizen who is sincerely interested in the problems of world peace, and under unanimous consent I ask that it be printed in the Appendix of the RECORD as a part of my remarks:

Since the challenge of infamy was hurled down upon us at Pearl Harbor, we in America have responded in full resolve and full vigor to turn back the tides of aggression and to preserve human freedom throughout the world.

That we and our allies have achieved a significant degree of success in this effort is strongly attested to by the fact that in every theater of war the enemy is on the defensive, mustering a final, desperate effort to stave off his inevitable defeat.

We in America are mindful of the many sacrifices made and being made by our fighting men and our fighting allies. We are mindful of those who suffer in hospitals and rehabilitation centers. We are mindful of those lonely and distressed Americans who cling to the fringe of life and hope behind the barbed wire of some dismal foreign prison camp. We are mindful of the blue and gold stars in the windows, of the broken homes in America.

And mindful of all these things, we have resolved that the peace which follows this war shall give to us and to all men a world worthy of the innumerable sacrifices which have been and are being made in the name of peace.

To this end we have pledged ourselves to the creation of a just and lasting peace among all nations. We have pledged ourselves to and have largely enacted a program to aid in the rehabilitation of our returning veterans, to the end that those who fight our battles shall never come to want.

And, finally, realizing that the economic fate of this Nation rests largely upon the buying power of our people, we have pledged ourselves to attain a sustained program of economic progress in the post-war era which

will provide all our people with decent jobs at decent rates of pay.

Now the achievement of all these goals is absolutely essential, if the great and inspiring efforts of our people on the fighting fronts, and in the mine, mill, and factory are not to be in vain. And in vain they will be, unless we and our allies stand united together and build now for peace.

A number of outstanding events in recent weeks—among them the sudden counter-offensive of the Germany Army, the recognition by Russia of the Lublin Committee as the bona fide government of Poland, the announcement by Great Britain that Russia's territorial claims in pre-war Poland must be recognized, and the tragic uprising in Greece—all these events have served to focus our attention and the attention of the world generally on those highly important problems of world peace and foreign relations.

We in America have repeatedly been told that we are fighting for a just and lasting peace—a peace which shall embrace and recognize the cardinal points contained in the Atlantic Charter. And in recent days, notwithstanding the fact that the nonexistence of that document has now been officially admitted, we in America are assured that the principles of the Atlantic Charter continue to remain the principles for which we fight, and that this Government shall do its utmost to see to it that the forthcoming peace is built upon the principles of that charter.

Meanwhile, our most powerful allies in this war, faced with concrete and realistic situations, have made far-reaching political and military decisions in Greece, Poland, and elsewhere on either a unilateral or a bilateral basis. But the action thus taken is not wholly without justification.

History, both past and present, has amply demonstrated the fact that the greatest menace to the peace of Europe and consequently to the peace of the world has been the powerful, militaristic state of Germany. And in both World Wars, the Nations of France, Russia, and Britain suffered and are suffering almost irreparable damage at the hands of the Teutonic warriors.

The nations of Europe are determined above all else to see to it that their lands are never again invaded, that their cities are never again destroyed, and that their population is never again decimated by the armed power of Germany.

Therefore, as the war has unfolded, as the German legions have been slowly but relentlessly driven back inside their own borders, Russia, Britain, France, and other nations have taken such action as they have in order to secure themselves against any future German aggression.

Now, the developments in Greece, Poland, and elsewhere in Europe have assumed their present form and substance largely because of the fact that the Government of the United States has thus far failed to come forward with any sound and clear-cut statement of its international policy.

It is now conceded in many quarters that had the United States taken a strong stand for an all-inclusive system of international cooperation, the nations of Europe would have devoted their energies to the implementation of that system, rather than to resorting to the methods of settlement they have thus far used.

This Nation and its allies are not fighting this war solely for the purpose of defeating Germany and Japan on the field of battle. We and our allies who have suffered millions of casualties, we who have expended countless treasures and endured endless sacrifices, are in reality fighting this war for the purpose of creating and securing a system of peace which will, for many generations to come, insure to all men everywhere a decent, uplifting human existence, free from the clutches of fear, want, and uncertainty.

Surely this is the type of peace we must secure if we are not to witness some future blacking-out of the lights of human freedom and civilization—a blacking-out which bids fair to become permanent this time, for many there are who feel with all sincerity that our civilization could never withstand the terrifying strain of another world war. Therefore, we must begin now to fashion a system of peace for the world which will stop all attempts at aggression in their infancy and maintain peace and equilibrium among all nations.

Now there are some who say that it is wholely impossible to take any definite steps toward world peace until we have fully and completely defeated our enemies on the field of battle. With that thesis, I most heartily disagree. The time for action is now. For too long a time we have been dealing in vague generalities and high-sounding ideals.

Current events have shown us that concrete action is necessary—that unsupported ideals must inevitably fall before less idealistic acts, where such acts are supported by a definite plan of action.

It has been said by others that these unilateral settlements and bilateral agreements are being made in Europe because there is skepticisim in certain quarters as to whether or not the United States will participate fully in an international organization to preserve the peace of the world. If ever there were any reasons to hold such a belief, the events of recent date in our own United States Senate should certainly have fully dispelled them.

Let me say that one of the great stumbling blocks to America's participation in the old League of Nations can be traced to this very tendency to wait until the war ends before any settlements looking toward peace are undertaken.

I was in Paris when Woodrow Wilson went there to attend the peace conferences. And you will recall, I am sure, that when he arrived at those conferences, Wilson was almost immediately confronted with a whole series of international agreements, many of which contained secret clauses. You will also recall that many of these agreements were themselves in direct conflict with one or more of Wilson's Fourteen Points. These treaties contained arbitrary and far-reaching territorial adjustments; they also contained military and political commitments which were diametrically opposed to certain of the Fourteen Points. And it was these secret commitments, more than any other single factor, that caused the United States to reject the covenant of the old league.

Thus, if we would achieve our ideal of a lasting peace—a peace which will do full justice to our fighting men and to the heartbreak and oppression which have been endured all over the world, we must cease talking in pious platitudes, we must cease deferring action. We must immediately undertake to organize the United Nations for peace as fully and as effectively as we have organized them for war.

We should, at the earliest possible moment, invoke the Dumbarton Oaks agreement, and establish the peace machinery it authorizes, with such modifications as are deemed necessary. We must put the council, the assembly and the world court to work solving the problems of the hour.

After this machinery has been put into operation, we should bring all international disputes before it for final settlement, and all unilateral and bilateral actions thus far taken should be subjected to the final approval or disapproval of the council.

By this type of early action, and by this type of action only, can we avoid the creation of a veritable network of separate alliances and agreements which, by the time the war ends, may render any concerted international plan for peace totally incapable of realization, and cause the nations of the world to resort once again to the old power-politics system of competing alliances which have heretofore succeeded only in bringing the nations of the world into recurring world wars.

Today the United States of America stands ready with open arms to welcome a just and honorable peace and to lend its full power to an international organization created and equipped to maintain that peace by whatever means it may require.

This Nation seeks no territorial aggrandizement, no booty, no unworthy aim. This Nation seeks peace—a peace that renders full justice to the great and the small alike. This Nation seeks also an international organization which accords equal dignity, equal power, and equal voice to the great and the small alike. This Nation seeks to create a world order of progress, stability, and peace for the great and the small, for the weak and the strong alike.

This Nation, which has always extended a helping hand to the downtrodden and the stricken; this America, which has twice spent unstintingly of its treasure and its blood to secure honor, decency, and peace in the world, must begin now to prosecute its aims of total peace as thoroughly and as completely as it has prosecuted and will prosecute its aims of total war.

No longer should we remain silent. No longer should our policy remain open to doubt. Let us proclaim our united stand to the world. Let us strive to build a union of all the nations of the world—a union that will promote the general welfare of all nations as fully and as effectively as that great union of States has done which we created here on this continent many generations ago.

Let us turn our eyes and our thoughts toward the realm of reality. Let us fashion that new and enduring world of lasting peace before the winds of adversity destroy it before our very eyes.

Uniform Air Laws

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. HARRIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very fine and appropriate editorial from the El Dorado Daily News, El Dorado, Ark., on uniform air laws:

UNIFORM AIR LAWS

The 44 State legislatures meeting this month and next will have before them 3 bills of national importance. They are the proposed uniform air laws which have been drafted by the National Association of State Aviation Officials and the National Institute of Municipal Law Officers, after consultation with the Civil Aeronautics Administration.

The bills are titled "The State Aeronautics Department Act," "The State Airports Act," and "The State Airport Zoning Act." Their general purpose is to avoid, before post-war flying expansion begins, the mistakes and Federal-State conflicts that have plagued other forms of transportation in the past.

Under the first act the C. A. A. would still make the regulations governing the competency of flyers and airworthiness of planes, as it does now. But the registration of Federal licenses and the enforcement of these uniform regulations would be in the hands of the States. By this act the States would adopt regulations consistent with the Federal rules, and would define their rights to estab-

lish and maintain airports and to finance and otherwise assist developments by the States' political subdivisions.

The State airport act would give the States a uniform law generally concerned with Federal aid, financing, and taxation of State, county, and city airports. The State zoning act would protect planes, pilots, and passengers from such hazards as high-tension wires and tall buildings in the immediate vicinity of flying fields.

These proposed laws are the result of careful study and the consensus of many minds. And they seem eminently commendable for a variety of reasons. Perhaps the most important is that their passage would avoid the creation of another great bureaucracy in Washington.

It is not extravagant to predict that a half million air line, private, and commercial planes may be flying American skies before many years have passed. The intricacies of licensing and regulating them will require a large force which might more safely and practicably be distributed among the several States.

The present C. A. A. requirements for pilots and planes have worked out successfully. But a State government cannot enforce Federal laws. So, if air control is to be decentralized, it will be necessary to duplicate these requirements in State laws and assign enforcement to the States.

It is true that some legislatures have a touchy feeling about Federal dictation. But it seems to us that in this case the dictation, endorsed by several State governments, is beneficial. To combat it would be disservice to the States as well as to the country as a whole.

Farm Labor Situation in Oklahoma

EXTENSION OF REMARKS

OF

HON. ROSS RIZLEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. RIZLEY. Mr. Speaker, under leave granted me to extend my remarks in the Appendix of the RECORD, I make a part of the same copy of a letter, dated January 10, 1945, from Mr. C. H. Hyde, of Alva, Okla., one of the outstanding farmers in my congressional district, directed to the senior Senator from my State.

This letter quite correctly analyzes the situation in respect to farm labor throughout the Eighth Congressional District in Oklahoma and I call it to the attention of Congress and the country for the reason that it comes from one who actually knows conditions as they exist in respect to labor on Oklahoma farms. It would indeed be advisable for the various agencies having to do with the manpower situation in the country, including Selective Service, to consult actual farmers such as the writer of the letter referred to, before making any drastic changes in respect to farm labor. We should remember the admonition that bare backs and empty stomachs will not win wars.

The letter follows:

ALVA, OKLA., *January 10, 1945.*

Senator ELMER THOMAS,
Washington, D. C.

FRIEND ELMER: There is a lot of talk now about drafting farmers. On my part, it does not make any difference. In threshing bundles I shocked last year, here is the crew we had: One boy 8 years old driving tractor; one boy 9 years old, the same; the threshing-machine operator is about 50 years old, and his 10-year-old son run the tractor to pull it. We had four boys under 15; three between 17 and 38, and all three of them have taken examinations now for the Army; one 40 years old, one 60, and one 65 years old, and myself who is 76.

They have taken about all of the farm help now. They have made a mistake; if we should have a fair crop this year, I do not know how we can harvest except possibly with the combine.

Oats and barley should be cut with the binder and threshed out of the shock. I know one man who has two sons in the Army. He is probably 60 years old. He ran his combine this year, and his 13-year-old girl ran the tractor. His wife hauled wheat in the truck to Alva. When they could not unload wheat in Alva because of car shortage, he unloaded the wheat, and his wife ran the combine.

I am going to the State farmers union convention next week. Personally, I do not expect much out of it, but do not get alarmed about taking the farm boys, because they have got them now.

Your friend,

C. H. HYDE.

Vital Committee Posts in House Go to P. A. C. Men

EXTENSION OF REMARKS

OF

HON. WALTER E. BREHM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. BREHM. Mr. Speaker, those who know me will testify that I am not a pessimist given to gloom and forebodings.

I have always tried to have faith and believe, often in spite of evidence to the contrary, that God is still in His heaven—all is right with the world.

It goes without saying that I have always had an abiding faith in the principles as advocated by the Republican Party; as well as a firm conviction that come what may the time-honored and tested principles of the real Democratic Party would ever hold fast to the fundamental principles of our Republic.

However, after reading of the action taken in closed session by the Democrats of the House on yesterday, I am convinced that the leaders of the present Democratic Party have not only lost the ball, but are not even calling the signals.

Earl Browder calls the signals while Sidney Hillman's open field runners carry the ball to the left of center and are making steady gains.

I submit the following as evidence to support this statement and most reverently say "May God have mercy on us" if those of us in both the Republican and Democratic Parties, who still have faith in the fundamental principles of our Republic, fail or refuse to form an all-American team and again get possession of the ball. We cannot win games when the other team has the ball.

VITAL COMMITTEE POSTS IN HOUSE GO TO P. A. C. MEN

(By Willard Edwards)

In a closed caucus session marked by heated bickering House Democrats yesterday gave official recognition to the invasion of their party by Sidney Hillman's Political Action Committee.

Posts on more than a score of leading committees were awarded to new Members listed by the C. I. O.-P. A. C. as owing their elections to Hillman's organization, which spent one and one-third millions in the campaign.

COMMITTEES LISTED

On such important committees as Military and Naval Affairs, Agriculture, Banking and Currency, Foreign Affairs, Immigration, Interstate and Foreign Commerce, Labor, Rivers and Harbors, and Roads the Hillman bloc landed from three to seven Representatives.

Conservative Democrats made one effort to contest the rise of the left wingers to power by moving to deny Representative MARCANTONIO (American-Labor), of New York, a seat on the Interstate and Foreign Commerce Committee. MARCANTONIO long has been regarded as pro-Communist and is the pet Congressman of the Daily Worker, official organ of the Communist Party.

Representative BOREN (Democrat), of Oklahoma, argued that the American Labor Party Member was not entitled to endorsement by Democrats, but Speaker RAYBURN, of Texas, talked against the motion, and it was defeated by voice vote.

DEMOCRATS AT PEACE

There was no fight against the six Democrats picked for the new Committee on Un-American Activities. As previously revealed, Representative HART (Democrat), of New Jersey, will be the successor to former Representative DIES (Democrat), of Texas, and Representative RANKIN (Democrat), of Mississippi, who led the fight to make the committee permanent, will be ranking majority member.

The two new women Democrats, EMILY TAFT DOUGLAS, of Illinois, and HELEN GAHAGAN DOUGLAS, of California, both listed by the C. I. O. as Hillman followers, were rewarded with seats on the Foreign Affairs Committee. Representative RYTER, of Connecticut, another freshman, who is a member of the Hillman bloc, also was selected to fill a vacancy.

The P. A. C. scored a clean sweep in connection with the Naval Affairs Committee, securing all five vacancies. Representative DE LACY, of Washington, member of organizations stamped subversive by the Attorney General, and well known on the west coast for his Communist leanings, was one of these. The others are Representatives FOGARTY, of Rhode Island; MADDEN, of Indiana; HAVENNER, of California, and BIEMILLER, of Wisconsin.

ON MILITARY COMMITTEE

Two of four vacancies on the Military Affairs Committee were given to Hillmanites. They are Representatives HOLIFIELD, of California, and PRICE, of Illinois.

The House Labor Committee will be almost wholly under C. I. O.-P. A. C. domination as a result of the Democratic caucus action. There were five vacancies, and Hillman bloc members got them all.

Chairman of the committee is Representative NORTON, of New Jersey, a bloc member, and another hold-over is Representative LESINSKI, of Michigan, similarly labeled. The new members are Representatives HOOK, of Michigan; PATTERSON, of California; GEELAN, Connecticut; GREEN, of Pennsylvania, and POWELL, of New York. The last-named is the new Negro Representative whose leftist leanings are well known.

For a Modernized Congress

EXTENSION OF REMARKS
OF
HON. ROGER C. SLAUGHTER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. SLAUGHTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of January 11, 1945:

FOR A MODERNIZED CONGRESS

Of the many men who have learned our Government in the school of experience and should be useful counselors on the better functioning of our instruments of national control, there are few who equal James F. Byrnes in personal knowledge of the legislative, the judicial, and the executive departments.

He has, therefore, performed a real public service in showing how Congress can be reconverted from its present concentration on constituents and cumbersome committees, to a really efficient coordinate branch of the Federal Government. His views are presented in the Mirror of Public Opinion on this page today.

Mr. Byrnes disagrees with the criticism of the intelligence or patriotism of Congress. Rather, he feels that the Congress falls too far short of being the sum of all its parts—the trouble isn't with the individual Congressman, it's with Congress as a clumsy, slow-moving machine.

To bring it to the true coordinate rank he proposes five changes: Adequate staff assistance for the individual Member, together with better pay; thorough revision of the committee system, reducing the number in each House to 10 or 12, and making their chairmen a congressional cabinet, to meet with the President; a permanent staff of trained career men to research for and advise the committees; better appropriation procedure; and the proposal for questioning Cabinet members on the floor of the House.

Of his five major recommendations, that which would benefit Congress the most, in our opinion, is the complete reorganization of the committee system. As Mr. Byrnes points out, both Houses function through committees excessive in number, overlapping in coverage and cumbersome in operation. Were the number in each House reduced to 10 or 12, as he urges, and the indispensable tool of trained staff provided, Congress could probably amend its slow and slipshod ways. Woodrow Wilson, in his Congressional Government, published in 1884, pointed out this flaw, which is even more grievous now than then. This reform cannot be made too soon.

The Nation, probably, would benefit the most from the ex-Justice's companion idea that the chairmen of these 20 committees should constitute a congressional cabinet to meet with the President, thus promoting a closer relationship between the White House and Capitol Hill. Here would be a major move toward bridging the gap on Pennsylvania Avenue. Also, it would be a move toward the British parliamentary system—perhaps as large a one as our mores justify. It would go far toward making a team out of executive and legislative departments.

The individual legislator needs, as Mr. Byrnes says, adequate staff assistance, to take off his neck some of the constituent service which now "make it almost impossible for a Senator or Congressman to find the time necessary to attend to his legislative duties." Added to this help for the Member as individual, the legislative collectivity must be implemented with the tool of research performed by a permanent staff of trained career men of good minds and judgments to aid the committees.

Better pay would in the long run improve the caliber of the national legislators, just as would the sense of accomplishment and personal dignity that would come from a more resultful functioning of the legislative mill.

Irrespective of the details of the Byrnes program, the fact that he would articulate it should indicate the importance of congressional reform. It is greatly to be hoped that the spirit manifest in the last three Congresses, that now is the time to modernize, will be catalyzed into action.

Prices Must Be Kept to the 1941-42 Level

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. HOOK. Mr. Speaker, in a few weeks, I have been assured, this Congress will be given the opportunity to consider legislation on the most important problem to come before this session of Congress, the problem of providing a stable, highly productive post-war economic system in this country. This is the most important problem before us because on its successful solution will depend not only the welfare of the American people, but also the preservation of the American system of production and the American way of living. I do not think it is at all an exaggeration to say that the possibility of maintaining international peace also depends on our ability to solve the problem of post-war full employment. For, unless we can have stability and prosperity here at home, how can we hope to have it in our international relations?

Marriner S. Eccles, Chairman of the Board of Governors of the Federal Reserve Board, recently told the National Industrial Conference Board that, "a high level of consumers' expenditures is the basic requirement for post-war prosperity." He went on to say that "a high level of consumers' expenditures is not possible without a large volume of wage and salary income. If our economy is to operate at full capacity, average wage and salary incomes must be high enough at normal hours of work to give the people sufficient purchasing power to take the product off the market. When, after the war, hours return to normal and overtime pay is discontinued, total wage and salary income will decline sharply. If we are to avoid sharply declining prices and loss of markets which discourage production and business expansion, a gradual upward adjustment will be necessary in the wages and salaries of the great mass of comparatively low-paid workers. This must be accomplished without increasing prices. Otherwise the desired increase in consumption would be absorbed by a rise in the cost of living."

Let me repeat the last part of this quotation because it is so important now. Mr. Eccles says:

This must be accomplished without increasing prices. Otherwise the desired increase in consumption would be absorbed by a rise in the cost of living.

Because this point is so important, I want to call to the attention of this Congress a most important statement on reconversion pricing recently issued by the Labor Policy Committee of the Office of Price Administration. It bears the signatures of the representative of the three largest labor groups in the country, the C. I. O., the A. F. of L., and the standard railway labor organizations. It is called, What Workers Can Do About Reconversion Pricing.

I especially want to urge that this statement be given consideration by the Office of Price Administration, and by every other agency of the Federal Government, because there is no use in even considering legislation for full employment if the Federal agencies are going to permit prices to go up and thus wreck the possibility of our people being able to buy the output of our plants and our workers.

Under the permission granted me, I am including the statement on what workers can do about reconversion pricing:

WHAT WORKERS CAN DO ABOUT RECONVERSION PRICING

THE PROBLEM

After the war, full employment will depend on the people being able to buy everything that our workers will be able to produce. This means that prices must be low enough and wages high enough so that there is money enough to buy all ıe goods and services which our farms and factories can provide.

If 1941-42 prices were to prevail, prices would be so high in relation to present wages that widespread unemployment would be forced upon the people of this country.

However, most industries which were converted to wartime production are demanding even higher than 1941-42 prices for their new peacetime goods. Every increase in prices over the 1941-42 level will increase the number of unemployed, and increase the number of jobs which Government will have to provide to save the country from a severe post-war depression.

While O. P. A. can do nothing to force prices back below their pre-war level, labor is convinced that O. P. A. must not permit prices to go any higher than they were in 1941 and 1942. For this reason labor is urging O. P. A. to require producers, with very few exceptions, to stick to their old prices when they go back into civilian production again. This position is supported by competent, impartial economists, by the evidence produced by governmental and other fact-finding agencies, and even by the statements of a few of the Nation's enlightened business leaders.

You can help to protect your job and the welfare of your country by helping to get these facts out to labor and the general public.

(NOTE.—We are talking about goods which have been out of production and will soon be coming into production again. Don't let anyone confuse the issue by dragging in questions about goods which have been continuously in production during the war. That is another issue which must be dealt with, but it's different from the one we're discussing here.)

THE FACTS

1. The cost of labor has gone down during the war

Even while wages go up, the cost of labor may go down. This can be true because new machines and new processes increase output per worker. In some industries productivity has increased as much as 40 and 50 percent.

Business analysts say that the possibilities of reducing labor costs through improvements already made have not yet been exhausted and that the benefits of these improvements can be carried over into peacetime production. We believe that this will be found true in most mechanized industries.

2. The prices of materials have gone up very little during the war

Steel prices have not gone up since 1941. The prices of other metals and materials are up about 5 percent. However, new metals which are cheaper and stronger will be available for use in civilian production. Also, many industries are redesigning their products to make them lighter.

As a result of these things, the cost of material used will in many cases be lower even where the prices of the same quantities of these materials may be a little higher.

3. Production at capacity will be low-cost production

Soon after the war ends production can be at capacity levels because demand will be great. This will reduce production costs because the cost of producing each unit goes down as volume goes up.

The public must not be required to pay high prices for goods produced at low cost.

4. Reconversion costs are already paid for

Prices on war production were set high enough so that industry could set aside money to pay reconversion costs. Over $40,000,000,000 has been put aside by industry for this purpose.

The public paid the costs of reconversion once—in advance. We should not pay for them again through increased prices on peacetime production.

5. Industry has other protection against short-time losses

Congress has insured industry against losses for 2 years after the war. The Government will refund taxes already collected from industry to pay for losses which may be incurred during the first 2 years after the war. Long before this period is over, production will be at a high, profitable level.

6. Selling and promotion costs will be way down

For sometime after the war demand will be high, and sales resistance will be at an all-time low. Consumers will buy without urging. Since the cost of distribution is such a large part of the price of an article, this should save manufacturers and dealers millions of dollars.

7. Exceptions will be few and far between

A company may require a price increase because it paid scab wages before the war and is paying a union scale now. Some other unusual conditions may justify a price increase, but such conditions will be rare.

Moreover, such conditions among few manufacturers should not justify a price increase for many, nor should such a condition in a plant be used to boost prices more than is necessary to cover the increase.

WHAT TO DO

Talk about it in your shop, your union, and your neighborhood—prices need not be and must not be higher than in 1941 and 1942.

Nobody knows better than the man in the shop that new processes and labor-saving devices have been developed. Tell everybody you can what this has meant in increased production per hour of work and in savings in materials used in production.

Arrange with your O. P. A. Labor Advisory Committee to talk the matter over with the O. P. A. district director and his price staff. Give them the information that will help them to see why prices must—and can—be held.

Have your union show you what the profits have been in the company you work for. Find out what that means in the ability of the company to absorb temporary losses while production is still going up. Tell that story to those who feel that higher prices are necessary for the period immediately following reconversion.

Get articles and letters into your union paper and the daily press. Have meetings in your union hall; send speakers to community meetings to explain that prices can be held down and must be held down for post-war prosperity.

If management tells you that an increased price is necessary to protect your job or your wage rate, demand the facts before you accept that statement. Tell management to prove to you—

1. What has happened to the labor cost per unit during the war? Remember that labor costs may go down while wage rates go up. Wage adjustments should therefore not be used as an excuse for automatic price increases.

2. On what level of output is management figuring? Remember that how high costs go depends on the level of output at which a plant operates.

3. What is the financial condition of the company as far as reserves are concerned? The Federal Reserve Board says that, in general, small corporations as well as large are in good position to finance their reconversion costs out of savings.

4. What tax refunds are available to the manufacturer in case his earnings should be temporarily reduced during reconversion? Congress has already provided for tax refunds to offset reduced earnings that manufacturers are expected to encounter when war production ends and before civilian production gets fully under way.

5. In saying that his labor costs are higher, has the manufacturer taken into account the lower average hourly costs of labor due to the reduction of overtime, night shift differentials, etc.?

6. When he says that material costs have been increased, is he allowing for possible saving in material due to technical improvements developed as a result of war expense?

Get everybody you can to see that prosperity depends on high wages and jobs, and jobs depend on low prices.

Write to your Congressman as often as may be necessary and to the Federal agencies involved in economic stabilization: The Office of War Mobilization and Reconversion, the Office of Economic Stabilization, the Office of Price Administration, and the War Production Board.

Remember that prices can be kept to their 1941–42 level. Do your part to keep them there.

National Support of the St. Lawrence Seaway and Power Project by Leaders of Both Parties, Governors, Mayors, Farm and Labor Organizations

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. PITTENGER. Mr. Speaker, on January 4 I introduced in the House a bill (H. R. 671) to implement the United States-Canadian agreement of March 19, 1941, and to authorize post-war construction of the St. Lawrence seaway and power project.

The bill, H. R. 671, is identical in terms with the bill, H. R. 2280, which I introduced in the Seventy-eighth Congress on March 23, 1943, and with the bill, S. 1385, introduced in the Senate on September 28, 1943, by Senator AIKEN, of Vermont. Both the House and the Senate bills followed the terms of the Mansfield bill, H. R. 4927, Seventy-seventh Congress. That measure was approved by the Committee on Rivers and Harbors by a 2-to-1 vote after extensive public hearings and after an inspection of the project site by the members of the committee in 1941.

We thus have before us in the Seventy-ninth Congress a bill to provide for post-war construction of the most beneficial and the most needed navigation and power project in the world, under legislation which is nonpartisan and nonsectional in its origin and in the character of its sponsorship and support.

WIDESPREAD ENDORSEMENT OF BILL IN PRESENT FORM

The bill in its present form has been recommended for enactment into law by the President, in his message to Congress in 1941, and in his letter to Senator AIKEN March 3, 1944; by the former great Secretary of State Cordell Hull, letters of June 7, 1941 and April 10, 1944, by Secretary of State Stettinius, December 4, 1944, by the Corps of Engineers, United States Army, War Department; by the United States Maritime Commission; by Secretary of Commerce Jesse Jones, who testified before the Rivers and Harbors Committee in behalf of the bill on June 23, 1941, and again strongly recommended its passage on May 30, 1944; by the Power Authority of the State of New York; by the Governors of many States and the mayors of the principal cities in the seaway area; by the National Grange; by the National Farmers Union; by more than 900 labor organizations and trade-unions; and by all of the official and engineering agencies of the Governments of the United States and Canada which have repeatedly surveyed the Great Lakes-St. Lawrence Basin and helped to perfect the existing plans for completion of the seaway.

I am confident that during the Seventy-ninth Congress the St. Lawrence seaway and power project bill will receive the favorable action which it richly deserves on its demonstrated merits.

PUBLIC HEARINGS ON MERITS OF BILL

While the Committee on Rivers and Harbors in the Seventy-seventh Congress approved the project and the bill, as I have stated, after complete hearings, no hearings on the merits of the measure were held in the Senate in the Seventy-seventh or the Seventy-eighth Congress. This accounted for the adverse vote when the bill S. 1385 was offered as an amendment to the rivers and harbors bill on December 12, 1944, and was rejected in the Senate. Many of those who voted against the adoption of the amendment

have publicly stated that they are favorable to the St. Lawrence seaway and power project but felt that public hearings should be held on its merits by a Senate committee before the bill was presented for final action.

The supporters of the St. Lawrence project are certainly entitled to be heard by this Congress on an improvement which means completion of a seaway directly benefiting more than 50,000,000 landlocked producers and consumers and the development of 2,200,000 horsepower of low-cost hydroelectricity, all at a net cost to our Federal Treasury of less than $200,000,000.

GREAT LAKES-ST. LAWRENCE AREA ENTITLED TO PARITY WITH OTHER RIVER BASINS

We cannot consistently exclude this great project from consideration as a part of our post-war program when we have just enacted into law a flood-control bill carrying authorization of $950,000,000 and have before us in the present Congress a rivers and harbors bill authorizing other river projects of a first cost of about $500,000,000.

Unless the St. Lawrence seaway and power project bill is enacted into law, the entire Great Lakes-St. Lawrence system will receive virtually nothing from the authorizations carried for post-war improvements in the great river basins of the country, and the entire Northeast will be excluded from the benefits of development of the largest of its waterpower resources.

GOVERNOR DEWEY REAFFIRMS STRONG SUPPORT OF SEAWAY AND POWER PROJECT

To illustrate the nonpartisan and nonsectional character of the support for the St. Lawrence seaway and power project, I wish to have printed in the RECORD a number of recommendations and endorsements which have recently been presented urging this improvement in the strongest terms.

On January 3, 1945, on the day preceding my reintroduction of the St. Lawrence project bill in the House, Gov. Thomas E. Dewey, of New York, reaffirmed his support of the St. Lawrence seaway and power project in his message to the New York State Legislature, as follows:

[Excerpt from Gov. Thomas E. Dewey's annual message January 3, 1945]

After 20 years of discussion, the tremendous power potential of the St. Lawrence River still remains undeveloped. Its estimated 1,620,000 kilowatts would be the second largest project of its kind in this continent. Its beneficiaries would be the residents of this State and nearby areas.

At the last session of the legislature, upon the recommendation of the State administration, resolutions were unanimously adopted declaring for the prompt development of the St. Lawrence River by measures which would provide low-cost power from these resources under the inalienable ownership of the people.

On December 12, 1944, the United States Senate rejected a measure for the completion of the seaway and power project, in accordance with the terms of the United States-Canadian agreement of March 19, 1941. However, it has been announced by the sponsors of the measure that it will be reintroduced at the first session of the next Congress.

I recommend, therefore, that the State continue vigorously to assert its substantial rights and interests in the St. Lawrence development.

For years I have advocated the completion of the St. Lawrence seaway and power project. During the past decade the means have been found and billions in Federal funds have been appropriated, to develop great rivers in other sections of the country, for power, navigation, flood control, irrigation, and like purposes. The incomparable resources of the St. Lawrence River should no longer be wasted. If the Federal administration is unable or unwilling to proceed, then the State of New York itself should undertake to complete the project on a self-liquidating basis in cooperation with the Dominion of Canada and the Province of Ontario.

The Governor of New York is to be congratulated upon his consistent advocacy of the St. Lawrence seaway and power project. In 1940, in 1942, and again in 1944, Governor Dewey as a candidate for office, issued public statements pledging himself to work for the completion of the entire seaway and power development.

NONPARTISAN SUPPORT OF THE AIKEN-PITTENGER BILL IN NEW YORK AND OTHER STATES

A review of Governor Dewey's record on the St. Lawrence improvement was presented in the Senate on December 12, 1944, by Senator AIKEN and is printed in the CONGRESSIONAL RECORD of that date. It includes a reference to the fact that over the period when Governor Dewey has been strongly supporting the St. Lawrence development, the Democratic Party of the State of New York has likewise pledged the improvement, declaring in its 1942 State platform:

We urge construction of the St. Lawrence power and seaway project. (Adopted at Democratic State Convention, Brooklyn, N. Y., August 20, 1942.)

On December 12, 1944, Senator WAGNER, of New York, voted for the adoption of the St. Lawrence amendment to the rivers and harbors bill. This was entirely consistent with the platform pledge referred to above, and with the public statement made by Senator WAGNER April 20, 1944, and published in the Watertown Times of April 25, 1944, as follows:

UNITED STATES SENATE,
Washington, D. C., April 20, 1944.

Mr. HAROLD B. JOHNSON,
Watertown Daily Times,
Watertown, N. Y.

DEAR MR. JOHNSON: In response to your recent request I am happy to send you a statement of my views on the constructive plans now pending for the improvement of the St. Lawrence River.

There is overwhelming sentiment for the earliest possible use of the power resources in the St. Lawrence River, resources essential for the post-war development of New York and the Nation. For half a century the people of New York have carried on a ceaseless battle, first to prevent these resources from falling into private control and more recently since the Power Authority Act of 1931 passed in the administration of Gov. Franklin D. Roosevelt, to develop and distribute the power for the public good. This power project has had my fullest support throughout my service in the State legislature and the Congress.

I am convinced that the enactment of the Aiken bill, S. 1385, furnishes the most direct means of achieving these public benefits and I am therefore giving that measure my active support.

I should be glad to have you make this statement available and to express my greetings and good wishes to all those participating in the nonpartisan conference on the St. Lawrence project, at the meetings scheduled at Ogdensburg and Watertown.

With best wishes, I am

Very sincerely yours,

ROBERT F. WAGNER.

As another evidence of the widespread nonpartisan support of the St. Lawrence seaway and power project, I wish to insert in the RECORD a public statement in support of the United States-Canadian agreement of March 19, 1941, which was issued on June 20, 1944, by 12 Republican Members of the United States Senate, as follows:

UNITED STATES SENATE,
Washington, D. C., June 20, 1944.

COMMITTEE ON RESOLUTIONS,
Republican National Convention,
Chicago, Ill.:

Through the cooperation of the United States and Canada dating from the administrations of President Theodore Roosevelt and President William H. Taft, the Great Lakes-St. Lawrence system has been steadily improved step by step until the seaway project is now complete over 90 percent of the distance from the Midwest to the Atlantic.

The Republican Party, whose administrations initiated and built the Panama Canal, has consistently pledged completion of the Great Lakes-St. Lawrence seaway and power project as an improvement that would serve the whole Nation, in war and in peace. Two world wars have fully demonstrated the soundness of this policy and the continuing need for the low-cost transportation and power facilities which this development will provide.

Completion of the project was pledged in platforms adopted at the Republican National Conventions of 1924, 1928, and 1932. Development of the St. Lawrence River for navigation and power and the removal of the last obstacles to the use of the seaway has been strongly advocated in public statements issued in the years indicated by:

President Harding, 1922; President Coolidge, 1923; President Hoover, 1924, 1928, 1944; Governor Lowden, of Illinois, 1926; Governor Landon, of Kansas, 1933, 1936; Governor Stassen, of Minnesota, 1938, 1941, 1942; Governor Dewey, of New York, 1940, 1942, 1944; the Republican Governors of more than a score of States since 1924, and many other Republican leaders.

A bill authorizing post-war construction of the Great Lakes-St. Lawrence project, sponsored by Republican Members of the Senate and the House, is now pending before Congress In the interest of agriculture, industry, and productive employment of labor in useful construction of permanent value to the entire Nation, we urge the readoption at the 1944 Republican National Convention of the plank heretofore endorsed by our party and by Republican Presidents and other outstanding Republican leaders, in substantially the same form, as follows:

"The Republican Party stands committed to the development of the Great Lakes-St. Lawrence seaway. Recognizing the inestimable benefits which will accrue to the Nation from placing the ports of the Great Lakes on an ocean base, the party reaffirms allegiance to this great navigation and power project and pledges its best efforts to secure its early construction under the terms of legislation now pending in the Congress of the United States."

GEORGE D. AIKEN, Vermont; HENRIK SHIPSTEAD, Minnesota; ARTHUR H. VANDENBERG, Michigan; RUFUS HOLMAN, Oregon; ARTHUR CAPPER, Kansas; HOMER FERGUSON, Michigan; JOSEPH H. BALL, Minnesota; CLYDE REED, Kansas; JOHN THOMAS, Idaho; EDWARD V. ROBERTSON, Wyoming; GUY CORDON, Oregon; KENNETH WHERRY, Nebraska, United States Senators.

It will be noted that this statement refers to the legislation then pending in Congress, the Aiken-Pittenger bill, and favors enactment of that measure to implement the United States-Canadian Agreement of 1941. While neither the Republican nor the Democratic national conventions in 1944 adopted planks dealing specifically with the projects then pending for improvement of the Mississippi, the Missouri, the Columbia, the St. Lawrence, or other rivers, both party conventions did pledge broad, general post-war programs to provide for such river developments. And on October 24, 1944, President Roosevelt and Governor Dewey, both singled out the St. Lawrence development in pre-election messages to the Detroit Seaway Conference and joined in renewing their pledges for its completion.

PRESIDENT ROOSEVELT'S ENDORSEMENT OF THE AIKEN-PITTENGER BILL

On March 3, 1944, President Roosevelt endorsed the St. Lawrence project bill, in the form in which I have reintroduced it in the present Congress, as follows:

THE WHITE HOUSE,
Washington, March 3, 1944.

DEAR SENATOR AIKEN: I am convinced that the time has come for a nonpartisan effort to secure congressional authorization for the St. Lawrence development in order that the project may be available for early post-war construction.

The undertaking will offer such important benefits to many States that I am sure it will provide a desirable stimulus to industrial and business activity which will assist the entire country in its reconversion to a stable peacetime economy on a continued high-production level. Many competent studies have shown that it will not hurt the railroads or ports through which foreign commerce now flows but will ultimately increase their business.

I am advising interested Federal agencies that your bill (S. 1385) modified to provide for construction as a post-war project, has my approval.

I have appreciated your consistent support of this great undertaking.

Very sincerely yours,
FRANKLIN D. ROOSEVELT.

Hon. GEORGE D. AIKEN,
United States Senate,
Washington, D. C.

Mr. Speaker, I am confident, in the light of the record, that the nonpartisan pledges made by the leaders and the Presidential nominees of the two great political parties of our country will be redeemed at the present session of the Seventy-ninth Congress.

SEAWAY ALREADY COMPLETE 90 PERCENT OF DISTANCE FROM DULUTH TO ATLANTIC

No other project which has heretofore been presented to Congress has promised such navigation and power benefits to the entire Nation on so large a scale, at so low a cost, as the St. Lawrence seaway and power development.

The project to provide a minimum depth of 27 feet in the connecting channels of the Great Lakes and the St. Lawrence River is already complete over more than 90 percent of the distance to be cruised by ocean cargo vessels from Duluth at the head of the Lakes, to the open waters of the Atlantic Ocean. The Great Lakes now carry a commerce of 100,000,000 tons bottled up within the Lakes.

The chief remaining obstacle to the completion of the seaway lies in the International rapids section of the St. Lawrence, a 48-mile stretch of the river. This section will be improved under the United States-Canadian agreement and under the terms of the bill, H. R. 671, to replace obsolete 14-foot depth canals with modern dual-purpose dams, locks, and other works, creating 2,200,000 horsepower of the cheapest energy in the world and simultaneously removing the existing bottlenecks with a new channel of a minimun. depth of 27 feet.

PRE-WAR AGREEMENTS BY SPECIAL INTERESTS AGAINST PROJECT EXPLODED AND DISCREDITED

It has at last become evident to all thoughtful and impartial observers that we have sorely needed the St. Lawrence seaway and power project during the present war for shipping, power, and other essential purposes, and that we shall need it even more to maintain a high level of production, increased foreign trade, and full employment after the war. The position taken by Governor Dewey, Senator Aiken, Senator Wagner, and other advocates of this project in the Northeast in support of the seaway and power development evidences the fact that its benefits to all sections of our country alike are now clearly recognized.

In the CONGRESSIONAL RECORD on December 11, 1944, appears the testimony of former Governor Lehman and Mayor LaGuardia, of New York City, given before the Committee on Rivers and Harbors in 1941, that the seaway would not result in any net diversion or loss of railroad or ocean shipping from existing rail centers and ocean ports, but would create an enormous new tonnage to the benefit of New York City, Buffalo, and other cities.

To say that an increase of 10,000,000 tons in American shipping through the St. Lawrence seaway could adversely affect New York Harbor with an annual tonnage of 100,000,000 tons, and destroy the commerce of Boston, Baltimore, and our Gulf ports, as charged by special interests which have obstructed the project, is too preposterous to mislead the Congress or our constituents. Such arguments will no longer fool an enlightened America as we tackle our post-war problems, determined to create new opportunities for our 12,000,000 returning veterans, our wage earners, industries, and agriculture.

COOPERATION OF ALL SECTIONS NEEDED TO REDEEM PLEDGES FOR POST-WAR DEVELOPMENT THROUGHOUT THE NATION

We of the landlocked interior States of this country have voted billions in the last two decades to complete the Panama Canal, to build Boulder Dam, T. V. A., and Bonneville-Grand Coulee, to protect the Mississippi and the Ohio from the ravages of floods, and to provide navigation, power, flood control, and irrigation improvements on nearly all our major rivers.

We now ask the cooperation of the West, the South, and the East in completing the improvement of the Great Lakes-St. Lawrence system, our greatest single natural resource for navigation and power.

The President and the highest officials of this administration have repeatedly pledged the improvement and have received the wholehearted support of the Governors of New York, Minnesota, Michigan, Wisconsin, North Dakota, and other States over the past 12 years for this undertaking. I, therefore, appeal with confidence to Members of the House, regardless of partisanship, to join in redeeming the pledges which have been made to complete the St. Lawrence seaway and power development, as an essential part of the post-war program now in the making before this Congress.

South More Self-Sufficient

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. BRYSON. Mr. Speaker, as evidence of the astounding progress made in recent years by the Southern States, I insert a clipping from the Charlotte Observer of December 22, 1944:

SOUTH MORE SELF-SUFFICIENT

In one sense the entire South is now in improved position to promote its own industrial development during the years ahead on its own power.

No longer need our section lament or apologize that it is lacking in financial resources to do for itself what formerly it was so dependent upon foreign capital to accomplish.

The South has attained to a position unique in this respect in its history of the past 80 years, or since the Civil War.

Some simple facts bear out this contention. They are presented by the Southern States Industrial Council through its director of research, Thurman Sensing.

In 1880, 15 years after the close of the Civil War, the total deposits in all the banks of the 15 Southern States from Texas to Virginia, amounted to no more than $190,000,000. At the present time, these deposits amount to approximately $20,000,000,000, or 100 times the deposits of the South 65 years ago and 10 times more than the deposits in the banks of the entire 48 States 65 years ago. It is an amount sufficient to have paid off the entire national debt in 1932.

To put it still another way, the per capita deposits of the South in 1880 were only $10, while today they are $475.

Moreover, since 1900 at least, the deposits of the South have increased proportionately faster than for the Nation at large, being 16 times larger than they were 45 years ago while the deposits of the Nation are only 8 times larger.

The most striking increase in the deposits of the South has been made during the past 4 years—due considerably to the stimulus of war contracts allocated to the South—increasing from $11,000,000,000 in 1940 to the present total of $20,000,000,000, or practically doubling in 4 years.

Mr. Sensing properly observes that there is an immense reservoir of capital now available in the banks of the South, such an amount, in fact, that the people of the South can now begin to guide their own destinies so far as their industrial progress is concerned. The opportunity the South has been awaiting for so long is now here. Once this has been realized and acted upon, the people of the South are destined for such prosperity as they have never known before.

Drafting Manpower for Industrial Jobs

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. HOFFMAN. Mr. Speaker, many Members of Congress have received information from both union men and employers residing in their districts to the effect that the manpower available is not being used to the fullest extent.

Some of us have verified some of these complaints and found that they were justified.

Shortly before July of last year an editor of Mill and Factory, Carl C. Harrington, caused an investigation to be made and his report as published in Mill and Factory contains some pertinent information.

Investigation should be made to see whether the conditions to which he refers still prevail and if they do, appropriate remedy should be applied to end the waste of manpower. His report follows:

HOW SOME DETROIT LABOR UNIONS SABOTAGE PRODUCTION

(By Carl C. Harrington)

Concerned over the many strikes and reports of labor irresponsibility in the Detroit area, I decided to visit personally some of the better known plants engaged in essential war work and examine their labor reports. These reports contain a detailed description of each labor grievance, work stoppage, slowdown, and strike, the names of the employees participating, and its effect upon production. They, therefore, quickly provide an authentic picture of labor conditions in each plant, together with a factual day-by-day history of its labor relations. They revealed a condition far more serious than I believed could possibly exist in the United States of America, at any time, and one completely inconceivable during a war period when our fellow citizens are fighting for their lives with the very weapons these men are producing.

I hesitate to publish the facts revealed by this investigating study, as I will be branded immediately and vehemently as an enemy of labor. But the facts must be brought into the open, both for the good of the country and for labor itself. They are in no way meant as a condemnation of all union labor, but are a very bad indictment against those large, irresponsible sections of union labor which are doing the cause of labor irreparable harm.

The cases discussed in this report are all taken from the records of Detroit plants working nearly 100 percent on war production. The records are on file in the company offices and substantiate each case.

I visited the offices of one company working 100 percent on war products which has experienced nearly 300 work stoppages in the past two years. These ranged from a walkout of 20 employees for the disciplining of one member for habitual absenteeism, to the striking of 15,000 workers over the reorganization of a department.

CONTRACT AGREEMENTS

A great many records of work stoppages which I saw indicate that local Detroit labor leaders either cannot or will not see that their members live up to contract agreements between the company and the union. There are hundreds of records where, after the company and union have laboriously agreed on hours and production rates, as well as rules and regulations, these agreements were completely ignored by the employees when something arose that did not suit them. Contracts invariably include a specified procedure for handling employee grievances in order to minimize interruption of production and to afford a sensible and rational way to settle complaints. In spite of these agreed-upon procedures, cases occur every day where the entire grievance machinery is ignored and a plant or department stops work. The following instances are typical of the records I saw:

Several women were transferred to a department in another building. Later, when the supervisor came through the building, he found the women sitting around doing nothing. They refused to work because there was no restroom adjacent to their washroom, as there had been in their former department. No grievance or anything else had been filed. They merely stopped work.

In one plant an entire department quit work because employees heard a rumor that there was to be a change in rates. No notice or official word had been given concerning such a rate change. The employees merely heard a rumor and stopped work.

One department of a company was far under its production quota. The union agreed to a time study being made and further agreed on the increased individual production rates shown possible by the study. Two men in the department refused to meet their quotas, even after warnings from management and union. When they were finally discharged, the entire department walked out.

Many records show that even when the union agrees with the company on transferring employees from one department to another entire departments will occasionally quit work.

PLANT DISCIPLINE

With the growing strength of their unions and the further knowledge that the Federal Government will almost invariably back their causes, union members in many industrial plants are becoming more and more irresponsible and demanding. They resent the slightest restrictive rules and regulations, even if established for their own good.

Employees in a certain department of a company I visited, where the work was hazardous to unprotected eyes, refused to wear safety goggles supplied by the management. These employees even went so far as to seek a court injunction to restrain the company from insisting that they wear the goggles.

Smoking restrictions, even in hazardous locations, seem to be universally resented. There are numerous cases where entire departments will walk out because one of their number was caught smoking and given a day or so off.

In some cases, to show their defiance of management, 30 or 40 employees in a department will wait until the superintendent is walking down their aisle, then deliberately turn around facing him and light a cigarette. Furthermore, if these employees are given a disciplinary lay-off, all the employees in the department, or even in the entire plant, are apt to stop work. This in spite of the fact that in the union contract there may be certain designated penalties agreed upon for breaking the no-smoking rule.

Even disciplinary action against rank and abusive insubordination may cause the shutdown of an entire department or plant. Many reports I saw show that employees like to see just how far they can go in violation of common ethics as well as in breaking company rules.

There was a record of one union committeeman who refused to show his identification badge to the plant guard at the gate. He insisted on entering without showing his badge and became very abusive when he was denied entrance. As a result, he was given a week off. His entire department of 200 employees walked off in sympathy with him.

Another employee who was discharged because of drunken and abusive behavior, during which he slugged a foreman, was the cause of his entire department stopping work.

There is another instance where 350 workers struck for 3 days because one of their members was sent home for pushing a foreman around.

Another strike of 1,000 people occurred because a woman was sent home for persistently ignoring a safety rule.

Over 2,200 employees quit work for 2 days because the company refused to discharge a foreman who had disciplined 2 workers.

The foregoing cases are typical of what I read in the daily labor reports of many unionized companies. They are in obvious violation of union-contract agreements as well as common sense. In no way are they mere isolated instances used intentionally to paint a black picture. Moreover such instances are increasing in frequency and in some cases are admitted by management to point toward a complete break-down of company discipline.

UNION POLITICS

The managements of several companies I talked with claim that politics within the local unions are one of the greatest causes of labor unrest. There are generally two or more factions striving for union power. Union committeemen who are elected by the members of each department are continuously "electioneering." To keep their job or to be elected in place of the current committeeman these individuals have to keep promising more and better things to the "voters." If and when these men are elected committeemen, they have to make some show of fulfilling their campaign promises. More often than not they have promised the moon, and cannot possibly deliver. This in turn gives the opponents something to talk about, and so the cycle repeats.

All this pulling and hauling keeps the various departments in a state of unrest. A good committeeman must always have a pocket full of grievances, all duly signed by some employee. By union agreement he is permitted a certain amount of time away from his company job to work on these grievances. There are instances reported by workers where committeemen have approached them with a filled-out grievance form and ordered them to sign it. "You've got a grievance and this is it," they are told.

Multiplied by the numerous departments in a large plant, it is easy to realize the continuous unrest that this union activity creates. Elections of committeemen by departments are often staggered, so that there is almost always an election being held by some group of workers. In one plant visited in June, elections had been going on since the previous December.

Committeemen, who are the departmental representatives of the union, often show as little respect for the union contract as do the rank and file.

In one case brought to my attention, a supervisor walked into a certain department and found the machines standing idle and all the employees over at one end of the room. He was told that the committeeman decided to hold a meeting and the employees had to attend.

A 2-day strike of 1,200 workers resulted after a committeeman and several workers were discharged because they refused to do the work assigned them.

A strike of 400 workers and a strike of 2,000 workers both resulted from the dismissal of union committeemen for just causes. Another strike of 1,300 workers followed the light disciplining of a union committeeman.

WORK RESTRICTIONS

Reports shown me indicate a widespread policy of actual production limitations, or

subtle work slow-downs, either openly or surreptitiously enforced by the union. This, even during a period when every piece of war equipment was urgently needed and there was no sign of production curtailment. Some plants report that they are working at from 50- to 70-percent efficiency, in spite of production-boosting campaigns, morale-building programs, and numerous other methods designed to encourage employees in boosting their production. There are many cases where endeavors to increase production, with union agreement, have resulted in strikes and work stoppages.

In one foundry a number of metal pourers held their production at a certain number of heats per day, then stood around the rest of the day doing nothing. When they were ordered to increase their output, the entire foundry of some 1,500 workers, walked out for 6 days.

One thousand workers struck for a day when the number of workers operating certain machines was reduced from 12 to 10.

Two ex-sailors working in a plant quit because the union committeeman insisted that they reduce their productive output. The company could do nothing to override the committeeman without precipitating a general strike.

WE DON'T LIKE YOU

Labor unions are loud in proclaiming racial equality and equal opportunity for all. To dispute their sincerity, I saw records of strike after strike which occurred purely because of the member's refusal to work with Negroes.

A 4-day strike of 1,400 workers occurred at a Detroit company's plant because nine employees were sent home for refusing to work with four Negro women.

Another strike of 125 workers resulted when employees refused to work with 2 Negroes.

Numerous strikes and stoppages have occurred because workers did not like certain people in their plant.

A 2-day strike of 2,200 workers occurred because the company refused to discharge a foreman who had disciplined 2 workers.

A strike of 3,800 workers was caused by a company's refusal to discharge a personnel man.

There was big news in Detroit on Friday, June 3. It was the first day in many months when there was not a strike of some sort in the area. This record was immediately ruined the next day.

This area has justly earned a reputation for strikes and labor dissension. Labor violence appears to be an accepted means for union members to negotiate. In May of this year over 4,000,000 man-hours were lost due to walk-outs in the Detroit area. This, of course, does not take into account the hundreds of work stoppages that continuously occur in individual departments of plants and cause an untold amont of lost time and production.

CONDITIONS UNBELIEVABLE

The conditions I found in some Detroit plants are unbelievable to outside industrial visitors. During the recent foremen's strike, which caused the idleness of some 52,000 workers, there were instances of idle employees having a catch with a soft ball right inside the plant; being abusive to company executives, and breaking the windows in their cars; and glorifying in the elimination of bosses. One union newspaper published an editorial pointing out this ideal state of affairs. This is reproduced on these pages and states that the members "* * * are for once enjoying the freedom and the democracy that we are supposed to have. * * *" The statement is carried under the byline of the president of the local union.

It is no wonder that R. J. Thomas, president of the United Automobile Workers, C. I. O., recently warned his union members against wildcat strikes and stated that public opinion has become "inflamed" against his union. If the public could read, as I did, the records of these labor disturbances and thus obtain a picture of what is going on in some industrial plants in Detroit today, "inflamed" would be no word to express the revulsion and rage that would sweep the country. If the public could see as I did how these vital war plants, during nearly every month for the past 2 years there have been hundreds of work stoppages, dozens of strikes, and thousands of man-hour losses over petty grievances, or if the public could realize the extent of union-fostered slowdowns and job restrictions that have artificially held manufacturing efficiency at from 50 to 70 percent of what it should be normally, short shift would be given to these Detroit unions who set themselves up as being responsible for workers' discipline and the betterment of their members and fellow Americans.

Mr. Speaker, the morning paper carries a statement from theater owners in St. Louis, Mo., the substance of which is that they are compelled to employ stand-by operators.

That, too, should be investigated as should the reputed practice of insisting upon stand-by jobs in various occupations. In wartime there is no excuse for an able-bodied man, capable of contributing to the war effort, being paid for doing nothing.

The practice of Petrillo's musicians and Dan Tobin's teamsters who insist upon loafing, while other men perform the work for which they are paid, should end without any further delay.

The Four-Point Plan of the Disabled American Veterans

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. JENKINS. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a copy of the four-point program adopted by the Ohio Department of the Disabled American Veterans at the twenty-third annual convention held in the city of Columbus, Ohio, August 25, 26, 27, 1944, and which was prepared and presented to this convention by its very able department commander, Frank B. Brown, of Canton, Ohio.

This is the most reasonable and complete program for the care of America's service disabled that has ever been brought to my attention. The Disabled American Veterans, commonly called the D. A. V., is composed exclusively of those who have served our country in time of war, and who were wounded, gassed, injured, or disabled in some way as a direct result of their service.

The D. A. V. in Ohio has rendered a most valuable service to this particular group of veterans and to the widows and orphans over a long period of years. During the last fiscal year ending June 30, 1944, the representatives of this organization at the offices of the Veterans Administration at Dayton and Brecksville, Ohio, arranged for 1,104 hospitalizations, obtained 2,061 physical examinations, received 14,376 letters from veterans regarding their claims, addressed 15,291 letters to veterans regarding their claims, personally interviewed 14,981 claimants, made 2,598 personal appearances before rating boards for veterans, and reviewed the claims files of 13,939 veterans.

The Ohio Department of the D. A. V. is leading all States in membership in the organization for the seventh consecutive year, has more members than the combined total of 26 other States, more life members than the combined total of 38 other States, and more chapters than the combined total of 21 other States. About 80 percent of the entire membership in the D. A. V. in Ohio are either part paid or fully paid life members. More than 45 percent of the entire membership in the D. A. V. in Ohio are fully paid life members. This is a record that is unequaled by any State organization of any kind in the United States.

I have had particular opportunity to observe the work of Senator Albert L. Daniels, who is the State adjutant-treasurer for the State department of Ohio. Senator Daniels is an able speaker and has given of his time and energies in speaking all over Ohio and in other States.

Likewise I have observed the activities of Mr. W. K. Adams, of Portsmouth, Ohio, who is the legislative chairman for the Ohio organization. Bill Adams has always been ready to do his part in this program. He has given to his job very efficient service.

I want also to compliment my friend, Hon. Benjamin F. Turner, of Pomeroy, Ohio, who is a member of the State board of the Ohio department. As a member of the State legislature he has had opportunities to carry on the work of this veterans' organization with great efficiency. Mr. Turner has always been a stalwart friend to the disabled veteran.

I can pay worthy compliments to other members of the State organization, but these three above named come from my section of the State of Ohio, where I have had a chance to observe personally their very efficient and devoted service.

The following is a copy of the four-point program to which I have heretofore referred:

FOUR-POINT PROGRAM, DISABLED AMERICAN VETERANS, DEPARTMENT OF OHIO

HOSPITALIZATION

We advocate that an immediate program of construction be instituted to enlarge the existing veterans' hospitals or to build new ones, so that necessary accommodations are available at all times to provide adequate treatment for honorably discharged veterans of all wars, and especially those with service-connected disabilities. It is our opinion that in no case should a veteran with a service-connected disability, who is in need of hospitalization, be placed on the waiting list, but should be admitted to the hospital immediately upon application. We advocate that everything possible be done to maintain an efficient medical staff in every hospital, as it is our opinion that America's disabled defenders are entitled to the best care

medical science can offer. We believe the Government should provide a more complete method in the hospitalization of veterans suffering with nervous disability, that a more extensive study and follow-up on this type of case be made with outside guidance in lieu of vocational training until such veteran arrives at a more stable state, and then be given the opportunity of vocational training. We oppose committing any veteran suffering with mental or nervous disorders to a State institution. We advocate a more generous policy of authorizing out-patient treatment, and believe this should be given special attention in cases of tropical diseases.

COMPENSATION AND PENSION

We advocate adequate compensation for the wartime disabled. We oppose the use of the word "pension" in connection with payments made to veterans of World War No. 2 for service-incurred disabilities and advocate the use of the word "compensation"—in connection with payments made to veterans of all wars for service-incurred disabilities. We oppose the present policy of the Veterans Administration which virtually restricts service-connected disabilities of World War No. 2 veterans to disabilities that are actually noted on the official service department records. We believe this policy should be broadened and that this group should be eligible to service-connected disabilities for any chronic disease that should manifest itself within 1 year following discharge. We advocate a more generous rating schedule that will more adequately compensate and include disabilities not recognized under present schedules.

EMPLOYMENT

We advocate the enactment of legislation that will guarantee the physically handicapped veteran an opportunity to secure gainful employment and we believe such legislation should apply to both governmental and private employment. We believe it is important to the future security of this Nation that partially disabled veterans be assured gainful employment. We further believe that the employment of these partially disabled veterans should be such as would utilize and be within the limits of the full capability of the veteran, and as such would assure maximum benefit to both Government and employer. We urge that the present regulations providing for preference for disabled veterans in matters of appointment be strictly adhered to, and we believe the Government should set the example for private employers by giving preference to disabled veterans.

EDUCATION

We oppose the present system of vocational training or education on the basis that it favors the veteran with the best background or prior education. We advocate legislation that will give preference in the training program to veterans with service-connected disabilities. We believe special emphasis should be placed on the training of those with service-connected disabilities—so that they may enjoy the benefits of gainful occupation. We oppose the Government's attitude of encouraging veterans discharged with disabilities to go into war work and believe these veterans should be encouraged to prepare themselves for the future by taking suitable training and we ask for the cooperation of the Government, management, and labor in the training program of America's disabled defenders.

Submitted by Frank B. Brown, commander, Disabled American Veterans, Department of Ohio, and adopted by the twenty-third annual convention, Columbus, Ohio, August 25, 26, 27, 1944.

Hon. Melvin J. Maas

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. COLE of New York. Mr. Speaker, this afternoon the Secretary of the Navy, Mr. Forrestal, entertained the members of the House Naval Affairs Committee, high ranking naval officers, and the majority leader, Mr. McCORMACK, at a buffet luncheon at his office for the purpose of bidding farewell to our former colleague the Honorable Melvin J. Maas, ranking Republican member of the Naval Committee, who is now on active duty as colonel in the Marine Corps. A token of esteem was presented to Colonel Maas in behalf of the committee by the Honorable CARL VINSON, chairman, and it is my pleasure to include in my remarks the statements which he made at that time which reflected the thoughts of each member of the committee:

Mr. Secretary, members of the committee, by the vicissitudes of the American way in which we choose our Congressmen, the Naval Affairs Committee, during the Seventy-ninth Congress, will not have the benefit of the counsel and advice of our former distinguished colleague the gentleman from Minnesota, Mr. Maas.

Much to our regret he was one of the political casualties of the "Battle of November 7." However, he has the satisfaction of knowing that during the long years he was a member of our committee he played a conspicuous role and was a tower of strength in fixing naval policies and passing legislation which has in turn enabled the Navy to meet and defeat the enemy and bring victory to our cause.

For 10 years Mr. Maas had been a member of the committee and during the last 7 years he was the ranking member of his party on it. However, no one could ever tell there was either a majority or minority party, for the committee acts and is guided by what it considers and deems to be, to the best interest of the country, and party denomination fades away in our deliberation.

I have never served with a member who was more intensely devoted and interested in the welfare of the Navy than Mr. Maas. His one thought was what he could do to increase the efficiency of the Navy and to maintain the morale of its personnel at its highest degree.

During the years he served on the committee more constructive and beneficial legislation was enacted for the Navy than ever before in its long and glorious history and he was an outstanding factor in helping to bring it about.

As a reserve officer, having come through the ranks to his present high grade, he was ever the champion of the cause of the reservists, for he knew intimately their trials and tribulations and every pulsation of his heart beat in harmony and unison with theirs.

Mr. Secretary, the Navy should be everlastingly grateful to Mr. Maas for the intense interest he has shown in the Navy and the Marine Corps as well as for the results that have been accomplished through his foresight, energy and aggressiveness.

I have never worked with a member of the committee where the relationship was more cordial and if we had different viewpoints we sat down and ironed them out in a friendly manner, for we both had the same objective—to contribute our best for the welfare of the Navy and the country.

Mr. Maas enjoyed not only the confidence and respect of every member of the committee but also that of the entire House. We will miss him in our deliberations in the Seventy-ninth Congress, for he was a Member with vision. He had a thorough grasp of every phase of the Navy, thoroughly conversant with the intricate personnel problems, as well as its complicated broad logistic matters.

I say to you from the bottom of my heart, I was profoundly sorry when I read the news that he had fallen by the political wayside for the time being, for during our long years of intimate association I had grown to rely immensely upon this man of outstanding ability.

I know that I speak for each and every one of our committee, when I wish for him in his tour of duty in the Marine Corps, wherever it may be, the very best.

Mr. Maas, on behalf of the committee, it is my very great pleasure to present to you this token, which is small and insignificant in comparison with the high regard and esteem in which you are held by the committee, and wherever you go always remember that you have the best wishes of your old colleagues and friends on the committee.

Rights Imply Responsibilities

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. HORAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am most happy to include an editorial which appeared in the Labor World, published in Spokane, Wash.

This editorial is by Ruth Taylor, and I think it is splendid. All of us should realize that no privilege can long exist unless each of us realizes our individual responsibilities which spring from those privileges.

The editorial follows:

RIGHTS IMPLY RESPONSIBILITIES

(By Ruth Taylor)

The Bill of Rights is a favorite topic with all American speakers, no matter what their viewpoint or their politics. It is the one sure-fire hit.

We all believe in the principles embodied in the Bill of Rights. We proclaim it as the foundation stone of our democracy. We brag of its insurance of our liberties as we wave the flag. We flaunt its great phrases in the faces of our enemies.

But do we live up to the ideal it embodies? Do we carry out in our national, in our community, in our personal life its great teachings?

We emphasize the equality before the law for which it stands. We say we oppose discrimination—that this is the abhorrent idea of the so-called master race. But are we free from the taint of discrimination? How do we judge our neighbors? Bigotry and intolerance can be allowed no place in our own

lives if we would be true to our own heritage and destiny.

The people have, through the Bill of Rights, the inalienable right to the furthering by the state of equality of opportunity. But they have it not merely as a state-given right but as a God-given one. Freedom from discrimination is a spiritual as well as a material condition for human development.

This does not mean that all people must have equal amounts of everything; but it does mean that they must have an equal opportunity to develop their talents, to do profitable and worth-while work, without being hampered by discriminations based upon anything other than their ability and their willingness to work with their fellow men.

The only way we can defend our liberties is to see to it that the law is administered impartially and equally to all the people of the country. The pledge to our flag makes this clear:

"I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one nation indivisible, with liberty and justice for all."

The last two words—"for all"—are the essence of the Bill of Rights; but before we brag too much about them let us do a little soul-searching and see if we live up to them in our own lives. Rights imply responsibilities.

Letter From Rev. David Bogard, of Little Falls, N. J.

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. CANFIELD. Mr. Speaker, our leadership seeks constantly to emphasize that the war we fight on so many battle fronts is a people's war. I believed it so when I voted for the war in December 1941 and I believe it so today as I repeatedly cast my vote for new authorizations and appropriations to expedite the victory.

At the same time, however, I can well understand the increasing feelings of dismay and disillusionment among our people as they seek to obtain facts about the progress of our military fortunes and our foreign policy.

The extent to which our people's representatives have been bypassed in this matter is disheartening. Consequently, I am glad to note that General Marshall and Admiral King have plans to move closer to the people's representatives and will report to them facts on our military operations. At the same time, it is pleasing to note that the new Secretary of State, Mr. Stettinius, has indicated he will move closer to the Congress in pursuing the problems of foreign policy. I cannot help but feel that the President and Commander in Chief seeks to do likewise and will move closer to the Congress and the people as he speaks out in his fourth inaugural next Saturday.

I have in my hand a letter from a clergyman in my district. He has never written me before. The Reverend David Bogard is pastor of the Second Reformed Church of Little Falls, N. J., and he is the father of a boy in the service. The thoughts he pens are similar to those going through the hearts and minds of millions of our people in these trying days:

JANUARY 5, 1945.

Hon. GORDON CANFIELD,
Washington, D. C.

MY DEAR SIR: I am exercising my prerogative as a citizen of your district to write you about matters that trouble me, relative to the conduct of the war.

None of us on the home front have any doubts about the courage and ability of our fighting men. Nor have we lost confidence in our military leadership, in spite of the recent disasters in Europe. I also have confidence in the idealism of our fighting men. They are willing to face any hardship to attain a worthy goal. We at home can bear the heartaches too, provided there is something worthy of the sacrifice.

Of late, however, a wave of frustration and futility has swept over us. With the Atlantic Charter tossed into the waste basket as an impractical collection of memoranda; with Europe being carved up before our eyes, in total disregard for the principles of that charter, what in God's name are we now fighting for?

Did we not enter the war with the idealism of the Atlantic Charter as our chief stimulus? Much as we hated war, this was worth fighting for. But now—even before the military victory is achieved, the very goal that led us into war is already scrapped. As it stands, we may, and undoubtedly will, win a military victory, but unless there is a decided change of heart, we have already lost the war.

It might surprise you to know how widespread is this angry sense of disillusionment. It is my business, as a pastor, to visit people and give comfort where I can. Almost daily I receive letters from the battlefronts. The tone of these letters and of the conversations would make our political leaders tremble if they could hear them.

Must we stand idly by, while the best blood and brains of our Nation are being sacrificed? Must we be led, "as sheep to the slaughter"? Or is this still a "Government by the people and for the people"? Perhaps you, as one who represents us, can do something.

Cordially yours,

DAVID BOGARD.

Platform of the National Grange

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. WHITE. Mr. Speaker, in charting a course for the guidance of our country to achieve the blessings of good government, the National Grange stands in the forefront among our national organizations working for the advancement of the American people.

In studying national issues, it appears that the money plank offered both the great political parties by the National Grange would do more to stabilize our national economy and bring permanent prosperity to this country than any financial program offered by any political party at any time when the Grange submitted this legislative program, from which I quote:

Agriculture demands a monetary system providing an honest dollar, one just to the debtor and creditor alike, with constant purchasing power preventing uncontrolled inflation, or the disastrous effects of deflation.

Since the Grange platform containing that monetary plank was presented to the country the Grange has met again in its national convention at Winston-Salem, N. C., in November of last year and adopted another platform with a declaration of principles for which that great farm organization stands, which it is my privilege to submit to my colleagues for their consideration:

GRANGE PLATFORM FOR AGRICULTURE

1. Organized agriculture and the rural people pledge continued maximum effort for winning the war.

2. The Grange recognizes that permanent world peace is of paramount importance. Steps to achieve this should include:

(a) An effectively implemented organization of sovereign states, including a world court, but with the right to declare war retained solely by Congress.

(b) Development of international trade on an equitable basis.

(c) Rehabilitation of productive industry in devastated lands.

3. The continued prosperity of America depends upon an economy of plenty, shared equitably by agriculture, industry, and labor. The American farmer is entitled to the American market to the extent of his ability to supply it, and he should share with other groups the American standard of living.

4. It is recognized that agriculture in wartime has stepped up production beyond normal demands for its products. The price ceiling structure has prevented building reserves to tide over price declines, and it is therefore a national obligation to avert losses which lead to widespread depression, by a realistic program for meeting the surplus problem.

5. Support prices should be used to insure needed production and to prevent collapse due to temporarily glutted markets. Marketing agreements should also be used to maintain parity prices for those crops having occasional or regional surpluses.

6. On crops with exportable surpluses a two-price system offers a simple method to obtain parity of income for agriculture without using funds from the Public Treasury; the consumer to pay a price which would reflect parity on that portion of the crop consumed at home. Each farmer would then be free to determine the extent to which he would produce for the world market at world prices.

7. The obsolete parity formula by which farmers' prices are measured should be modernized and such formula should include farmers' labor costs.

8. Taxes must be maintained at high levels during the war to help pay war costs from current revenues and to aid in preventing inflation. Taxes should never be used as a means of promoting social reforms or for discrimination against any form of business, including cooperatives.

9. Continuance of certain controls to prevent inflation is recognized as necessary, but these should be relaxed as rapidly as conditions will permit.

10. Cooperatives afford the means by which individual farmers in the exercise of private enterprise may pool their efforts for economy and efficiency, and such cooperatives are of

benefit to farmer and consumer alike. Cooperatives should be encouraged and protected from attacks, including unfair taxes and unjust discriminatory legislation.

11. A dependable system of sound farm credit should be administered cooperatively, with Government supervision in the hands of a bipartisan board. Crop insurance should be developed on a practical basis.

12. Agriculture must assume its responsibility in planning for the post-war period, in cooperation with labor, industry, and other groups, for coordinated national economy and to assure well-balanced and lasting prosperity.

THE NATIONAL GRANGE FAVORS

Federal aid for highways, apportioned to the States on the basis of one-third population, one-third post roads, and one-third main roads.

Improvement of rural schools wherever they are below reasonable American standards, coupled with development of youth leadership training.

Extension of social security to include farmers and farm workers.

Continuation of a congressional committee to investigate un-American activities.

Termination of rebates on Government shipping over land-grant railroads.

Conferences between agriculture, industry, and labor for discussion of common problems, in the interests of national welfare.

Extension of rural electrification as rapidly as practicable, with continued support of the R. E. A.

Revision of the Lend-Lease Act to prevent its use for nonwar purposes.

An amendment to the Constitution of the United States to divide the electoral vote within the States as nearly as possible in line with the popular vote.

Continuation of appropriation to help alleviate farm-labor shortage.

A constitutional amendment to forbid citizenship to children of persons ineligible for citizenship.

Simplification of income-tax return forms.

Production control for tobacco, together with support prices.

Formulation of a program for cotton based on soil conservation, Government loans, and support prices; with an export policy which will make it possible to reach foreign markets during the period necessary to bring cotton production into adjustment with domestic and foreign outlets.

Assurance that all projects involving irrigation, reclamation and development of power be administered by the Bureau of Reclamation.

Development of voluntary rural health and hospitalization programs.

Elimination of abuses in manipulation of prices and weights in marketing of hogs or other products.

Modification of International Bank for Reconstruction and Development to give those who furnish the most capital greater control; also elimination of international monetary fund because better handled by the bank itself.

Making available, under royalty or otherwise, the use of any patents which have been withheld from the market against the public interest.

Establishing congressional agencies to provide Congress with accurate information on current expenditures, disposal of Government properties and similar matters.

Appropriations to pay expenses of O. P. A. advisory committees so that no group may be barred from participating because of lack of funds.

Vocational training for youth and returning veterans.

Encouragement for credit unions, with wider distribution of literature explaining their purposes and possibilities.

Agricultural representation in all agencies authorized to make trade agreements.

The right of Congress to revoke any trade agreement within a reasonable length of time after its adoption.

Establishment by local granges of memorial forests in honor of servicemen.

THE NATIONAL GRANGE OPPOSES

Continuation of interstate trade barriers.

Subsidies in lieu of fair prices.

Continuation of daylight-saving time.

Federal control of insurance.

Attempts to bottle up the sale of public power.

Automobile use taxes and Federal gasoline taxes, as an invasion of the rights of States.

Freight-rate increases by the railroads.

Trend toward immoral motion pictures and literature.

A Federal sales tax.

Sales of intoxicating liquors in public parks.

Restrictions on cooperative farm enterprises through taxation or otherwise.

Spread of corporation farming as a threat to the family sized farm and to highest rural interests.

National Catholic Rural-Life Conference Explains Truth About Taxation of Cooperatives

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. VOORHIS of California. Mr. Speaker, I am very gratified and honored to have the opportunity to include with my remarks an article which appeared in the December 1944 issue of Land and Home, the official publication of the National Catholic Rural-Life Conference, and which deals factually and effectively with the whole question of taxation of cooperatives:

ROCHDALE AND TAXES

(By Martin Schirber, O. S. B.)

On the hundredth birthday of the Rochdale Cooperative Movement, cooperatives in America are being subjected to an attack that gives every promise of being a fight to the finish. The attack does not come as a bolt from the blue. Cooperative leaders have known for some years that they are being gunned for—that the growth of the cooperative movement is an invitation to battle with the interests that are being stepped on as cooperatives expand. Expansion since 1940 has been so rapid that it is more than some private enterprisers can stand.

When the business of farmer-owned cooperatives leaps 30 percent in 1 year to a total of three and three-quarter billions, and when membership increases in the same period by a quarter of a million, the competition of farmers' elevators and of greasy little co-op oil stations begins to take on a different cast. When these little ventures, which were innocent enough in the beginning, begin to unite into regionals to do a more efficient job of marketing and purchasing, they become positively un-American.

Spearhead of the movement to squash these un-American tendencies is the National Tax Equality Association, which was organized in 1943, after a couple of false starts, as a clearing-house for the dissemination of information on tax inequalities, Government subsidies, and the preferential treatment accorded to the competitors of private business. N. T. E. A. is headed by Ben C. McCabe, president of the International Elevator Co., of Minneapolis. Its other officers include representatives of firms dealing in grain, lumber, and coal.

N. T. E. A.'s approach is what you would call indirect. It disclaims any antagonism for "true" cooperatives which, although "set up by a foreign pattern," are designed to "help the farmer by permitting him to sell his products with other farmers and to buy certain needed supplies at wholesale costs." (Note the weasel words!) What it objects to is the growth of these organizations "to great size and in fields far removed from the original concept"—whatever that was. The reason for this growth, according to Mr. McCabe, is that "they are specifically exempt from the high Federal income taxes which are today taking most of the earnings of all corporations."

Mr. McCabe's mental distress becomes understandable when it is realized that his principal cooperative competitor in the Northwest did a business of $100,000,000 in 1943 and saved its members $2,000,000; and that the patronage dividend in that year was at a rate which exceeds the commission it is obliged to collect from affiliated country elevators for selling their grain on the exchange. In other words, because of careful management and because of other operations carried on by this large regional cooperative, it is able to pay a patronage dividend to member elevators which is larger than the commission which nonmember elevators must pay to have their grain sold for them.

It is this patronage refund which Mr. McCabe and the N. T. E. A. are after. They assert that cooperatives do not have to pay Federal income taxes and thus derive a special advantage which makes it impossible for private business to compete with them. They would like to see the patronage refund taxed away while still in the hands of the co-op, rather than refunded to the farmers, so that farmers would have less incentive to patronize their own businesses.

The reaction from the grass roots has been strong and spontaneous. Cooperatives are coming together as never before to meet the attack, because they are convinced that all the patter about tax equality is just a blind to hide a campaign to make the world safe from cooperatives. As one cooperative editor put it, farmers are recalling the advice of Mary Ellen Lease during the Populist campaign "to raise less corn and more hell." State councils and associations of cooperatives are springing up or undergoing reorganization from coast to coast; and a National Association of Cooperatives has been formed to carry on the fight at the national level.

The common danger has unified the movement as nothing else could. Cooperators for the life of them can't see why they should scrap their well-organized cooperative institutions and pay a middleman to market their products when they can do it more cheaply and efficiently themselves. Nor can they see why they should pay for the cross-hauling, back-tracking, and buck-and-winging of trucks operated by half a dozen competing oil dealers when they can concentrate their patronage on their own co-op oil station and eliminate untold duplication of facilities. (See Farm Petroleum Delivery Bulletin P52, Iowa State College.)

Why do farmers feel so righteous about their cause? Is it true that their co-ops don't pay taxes and therefore enjoy an unbeatable advantage over private enterprise? The first thing a cooperator will tell you is that his co-op does pay taxes. It pays real-estate taxes, capital-stock taxes, excise taxes, and perhaps taxes on earnings not distributed as patronage refunds. It pays no income tax on income that is refunded to patrons on the basis of patronage, because that income is an overcharge which does not belong to the co-op.

If a marketing co-op gathers and sells its members products, and after charging the

competitive commission has a surplus which it refunds to members, it has received no income. It merely overcharged them for the service it performed as agent, and now it refunds the difference to the principals.

If a purchasing cooperative charges the current market price for goods it supplies to its members (one of the Rochdale rules) and finds that there is a margin remaining after all expenses, it has overcharged its members and therefore reimburses them by paying a patronage dividend.

In either case the members will have a higher income because their costs were reduced (except in the case of the purchase of purely consumers' goods) or their sales price higher, and they will pay income taxes on that increased income. To an open mind it is an arrangement about which everyone should be happy. England, the home of cooperatives, has settled this question two times over by the exhaustive reports of Royal Commissions.

American courts have repeatedly come up with the same decision. As long as any corporation, whether cooperative or not, is obligated by its bylaws, etc., to pay out its earnings to patrons, so that its directors have no discretion in the matter, those earnings are not taxable while in the hands of the corporation. In fact, members can vote to leave their patronage refunds or savings with the cooperative, and as long as the co-op evidences its indebtedness to the members therefor or allocates the retains to the respective members' accounts, it is not legally bound to pay income taxes thereon. The individual members whose income is enhanced by the patronage refund will pay increased income taxes at the proper time, depending upon when it is considered that they received the refund.

If patronage dividends which the co-op is obligated to distribute to patrons are nontaxable while in the hands of the co-op—in fact, lawyers believe that it would require an amendment to the constitution to make them taxable—why does the N. T. E. A. get so worked up over the "legislative favoritism" in virtue of which "their earnings are classed as 'savings'—not as profits?"

What about Mr. McCabe's assertion that cooperatives are mushrooming on all sides because they are "specifically exempt from the high Federal income taxes that are taking most of the earnings of all corporations"? It is true that co-ops meeting certain requirements are exempt from Federal income taxes. But this exemption by statute does not affect the inherent untaxability of patronage refunds which are paid pursuant to contract (e. g., bylaws, etc.). This exemption merely frees the co-op from paying taxes on income which it actually distributed as patronage refunds, but which it was not obliged by contract to distribute, and from paying income taxes on earnings withheld without consent of the members or without specifically allocating the retains to individual members. Such income would be such a small amount that it would not be worth the trouble of collecting the income taxes on it, and the repeal of the exempting statute would merely be annoying, not devastating.

The ominous thing about the attack is that N. T. E. A. knows this very well, but if it can misrepresent the issue sufficiently and arouse public opinion to the boiling point, it may be able to swing discriminatory legislation which will tax cooperatives in defiance of all rules of justice.

Where N. T. E. A. has a point, however, is that some cooperatives have not always treated their earnings as a fund held in trust for their patrons, while others have traded indiscriminately with members and nonmembers, without paying a patronage refund to the latter. If the attack of the N. T. E. A. forces such cooperatives to put their house in order, it will have performed a service for the cooperative movement and for the country as a whole.

On two counts, then, the N. T. E. A. attack should be considered the opposite of an unmixed evil. In the year of the Rochdale centennial, it is rallying the badly divided cooperative movement under one standard, and it is making cooperatives from coast to coast aware of the necessity of cooperatively correct operations, methods, and records. In the words of William E. Sanderson, president of the newly organized Wisconsin Association of Cooperatives, "Ben C. McCabe may unwittingly become one of the movement's unsung heroes."

The Manpower Shortage

REMARKS

OF

HON. FRANK A. BARRETT

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. BARRETT of Wyoming. Mr. Speaker, I rise today to discuss the problem of manpower shortage. Men in high places advise that there is a critical shortage of the materiel needed by our boys in the front lines. I take it for granted that every American will do whatever may be necessary in order to promptly correct that situation. It has been estimated that 700,000 additional war workers will be needed within the next 6 months to produce the tools of war. At the same time the armed forces are calling out an additional 900,000 men.

In order to provide the men for the armed forces the Selective Service System has ordered the reclassification of all deferred farm workers. It is estimated that there are approximately 364,000 farm boys between the ages of 18 and 26 who have been deferred as essential agricultural workers. I am advised that the Selective Service System believes that approximately one-half of these boys will be called to military service. In nearly every case these boys were born and reared on the farms of America, and it goes without saying that they are the most efficient farmers in the Nation. In the main these boys are irreplaceable, and in view of the critical shortage of farm help in every community of the Nation, I venture to say that it will be wholly impossible for agriculture to produce the food and fiber so vital in the war effort. It seems to me that the various boards over the country have construed the recent directive of the Selective Service System as a mandatory order to disregard the plain intent of the Tydings amendment to the act. The advisability of taking these boys from the farms is still left to the sound discretion of the local boards, but I fear that most of the local boards in the farming areas have concluded to call to the service these boys who have been deferred as agricultural workers because they have construed the directive as an order from Washington. To my way of thinking, this can result only in an increase of the acute shortage of food so badly needed here and abroad. I seriously doubt the wisdom of this directive because of the fact that this might create a serious shortage of food, which would interfere with successful prosecution of the war, and most assuredly curtail the available supply of food not only for our own people but will most assuredly decrease the amount of food for our allies and the unfortunate people of occupied countries.

It is proposed also to draft legislation for limited compulsory service for all men from 18 to 45. A compulsory service law to provide labor for private employers is entirely foreign to the American system and is a long step toward totalitarianism. Labor battalions are the European way, not the American way of life. American production has amazed the world, but I am very fearful that such a move would have a demoralizing effect on the productive output of America. It seems to me that this legislation will hinder rather than help production.

We have 4,500,000 boys classified as IV–F. General Hershey made the statement that in his judgment all but 10 percent of these boys would voluntarily cooperate and do whatever they could to assist in the war effort. Now, I think the general was mistaken. I think these boys are just as patriotic as any of the rest of us. I think that less than 1 percent of them would fail to respond and do anything they could to help out during these critical times. If some responsible agency of the Government would tell them precisely what was expected of them, I am positive that they would respond almost to a man. I think these boys have been kicked from pillar to post long enough. After 3 years of war we are told that thousands upon thousands of men are working in nonessential activities, or not working at all, when there is a critical shortage of manpower in war activities. Still, at the same time, we do not have an up-to-date survey of the available workers of America.

I am firmly convinced that there is a better approach to the problem of efficient use of America's manpower than the compulsory service proposal. I think this Congress can work out a plan to achieve better results by the voluntary cooperation of the people in every community of the land than by means of compulsory legislation. While I recognize the seriousness of the problem, still at the same time it must be recognized that the need for 700,000 additional war workers is over a period of the next 6 months, and not as of this moment. I think a plan for the joint cooperation of labor, management, and Government in every community of this country, with the power of public opinion behind them, will work out this problem far more satisfactorily on a voluntary basis than any yet proposed. In order to solve this problem, it seems to me that we must have an up-to-the-minute Nation-wide survey and reappraisal of the manpower of the country. Millions of men between 18 and 45 are working in war activities or war-supporting activities, but we have no way of telling how much of this manpower is wasted. Last week the American Federation of Labor and the Railway Brotherhood leaders,

after a joint conference, said they had evidence of flagrant wastage of manpower and money by Federal Government agencies and by private industries engaged in war production. To my way of thinking, that strikes right at the heart of our trouble, and in the main, that is a local problem which can only be solved intelligently by the full cooperation of labor and management wisely guided by Government representatives in each community.

Last Friday morning I saw a big limousine driven to the Capitol by a liveried chauffeur, with one passenger, and I noticed painted on the car the words "Federal Housing Administration." My curiosity was aroused and I inquired from the Bureau of the Budget the number of automobiles furnished by the Government in Washington, and I am informed that there are 667 automobiles furnished to Government agencies and officials, about 90 percent of which have chauffeurs. This number does not include 240 cars furnished to the F. B. I., Secret Service, and other law-enforcement agencies, or 960 cars furnished to the Army and Navy in Washington. This certainly is evidence of wastage of manpower in the Government service. Without question, thousands upon thousands of men are employed in the Government service who could well be released to war industries without in the least impairing the service, and in fact, it would undoubtedly improve it.

Just recently I received a letter from a constituent who has been working in a war plant for a year and a half, which reads as follows:

OGDEN, UTAH, *January 7, 1945.*

Congressman FRANK A. BARRETT,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I wish that I was sitting talking to you this morning as we used to in your office at Lusk, Wyo., instead of typing a letter to you as I could do so much better, but due to the fact that the talking is impossible, I will relieve the tension on my mind on this typewriter.

I feel that I am in a position to give some information that I have gathered in the last 2 years that might be of considerable help to you as I am in a position to gather the type of information that is hidden from you Congressmen. I went into defense work and it is to this I wish to refer.

No nation, America, or any other, cannot sustain a program of waste such as I will refer to and accomplish the desired result. We hear that to buy bonds will hasten the conclusion of the war and now if this is true and it should be then sure as ——— the correct expenditure of that money would likewise hasten the same conclusion of the same war.

I do hope that you can find the time to weight the things I write, as they are vital. I have worked at O. A. T. S. C. Hill Field, Utah, since * * * and have witnessed thousands of manhours wasted and millions of dollars.

Now, wait, Congressman; I don't mean the waste that is necessary to all large programs, but when I finish you will see what I mean.

Not one thing which I mention is without absolute proof * * *, and it is high time that someone turns the gate open on such sabotage, and sabotage it is.

I will not attempt to cite to you all of them, just a few.

I have witnessed B–24 airplanes, known as Liberators, bombers that could easily have been repaired, put under the saw and hauled out to the scrap heap. * * *.

We have absolutely hundreds of B–24's sitting at Hill Field not being used. We reconditioned 26 B–24's at Hill Field so as to fly them to Florida to put them under the saw for scrap, and what is done with the scrap? It is hauled out and dumped over a bank, tons of it laying at Hill Field.

On January 3, when the grease rags were put out, they were blue denim jackets and G. I. coveralls, many without a hole in them and not a button missing, much better garments than those worn by the workers, and some of the workers took some of them and put them on to work in, but they were severely rebuked and forced to use them to wipe grease with. We can't buy denim coveralls for our children, but we can use them to wipe grease on. Many of these garments have never been laundered more than once.

No wonder we hear, "What kind of a war are we fighting?"

I saw gasoline dumped in the sand in lots ranging as high as 200 gallons at one time. No; not dirty gasoline, but gasoline which was put in an airplane and because the fuel cells leaked it was drained and not used in trucks or other equipment but drained into barrels and hauled out and dumped in the sand by men who could obtain enough gasoline to get to work with only by lying to a ration board.

This added to their morale.

Two of our inspectors were dispatched to Oakland, Calif., to inspect some P–47's—these are the noted Thunderbolts—and to estimate the time needed for repair, and when they arrived they were taken to the C. O.'s office and met the request that they condemn everything they could. I ask you why, and at who's command?

Twenty of these P–47's had been shipped to the islands in the Pacific and returned, to test packing methods. With our boys fighting in hell itself, we here practice such tommyrot.

They witnessed (R–2800) engines—these are the type that the Thunderbolts are equipped with—laying on the scrap pile; engines which had only a few hours' flying time and yet left to the elements to destroy.

When we reconditioned the 26 B–24's referred to before and sent them to Florida, we had hundreds of people idle at Hill Field who were being told by their supervisors they would have to make certain jobs last for long periods of time as there was nothing for them to do.

On January 1 we instituted a time-card system that had been tried here before and had proved a failure with the result that hundreds stood in line for 2 hours to get into the clock house, and although they were supposed to clock in by 7:30 a. m., many of them were still in line at 9:30 and a bulletin was put out on the board to the effect that if they clocked in before 10 they would not be considered tardy. Let's save man-hours is the cry heard from our Chief.

Then who is responsible for actions of this sort, but the fact still remains our boys still fight while manpower is being wasted.

I have seen times when it took 7 days to get a part from the warehouse that was located less than a quarter of a mile away because of the red tape involved. Oh, yes, the part was there and the mechanics needed it to repair our fighting machine but we had to go through channels to get it with this kind of a result. Meanwhile the mechanics were up in the air, so to speak, and cussing and saying what kind of a system, only to be told they would have to be patient.

Perhaps the next day someone would come around to sell bonds to hasten the conclusion of the war.

We have now in hangar No. 2 an airplane known as airplane No. 42–52288. It is a B–24, yes, a Liberator bomber, which cost above $300,000, four engines and it will use about 250 gallons of gasoline per hour and we have equipped this airplane with fine flooring, inlaid linoleum, chairs that cost $111.16 each, loud speaker for the radio, and many other; oh, yes, an ice box. Well, we have put in a little over 4,500 hours of manpower and an estimated $10,000 in equipment and this airplane is to be used by Gen. G. H. Beverley to fly around over the country with.

I tell you the Sixth War loan went to town when this thing came in for such, and it is to be released for flight the 10th of this month.

This is sure to help win the war

I tell you, Congressman, I sure am full of such when I see those kids coming back in the condition they are in and we sit and let a bunch get away with such.

I say again that the correct expenditure of our money may mean a lot to some youth, maybe yours and maybe mine, and this kind of foolishness can only mean one thing, that being to kill the morale of our people.

Is it possible that Congress is in a position that nothing can be done?

Yet Congress is being urged to enact legislation to draft labor into jobs of this sort and the fruits of their labor to be destroyed before their own eyes and they forced to destroy it.

We have a fuel cell known as self-sealing so that when it is punctured it will seal itself from leaks. Now, some of these cells are equipped with a fitting which would no doubt cost about $5, but we have been forced to condemn the entire cell which would cost about $500 because they say they are unable to obtain that fitting from the fuel-cell manufacturers.

What kind of a war are we waging and when will we make an investigation that will rock from coast to coast.

I challenge the Chief or Congress—give me 12 men in work clothes and men who can't be bought and I will uncover a lot of tommy rot that will smell to the high heaven.

When you in Congress come along, of course, everything is fine, but come in work clothes and see what is being done.

In the year I have been at Hill Field I have never heard one person complain of working too hard but I have seen them quit by the dozens because they could not work.

Thousands of man-hours are wasted each and every month by some clean-up order because some general is coming through and many times they don't even enter the hangars.

I have seen the workers sweep the floors until they shone just to have something to do, and I have heard them say, hundreds of times, "Some way to win a war."

Does our Chief know these things?

Men who come in skilled in certain lines are sure to be put where they know nothing about their work. I will say in 7 cases out of 10 this is the case.

I have seen every activity close down and people put to sweeping floors and wiping dust from window sills because some general or general's stooge was coming along.

The packing at the warehouse has been closed down and the laborers put to sweeping up, and directly here would come someone in an automobile down through the warehouse and look from side to side, and then all was fine, but the man-hours were a loss.

Congressman, are you to stand this kind of a monkey business with your son out there?

I will answer it as I believe you will, and, knowing you and the fight that I believe you have in you, I firmly believe that you will say, "By the eternal, we must use every effort to see these kind of procedures are stopped."

I have watched your actions in Congress thus far and will freely state that I think Wyoming can well be thankful for the efforts you have put forth in her behalf.

You may show this letter to whom you choose or tack it on the walls in Congress, but I think that it is time to see that things of this type are investigated and some real action taken when they are found to exist.

I will be glad to cooperate in any way I can and welcome an investigation of these things being true.

I feel that it is absolutely unfair and a regrettable fact that our Chief would suggest that a draft measure be enforced upon labor when they have worked the way I have seen them when the work was to be done.

I have seen women in the shipyards carrying heavy pieces of iron who will never see their sixtieth birthday again, trying to do their bit while some guy in fine clothing acted as a slave driver or a king looking for a salute.

This may sound like I am soured, well I will admit that with the conditions as they are, I am thoroughly convinced that some of the waste I have witnessed has not been unintentional and that back of some of it has been a spirit of indifference and irresponsibility. * * *

I will appreciate a note from you that I may know that you received this newspaper.

If this was all the waste I knew about I would not have written you about it but it is only a very few illustrations.

Thanking you for the time to read it.

Yours very truly,

Mr. Speaker, by reason of the widespread public opinion that there is a flagrant wastage of manpower in the Government service, it is high time that the matter be thoroughly investigated. On Monday last, I introduced H. R. 1421 which I desire to call to your attention.

My bill provides that the Selective Service shall reclassify all men between 18 and 45, except those in I–A. All those who are found not to be employed or engaged in war activities, including agriculture, war-supporting activities, or in occupations necessary for the civilian economy of the country, or in the Government service necessary to the civilian economy or the proper administration of the Government or the war effort and who are physically qualified, shall be required to state in writing if they will respond to a call from the proper Government agency to work in the war activities. I am convinced that this will provide a huge reservoir of manpower. In addition, the bill will require that the Director of Selective Service cause the various local boards to make a survey of the manpower of defense plants and other industries in their respective jurisdictions to determine if full use is made of the services of the men working in both governmental and civilian employ.

Under the bill, the boards are furnished necessary technical and other help to carry out this work. The boards are empowered to require persons to appear before them and give evidence as to the facts. When any board finds evidence as to wastage or hoarding of labor it shall require employers to certify a list containing the names and addresses of their employees whose services can be dispensed with. And these too will be added to the reservoir of available manpower.

To my way of thinking, on the whole the American people are intensely patriotic and are extremely anxious to do whatever may be necessary to get on with the job of producing the goods so that our boys can win this war as quickly as possible. I am convinced that in the main this is a local problem that reaches into every community in America and that under the intelligent cooperation of labor and management, with the proper guidance from the Government we will get the job done in the real American way. Public opinion and public sentiment, if properly aroused, will be a far more effective method in my opinion than any compulsory means.

Hardly a family in America but has some relative in the service, and I have great faith that they will intelligently and patriotically cooperate if given the chance.

Imperialism Is Indicted as a Cause of War

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. MUNDT. Mr. Speaker, for the information of the Congress and the country I am inserting in the RECORD at this point a newspaper report of a speech recently delivered in South Dakota by Dean E. Smith, of the Redpath Bureau, and an editorial growing out of his address. Both come from the Mitchell Gazette, published in Mitchell, S. Dak.

While it occurs to me that the speaker may have over-emphasized somewhat the unsavory aspects of British and Russian imperialism his address does serve to call attention to a situation which the United States must face up to in its dealings with other nations in the post-war world if our leadership is to achieve world peace and anything resembling the extension of the "four freedoms" to over half the people of this earth.

We gain nothing by refusing to face the facts. Let us rather analyze the facts as they are and then exert enlightened world leadership in our international conferences to the end that freedom may become a possession rather than a phrase for the hundreds of millions of people on our side of this great war who continue to live under intolerable conditions. If the facts are as reported by Dean Smith, corrective steps should be taken; if they are not as bad as Mr. Smith reports but still seriously disturbing, remedies should be proposed; if they are entirely out of line with Mr. Smith's analysis the American public and the right thinking people of the world should be given the true picture supported by documentary and completely authentic evidence.

It seems certain that a prerequisite of permanent peace is the establishment of conditions of self-government and economic opportunity which will give people everywhere the satisfied feeling that they can live in their natural habitats as free citizens enjoying equity and justice to the full extent of their ability to develop such advantages for themselves unhampered by the imperialistic designs or dynasties of the so-called great powers.

IMPERIALISM IS CONDEMNED BY CHAMBER OF COMMERCE SPEAKER—DEAN SMITH TELLS BUSINESSMEN THEY MUST BE ON GUARD AGAINST BRITISH IMPERIALISM AFTER WAR—SAYS CAN BE NO PERMANENT PEACE UNLESS IT IS CURBED—AMERICA CAN DOMINATE WORLD WITH PRINCIPLE OF FREEDOM—"IMPERIALISTS HATE UNITED STATES," BUSINESSMEN ARE TOLD

The United States must continue to fight with unabated energy and must continue in full cooperation with Great Britain and Russia to win the war; but after it has been won, it will become the solemn obligation of this country not to surrender any of her sovereignty to the imperialism of Great Britain, nor to lend any aid to the rebuilding of that imperialism, or the communism of America's other wartime ally, Russia.

This summarizes, in a sentence, the address of Dean E. Smith, of the Redpath Bureau, Chicago, before the Mitchell Chamber of Commerce at the annual meeting in the Masonic temple Monday night. Mr. Smith sees in the imperialism which he declared has dominated Great Britain's activities prior to the war, during the war, and will continue after the war has been won, a threat to democratic government in other nations, a stumbling block to world peace. While emphasizing the importance of wartime cooperation to defeat imperialistic Japan and Germany, the speaker took off his linguistic gloves in a two-fisted denunciation of what he termed "British imperialism" in all its phases.

POWER BREEDS DESPOTISM

Declaring that "power breeds despotism," the speaker said it is the duty of the citizens of a republic to refuse to be governed except by their own consent. "We must conquer Germany and annihilate Japan everywhere except in her own island; but while we are destroying one monster, let us be careful not to create another Frankenstein that will rise up and destroy us sometime in the future. * * * In the current war we must view the peace to follow. * * * We must deal with men and nations, not as we would like them to be but as they are."

Dealing directly with the British empire and its imperialism, Mr. Smith declared that "three-fourths of Britain's colonists would tear down the British flag and spit on it, if there wasn't a bayonet pointed at them. * * * America stands for freedom of individuals and of nations. It causes the imperialists to shudder when they contemplate our position. Imperialists have no use for republics," he averred.

AMERICA TOO GENEROUS

Touching on what he inferred was the impractical generosity of the United States in the matter of canceling the financial obligations of World War No. 1, Mr. Smith declared it to be the opinion of many citizens of Europe and Asia, where he has been living for the past 27 years, that if we had insisted on the full payment of Europe's debt, World War No. 2 might never have been started.

Taking up the Polish question, the speaker declared that in the numerous partitionings of that country, the partitioning had never been done by the people of other nations but by the heads of government, with the people not knowing and not caring. And then back to the theme of his address—British Imperialism—"Let us see that the United States is not accused by Great Britain and Russia that 'If you had not helped to maintain our imperialism, maybe we would not have gotten into whatever mess we are involved in 25 or 50 years after the war.'"

"Let us see that we get some results from this war, in the way of establishing American

principles," he challenged. "We are being misled in this country by imperialists. * * * Imperialism is the system where one man tries to dominate another. * * * Let us see to it that our strength is not used to perpetuate imperialism. * * * If the United States had stood for its principles we could dominate the world for those principles. The peoples of the world love us; the leaders of the world hate us."

Speaking out of his long experience in foreign lands, Mr. Smith declared: "Hundreds of millions of people in Asia and Europe are thinking of freedom as you and I do; and they are thinking against the imperialists. * * * They will look to America after the war, to make freedom the real force of government. * * * They want a world organization that will insure peace, but know it will not last unless it is based on the American principle of freedom."

The speaker, avowing that he was revealing nothing that has not already appeared in print, quoted statistics to show that Great Britain has close to a million civilians imprisoned in India for political reasons. Russia, he declared, has 10,000,000 civilian prisoners who are kept behind steel bars and barbed wire because they don't believe in communism—"because they think as we do." And then:

"Are we going to surrender part of our sovereignty to that nation?"

DOESN'T FEAR COMMUNISM

Touching on phases of the current war with which he is familiar because, as manager of the Standard Oil properties in Burma for a period of 20 years, he was a resident of India, Burma, and China, Mr. Smith told the Mitchell businessmen that the Burma road could have been opened 2 years ago for the shipment of war materials into China, but was not opened "because Great Britain does not want to see a strong China emerge from this war. * * * That country does not want a China that will be strong enough to destroy imperialism."

Regarding Russian communism, Mr. Smith said that America has nothing to fear from communism if informed how unsatisfactorily it works.

"The United States started out on the right path; let us continue on that path," the speaker urged, in concluding his address. "Let us continue on with our boys and our money in a fight for American principles; that all nations may be free." But he warned against a post-war program that would use American money and American resources to rebuild and maintain British imperialism. "Great Britain has two or three times as much oil and other resources as the United States; why should we use our resources to rebuild her after the war * * *. If we do, they will use it to bolster their imperialism. If we do not help them after this war, they are going to be forced to cooperate with their own people * * *. The greater power the people have, the greater potentiality for peace * * *. Russia and Great Britain will not become a threat to the world, unless we help them develop their imperialism."

STRONG INDICTMENT OF BRITAIN

It was a strong indictment of Great Britain that Dean E. Smith delivered in his address before the Mitchell Chamber of Commerce in its annual meeting Monday night. Strong really is not the proper adjective. It was more than that; it was violent. Because Mr. Smith was manager of the Standard Oil properties in Burma, India, and China for close to a quarter of a century, he was at least speaking out of an abundant business experience and contact with the British imperialism, which he is now attacking so bitterly. One may hope that a lecturer who is highly recommended by the Redpath Bureau would not allow personal vindictiveness to color his addresses on so vital a subject or to influence his condemnation of America's closest ally in the current war; but whether Mr. Smith is allowing personal animosities to add violence to his charges against Great Britain, or his addresses are based in calm deliberation of what British imperialism has done, is doing, and will do, he certainly is giving his audiences something very serious to think about.

There is nothing new in charges of British imperialism. The charges are as old as the facts. But for a noted platform lecturer, a man of Mr. Smith's knowledge of events, to declare that British imperialism is still standing in the way of an all-out effort to get war supplies to China, that it is the cause of starvation of many thousands of Chinese, that its continuance will wreck any plans for permanent peace is to create an attitude of public mind in America toward this ally that is anything but healthy.

It may not make a lot of difference what Mr. Smith said before an isolated meeting of businessmen in a midwestern town, but if he is making this address in all parts of the United States, it does make a difference—a great deal of difference. And the fact that he is sponsored by a nationally known and highly respected lecture bureau is indication of the fact that the things he is saying must be pretty much the truth and his opinions highly considered.

A man in the public eye does not repeat idle phrases and get by with them for long; and one must accept the declarations of Mr. Smith as pretty much based on fact, else he could not continue to repeat them over and over again, from one end of the country to the other, and still retain his place with the lecture bureau which sponsors him.

Phrases such as these, taken from Mr. Smith's Mitchell address, would not go long unchallenged, if they did not hit pretty close to the mark:

"While we are destroying one monster (the Axis Powers), let us be careful not to create another Frankenstein (a post-war British Empire) that will rise up and destroy us.

"Three-fourths of Britain's colonists would tear down the British flag and spit on it, if there was not a bayonet pointed at them.

"We are being misled in this country by imperialists * * * Let us see to it that our strength is not used to perpetuate imperialism.

"The peoples of the world love us; the leaders of the world hate us.

"Are we going to surrender part of our sovereignty to that nation." Meaning Russia, which the speaker declared has 10,000,000 civilians behind bars and barbed wire "because they think as we do.

"Great Britain has"—probably meaning through her colonies—"two or three times as much oil and other resources as the United States; why should we use our resources to rebuild her after the war?"

These are but a few samples of the challenging charges made in Mr. Smith's address, reported elsewhere in today's Gazette. Their effect should not be to lessen our efforts to cooperate with Great Britain and Russia in winning the war; but to caution our own statesmen in their wartime and post-war demands on Great Britain and Russia.

Pick's Pike Opens

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. CASE of South Dakota. Mr. Speaker, in the good war news of the day was the announcement that the first truck convoy from India in 2 years had reached Myitkyina and the new Ledo road was now in operation.

Aside from the general interest that attaches to this achievement, the event has special interest for those who know the man who was in charge of the construction of that road, familiarly known as Pick's Pike. This military road, built under the eyes and often the fire of the Japanese, was constructed in record time by forces directed by Brig. Gen. Lewis A. Pick, who was division engineer for the Missouri River division, United States engineers, prior to his assignment to the big job in India and Burma.

His assignment to that job, of course, was the natural result of the way he had handled his previous assignment. In the Missouri River division he directed over a billion dollars' worth of Army construction in 1 year. He took jobs that were behind schedule and whipped them to schedule and finished them ahead of schedule. General Pick knew how and knows how to get things done.

And on top of the construction program he directed a battle against the big flood of 1943 and brought out a program for the control of Missouri River floods so comprehensive and challenging that it at once took his name up and down the valley as the Pick plan.

Although he went on to India, the flood-control plan he proposed was embodied in an authorization passed by Congress last year and now law. Under permission given by the House, I now place in the RECORD this morning's front-page story from India:

[From the Washington Post of January 16, 1945]

FIRST TRUCK CONVOY FROM INDIA IN 2 YEARS REACHES MYITKYINA

NEW DELHI, January 15.—The first truck convoy carrying war supplies to China in more than 2½ years has arrived in Myitkyina, north Burma, after a 262-mile trip from Ledo, India.

Chinese troops under the command of Lt. Gen. Daniel I. Sultan now are battling the Japanese in the Wanting and Namhkam areas along the China-Burma border, and only 25 miles of the overland route remain in enemy hands.

When that stretch is cleared one of the toughest jobs in the United States Army engineering history will have been completed—a 2-year battle against jungle diseases, driving monsoon rains, and Japanese troops by workmen of four nations—the United States, China, India, and Burma.

The new China supply line, more than 2,000 miles long, will be in two sections. The western portion, winding through malaria-infested jungle from Ledo to Myitkynia, and known throughout the theater as Pick's Pike, was constructed under the guidance of Brig. Gen. Lewis A. Pick, of Auburn, Ala. It was officially declared completed yesterday. The eastern section will run from Myitkynia to Kunming.

For most of the first string of vehicles now marking time in Myitkynia it will be a one-way trip. They will remain in China because Generalissimo Chiang Kai-shek's armies are badly in need of trucks.

The new road will replace the old Burma Road, which will not be reopened.

The gravel-surfaced artery will carry more than the Burma Road ever carried, but at best it probably never will equal the pace now being set by American Air Transport Command planes flying the hazardous Himalayan hump from Assam to Kunming.

The United States flyers have increased their air supply service day by day and have built it up to 23,000 tons per month over the world's most dangerous air-line route. It has been the only means of getting men and supplies to China since the Japanese drove the British out of Burma in 1942.

Troops of the Chinese First Army now are knocking at the doors of Namhkam, the last key Japanese defense position guarding the final lap of the main Ledo Road. It is the only Burma zone where the enemy has been putting up determined resistance.

Farther south, where the British Fourteenth Army has swept to within 30 miles of Mandalay, there has been only token Japanese resistance.

Army Nurses

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mrs. ROGERS of Massachusetts. Mr. Speaker, this article by Catherine Coyne, of the Boston Herald's war correspondents who has served with our armies overseas for some 7 or 8 months, describes two nurses who were in the same hospital where Miss Slanger was killed. These two nurses were in the same tent with her, and Lieutenant Powers, of Lowell, Mass., a friend of mine and a very fine woman, was wounded. Lieutenant Powers in this article speaks of the magnificent privilege it is to serve our wounded men overseas and of the idolization of the nurses by the wounded they serve in the hospitals. She speaks with feeling to the effect that it would be unfortunate to have any nurses drafted or have to be drafted to take care of the wounded. I should like to state that of course we must have the nurses. I do not know whether the draft will be absolutely necessary, but we must secure nurses by some means to provide the best care for our service men and women. We should fail in our duty to them if we did not do everything in our power to secure them. We must not fail.

I should like to state that 75,000 of the nurses in this country have volunteered for service with the armed forces—one-third of the entire nurse population of the country. It is only proper to pay tribute to this patriotic group.

The article I referred to, from the Boston Herald of January 16, 1945, follows:

LOWELL NURSE IN THICK OF WAR 7 MONTHS EARNS TRIP TO PARIS—LIEUTENANT POWERS CHIDES NURSES AT HOME ON DRAFT, HIDES HER DECORATIONS BUT NOT HER FEELINGS

(By Catherine Coyne)

SOMEWHERE IN BELGIUM, January 15.—Lt. Elizabeth F. Powers, attractive nurse from Lowell, who hid her Bronze Star and Purple Heart ribbons inside her jacket so no one would ask questions, was leaving the front today.

First American nurse to land in France in this war, she has been up front since the fourth day of the invasion when she jumped from a barge into water up to her chin and waded to the beachhead to minister to the wounded. She following the infantry through the hedgerow fighting, arriving in Cherbourg the very day that seaport fell, then went along on the lightning dash through France and Belgium right into Germany.

Though fully recovered from a wound in her right arm caused by shrapnel from the shell that killed her tentmate, Lt. Frances Slanger, of Roxbury, she was on her way today to less rugged but still strenuous duty at a station hospital.

As she boarded the train she admitted she wasn't sorry to leave the front, to swap the nomadic life of a platoon chief nurse with a First Army hospital and tent living for the routine of a big behind-the-lines hospital. Yet she worried about the wounded.

"There have been times," she said, "when we could have used many more nurses. Any American nurse who wants the Army to draft her to care for our wonderful G. I.'s ought to hang her head in shame."

She and her companion, Lt. Mary W. Reynolds, Bangor, Maine, were proud and had every reason to be proud of their service on the continent. They regard it as a rare privilege to have a share in saving the lives of hurt American boys.

"I can't understand," Lieutenant Powers said, "why any American nurse would avoid the opportunity to serve here, nor can I understand why any nurse once here would want to go home before the war is won. There is so much to be done. Nurses help not only in the professional care they give the wounded but even by their very presence."

IN FIRST DEVENS CLASSES

"The news that a hospital has moved into the area," Lieutenant Reynolds added, "gives the boys a wonderful morale boost; they idolize us. It's not us as persons, of course, but as American nurses. If the nurses at home knew the magnificent privilege that is ours for service, they wouldn't wait to be drafted."

These two New England women were among the first to answer the call for nurses. Lieutenant Powers was a member of the first class to be graduated from the nurses' basic training course at Fort Devens and Lieutenant Reynolds was in the second class.

They were by turns coolly professional and excitedly feminine today, professional in their appraisal of the work of the nurse in the Army, and feminine in their joy over prospect of a day's leave in Paris and a night's sleep in a real bed between white sheets.

Their last home here was a canvas tent with snow packed around the base. There was no tarpaulin on the ground; their beds were canvas cots and khaki wool blankets.

"I haven't slept between sheets since June. Lieutenant Powers said. "I haven't worn a skirt since I was in England, actually not since the end of May. I'm not sure how I'll behave when I get back into a skirt."

RECALLS FAMED LETTER

"I've got a skirt," Lieutenant Reynolds said, "but they won't let me wear it. Imagine going to Paris in field clothes, wearing trousers stuffed down into high boots. Oh, well, we'll see Paris, anyway."

Lieutenant Powers is the daughter of John Powers, of 69 Norcross Street, Lowell, and sister of the Reverend John Powers, St. Joseph's Church in Boston's west end. She was graduated from St. Elizabeths Hospital, Brighton, and worked in New York hospitals before joining the Army.

She was one of the signers of the now famed letter, beloved by soldiers, written by Lieutenant Slanger in their tent the night before the latter was killed. In that letter the Roxbury nurse expressed admiration of her tentmates for their magnificent courage and awesome patience, and for the delightful, if impudent, humor of wounded Americans.

"Frances mailed that letter the morning of the day she died," Lieutenant Powers recalled today. "Margaret Bowler and I were standing on cots fixing the black-out curtains when that shell—a 150—came. We had had quite a bit of artillery, so we didn't pay much attention to it. It's a miracle we weren't all killed.

DID WHAT THEY COULD

"We did what we could for Frances, but there wasn't much we could do. She told me she was dying. All we could do was to put her on her cot and crouch there beside her, screaming for help. The shells were coming in and no one could hear us for a long time. It wasn't until afterwards that I realized I had been hit, too."

These girls have bronze stars for 6 months of meritorious nursing service in combat zone. Their nerves are all right, but these two nurses have earned a rest, and to work under less tense conditions. Yet, as they left tonight for their safer posts, it was with misgivings. They worried about nurses to replace them, they fretted over slowness with which their colleagues at home were responding to the Nation's desperate need for Army nurses.

"If only they knew the privilege that would be theirs," murmured Lieutenant Powers as she left.

Committee on Un-American Activities

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a radio address which I delivered over the Columbia Broadcasting System last night.

The address follows:

WHY WE NEED A PERMANENT COMMITTEE TO INVESTIGATE UN-AMERICAN ACTIVITIES

Fellow Americans, first I want to thank the Columbia Broadcasting System for giving me this opportunity of speaking to you for a few minutes on a subject that vitally affects the very life of this Nation—that of protecting this country against the subversive activities of un-American elements within our gates.

On January 3, 1945, the opening day of the new Congress, I arose in the House and submitted to that body the proposition of establishing a permanent or standing Committee on Un-American Activities to succeed the special committee known as the Dies committee, which had expired with the previous Congress.

The House adopted my proposal in what has been termed an unprecedented action by a vote of 207 to 186.

Now, why did the Members of the House do this? Why did your Representative in Congress vote to establish this permanent Committee on Un-American Activities? I will tell you why.

They did it because they wanted to save this great Government of ours for which your sons are now fighting and dying all over the world. They did it because they wanted Congress to continue the valuable work of the Dies committee, which the House set up in 1938 and which has been active since that time, ferreting out and exposing the subversive and un-American elements throughout this country.

They did it because they wanted to preserve the valuable records amassed by the Dies committee, which contain the names of over 600,000 individuals in the United States who have identified themselves with the subversive activities of the Communists, the Nazis, the Fascists, the Japanese, and other such organizations operating in this country. These records have been of tremendous value to the Nation during this war in supplying information to the various intelligence units of the Government, such as the F. B. I. and the War and Navy Departments.

As an illustration of this service I should like to remind you that thousands of agents of this Government in the past 2 years have called at the committee's office for this information.

The Congress is concerned that the people be informed as to the true purposes of these individuals and organizations who are masquerading under high sounding titles, but who, in reality, are seeking to destroy our form of Government, and our American way of life, if not our entire civilization.

The Members of Congress are desirous of having a vigilant committee, now and in the post-war period, to expose the alienisms and ideologies that will grow out of the chaos of this conflict. We must never let down our guard. The war drove many of these subversive elements underground, but make no mistake about it, they will reappear under new banners and with new slogans. We must therefore be alert and ready to point them out and expose them at all times.

And lastly, the Members of the House established this permanent committee because they were reflecting the concern of a vast majority of the American people over what is happening throughout Europe, and what might happen to this country if we should relax our vigilance or fail to maintain the proper safeguards. Our people are determined that our sacred institutions shall not be destroyed by secret enemies at home while our brave young men are fighting so desperately to protect them from our enemies abroad.

Now, what is the real significance of this new permanent committee? It means that every citizen of this country has a right to petition the Congress to investigate matters which he or she considers to be un-American.

Under this new set-up Members of Congress may introduce resolutions requesting investigations. These resolutions will be referred to this standing Committee on Un-American Activities. This committee will have the staff, and the authority, to make thorough and complete investigations. It will have the authority to use the powerful weapon of subpena, which no executive agency of the Government has. It can report legislation to the House, and assist in writing laws to curb un-American forces at work in this country at any time.

This committee will be made up of nine members—six Democrats and three Republicans. To say that I was disappointed that more Members were not placed on this committee who favored its creation, and who have supported the Dies committee at all times expresses it but mildly. It is likely to prove embarrassing to some members of this new committee, especially if they attempt to block our efforts to rid this country of these un-American activities.

I have been urged by the members of the American Legion and other patriotic individuals throughout the country, including my own colleagues, to accept a place on the committee. I have hesitated to do this for many reasons, which I will not take time to explain, but which I think you will understand. I refused to consider taking the chairmanship of this committee, for the reason that I did not want to give up my chairmanship of the Committee on World War Veterans' Legislation.

I have finally decided to accept a place on this new committee, for the time being at least, in order to assist in steering the committee on a course that will reach all forms of un-American activities, whether they be in high or low places, and to preserve the valuable records of the Dies committee.

If the members of this committee will exercise that degree of fairness and diligence which the country has a right to expect, then the results of the committee's work will be a real and lasting service to the Nation.

This is a great Republic—the greatest the world has ever known—but because it is a Republic, it was inevitable that there should be among our 130,000,000 people many individuals who would seek to destroy the very foundation upon which it rests, and which gave them their rights and their liberties—especially when we have among us so many dangerous aliens.

They are the poison in the blood stream of our Nation. Poison like the American Communists who since 1920 have used ever-changing tactics to undermine and weaken our Government, wipe out the Constitution and destroy everything our fathers have built, in the hope that out of chaos they might seize power. And mind you, I am speaking now, not of our gallant allies, the Russians and their brave soldiers—I am speaking of the American Communists, many of whom have been run out of Russia, who have used the cloak of American citizenship to hide their treasonable activities against America. The hundreds of thousands of Communists in America, along with the Nazis, Japs, and other un-American elements, must be watched and spotlighted because their aim is the destruction of our system of Government, and our way of life.

Poison like the German Bund members in America who under Fritz Kuhn established outposts for Hitler in 36 States before we were aware that they were conspiring to substitute Hitlerism for our democracy.

Let me remind you that there were thousands who goose-stepped and heil'ed Hitler every Sunday in these camps—they are still in our midst.

Poison like the thousands of so-called Japanese-Americans in the United States who, although born in this country hold their allegiance to the Emperor of Japan, and take their orders from the Black Dragon Society, one of the most dangerous and far-reaching organizations that ever conspired to stir race trouble in this country.

They are still here.

And then there is the poison of the smear bund whose members have done so much to destroy the character and reputation of men in public life who do not agree with them on national and international affairs. They constitute the propaganda front for these un-American elements.

Thus you can see why we must have a Committee on Un-American Activities to strip the mask from these imposters and show the American people what they are and what they propose to do.

I fear the American people will never know what a lasting debt of gratitude they owe to Martin Dies and the other patriotic members of his committee for the splendid work they did for the protection of this country against these subversive elements during the last 7 years. Mr. Dies is no longer a member of Congress, having been compelled to retire because of poor health. But his name will live and his services will be remembered by a grateful Nation long after his defamers shall have slumbered in forgotten graves and the subversive elements he fought shall have been driven from American soil.

I took up this fight where he left off and had this Committee on the Un-American Activities made a standing committee of the House. I want these criminals to know that the grand jury would be in session from now on.

At this time I want to thank the American Legion, the Daughters of the American Revolution, and other patriotic organizations for their encouragement and support in this fight, and to urge them to continue their activities in this great cause. I hope every post, every camp, and every unit of all the great patriotic organizations throughout this country will join us in this fight with the same determination and enthusiasm now being manifested by our fighting men on every battle front in the world.

I also want to thank those thousands of patriotic individuals for their messages of encouragement in this trying hour. I feel that in carrying through this fight to have this permanent Committee on Un-American Activities established I have been privileged to render my greatest service to my country.

But we need your continued help. Let your Congressman know how you feel on this all-important issue. You may rest assured that those subversive influences this committee is designed to watch will be writing in and doing everything they can to discourage and discredit its work.

Eternal vigilance is the price of our liberty! We are going to need the active and enthusiastic support of every real God-fearing, liberty-loving, patriotic American to help protect this country at home while your sons are defending it abroad, so that when they return they will find that those glorious institutions for which they fought have not "perished from the earth."

Thirty-fifth Anniversary of the Sentinel

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1945

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered at a dinner given at the Hotel Sherman in Chicago, Ill., January 6, 1945, in commemoration of the thirty-fifth anniversary of the founding of the Sentinel, a progressive American-Jewish newspaper, under the able direction of Messrs. J. I. Fishbein and J. M. Feldman as associate publishers:

I am asked to speak tonight on different subjects. The subjects are unity and the post-war world. I might ask, the unity of what? The unity of nations, the unity of faith, the unity of people, the unity of the press?

And, as we have assembled here tonight to celebrate the thirty-fifth anniversary of the publication of the Sentinel, which is a Jewish paper, the thought occurs to me that we should dwell on the efforts of the Sentinel to promote unity among the Jewish people.

A time of celebration should also be a time of stock-taking. We must take an inventory of our past and present achievements and our future intentions, to determine whether or not a celebration is warranted at this time. Celebrating a date such as the thirty-fifth anniversary of the publication of the Sentinel has no value unless the succeeding years have been years of accomplishment. Every event, as every person, waxes old. There is nothing remarkable about that. Old age is meaningless unless you have something to show for it.

Later on in my address tonight, I intend to take inventory of the accomplishments of the Sentinel, past and future. But for the

present I will take the second half of the dual subject given me—the post-war world.

We attempt to picture the post-war world. Books are written on the subject, and the papers are full of articles telling us what will be and should be. My own consideration of the subject causes me to dismiss details, because it is impossible to foresee in detail what is to come. I confine myself to principles. These cannot fail, because they are based upon truths that are immutable.

Among these principles I can mention two or three that underlie all that we can foresee of the post-war world.

First, and most important of all, is the principle of liberty—the urge of mankind for freedom. This war has taught us many things, one of which is the fact that liberty is under constant siege and can be preserved only by eternal vigilance. Another thing we have learned is that mankind is struggling for liberty. The world is marching toward broader freedom. This march is as irresistible as the movement of a glacier—and almost as slow, as a rule; but now it is quickening. No tyrant nor combination of tyrants can stop this march, or divert it from its goal. Therefore I draw one conclusion: That the nations already possessing liberty will redouble their vigilance so as to make sure that their liberty shall be secure. They will discover that a movement toward liberty, anywhere in the world, by any people, no matter how hopeless the struggle may seem on the surface, is a movement that fortifies liberty, even in the strongest and freest nation. So the free nations will help those that are striving for liberty.

Second, and next to liberty itself, I note the extension of the principle of cooperation among peoples and nations. By cooperation the American people achieved their more perfect Union, and thus secured the blessings of liberty. Gladly would we hail the establishment everywhere of governments patterned after the Government of the United States, as ordained by our Constitution; but we know that conditions in many countries are not ripe for such a system.

There can be cooperation, however, among the people in every region, and when this cooperation hastens the advent of liberty it contributes to the welfare of the whole world. This movement within a region can be helped by the supreme authority of each nation, and by neighboring nations. Thus, by the cooperation of nations, we hope to see a system established on the basis of the Dumbarton Oaks plan, whereby the whole world shall be made both free and secure, and kept at peace.

That would be the supreme triumph of the principle of cooperation—the victory of lasting peace over war.

Now, out of the increase of cooperation among men and nations must come improvement in every-day welfare as well as progress in freedom. Although the urge for liberty is the driving force behind cooperation, we discover that cooperation brings other blessings besides making freedom more secure. Cooperation makes for friendship and intercourse, exchange of ideas and goods, and universal betterment.

I have mentioned only two basic principles which I believe will operate upon the nations after this war. Within these principles of liberty and cooperation are scores of blessings, such as education, culture, interchange of inventions and discoveries, better labor conditions, emancipation of human toil by larger use of machinery, and many others. All of these are attainable by all nations if they will take the opportunity awaiting them after this war.

Now, when you ask me for a blueprint of the world peace system that will emerge from this war, I confess that I have none. Who has one? He may as well tear it up, for no one can foresee the details of what is to come. Why waste time trying to predict future action on matters that are still the sport of time and war? No sane nation will commit itself in advance to a course of action which might be pure insanity or stupidity in the light of better knowledge. But this applies to ways and means, methods and agreements upon details, and not to cooperation for the sublime objective of human liberty and peace.

President Roosevelt was right when he laid emphasis upon the principles that hold the United Nations together and carry them to victory. He is not worried over the subordinate questions that arise daily in this struggle, so long as the peace-loving nations are united in adopting the principles of liberty and cooperation. The President very properly dismisses the technicality of a signed document embodying the principles of the Atlantic Charter. What does it matter whether Mr. Roosevelt and Mr. Churchill signed a document or not? Is their declaration in harmony with mankind's march for liberty through cooperation? If so, it stands. If not, it falls. There is no such document as the constitution of Great Britain, but we know what it is, and we know that it stands. No one can find any document bearing a signature to the Ten Commandments. Magna Carta itself was not signed, while our Constitution was; but it is the spirit of each that counts, not the perishable parchment, signed or unsigned.

We know that the Atlantic Charter embodies the principles of liberty and the cooperation of nations. Therefore we may be sure that the post-war world will adopt a system harmonizing with the Atlantic Charter as well as with the Constitution of the United States. The truths underlying these and other charters and constitutions of peace-loving nations are eternal truths, always in harmony with themselves and with God's law. They breathe the universal prayer of mankind, striving for freedom and peace.

This war can have but one end, and that end is the triumph of liberty. That means that this war is a war between the United States Constitution and its enemies. How could the war end, except in victory? Anything short of victory would merely signify a continuation of the war until victory came. Victory signifies opportunity to make liberty more secure by the cooperation of all lovers of liberty throughout the world, nation after nation lining up to hammer the rivets upon the arms of oppression and to knock the shackles from men that are bound. That opportunity opened by victory is the golden hour for mankind, the hour granted by the Almighty wherein the nations may have a chance to cooperate and thus make their liberty secure. God is with us. He fights our battles when we fight to establish His rule on earth. He endowed us with liberty as a birthright. He bids us and all nations to go forward. As freemen we hear and we obey.

Now, may I return to the first part of my subject, that of unity. We celebrate here tonight the anniversary which marks 35 years of endeavor by the Sentinel, which from the time of its establishment has devoted itself to promoting unity in Jewish life. From the very first it has been a wise defender of Jewry against dangers from without and a fearless mentor of failings within. Firm at all times in its opposition to every form of spiritual self-obliteration or revolution in religion, it has given its utmost support to all movements that stood for Jewish life and the deepening of Jewish self-respect.

In establishing an American-Jewish newspaper, the founder invited a responsibility far transcending that of an ordinary newspaper. Such a paper must not merely present to the public week by week an acceptable and attractive sheet so as to gain popular support, for the object of the American-Jewish press is something infinitely wider and altogether bigger. It is charged with maintaining the sense of the oneness of the House of Israel and urging the preeminence of the abiding truths of Judaism. It seeks the elevation not merely of the individual but of the Jewish people.

That the Sentinel has squarely met and accepted this responsibility is shown by the eminent place it has won in the field of American-Jewish journalism. Its issues give a vivid survey of the condition of the Jews and Judaism throughout the globe. As its readers know, its records and chroniclings and comments are dominated by the one supreme desire to rouse and maintain in the hearts of its readers the spirit of unity, and in the minds of its non-Jewish readers a thorough comprehension of the essence and mission of Judaism.

The Sentinel has been the champion of the Jewish cause without minimizing Jewish faults; it has come into Jewish homes as a friend and has therefore been received as a friend as well as a comforter and guide. It has taken the lead consistently in the defense of the community against slander and attack. It has not evaded the issue by feigning nonexistence or pretending that attacks are directed against someone else. It has been the communal watchdog against libels in the press and on the platform. Truly, the Sentinel has lived up to its name; it has not only reported but guided and inspired.

The thread on which the different good qualities of human beings are strung as pearls is the love of God. When the fastenings of this love are unloosed, the pearls roll in all directions and are lost one by one.

To labor in the vineyard of the Lord is and should be the only objective of the American-Jewish press.

As I look on the tiny scroll of the Law (the Torah) on my desk, I think of the American-Jewish press and its future; and I wish to apply to it the beautiful passage of our ritual when the Torah is being placed in the ark:

"It is a tree of life to them that grasp it, and of them that uphold it everyone is rendered happy. Its ways are ways of pleasantness, and all its paths are peace."

Charles M. Hay

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. COCHRAN. Mr. Speaker, last night there was a war casualty, not on the battle front, but on the home front when Hon. Charles M. Hay, the Executive Director and assistant to the Chairman of the War Manpower Commission, died of a heart attack at his apartment in Washington.

In the last few weeks when the Chairman of the War Manpower Commission was abroad, Mr. Hay was acting in his place. Not only did he absorb the duties of the Chairman in Washington, but he made several trips out of the city settling war manpower problems of great importance. In his capacity as Acting Chairman of the War Manpower Commission only a few days ago he appeared before the Military Affairs Committee of the House, urging the adoption of legislation that would be beneficial in connection with the crisis that confronts

the country on the home front at the present time.

Mr. Hay was a resident of the State of Missouri and had been active in political life for nearly 40 years. He was greatly disappointed in his inability to participate in the campaign last fall when he sought to resign his position in order to go throughout the country and make speeches for the reelection of President Roosevelt. Due to the manpower situation he was prevailed upon to retain his position. He had been connected with the War Manpower Commission since 1943 when he was appointed the general counsel and later became the executive director of the agency.

He had on other occasions been a member of the War Labor Board and one of his outstanding services to his Government was as assistant to the Attorney General, when he successfully defended the Railroad Retirement Act in the Federal courts. In view of his success in connection with the Railroad Retirement Act he later became associated with railway labor, representing them in connection with wage disputes.

Mr. Hay had held numerous positions in the State government of Missouri, serving in the legislature and later as chairman of the board of election commissioners as well as chief city councilor.

He was an outstanding American, always defending our institutions and recognized as one of the great orators of the country. His family has lost a devoted husband and father; the country and the State, a great American; and I, a very close personal friend of over 35 years. To his wife and children I extend my deepest sympathy in their hour of sorrow.

Shall the American Taxpayer Pay for European War Devastation?

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1945

Mr. ENGEL of Michigan. Mr. Speaker, I am including in my extension of remarks a letter written me by Secretary of State E. R. Stettinius, Jr., together with a statement issued by him regarding the policy of the State Department on Poland. Paragraph 3 of this statement states that it is the announced aim of the United States Government, subject to legislative authority, to assist liberated countries in Europe in repairing the devastation of war. This means that we are to finance the reconstruction of Europe. While I am willing to help feed Europe in the interim and until those liberated countries can raise their own foodstuffs, I am absolutely opposed to taxing our people to help reconstruct Europe.

The letter and statement follow:

DEPARTMENT OF STATE,
Washington, January 10, 1945.

The Honorable ALBERT J. ENGEL,
House of Representatives,
Washington, D. C.

MY DEAR MR. ENGEL: With further reference to your letter of December 27, 1944, concerning the statement on the Polish question which I issued on December 18, I am happy to enclose a State Department press release giving the text of the statement in question. You will note that the passage relating to the transfer of national groups reads as follows: "If as a result of such agreement the Government and people of Poland decide that it would be in the interests of the Polish State to transfer national groups, the United States Government in cooperation with other governments, will assist Poland, insofar as practicable, in such transfers."

The complex question of the transfer of populations is receiving constant study in this Department, and in issuing this statement I had in mind no specific method by which American assistance could be extended. Such a large-scale transfer of populations would involve many problems including transportation, organization, and supervision apart from any possible direct assistance to the persons concerned. The words "insofar as practicable" were used in the statement with the object of insuring that this Government would be free to determine, in the light of the actual conditions and circumstances of any transfer, both the method and extent of the assistance which it would render. At the same time I am sure you will agree that for humanitarian reasons as well as because of our desire to further stable conditions in post-war Europe this Government will have an interest in rendering such assistance as may be feasible.

Sincerely yours,

E. R. STETTINIUS, Jr.

(Enclosure)

STATEMENT OF MR. EDWARD R. STETTINIUS, JR., SECRETARY OF STATE

The United States Government's position as regards Poland has been steadfastly guided by full understanding and sympathy for the interests of the Polish people. This position has been communicated on previous occasions to the interested governments, including the Government of Poland. It may be summarized as follows:

1. The United States Government stands unequivocally for a strong, free, and independent Polish state with the untrammelled right of the Polish people to order their internal existence as they see fit.

2. It has been the consistently held policy of the United States Government that questions relating to boundaries should be left in abeyance until the termination of hostilities. As Secretary Hull stated in his address of April 9, 1944, "This does not mean that certain questions may not and should not in the meantime be settled by friendly conference and agreement." In the case of the future frontiers of Poland, if a mutual agreement is reached by the United Nations directly concerned, this Government would have no objection to such an agreement which could make an essential contribution t the prosecution of the war against the common enemy. If as a result of such agreement the Government and people of Poland decide t at it would be in the interests of the Polish state to transfer national groups, the United States Government in cooperation with other governments, will assist Poland, insofar as practicable, in such transfers. The United States Government continues to adhere to its traditional policy of declining to give guaranties for any specific frontiers. The United States Government is working for the establishment of a world security organization through which the United States together with other member states would assume responsibility for the preservation of general security.

3. It is the announced aim of the United States Government, subject to legislative authority, to assist the countries liberated from the enemy in repairing the devastation of war and thus to bring to their peoples the opportunity to join as full partners in the task of building a more prosperous and secure life for all men and women. This applies to Poland as well as the other United Nations.

The policy of the United States Governments regarding Poland outlined above has as its objective the attainment of the announced basic principles of United States foreign policy.

Reduction of Prison Sentences of William Bioff and George E. Browne

REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. McCORMACK. Mr. Speaker, in the Appendix of the CONGRESSIONAL RECORD of January 6, where they were inserted under leave to extend his remarks, I read a statement by the gentleman from Wisconsin [Mr. SMITH], together with an editorial from the Milwaukee Journal, concerning the action of the Federal district court in New York in reducing the prison sentences of William Bioff and George E. Browne.

I contacted the Department of Justice and asked for the facts of these two matters. I now have the facts in the form of a statement by the Attorney General of the United States, and I ask leave to insert it at this point in the RECORD:

I have just seen a statement in the CONGRESSIONAL RECORD of January 6 by Representative LAWRENCE H. SMITH, to the effect that the reduction of sentence in the cases of William Bioff and George E. Browne was the result of a deal between these men and the Attorney General.

Mr. SMITH is misinformed. The facts are these: There was no prior agreement or commitment by the Department of Justice or any of its representatives. At the time of their trial in November 1941, for violation of the Antiracketeering Act, it became apparent that Bioff and Browne had associates who participated with them in their crimes but whose identities were not known to the Government. The defendants refused to divulge this information, and the Government recommended and the court imposed, upon conviction, sentences of 10 years for Bioff and 8 years for Browne, plus fines of $20,000 each.

Subsequently, the two convicted criminals turned informer. Information and testimony given by them and other witnesses aided the Government in breaking a gang in Chicago that had succeeded to Al Capone's power in the Chicago underworld.

Therefore when motion was made by attorneys for Bioff and Browne to reduce sentences of these two informers, the Government interposed no objection. Judge John

C. Knox, who had sentenced Bioff and Browne and had kept the term of court open in their cases, reduced their sentence to time already served—3 years, 1 month, and 1 day—as of December 22, 1944. On the recommendation of the Government, the court left one count of their conviction undisturbed, placing them on probation for 5 years. It should be noted that Browne had become eligible for parole in July 1944 and that Bioff would have become eligible in March 1945.

This is a customary procedure of the court in recognizing the services of convicted criminals who have turned informer.

The facts prove the gentleman's remarks to be inaccurate, to put it mildly, and the editorial, based on wrong premises, in all decency should be corrected editorially by this newspaper. Sentence was imposed on Bioff and Browne by one of the ablest and most distinguished members of the Federal district bench, a jurist with more than 27 years of faithful service in the southern district of New York, the Honorable John C. Knox. Entirely aside from the gratuitous slur upon the Attorney General, it is shameful to imply that Judge Knox would be a party to or could be imposed upon by a "deal" with convicted criminals.

The facts are that Judge Knox reduced the sentences of Bioff and Browne to time already served—3 years, 1 month, and 1 day—after all fines had been paid, and, at the specific request of the Department of Justice, left one count of their convictions undisturbed, thus placing them both on probation for a period of 5 years.

The proper and fair course for anyone to follow before making any such charges would be to investigate and ascertain the facts before writing an editorial or using such editorial on the floor of the House. The charge that a deal was made is without foundation.

Why Not Crop Insurance?

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, we saw the wheat-cotton insurance program revived with one war crop—flax—added to the list. The platforms of both parties pledged support to crop insurance but not insurance for only a small part of agriculture.

This legislation is of particular significance at this time, when the acting War Food Administrator is asking that cotton acreage be maintained and wheat acreage be increased even when manpower, transportation, and ships are being used to export the declared surpluses of cotton and wheat.

In order to present a picture of the importance of these crops, I include the following official table from the Bureau of Agricultural Economics:

	Hay	Corn	Wheat	Cotton	
				Lint	Seed
1939 farm value	$685,427,000	$1,465,075,000	$512,401,000	$536,996,000	$102,933,000
1939 acres harvested	69,097,000	88,279,000	52,668,000	23,805,000	
1940 farm value	$718,011,000	$1,521,692,000	$554,878,000	$621,284,000	$114,817,000
1940 acres harvested	71,919,000	86,738,000	52,988,000	23,861,000	
1941 farm value	$910,915,000	$2,008,881,000	$890,832,000	$914,317,000	$216,961,000
1941 acres harvested	71,776,000	86,186,000	55,642,000	22,236,000	
1942 farm value	$1,132,515,000	$2,871,400,000	$1,069,878,000	$1,219,716,000	$237,221,000
1942 acres harvested	72,645,000	89,021,000	49,200,000	22,602,000	
1943 farm value	$1,502,720,000	$3,467,102,000	$1,146,784,000	$1,135,605,000	$244,059,000
1943 acres harvested	74,345,000	94,455,000	50,648,000	21,652,000	
1944 farm value [1]	$1,597,706,000	$3,679,495,000	$1,527,413,000	$1,298,849,000	$262,546,000
1944 acres harvested [1]	74,067,000	97,235,000	59,309,000	20,098,000	

[1] Preliminary.

The corn crop in acreage and value exceeds any other two crops. If we are to have a crop-insurance program, we should have a program that includes all crops, especially those needed for the war.

We have programs based on political expediency and sectional favoritism when we should have programs for the general good of agriculture and not for the few at the expense of the many.

Don't-Fence-Me-In Albano

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, I should like to call to the attention of the Congress the exploits of Lt. Raymond Albano, of Heron, Sanders County, Mont. He has been cited for exceptional bravery, and single-handed has captured 31 German prisoners, killed 82, taken 21 machine guns and cannon. His comrades refer to this outstanding soldier as Don't-Fence-Me-In Albano.

Under unanimous consent, I am inserting in the RECORD a part of his life history, taken from the Sanders County Independent Ledger, of Thompson Falls, Mont.:

Raymond Jay was born October 14, 1919, at Salmon, Idaho, in Clark County. In January 1941 he was one of the first two men from Clark County to enter the Army under the 1-year training plan. He was stationed at Fort Ord, Calif., with the Seventeenth Infantry, in the Seventh Division, until the summer of 1941, when the Ninety-fifth Division was organized at Camp Swift, Tex., and the Army took the better-trained noncommissioned officers from the Seventh Division for the newly formed Ninety-fifth Division. While with the Seventh Division he was especially trained to use trench mortars. Here he won an award as the fastest and most expert gunner in his battalion. Since that time he has been awarded several honors, among them the expert rifleman's and expert infantryman badges. He went overseas in August.

To his family in Heron I extend my sincere best wishes; and to them the people of Sanders County, the State of Montana, and the Nation say, "We are proud of Ray."

Review, November 7–January 11

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Bucyrus (Ohio) Telegraph-Forum.

Mr. Speaker, the writer of this editorial, Mr. Rowland R. Peters, goes straight to the heart of the matter he discusses. The observations made here can, of course, be of no value insofar as correcting past mistakes are concerned. But such words as are spoken here can be worth much to us for the future. The Machiavellian conduct which Mr. Peters disparages is perfectly natural to the regime in control of our Government. It may be expected the practices which the administration has indulged in will not only continue but will become worse so long as this regime remains in power.

I wish every person in the United States could read this editorial:

REVIEW, NOVEMBER 7–JANUARY 11

Before last election day we were led to believe by one who delights in referring to himself as the Commander in Chief when all is going well on the battle front that the war was practically won. In fact the spoils were being divided by his allied friends. All we had to do was to keep Roosevelt in office and the world would soon be at peace. Since then the Germans have launched a disastrous offensive which has cost many American lives and limbs.

Since then, too:

Roosevelt has been forced to admit that the Atlantic Charter, by reason of which he received many votes, does not exist and it, in fact, is nothing more than a "scrap of paper." General Eisenhower has found it necessary to send a group of his soldiers back to the States to report a munition shortage on the western front; Winston Churchill and Joe Stalin have returned to their old roles as power politicians; the court martial to determine responsibility for Pearl Harbor has been sidetracked for good as far as this administration is concerned; ration points have been canceled overnight; race tracks have been closed; conventions have been canceled; a ban has been placed on decorative lights; and we have been asked to live in houses and apartments with temperatures no more than 68.

The American people have demonstrated their willingness to conserve anything or do anything that will shorten the war and insure complete victory. The people have given their Government everything the Government has called for. They have abided by every edict and they have endured foolishness. This they have done for their country and for the men who are fighting for it, the men they want back home at the earliest moment it is possible for them to return.

These people know now as they should have known again and again and again that they were tricked before election day, tricked by the golden voice of deception, and lulled into a sense of peaceful security by talk of early victory at a time when the Commander in Chief knew there was not sufficient ammunition in Europe. He knew, too, what was in the minds of Churchill and Stalin and he knew there was no such thing as an Atlantic Charter. Until a few years ago it was inconceivable that American history would ever contain such a story of deception that has been written into it since March 4, 1933.

The Late Honorable Thomas Riggs

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. BARTLETT. Mr. Speaker, the news of the death in this city Tuesday of Hon. Thomas Riggs will be learned with sorrow by thousands of his Alaska friends. By reason of outstanding qualities of mind and heart he has earned an abiding and affectionate place in the history of the great Territory of Alaska.

Governor Riggs' death followed an illness of several weeks but until the last it had been hoped and believed he would recover.

The name of Thomas Riggs will always stand in the first rank of those who have labored hard and accomplished much for Alaska. His career in the Territory extended over a long period of years and was climaxed by his appointment as Governor of Alaska in 1918. In that position he served with ability and devotion and patriotism until 1921. Governor Riggs was first in Alaska in 1897 and remained there until 1901. After an interval in continental United States he returned to the Territory with the United States Geological Survey and later served as engineer for the Alaska boundary survey. When construction of the Alaska railroad was started in 1914 he was appointed as a member of the Alaskan Engineering Commission and was placed in charge of building on the northern end of the line. His preeminent qualities as an engineer and as a man enabled him to accomplish a tremendously fine job of pioneer railroad building and earned for him an outstanding reputation.

For several years past Governor Riggs has been American member of the International Boundary Commission and of the International Highway Commission.

Surviving Governor Riggs are his wife; daughter, Lisette Isley, an officer in the Spars; and son, Thomas, Jr., United States Army, recently returned to this country from active duty overesas.

During the years which have gone by since he left Alaska Governor Riggs never for a moment lost his interest in that frontier land. With all his great ability he continued to work for its advancement. On behalf of all Alaskans who knew and respected and loved Tom Riggs, I wish to extend the deepest sympathy to the bereaved ones of his family. Hard as the blow is, it will be tempered even now, in part at least, by the thought and knowledge that the world is better for Thomas Riggs having lived in it and that history will remember him as one of the American builders of a frontier country.

Political Parade

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Rothwell Brown from the Washington Times-Herald of January 17, 1945:

POLITICAL PARADE

(By George Rothwell Brown)

The tragedy of today's admitted shortages in manpower and production lies largely in the fact that President Roosevelt did not warn the country in time.

Instead, the President, in his fourth-term campaign addresses, painted such a rosy picture of American armed might that the people were lulled into a sense of false security.

This led inevitably to a let-down. Unfortunate, but true.

Thus it is not to be wondered at that the revelations now being made have come as a shock to Congress, which was lulled along with the rest of us.

For reasons obviously political Democratic spellbinders in the Presidential and congressional campaigns put such emphasis upon the terms of peace that were to be inflicted upon Germany and Japan as to lead the layman to conclude that the end of the war was "just around the corner."

Now we know better. Now we are being told better, by those who should have informed us in October and November of what they are revealing to us in the new year 1945.

It was not until about the first of December, a month after the election, that President Roosevelt admonished his executives to put on the soft pedal. Meanwhile the mischief had been done.

It was the President's speech at Philadelphia, on October 27, 1944, which more than anything else gave to the Nation that feeling of false security from which it has now been rudely awakened.

At that time Field Marshal Von Rundstedt's counteroffensive had not taken place, nor had it been contemplated, and this is true also of the first week in December, when the President sounded his first warning.

Thus it is clear that it is not this counteroffensive which has caused such an alarming increase in manpower and production estimates. The warning came before that.

Said the President at Philadelphia in one of his most optimistic orations of the fourth-term race:

"The war in Europe has reached the final, decisive phase—the attack on Germany itself."

That was a good campaign argument. And the changes were rung upon it everywhere. The main argument came down to this, that Mr. Roosevelt must be given a fourth term in order that he might preside over the peace table, very effective indeed, for the people longed for a victorious peace.

We are now being told in January by spokesmen of the administration that the battles still ahead will be long and tough. The suddenly revealed recuperative powers of the German Army also have told us that.

Yet at the end of last October we were led to believe that in manpower and production everything was 100 percent perfect. Said the President:

"Never before in history have the soldiers and sailors of any nation gone into battle so thoroughly trained, so thoroughly equipped, so well fed, and so thoroughly supported as the American soldiers and sailors fighting today in Europe, Asia, and the Pacific."

The accent was on thoroughness. No hint of shortages. A little later in the same political address the President said:

"All these operations had to be planned far in advance—and that does not mean merely drawing arrows on maps. It has meant planning in terms of precisely how many men will be needed and how many ships—warships, cargo ships, landing craft—how many bombers and how many fighter planes, and how much equipment and what types of equipment down to the last cartridge."

That was Candidate Roosevelt speaking. Today we are being told by Chairman Krug and Secretary Stimson how many more cartridges we shall need and how many more men.

The planning the President spoke of so glowingly on the stump in October does not now appear to have been "precisely" as perfect as he made out to be the case.

Representative O'Connor

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a fine and deserved tribute by Horace C. Carlisle to our late colleague and friend the Honorable James F. O'Connor:

REPRESENTATIVE O'CONNOR

In the untimely passing of James F. O'Connor,
Our great country sustained a great loss—
His devotion to that divine grace, sacred honor,
Gave him strength for this life's every cross,
Which he bore with a fortitude, rich in assurance,
That someday he would lay his cross down,
At the end of his long, weary siege of endurance,
And receive both his robe and his crown.

In Montana, the passing of James F. O'Connor
Is bemoaned by his friends everywhere;
For he loved his home State, and reflected upon her
That true courage which conquers despair;
And his State loved him with an increasing devotion,
That grew sweeter with each passing year,
And Montana's great heart overflows with emotion,
As she pauses beside his still bier.

But a home in Montana, when James F. O'Connor
Bade adieu to his neighbors and friends—
And his wife, with this grief thrust so sadly upon her—
Have sustained the loss that never ends;
But when they look aloft, from life's valley of shadow,
Disappointment, distress, and despair,
They can see at the top of faith's ascending ladder
Representative O'Connor there.

—*Horace C. Carlisle.*

Veterans' Legislation

EXTENSION OF REMARKS
OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. GOSSETT. Mr. Speaker, daily, letters come to my office making inquiry about veterans' legislation and the rights and privileges of servicemen generally. In an effort to be helpful to servicemen, their friends and families, I wish to insert in the RECORD a brief summary of some of the more important laws passed by the Congress pertaining to veterans' affairs. During 1943 and 1944 this Congress passed more than 50 bills relating to people in the service and their dependents. It was my privilege to support all of this legislation, realizing that much of it was imperfect, and that we would need to pass a great deal of perfecting legislation during the present Congress.

We realize, of course, that there is no way to compensate men for military service. There is no way to repay their families for anguish or suffering. A grateful country should never cease, however, to aid the veterans and their families in every possible way.

Recently there has been great interest and many inquiries as to the provisions of the so-called G. I. bill of rights. In order that there may be general knowledge of the provisions of this bill, as well as other legislation concerning veterans and their dependents, I am summarizing briefly some of the provisions of these laws.

Promptly upon his discharge there are a few things a veteran should do: First, report to his Selective Service Board in person or by letter within 5 days of his discharge. Second, apply for his old job within 90 days of his discharge. Third, pay the premium on his national service life insurance in order to keep it in force. Fourth, put his records in order for the future. These records include his service serial number, discharge papers, disability claim C number, insurance policies, social security card, birth certificates of himself and his dependents, marriage certificate, any divorce decrees, last will and testament, selective service registration card. I cannot lay too much stress on the importance of such records. Many a veteran's claim for compensation has been disapproved because records were not in order.

MUSTERING-OUT PAY

A veteran discharged under honorable conditions automatically receives mustering-out pay ranging from $100 to $300 depending on his length and place of service. A veteran discharged before the law was passed may obtain payment by applying to his own branch of the service.

SECURING A JOB

The United States Employment Service has offices throughout the country, and maintains a special representative in each office whose duty it is to assist veterans in finding suitable positions.

Those who were civil-service employees, other than temporary, upon entry into the armed forces should apply to the agency where last employed within 90 days of discharge, or to the Civil Service Commission in event difficulty is experienced in getting reinstated.

Those veterans who did not have civil-service positions but wish to enter the Government service will be given special preference in civil-service examinations. This preference is also extended to wives or widows of veterans under certain circumstances.

APPRENTICE TRAINING

Virtually all the 30,207 apprentice-training programs in the United States extend opportunities to returning veterans. Veterans may be employed as apprentices and be paid as they learn, getting not only a steady job but training which prepares them for skilled jobs. Information may be obtained from the United States Employment Service or the nearest facility of the Veterans Administration, which for our section is the Veterans Administration, Waco, Tex.

VOCATIONAL TRAINING

A veteran who has a service-connected disability resulting in an occupational handicap can probably be taught a new type of work which will not be hindered by the disability. The Veterans Administration is in charge of this training. If the disability is not service-connected, or occurs after discharge, vocational training may be secured through the State board of vocational education, which is a Federal-State program.

EDUCATION

Veterans who were discharged under honorable conditions and were not over 25 at time of entrance into service, or, if over 25, who can show their education or training was interfered with by service, or who desire a refresher or retraining course, are eligible to receive educational aid from the Veterans Administration. Such education must commence not later than 2 years after discharge or the end of the war, whichever is later.

The length of training consists of 1 year or its equivalent in part-time study. If the veteran completes these courses, excepting refresher or retraining courses, in a satisfactory manner, he will be entitled to additional education or training not to extend beyond the time he spent in active service—not including A. S. T. P. or Navy college program—and no course of training shall exceed 4 years.

For an ordinary school year the Veterans Administration will pay up to $500 in tuition, fees, and certain other expenses for the education and training of a veteran. In addition a subsistence allowance of $50 a month is paid the veteran with no dependent, and $75 a month to those with dependents.

UNEMPLOYMENT INSURANCE

Weekly allowances of unemployment compensation are available through a Federal program if the veteran is not eligible under a State program. If he qualifies under both, money received under a State plan is subtracted from the Federal allowance. Under the Federal plan 4 weeks' allowance is made for each calendar month of active service after September 16, 1940, up to a total limit of 52 weeks.

LOANS TO VETERANS

The Veterans Administration will guarantee loans to veterans of World War No. 2 up to 50 percent of any such loan, provided the amount guaranteed does not exceed $2,000. The applicant must show that the borrowed money will be used in purchasing farm or farm equipment or business property, or for purchasing or repairing a home. Special provisions are made where a principal loan is approved by a Federal agency and for eligibility under the Bankhead-Jones Farm Tenant Act, subject to the $2,000 limitation.

MEDICAL AND HOSPITAL CARE

Medical service, dental care, and hospitalization, including out-patient service, are provided if the veteran's condition was caused or aggravated by his service in the armed forces. Hospital treatment is also made available, within the limits of Veterans Administration facilities, to all veterans unable to pay the cost of treatment for disabilities not shown to be due to service.

DISABILITY COMPENSATION OR PENSION

Veterans discharged from the armed forces under conditions other than dishonorable and who have a disability due to service are entitled to compensation or pension. The amount payable, based upon wartime service, ranges from $10 a month for 10-percent disability to $100 a month for 100-percent disability. Beginning June 1, 1944, these sums have been increased by 15 percent. There are special rates and allowances for specific injuries and more serious disabilities. The peacetime rates are approximately 75 percent of the foregoing rates.

NON-SERVICE-CONNECTED DISABILITIES

As distinguished from compensation paid to veterans suffering from service-connected disabilities, pensions are payable to war veterans for non-service-connected disability. Such pension is

payable to World War Nos. 1 and 2 veterans only when the disability is held to be permanent and total, and provided the annual income of the veteran, if single, does not exceed $1,000, or, if married or with minor children, does not exceed $2,500.

SOLDIERS' HOMES

A veteran who is so disabled as to be unable to earn a living, and is without adequate means of support, may apply for admission to one of the numerous national soldiers' homes for disabled, located throughout the country, where former members of the armed forces may live and receive care.

CIVIL RELIEF

The Soldiers' and Sailors' Civil Relief Act protects service men and women up to 6 months after their discharge by making it possible for the courts to suspend enforcement of certain civil liabilities during that time, such as lawsuits for collection of debts, contracts, repossession of property, collection of certain taxes, sale of property for taxes, eviction of dependents for nonpayment of rent, insurance premiums, and rights in public lands.

BURIAL

A sum not exceeding $100 may be allowed on the burial, funeral, and transportation expenses of any honorably discharged veteran of any war, a veteran discharged for disability incurred in line of duty, or a veteran receiving pension for service-connected disability. Men and women who die in line of duty while in the armed forces, and veterans whose last discharge was honorable are eligible for burial in a national cemetery. Under certain circumstances arrangements may be made for the burial beside him of his wife or widow, and in some of these cemeteries for the burial of minor children and unmarried adult daughters. In most cases an American flag for draping the casket of a veteran may be obtained from the Veterans Administration or any county seat postmaster.

Headstones are supplied for veterans, without charge, upon application to the Quartermaster General, United States Army, Washington 25, D. C.

DEPENDENTS' ALLOWANCES

Most people are familiar with the family allowances act whereby the Government contributes to the support of dependents of enlisted men in the armed forces, and with the provisions of the law extending maternity care to the wife of any enlisted man in the service who is in the four lowest pay grades. Free medical and nursing care is provided for the wife and infant, and the baby is entitled to free medical care during the first year of life. The maternity-care program is administered by the various States.

PRISONERS AND MISSING IN ACTION

As long as a service man or woman is a prisoner of war or interned in a neutral country, or is listed as "missing" or "missing in action," dependents continue to receive family allowances as previously, and any allotments that are for their support and have been so designated.

GRATUITY AND BACK PAY

When a man dies while in the armed forces a gratuity payment in an amount equal to 6 months' pay is made to the family, subject to limitations and conditions outlined by the armed forces. The balance of any pay account remaining due a person who dies while in service is paid to the next of kin. Unpaid portions of mustering-out pay may be claimed by a surviving wife; if none, by surviving children; or if no surviving children, by a parent or parents.

INSURANCE

A serviceman may take out national service life insurance policies in amounts starting at $1,000, and more in multiples of $500 up to $10,000. Upon the death of a person who carried Government insurance, the Veterans Administration should be notified and will furnish the necessary blanks to the beneficiary named by the insured. Payments of this insurance are not made in a lump sum but in equal monthly installments, depending on the age of the beneficiary.

This insurance is originally issued on what is called the 5-year-level premium term plan. Any time after it has been in force a year, and before the 5 years are up, it may be converted into ordinary life, 20-payment life, or 30-payment life. The original policy must be converted before the expiration of the 5-year period in order to keep it effective. The new policy will have regular cash value after the first year from which a veteran can borrow if necessary. All veterans are urged to keep their insurance in force.

DEPENDENTS' PENSIONS

When a member of the armed forces dies in action or in line of duty, or a former serviceman dies as a result of service-connected disability, his dependents are entitled to compensation or pension benefits. The rates of these pensions, which are the same for World Wars Nos. 1 and 2, are as follows:

Widow, no child	$50
Widow, 1 child (with $13 for each additional child)	65
No widow, but 1 child	25
No widow, but 2 children (with $10 for each additional child, the total not to exceed $100)	38
Dependent father and mother:	
Each	25
Or 1 only	45

The widow and minor children of any deceased veteran of World War No. 1 who was released from active service under conditions other than dishonorable after serving 90 days or more, or for disability incurred in the service in line of duty, are also entitled to pensions. Furthermore, the widow and minor children of a veteran of either World War who had a disability incurred in or aggravated by his war service, but who died from another cause, are entitled to pensions. Rates of these pensions are as follows:

Widow, but no child	$35
Widow with 1 child (with $5 for each additional child)	45
No widow, but 1 child	18
No widow but 2 children (equally divided)	27
No widow but 3 children (equally divided)	36

With $4 for each additional child, the total amount to be equally divided. Payments are limited to an aggregate of $74 in any one case.

I count it a privilege to be of all possible assistance to all veterans or their dependents. Please write me about your problems, or address your inquiries to the Veterans Administration, Waco, Tex., whose duty it is to furnish veterans with full information on all matters pertaining to their rights and privileges.

Team Play and Free Speech

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Herald of January 14, 1945:

TEAM PLAY AND FREE SPEECH

We are still in the midst of a great war. We have been threatened, we may still be threatened, with a serious disaster on the western front. Our progress, and that means the progress of all the United Nations, toward victory has been checked. There will be other crises, other set-backs which will have to be overcome. The road to victory will be hard. But if the allies work well together, victory is inevitable, and the only hope of our enemies is that misunderstanding and dissension will break out between the allies.

Every word of dissension is picked up and carried to enemy ears. This encourages the Germans and their forces, strengthens their will to resist, and means the loss of more American and English lives. Is it not clear, then, that those who, by word or act, stir up ill feeling between the allies, are giving aid and comfort to the enemy?

Yet during recent weeks there has been much criticism from American writers of England's plans and policies, and a cacophony of complaints from broadcasters. The English are making bitter observations about our policies. It doesn't make much difference who was the first to offend or to say, "You're another."

Perhaps we must preserve free speech, whatever the cost. On this, at least, this country and England seem to agree. But great privileges need not be abused, and it would seem as if those in each country who have no responsibility for any decisions affecting the war, and who cannot know all the facts and considerations which determine these decisions, might have the patriotism, if not the decency, to refrain from offhand criticisms which can and do stir up inter-allied difficulties.

Such irresponsible men—and there are offenders in both this country and England—have lately been particularly vociferous. The gravity of the situation in Europe seems to stimulate them. At no time have cooperation and good will between England and ourselves been more important, yet this is the very time these self-appointed diplomats and foreign-policy experts sound off most loudly.

Perhaps it is permissible for a mischief-making Englishman to criticize the foreign policy of his own administration. Perhaps it is appropriate for uninformed Americans

to condemn the foreign policy of our administration. The expressed opinions rampant on the air show a strange mixture of would-be omniscience, unthought idealization of vague terms, and a point of view so confused as to leave one in doubt whether the speakers believe in Hitler or St. Paul as a guide for diplomacy.

A chronic critic of his teammates spoils the spirit of any team. If he should speak in such a vein during the crisis of a contest, even in a mere sport, he would be disciplined. He imperils success. The same principles apply in this greatest of all contests.

At least, we should show, by every possible means, our contempt for those critics who are doing so much to stir up uncertainty and ill feeling between the Allies. Freedom of speech need not be abused to be preserved, nor should it be used to aid those who would destroy it forever.

The Manpower Shortage

EXTENSION OF REMARKS

OF

HON. DUDLEY G. ROE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. ROE of Maryland. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include the following letter bearing on the very serious manpower shortage:

OXFORD, MD., *January 8, 1945.*

Representative DUDLEY G. ROE,
House of Representatives,
Washington, D. C.

MY DEAR MR. ROE: It may seem presumptuous for a small businessman to question the view of the President of the United States, but on the other hand, the backbone of this country is business, especially small business and our Chief Executive's lack of early training in the fundamentals of business becomes more and more apparent.

We have listened with great interest to the President's speech on the state of the Nation. The manpower situation seems to be the President's chief domestic worry. An ordinary citizen cannot help feeling that the President's plea for a manpower draft would carry more weight if there were any reasonable effort being made by the Government to put its own house in order first.

Even a very small businessman with a limited point of view can see this situation all around him. All this winter there has been a converted yacht with a full crew of able-bodied young sailors lying in the Choptank River. Of course they may be winning the war, but they seem to be on nice days making a new survey of the Choptank and Tred Avon Rivers. This certainly cannot be a big worry to either the Germans or the Japanese and could well wait until after the war. There are more able-bodied men tied up on this one seemingly unessential job than will be obtained by draft from this entire town.

Another instance would be a 38-foot motor launch returned to our yard here by the Coast Guard. A crew of five, a lieutenant, a petty officer and three enlisted men, brought this vessel down from Baltimore. Two more enlisted men came down from Baltimore with a station wagon to pick them up. In all seven men took 2 days to do work that two men should do in 1 day, a labor wastage of 600 percent.

These are only isolated cases, but I am sure that if you have been around any of the large bases or shipyards doing Government work on a renegotiation basis, you will agree that the criticism is fair and the situation general.

That the Government itself is wasting all kinds of man and woman power in the civil service, in the armed forces and in industrial plants, is hard to deny. Some of this wastage is to be expected in the confusion of a war, but a lot of it must be stopped before the ordinary citizen can take the Chief Executive seriously.

Very sincerely yours,

RALPH H. WILEY.

Cancelation of Ration Points

EXTENSION OF REMARKS

OF

HON. P. W. GRIFFITHS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. GRIFFITHS. Mr. Speaker, having sat here and heard it said how the women of this country reacted to the cancelation of the ration-point coupons, I should like to insert a letter I have received from my home town on the subject. I might add that although I have received many letters, I have not had one solitary letter from anyone in my district taking an opposite view.

The letter follows:

MARIETTA, OHIO, *January 14, 1945.*

The Honorable P. W. GRIFFITHS,
Washington, D. C.

MY DEAR MR. GRIFFITHS: I am one of those who resent Senator PATMAN'S sweeping statement that the women of this country are solidly back of those responsible for invalidating our coupons after allowing us to believe that they would be honored when we needed them.

I have written the following to Senator PATMAN, sending it special delivery, and I am hoping that it will reach that gentleman instead of going by way of a secretary into the wastebasket. And now to the letter:

"Although realizing and resenting the fact that this administration began by breaking every promise but the one to bring back liquor before Christmas, I was one of those who kept faith with the Government by declaring every can of food on my shelves, my sugar, and truthfully revealing my age.

"Perhaps this leaves me a shade more bitter about the last dishonest move put over on the women of this country who have been complacently believing the promise that our coupons would be honored when we faced emergencies in our homes.

"Also perhaps this leaves me a bit more indignant over your sweeping statement that the women of this country are solidly back of the move to deprive them of their use. Of course, I realized that the removal of points was a political move because of the time when it was made, but I was stupid enough, with thousands of others, to believe that I need have no worry as to the danger of their being invalidated.

"I think that now even the most loyal New Deal women have learned a lesson that we have all been slow in learning and that we will not wait again for real need of canned food or for shoes.

"I am wondering how many office windows in Washington are open these days to give comfort to the coatless Government workers in the overheated rooms, as was the case last winter, while it is demanded that homes be kept uncomfortably cold.

"Notwithstanding what I regard as criminal extravagance, and despite blundering incompetence in Washington, the odoriferous John L. Lewis' $600,000 gift, the Browder-Hillman, and many other episodes, I have supported the President in many of his foreign policies, beginning with lend-lease.

"I am hoping that some day before the war is over, he will come forward with the positive statement of our principles, which, to many of us, seems an imperative necessity.

"It is unpleasant to write a letter of this kind to a Senator, but I cannot allow your statement to pass unchallenged. All the women of this country are not solidly back of those responsible for the coupon hoax.

"There are still many of us who revere the truth and despise trickery from whatever source."

I want you to know, Mr. GRIFFITHS, how much I admire your aggressive services in Washington. It is a comfort to us to have a man who stands for integrity and decency and who is fearless, never dodging an issue, representing us.

I hope that you approve of this letter to Senator PATMAN. Do you think there is the remotest chance of his seeing it?

Very respectfully,

MYRTIE R. SIBLEY.

Selection of Farms for Veterans

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, the following article in the January 11 issue of the Adams County Times published at Adams, Wis., should be of interest to every citizen in our country:

FARM LEADERS TO HELP VETS SELECT FARMS

Agricultural leaders of central Wisconsin are already planning to help returning war veterans locate only on land suited for farming rather than to repeat the mistakes after World War No. 1 where too many were attracted to the farm regardless of its value or its adaptability to successful operation.

Members of the veterans' advisory committee, which has been formed in Adams County, are Mr. I. S. Jones, Friendship; Mr. Owen Owens, Friendship; Miss Shirley Young, Westfield; Mr. Leo Baggot; Wisconsin Dells; Mr. B. A. McBride, Adams; Mr. H. O. Spindler, Grand Marsh; Mr. Jerry Filip, New Rome; Mr. J. C. Lambert, Grand Marsh; and Mr. Merton Thurber, Strongs Prairie.

Emil Jorgenson, district agricultural extension leader, reports that central Wisconsin counties are well dotted with farms whose operators will retire when the war is over but who have kept on farming because it was a patriotic effort to aid food production.

One of the main objectives in central Wisconsin, he adds, is to encourage local boys to settle on good land in their home counties and to keep poor land off the market.

Unless a war veteran has had adequate farm training and experience, has lived on a farm, and has adequate financing, he may be cautioned to go slow in deciding to start farming, say members of the county advisory committees. In this connection it is also pointed out that some veterans would be better off, if, instead of acquiring farm ownership, they would become tenants or hired

men on farms until they acquire a nestegg and more experience, rather than to go on the land without enough money or experience to make it go.

Veterans advisory committees have been formed in most counties of the central area to work with the county service officer in advising returning veterans as to the opportunities as well as the hazards in farming. County agents have been designated liaison officers by the United States Department of Agriculture between the veterans and the advisory committees.

Mr. Speaker, you will note from this article that Brig. Gen. Frank T. Hines, Administrator of Veterans' Affairs, made a wise decision when he asked for the cooperation of rural people in connection with farm purchases under the G. I. bill.

You will also note the alertness of the Agricultural Extension Service of Wisconsin in that they are giving this project immediate attention. The State of Wisconsin has been making a land-use study for over 20 years and the agricultural college is in a position to render excellent service in farm selection.

The people of the State are evidently not going to be content with flag waving when the veterans depart for service—they are going to give a practical application to the welcome home.

Hebrew Group Seeks F. D. R. Aid in Palestine Problem

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following letter which was written November 29, 1944, by Mr. Peter H. Bergson, chairman of the Hebrew Committee of National Liberation, Washington, D. C., to the President of the United States; this letter was published December 29, 1944, in the New York Journal-American:

HEBREW COMMITTEE OF
NATIONAL LIBERATION,
Washington, D. C., November 29, 1944.

HIS EXCELLENCY, THE PRESIDENT OF THE
UNITED STATES OF AMERICA,
The White House,
Washington, D. C.

MR. PRESIDENT: We take the liberty to request the assistance of the Government of the United States by using its good offices to intervene in the present deadlock which has arisen in the conflict between the policy of the Government of Great Britain and the interests of the Hebrew nation.

The territory of Palestine was mandated to Great Britain for the purpose of transforming it into the national home of the Hebrew people. This League of Nations mandate was ratified by the Government of the United States and recognized in the American-British Treaty of 1924.

The mandatory power of Palestine was obliged and did report annually to the Mandates Commission of the League of Nations on the progress of its administration. No policy regarding Palestine could be put into effect without the approval of that Commission.

Palestine now is being administered in accordance with the policy announced in the white paper of April 1939, which was submitted to the Mandates Commission and rejected by it as being incompatible with the terms of the mandate.

The Government of Great Britain, however, saw fit to persist in its strict adherence to that unauthorized policy and in accordance with it, has barred all entry of Hebrews into the territory which is, under international law, the Hebrew national home.

In view of the diabolical campaign of extermination which Germany and her satellites have been conducting in recent years against the Hebrew people in Europe, the closed doors of Palestine have helped in a way to deliver hundreds of thousands of Hebrews into the hands of their murderers.

It is justifiable to say that more than half of the estimated 3,000,000 Hebrews who lost their lives in Europe could have been alive in Palestine and elsewhere if not for the white paper policy, which closed to them this main avenue of escape and, indirectly, all other avenues of escape.

We believe that the Hebrew nation is a cobelligerent in this war and is of right, though not recognized, a member of the United Nations and therefore an ally of Great Britain. We have, therefore, repeatedly stated that the settlement of the Palestinian political and boundary problems ought to be postponed until after the war, when they should be settled together with other interallied problems.

It is because of this that we advocate full cooperation with the mandatory for Palestine. But the fact we are allied in a war against Axis tyranny certainly does not compel or oblige us to acquiesce in the internationally illegal policy which stood, and still stands, in the way of the rescue of hundreds of thousands of martyred human beings. We therefore took issue with the Government of Great Britain on the question of the right of every Hebrew in Europe to escape to Palestine.

In our deep anxiety to maintain good relations between allies, we offered a series of compromise proposals, culminating with the suggestion that there be established in Palestine emergency rescue shelters into which all Hebrews should be admitted temporarily, without prejudice to their future status, so that their lives might thereby be saved and so that the political controversy not continue to stand in the way of saving them.

We were willing to accept temporarily the status of foreign refugees for Hebrews in their own national home, a status similar to that of the European refugees in the emergency rescue shelters in the United States and French and middle eastern territories. Even this was rejected.

All the above-mentioned facts compel us to seek the help of your great country in bringing to an end a tragic situation and one which throws serious aspersions on Great Britain's adherence to the very principles for which the United Nations are waging this costly global war.

We maintain that the Hebrew nation has already suffered staggering losses in this war and should not be called on to continue the suffering endlessly and aimlessly. The Hebrews in German-occupied territory should not be abandoned to death at the hands of the Germans because of an unjustifiable and stubborn policy of Great Britain, and the Hebrews in the liberated territories of Europe should not be forced to remain, to be starved and humiliated, in their shattered ghost-ridden homes, amidst the scenes of horror and destruction which they miraculously survived.

But the Government of Great Britain continues its present policy in Palestine despite the horrible toll of suffering and death for which this policy is responsible.

In view of all the above, the Hebrew Committee of National Liberation respectfully requests your assistance in order to bring this tragic conflict to an early end. We propose that you, Mr. President, take the initiative to convene a round-table conference between representatives of the British Government and representatives of the Hebrew nation in which, under the guidance of your representatives, animated by impartial justice and equal friendship for both sides, it should not be too difficult to arrive at some understanding and bring to an end the present intolerable situation.

Our confidence in the success of such a conference is due to our conviction that the present deadlock is not a result of cruelty or bad will, but rather a result of inertia fostered by the confusion of the Zionists themselves, and once scrutinized under the guidance of American good will and common sense, it will become easy to eliminate misunderstandings and the relatively minor obstacles which are now responsible for a very tragic situation.

We beg to submit, Mr. President, that the confusion and the lack of status of the Hebrews in Europe today not be permitted to stand in the way and block the realization of our proposal as it has blocked every constructive effort to solve this problem in the past. Let not the deluge of organizations amongst American Jews and the perpetual debates amongst them be the reason for continual inaction, for it does not concern them. It concerns solely Hebrews—those people who are persistently misnamed and referred to as refugees, as Germans, as Hungarians, or stateless Jews, but never by their own name—Hebrews.

There are no Hebrews in the United States. There are Americans of Hebrew descent or Americans of the Jewish faith. It is not a religious problem that we are dealing with, and American clergymen (of the Jewish faith) should not be asked to determine it. We ask the help of the United States to solve the present conflict between our need for survival and the policy of the British Government.

American Jews have no conflict or the right to have a conflict with the British Government. They have appreciation of and sympathy for us Hebrews, the victims of that conflict, as indeed have the overwhelming majority of the American people.

In view of the lack of an as yet recognized national representation or authority to speak for the Hebrew nation, we propose that the Hebrew Committee of National Liberation be invited to compose the Hebrew representation, which would include those members of the Jewish Agency for Palestine who are Hebrew nationals, barring, of course, the participation of those members of the Jewish Agency who are nationals of other nations owing exclusive allegiance to those nations and therefore ineligible to be spokesmen for the Hebrew nation at any international conference.

Mr. President, not only the people of your great Nation but the people of many lands—indeed humanity at large—are already indebted to you for your magnificent leadership in world affairs. Throughout the earth men thank God for having given you the greatness, the vision, and the strength for such leadership. On behalf of our martyred nation, which has reached the very end of its endurance, we appeal to you to apply the genius of your initiative and leadership for the restoration of life and dignity to our ancient nation.

I remain, Mr. President, with respect and admiration,

Faithfully yours,

PETER H. BERGSON,
Chairman.

The Ratification of Treaties

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address on the ratification of treaties delivered by me before the General Court of New Hampshire on January 17, 1945.

Mr. Speaker, Governor Dale, members of the Governor's council, president of the State senate, members of the general court and guests, you of the New Hampshire Legislature by inviting me to speak from this rostrum today have conferred upon me a singular honor. I recall with keen pleasure my service in this house as chairman of the committee on ways and means in 1939. It is delightful to be here again and to renew my many acquaintances. The friendships I made during my service in this house are among my most treasured possessions. You were good to me in the 1939 session and subsequently you have aided me in my several campaigns for Congress. It is a privilege to serve my State in the National Capital. For this opportunity I am most grateful to the electorate of New Hampshire.

I wish to express my deep appreciation to you for the invitation extended to me by the legislature of my own State to discuss here this morning the subject of treaty ratification. This issue, aside from winning the war, is, I believe, the most important single question of the day. It is a subject to which we must give our careful attention since on its correct solution may well depend the happiness of future generations.

THE PEACE—A VITAL CONCERN TO ALL

We are winning the most devastating war in history; a war fought for democracy and the institutions of freedom. This conflict reaches the lives of all our people. You who are listening have sons, daughters, or other relatives in the armed forces. Just as this unparalleled struggle touches each individual in the country so will the peace be a vital personal concern to every man, woman, and child in the Republic. Our major objective then, following the winning of the war, is to lay the foundations for a just and lasting peace so that our posterity will not be required to sacrifice, bleed, and die in another international clash of arms. We must keep faith with those who are achieving such notable triumphs on every fighting front. The statesmanship of the Republic must succeed in pointing the way to permanent peace. The United States of America is a great and growing world power and with power comes the responsibility for exercising constructive leadership. As a Member of Congress I will tirelessly devote my energy to forging the governmental machinery essential to the construction of a peaceful world order. I will work with all the ability I possess to assist in preventing another global war. If the leaders of this Nation and other powers fail in charting the way to a world free from war then the youth of America are today making their incalculable sacrifices in vain.

ISOLATION IMPOSSIBLE

This world is shrinking with astonishing rapidity. We no longer live in an age of horse-drawn carriages. This is an era of instant communication, swift transportation, and super air liners. On Thursday, January 4, I flew from Washington to New Hampshire to attend the inauguration of His Excellency Governor Dale, completing the trip from the Capital of the Nation to the city of Manchester in 1 hour and 40 minutes, an average speed of 262 miles an hour, or over 4 miles per minute. It is utterly impossible for the United States or any other country to remain in isolation. There are no longer any remote points on the surface of this planet. The philosophy of isolationism by the impact of modern science has been ground to dust. We are a part of, and will continue to remain a part of, the onrushing stream of world affairs. We must win victories at the peace table as well as on the battle fronts if we are to take our proper place as a leader among the powers of this earth. Constitutional changes in our governmental procedures are imperative to allow effective participation in world affairs. The magnitude of our responsibility is seemingly without bounds. It's weight is sobering. Our tasks must be approached with the most thoughtful and prayerful consideration.

THE CONSTITUTION ON TREATIES

After hostilities have come to an end, treaties of peace will be written. Under our antiquated constitutional procedure these treaties will be made by the President and to be effective they must be ratified by a two-thirds vote of the United States Senate. In the words of the Constitution: "He"—the President—"shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur." One of the most needed constitutional reforms is to change this section so that a simple majority of both Houses of Congress will be empowered to validate treaties.

TWO FUNDAMENTAL QUESTIONS

In the discussion of this subject we find there are two fundamental questions involved. First, should treaties be acted upon in the Congress by a majority or by a two-thirds vote; and second, should the House participate in the ratification of treaties. In the consideration of these issues it will be helpful to review the history of the two-thirds rule.

REASONS FOR TWO-THIRDS RULE NO LONGER EXIST

The United States is the only great Nation requiring a two-thirds vote of a branch of the legislative body to ratify treaties. There is absolutely no political theory on which the two-thirds rule is based. The reason motivating the writers of the Constitution to insert the requirement have long since disappeared. The Articles of Confederation providing for treaty ratification by a vote of 9 out of the 13 States were in the immediate background as the makers of the Constitution did their work. The document was to become effective when ratified by 9 States. At that time there was serious doubt that even this number would join the Union. If but 9 had adopted the Constitution, then the Senate would have consisted of only 18 Members. The two-thirds provision was inserted to prevent treaty ratification from being placed in the hands of the President and 3 or 4 States. In the Constitutional Convention of 1787 no one ever dreamed that the Senate would become a body of 96. In the beginning the House itself was to consist of only 65 Members.

Demand for the two-thirds provision came from the jealousies and suspicions of the original States. The South was interested in navigation on the Mississippi River. The New England States were concerned in protecting fishery rights. Sections were fearful lest treaties might be made which would interfere with their respective economic interests. State sovereignty was prominent at the time of the Constitutional Convention. The fathers intended that the President should consult and advise with the Senate. It was believed that secrecy would prevail in the small Senate and that treaties would be made in executive sessions. All of these reasons no longer exist. With the growth of the country they have passed out of existence, and today the United States of America stands alone as the only great Nation to employ the cumbersome, obstructive, and senseless two-thirds requirement.

THE RECORD OF THE SENATE

The record of the Senate in the handling of treaties for the settlement of international disputes is most disheartening. In writing this record the Senate has ably demonstrated its inability to act constructively in international affairs. Peace treaties and treaties of arbitration have suffered irreparable mutilation at the hands of the Senate. Since the Spanish-American War the United States has been a world power. Again and again during the last 50 years the Senate has frustrated moves to substitute the peaceful settlement of international disputes for war. The Olney-Pauncefote Arbitration Treaty of 1897 was rejected. The Hay Arbitration Treaties of 1904 were emasculated. The Senate maintained a stranglehold on the Root Arbitration Treaties of 1908 and 1910. The life was taken out of the Taft Arbitration Treaties of 1911. The Treaty of Versailles and the League of Nations were destroyed by the two-thirds rule of the Senate. In recent years few treaties of any great consequence have been ratified by the Senate. One is forced to the conclusion that no treaty of far-reaching importance in connection with the establishment of peace can be ratified under the two-thirds rule.

NATION NEARLY HELPLESS

The Nation is thus left almost helpless to assist in establishing permanent peace. The President cannot speak for the people since whatever he does is subject to a veto by one-third of the Senate. Other nations have grounds to seriously doubt the ability of the United States to play an active role in organizing the world community after the war is won. In the two-thirds rule the Constitution contains a major defect. The Chief Executive in the United States ought to have the same freedom in international negotiations as is enjoyed by the heads of other governments. Leaders in other countries are reluctant to enter into agreements with this country since they know that a minority in the Senate can doom the constructive plans of any Chief Executive. Our negotiators go to international conferences handicapped. The hands of the American diplomats would be strengthened if treaties could be ratified by a majority vote of both Houses of the Congress.

MAJORITY RULE

A fundamental principle of democracy is majority rule. The present method of treaty ratification is undemocratic in the extreme. The population of Nevada is 110,247; of New York 13,479,142. Since the adoption of the seventeenth amendment Senators are elected directly by the people. In treaty making the vote of a Senator from Nevada is worth twice that of a Senator from New York. The power of a voter in the State of Nevada is the same as that of a hundred and twenty voters in the Empire State. Pennsylvania has a population of 9,900,180. The 2 votes from Nevada could cancel the votes of the Senators from Pennsylvania and New York. Thus the Senators representing 110,247 can override the will of Senators representing 23,379,322. This is a most undemocratic process. There are no logical arguments to sustain the positions that the vote of a legislator who objects to a treaty is worth twice as much as one who favors it.

One-third plus one of the membership of the smaller House of Congress has in its hands life and death power over treaties. Under existing procedure if the entire Senate membership of 96 were present, Senators from 17 States voting against a treaty could cause its defeat. Were the Members opposed to a treaty to come from 17 of the smallest States, rejection would result by the action of Senators representing States with a population of approximately 10,500,000 people, according to the census figures of 1940. If the remaining Senators, representing States with a population of 120,000,000 people should all vote for the treaty, then their will could be overruled by the Members who represent 10,500,000. Should only a quorum of the Senate be in attendance when a vote on a treaty is taken, 17 Members could prevent ratification. If the 17 votes should come from the smallest States and the 32 votes from the 16 largest States, the Senators from States with approximately 3,500,000 could thwart the will of Senators from States with a population of over 88,000,000. These are, I realize, extreme cases and the alinement to which I have referred may never occur. The situations I have pictured are, however, possibilities under our system and speak eloquently for the undemocratic character of our constitutional procedure of treaty ratification. By including the House we would require, if we go to extremes, at least 110 Members of that body plus 25 Senators to reject a treaty. This would be the situation in the event only a bare quorum existed at the time of voting. Majority approval by both Houses would be infinitely better than the two-thirds rule we now follow.

Opponents to the proposed amendment call attention to the unanimous consent required by juries; to the two-thirds provision for the impeachment of a President; to the two-thirds vote necessary to override a President's veto; and say that more than a majority are necessary in certain decisions of vast importance. They then conclude that in the matter of making treaties we should retain the two-thirds requirement. These cases are not analogous to the two-thirds provision for treaty ratification and have no bearing on the question at hand.

A majority of both Houses of Congress is sufficient to enact Federal statutes. A majority is deemed ample to commit the Republic to such a program as lend-lease and other policies of great national and international moment. A simple majority of Congress is sufficient to take us into war. Surely the formulation of the peace is as grave a matter as making war, yet it is easier for this Government to declare war than to write a peace. There is no conceivable reason why a majority of both Houses is not enough to validate peace treaties. Under the present system a treaty of far-reaching importance, a treaty embodying principles on which the structure of world peace might be erected could be rejected by a militant minority of the Senate even if a majority of the Senate wished to ratify it; even if a majority of the House of Representatives desired its acceptance; yes, even if a majority of the American people demanded its validation. The treaty section of the Constitution is a serious handicap to our leadership in international cooperation. To continue the two-thirds rule for ratification by the Senate is to impair, if not to imperil, our successful participation in the conduct of foreign affairs.

It is reasonable to assume that a majority of the people's representatives in both Houses of Congress can better safeguard our interest in international affairs than a minority of the Senate. The architects of the Constitution themselves were not in favor of minority control. In the early days of the Republic traveling conditions were bad. The Senate was expected to be small. It was anticipated that there would be many absentees. One of the reasons for adopting the rule under discussion was to prevent minority dictation of our foreign policy. By abolishing this rule we would have a workable system. The Federal Government would be more responsive to the will of the people. The argument that a majority control of treaty making would result in hasty, ill-considered, and unwise action is the weakest of all arguments coming from those who hold that this power should be vested in one-third of the Senate. If a majority of Congress cannot protect our interests, then nothing can save us. The burden of proof rests on those who contend that less than a majority of one House of Congress should direct the foreign relations of this great Nation in the post-war period.

CIRCUMVENTION BY AGREEMENTS AND RESOLUTIONS

The foreign relations of the United States are becoming constantly more complex. Conventions, agreements, and joint resolutions are being resorted to to circumvent the two-thirds rule. Many matters which would have been considered by the founding fathers as treaties have been handled as executive agreements and resolutions. Congressional influence in foreign affairs is constantly diminishing as a result of these practices. The continuation of the two-thirds rule is an insurmountable encumbrance to our successful participation in the councils of the nations. It is rendering increasingly ineffective the voice of the Representatives of the people in international affairs. For self-preservation and for augmenting its own influence in foreign relations the Senate itself should be the first to enthusiastically accede to the growing demand for this constitutional reform.

THE HOUSE SHOULD HAVE A VOICE IN TREATY MAKING

The House, much closer to the people than the Senate, should have a voice in treaty making. This branch of the Congress is in a far better position to act in accordance with the wishes of the majority. So intricate have become human affairs that domestic laws are closely interwoven with foreign policy. The laws affecting the merchant marine, the size of the Army, the exchange of materials of war, tariffs, and appropriations to implement treaties are illustrations of subjects in which the House has a voice and are matters closely connected with foreign policy. It is impossible to draw a line between local problems and the issues connected with foreign affairs. Few treaties can be sustained without implementing legislation requiring the concurrence of both Houses of Congress. There is no valid reason why one type of legislation should be possible by only a two-thirds vote of the Senate when legislation implementing this must receive the sanction of the other House. No foreign policy agreed upon by the Senate can long endure unless it has the wholehearted support of the people. This can best be given by the House of Representatives.

Under article VI of the Constitution treaties are a part of the supreme law of the land along with the Constitution and laws enacted in pursuance thereof. This is a compelling reason for associating the House with treaty making. The majority of Congress may abrogate a treaty by voting for conflicting legislation or failing to pass subsidiary legislation. The agencies of Government empowered to abrogate a treaty should be consulted in the formulation of a treaty. By including the House in treaty making undue delay by the Senate would be greatly lessened if not entirely prevented. With the House voting we would actually be able to establish a people's peace.

DUMBARTON OAKS

The now famous Dumbarton Oaks proposals or a modification of them for the establishment of an international organization to maintain peace and security will undoubtedly be presented in treaty form. Abolition of the two-thirds rule will increase the chances of this Nation joining a world organization to preserve the peace. Furthermore, many treaties supplementing the original Dumbarton Oaks proposals will have to be agreed upon. To insure our successful participation in building a peaceful society it is imperative that the two-thirds provision be stricken from the Constitution. I, for one, am not willing to leave the question of the United States joining a world organization for peace and security in the hands of one-third of the Senate. Those who feel that we shall become a member of such a group under our present system are indulging in unwarranted optimism.

PRESENT STATUS OF PROPOSED AMENDMENT

On the 20th of November I debated this issue on the floor of the House. Later the Committee on the Judiciary held hearings and finally reported favorably a resolution to amend the Constitution. This came so late in the last session that the question did not reach the floor. On the 3d of January I introduced House Joint Resolution 16, which is as follows:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as a part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"SECTION 1. The President shall have power, by and with the advice and consent of the Congress, to make treaties, provided a majority of the Members present in each House concur.

"SEC. 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within 7 years from the date of its submission."

The Committee on the Judiciary will undoubtedly consider this proposition again in the near future and since a resolution similar to the one I introduced was reported favorably in the Seventy-eighth Congress there is every reason to believe that it will be reported favorably in the Seventy-ninth Congress. I hope that in the near future the subject will be discussed on the floor of the House and that a resolution to submit the proposed amendment to the State legislatures will be passed by far more than the necessary two-thirds vote.

STATE LEGISLATURES IN SESSION

Over 40 of the State legislatures are convening this year. If the Congress acts at once it is possible for the amendment to become a part of the Constitution within a few months. The Seventy-ninth Congress could perform no act which would so increase the faith of the people in representative government as to give the State legislatures an opportunity to vote on this question. Now is the time for the National Legislature to rise to a high position of leadership and make an incalculable contribution to future generations by developing governmental procedures to meet the problems of this modern age.

HOUSE MUST ASSUME LEADERSHIP

The House must assume the leadership in this matter just as it took the leadership in passing the Fulbright resolution approving United States membership in an international organization to halt aggression. The statements presented to the House Judiciary Committee were almost unanimous against the two-thirds rule. There are very few people outside of the United States Senate who believe that the present method of rati-

fying treaties should be continued. Recent polls show that a majority of the Nation is in favor of striking out the impeditive two-thirds requirement. If the House will soon vote upon this question, the Senate may be prodded into action. This would give the State legislatures, in session this year, an opportunity to vote on the suggested amendment.

INTERNATIONAL ORGANIZATION—ONLY ALTERNATIVE TO WAR

The present system plays definitely into the hands of obstructionists; into the hands of those who still cling to isolationism and into the hands of those who would have this Nation try to retreat from the theater of international affairs after the tanks have ceased to move and the bombers have completed their missions. The only alternative to recurring world wars is an international organization sufficiently powerful to check an aggressor when he first begins his march of conquest. By actually participating in an association of nations to effect world unity we will be doing our part as a great power in seeking a way to avoid international anarchy. Many responsible leaders in both major political parties have expressed themselves as favoring an international organization, implemented by force, to preserve the peace. Here is an excellent opportunity for them to demonstrate their sincerity by putting their influence behind the proposed constitutional reform. This is the first major step in accomplishing their objectives. The Congress has stated that is is in favor of entering a world organization. Here is an opportunity by voting for this amendment to prove that we meant what we said when we passed legislation pledging our participation.

I believe that the first step in developing an enlightened foreign policy, is to amend the Constitution so that a majority in both Houses may validate treaties. Such an amendment would strengthen the hands of our negotiations at the peace table. Such an amendment would permit a majority of the people's representatives to participate in creating a just and enduring peace. Such an amendment would strip from the hands of a small minority the dictation of our foreign policy. Such an amendment would be an announcement to the world that the United States of America actually intends to assist in organizing a peaceful society and in laying the foundations for international goodwill. Such an amendment would remove a glaring defect in the Constitution and would make this Republic far more influential in the direction of world affairs. It would end our impotence in concluding treaties and would give new hope to those of the present generation as well as afford the means by which the people of the future may escape the curse of war.

WILL PRESS FOR ACTION

I am frank to say that I, along with many others, will fight this battle to the finish. We will press for action until the question reaches the floor of the House. Now is the time for every legislator, yes, for every citizen to let his position be known on this question as we enter the struggle to establish a just and lasting peace.

The antiquated, obstructive, undemocratic, and indefensible method of approving treaties should be ended. I hope that the country will rally to the support of this amendment and by so doing make the first move in establishing our leadership in the struggle for world unity. Just as the boys are fighting for military successes on the battle fronts, so must we work for victories on the home front. If those in our armed forces are not to be let down by the country and by those who are privileged to move in that distinguished group referred to as statesmen, then we must act promptly to preserve the fruits of their victories.

WE MUST NOT HESITATE

Let it not be said by the historians of the future that this Republic hesitated at this crucial juncture in world affairs. Let it not be said that we failed to use our position of unparalleled power to lead the nations in the struggle for universal peace. If we hesitate, if we do not keep faith with those who are fighting, if our statesmanship is incapable of solving the questions of this hour, and if we do not lay the groundwork for an enduring peace, then the generations of the years to come will by our failure be condemned to the recurrence of devastating wars. Let us be resolved that our country shall lead the march toward good will, brotherhood, and peace.

Laws Affecting Disabled Veterans

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1945

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter:

DISABLED AMERICAN VETERANS,
HUGH SMITH THOMPSON, 3D,
CHAPTER, 17,
Castle Point, N. Y., January 10, 1945.

Hon. E. CELLER,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: We desire to call to your attention injustices and inequalities affecting disabled veterans under existing laws.

A service-connected single disabled veteran who enters a hospital for treatment of any kind receives $20 per month either as compensation or pension for his service-connected disability. Under the present law there is deducted $95 per month from his monthly check. In other words, he is forced to pay his own way in a Government hospital while he is totally and permanently disabled while undergoing treatment for his service-connected disability. Prior to the enactment of the Economy Act of 1933 these men received full benefits while hospitalized. Returning disabled veterans of World War No. 2 are very much disillusioned to find that their benefits are reduced to $20 per month during periods of hospitalization for service-incurred disabilities, while in the service they had been receiving $50 or more per month.

Many single disabled veterans, particularly those with tuberculosis which requires an extremely long period of hospitalization, leave Government hospitals before maximum treatment is reached in order to secure full benefits due them as they have obligations contracted prior to hospitalization such as insurance and family obligations which the Veterans Administration does not recognize as dependency. A veteran who leaves a hospital in this manner not only jeopardizes his own health, but is a menace to the public in general. Legislation is required to correct this injustice.

We should also like to suggest for your consideration the matter of statutory awards. A statutory award of $50 monthly throughout life was granted for the benefit of World War No. 1 veterans with an arrested case of tuberculosis. World War No. 2 veterans do not share in this protection. Instead, they are rated by the Veterans Administration Rating Board semiannually upon discharge from the hospital, and in many cases their benefits are reduced to the minimum (which can be nothing) as quickly as 1 year after discharge. The statutory award was granted to compensate for the reduced earning capacity of the veteran in the labor market due to his disability. It is not only recognized by employers that a veteran with arrested tuberculosis is unable to exert himself fully, but the veteran himself knows that to do so would be to court a recurrence of the disease. Legislation is also required to correct this injustice.

Another point of vital interest to veterans of World War No. 2 and their families is the matter of converted insurances. Discharged veterans of World War No. 1 were permitted to convert their service insurance into any of the following forms: 20-year-payment life, 20-year endowment, endowment at age of 62, 30-year-payment life, 30-year endowment.

All of these policies contained a disability clause for permanently and totally disabled men. Payments were made at the rate of $5.75 per thousand per month while permanently and totally disabled. World War No. 2 veterans are permitted to convert into the following forms only: 20-year-payment life, 30-year-payment life.

These converted policies do not contain any disability provisions whatever. Comparatively, this matter of insurances is very unfair to the veterans of World War No. 2. Legislation is also required to correct this injustice.

We ask your cooperation in furthering legislation to effect these very necessary amendments to existing laws.

Our national service director, Mr. Millard W. Rice, Disabled American Veterans, 543 Munsey Building, Washington, D. C., will be pleased to enlarge upon any of these matters at your convenience.

Assuring you of our high regard and esteem, we are,

Respectfully,
WILLIAM R. CLEARY,
Commander.

Our Right to Peace

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following editorial entitled "Our Right to Peace," which appeared in the Daily Evening Item, Lynn, Mass., January 15, 1945:

OUR RIGHT TO PEACE

The average American, slow to anger, can be a pretty tough hombre when aroused.

The colonists, aroused in 1776, cut themselves free from a despot.

In 1812 we went to war to assure the freedom of our commerce on the high seas.

In 1861 we fought to banish slavery.

In 1898, we resented Spain's high-handedness and rolled up our sleeves once more.

In 1917 we objected to Germany's plunging our fellow citizens to death in the icy seas and in 1941 we took up the cudgets again, this time to halt the sweep of Nazi dominance and to avenge the Americans killed by a sneak Japanese attack on Pearl Harbor.

We have never lost a war and we shall not lose this one.

But isn't it barely possible, that glorious as all our victories have been, the greatest battle of our history will begin when the last gun is silenced in the present conflict? Isn't it time we began giving some thought to the battle for enduring peace, not only for ourselves but for all people everywhere?

Is there any more sublime objective to which we, as a Nation, can dedicate ourselves?

It is obvious, even to a school child, that the next peace, if it is to be worth anything, must have teeth. We cannot abruptly lay down our arms, busy ourselves with domestic concerns, forget the rest of the world and not expect another international eruption 25 or 50 peace hence. Hitler will die, nazi-ism will pass, the pagan fanatics of Japan will be subdued, but what guaranty have we, as of today, that new Hitlers will not arise, new cults attract frenzied followers somewhere else on the globe and new quarrels provide the spark for another explosion?

It seems to us that out of all the welter of discussion of how lasting peace can be secured, only one man, an American, has thus far taken a single practical step toward enduring international amity. That man is Kent Cooper, executive director of the Associated Press, who proposes a free exchange of news among all nations so that people everywhere will know what is going on. That, obviously, is step No. 1. Americans should fight for Mr. Cooper's plan, and see to it that their Government representatives, from the President down to the lowliest diplomatic attaché in Siam, fight for it until it is assured of world-wide acceptance.

Step No. 2 is an international police force. The United States should insist on this at the peace table. Force is the only language that the hoodlum down the street or the international gangster across the ocean understands. Some day, we all pray, it will not be necessary to police the world, but at this writing it is imperative and is likely to be for many decades to come until men learn that no great moral issue is permanently settled by hurling explosives at human beings or ramming a bayonet through a fellow man's body.

Step No. 3 is education. A truly enlightened people recognizes the futility of war, but there are millions who look upon it as the highest calling of man, the supreme expression of racial supremacy. Education is the most effective antidote for such nonsense.

Step No. 4 is a more militant Christianity. We as Americans profess to be Christians. Our Nation was founded on belief in a just and beneficent Deity. Was there ever a more perfect design for peace offered man than that given us by Christ? Can we honestly say that we have fulfilled our destiny as a nation until we take steps to make sure that people everywhere are given an opportunity at least to know what Christianity means, of the solace and hope it has brought to millions? A sincerely Christian world will be a peaceful world.

This is an ambitious program—a program that will overshadow the most heroic of all previous American efforts. We cannot accomplish it alone. We've willingly poured out our blood to make an ignorant Negro free or the lowliest laborer king in his own home. Neither Mr. Stalin, nor Mr. Churchill, nor anyone else should be permitted to let his own nationalistic concerns stand in the way of an attempt to make the next peace stick. It's time the human race became of age and that a sincere, concerted effort were made to enable man, in the few brief years allotted him on this earth, to enjoy the blessings of his Creator, the wealth of nature, the products of his own skill and industry, and the bliss of family life without periodic interruptions of strife and carnage.

We Americans have been tough on Saipan, at Leyte, on the Murmansk run, in Africa, Sicily, Italy, and the western front. Let us here highly resolve to be equally tough when the next peace is designed so that the heroic sacrifices of our sons will be translated into enduring benefit for all mankind. No one, certainly, has a greater right than we to say what kind of world our children and grandchildren are to inherit.

Farm Labor Shortage

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. REED of New York. Mr. Speaker, the farmers whose sons are fighting for liberty under law stand aghast to see the plain intent and spirit of the Tydings amendment bypassed by those in authority who are sworn to execute all laws passed by Congress. The evidence that is pouring in to Members of Congress in support of this statement furnishes eloquent illustrations of the principle that "where law ends tyranny begins."

The Tydings amendment was enacted as part of the Selective Training and Service Act of 1940. Its purpose was to protect the farmers from being stripped of labor necessary to carry out a program of food production. It was to enable the farmers to achieve by extraordinary efforts a volume of food production necessary to feed the Army, Navy, and civilian population during war. The burden placed upon the farmers by the Government has been expanded far beyond the original intent. Now it is expected that the farmers will not only supply the Army, Navy, and civilian population during war, but also feed the people of the liberated nations now and after the war.

No group of people in the United States has responded more willingly, without regard to hours of labor or income, to a degree that is not only admirable but almost superhuman, than the farmers.

Now, at a most critical time when the War Food Administration, through its Administrator Marvin Jones, is requesting an increase of 3 percent in farm output, the President of the United States has joined in a directive signed by General Hershey known as advice to the State directors and addressed to the subject Reclassification of Registrants in Agriculture, Ages 18 to 25, the intent of which is undoubtedly to cause draft boards and State directors to nullify the purpose and intent of the Tydings amendment.

There is no group outside of the officers and soldiers of the Army, Navy, and Air Force that has made a greater sacrifice to meet the demands of the Government during this war than the farmers. They have seen their boys taken from the farms when they were sorely needed to meet the demands of the Government for food; they have seen the farm machinery, which they required, shipped abroad, and now they see an attempt to destroy the little protection that they should have under the Tydings amendment.

The letters that are coming in from the farmers of this country presents a tragic picture. Notwithstanding all this, the administration is pursuing a course of totalitarian methods which our boys on battlefields throughout the world are attempting to destroy.

I have before me a letter which is typical of what is taking place at the present time regardless of the Tydings amendment. A farmer, aged 25, with two small children and another soon due has just been examined and ordered for induction by Presidential order. This man is the only man to operate one of the best 250-acre farms in my home county. He was even refused an appeal, so I am informed, because he was inducted under Presidential order. There is no Presidential order that can supersede the Tydings amendment nor the right of appeal. This man has always farmed and his request for deferment was denied on the ground apparently that he bought a larger farm and moved on there last fall. There is nothing for such a man to do but to sell out or at least to let the farm stand idle. This penalizing a farmer for enlarging his acreage does not make sense at a time when the Government requests an increase of 3 percent in farm output. The Congress ought to take action and take action promptly lest our farm program completely fail to meet the exigencies of war. We have had a shortage of war material in the way of large guns and shells. Let us not endanger ultimate victory by failing to furnish adequate food to our Army, Navy, and to our own people as well as others.

Under leave to extend, I am inserting an article which appeared in the New York Herald Tribune on Wednesday, January 17, 1945:

W. F. A. REQUESTS INCREASE OF 3 PERCENT IN FARM OUTPUT—MARVIN JONES ASKS ALL-OUT PRODUCTION TO MEET 1945 GOALS ON FOOD AND FEED

WASHINGTON, January 16.—Marvin Jones, War Food Administrator, called anew on the Nation's farmers for all-out food and feed production this year as he announced final agricultural production goals for 1945.

These goals represent the total of State goals recommended by farmers, farm leaders, and State agricultural officials, and are approximately the same as were recommended by the W. F. A. last November 15.

This year's crop acreage goal totaled 363,635,000 acres, nearly 3 percent more than the 1944 planted acreage and a little more than the 363,616,000 acres which had been suggested by the W. F. A.

Goals for flaxseed, sugar beets, and clover crop seeds were increased substantially over 1944, while moderate increases were decided upon for acreages for dry beans, potatoes, and tobacco. Legume hay seeds and soy bean acreages will be maintained at the record 1944 levels, Mr. Jones said.

LARGER SLAUGHTER ASKED

The W. F. A. called for a larger slaughter of cattle to meet increased military and civilian demands. The cattle and calf slaughter suggested by the W. F. A. was 35,000,000 head, an increase over the 33,900,000 in 1944. Slaughter goals were not established on a State basis.

State recommendations called for an increase in the goal for spring pigs from 55,925,000 in 1944 to 57,563,000. The W. F. A. had suggested 57,000,000. Farmers were urged to keep more sows for spring farrowing to help meet the goal. The number of sows to farrow in the spring was set finally at 9,569,000, compared with W. F. A. suggestions of 9,429,000 and the 1944 estimate of 9,187,000.

W. F. A. announced extension of the price support period on hogs to March 31, 1946, to cover the period when the spring pigs of 1945 will be marketed.

The national wheat goal was set at 67,731,000 acres. This compares with 65,454,000 acres planted for harvest in 1944.

The corn goal was fixed at 99,098,000 acres, compared with 98,722,000 acres planted in 1944.

MILK GOALS INCREASE

Increased milk production also is called for in the final national goals. The final State-recommended output for 1945 was 120,582,000,000 pounds, 582,000,000 more than W. F. A. recommended and above the estimated 1944 production of 119,200,000,000 pounds.

W. F. A. said that because of recent changes in needs, the 1945 egg goal was increased by about 10 percent over the preliminary goal and was fixed at 4,350,000,000 dozen. The W. F. A. had suggested 3,920,000,000 dozen, which was considerably under the estimated 4,790,000,000 last year.

State-recommended goals for chickens totaled 745,000,000, the same as the estimated 1944 production but above the 700,000,000 the W. F. A. proposed.

"Increased military needs," Mr. Jones said, "have resulted in higher pack goals for vegetables for processing."

America's Part in World Affairs

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, January 18, 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address, entitled "America's Part in World Affairs," delivered in New York City last evening by our colleague the junior Senator from Arkansas [Mr. FULBRIGHT] in the New York Times Forum.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Profoundly disturbing to all peace-loving citizens are the events of the past 6 weeks. The military reverses have been serious. The savagery and destructive power of our enemies, just as we thought them weakening, have shocked us. But our military performance is not the source of our greatest concern. Few have lost faith in the ability of our generals and none have lost faith in the courage and skill of our fighting men.

Our apprehension springs from another source. It springs from the hesitation and timidity, the lack of forthrightness in the management of foreign affairs by our own Government. Why is it that with all our military power and our enormous contribution of material goods to the cause of war, we are unable to secure even the semblance of unity among our allies in dealing with the problems of peace in the liberated countries? These problems in the liberated countries cannot wait. Disorder, starvation, and death face these peoples and something must be done. What is wrong with our policy?

Sixteen long months ago, in September 1943, the House of Representatives declared that it favored the "creation of appropriate international machinery with power adequate to establish and maintain a just and lasting peace among the nations of the world and as favoring participation of the United States therein." The essence of this declaration by your Representatives is the participation of the United States. And yet, in spite of this unequivocal statement, by an overwhelming vote, your Government has not yet created the appropriate machinery by which we can participate in the solution of problems leading to the establishment of peace.

Participation is a positive, a dynamic, word. It means to share in common with others; to share by common action. The declaration by the representatives means that we should share actively, affirmatively, in the negotiations and decisions which have any bearing upon the shape of the world to come. It means that our counsel, and our entire influence, should be brought to bear, jointly with our allies, upon all the difficult and vexing problems which are bound to arise out of the confusion created by the Nazis throughout the world. It means that we must assume our just share of the responsibility for all the settlements being made now, as well as for those to be made at a peace table

That statement of the representatives does not mean that, if some especially difficult problem cannot be solved to our complete satisfaction, we should withdraw and disavow any responsibility therefor. It clearly does not mean that we have no interest in the character of the governments to be formed in either the liberated or the enemy countries. It does not mean a hands off policy in the trouble spots of the world. It does not mean that we participate merely by giving charity to stricken peoples while refusing our influence in the reestablishment of law and order within those unfortunate countries. Above all it does not mean that we should engage in petty bickering and criticisms of our allies, at least, until we have demonstrated in concrete terms, our willingness and determination actually to participate in the burdens of peace as we have so magnificently participated in the burdens of war.

In spite of the 16 months in which to proceed, our Government has presented us with nothing more than an incomplete blueprint. We still lack the machinery for arriving at decisions, decisions based upon the give and take of mutual consultation. Conferences have been held, broad principles have been stated, but decisions by mutual agreement, with joint responsibility for specific action, have been largely avoided.

The making of peace does not consist merely of a beautifully drafted constitution or a magic formula. The making of peace is a continuing process that must go on from day to day; from year to year so long as our civilization shall last. Our participation in this process is not just the signing of a charter with a large red seal. It is a daily task, a positive, creative participation in all the little details and decisions which together shape the final structure. If this be true why is it that we are forever waiting for another conference, or for the signing of another document? Why are we not participating now, positively and definitely in the decisions which are shaping the world of the future?

As in the war we deluded ourselves that the battle was won, so with the peace there are those who declare that isolation is dead. But only 12 days ago the most distinguished, and the shrewdest of all the isolationists was so encouraged by the apparent paralysis and the confusion of our Government, that he boldly reaffirmed his faith. He said on January 5, I quote "tonight I make not even the pretense of an apology for the position I have held both before and during this war." Then he proceeded "Dumbarton Oaks is a grim hoax. No nation today trusts the other nations sufficiently to warrant a single gesture towards risking its security on the success of an international organization." Obviously Senator WHEELER has found much in our hesitation and reluctance to assume responsibility to warrant his saying, "I told you so."

The reason for the Senator's outburst, and the cause for our concern is the failure of the three great powers to act jointly in the solution of the difficulties that have already arisen in Europe. The impression is current that each country goes its own way with no thought of mutual or cooperative action. There is little evidence that the United States has insisted upon its right to participate in many of these decisions. If this is not true then in the words of Assistant Secretary of State MacLeish, "The people have a right to know."

They have a right to know why 16 months is not enough to create at least the initial machinery for mutual consultation and agreement. They have a right to know if this failure is due to the devotees of protocol and the status quo in the Department of State, or to the opposition of Stalin and Churchill. There is a suspicion current that it may be the former who have contributed so much to the vanity of our present position. The people have a right to know why the futile diplomatic procedures which reveal, but seldom reconcile, the differences among the nations, are not abandoned.

It is in the nature of things that differences should exist among the three powerful Allies and that no one of them can in every instance have its way.

If there were no differences there would be no need for security measures, indeed there would be no war. In considering these differences in policy, it is unfortunate that we are so quick to attribute unworthy motives to all other peoples. It surely is not unthinkable that the British, the Russians, and the French desire peace and security just as fervently as we do. Their judgment as to the most effective methods to secure it may be at variance with our own. But the variance does not in itself warrant the automatic condemnation of their policies and actions. The fact is that until this country demonstrates more definitely and specifically its determination to share in the responsibility of creating a world order, there is good reason for the skepticism of our allies. So long as we follow a hands-off policy our criticisms of their actions are especially offensive. Furthermore, a hands-off policy on our part is a justification for the unilateral agreements which we so freely condemn.

We in the United States are suffering, as we did at the end of the last war, with a bad attack of self-righteousness. We never admitted in the last war, nor have we in this, that we are in it to save our own skins. We have pretended that we fight only to save democracy or human freedom, but never for our own personal benefit. We feel that our friends never appreciate our virtues or our sacrifices. We are forever feeling abused and mistreated. But isn't it true that we have a bigger stake in human liberty and material prosperity than any other nation, and I cannot see why we do not admit that we are fighting to preserve and protect it. I happen to believe that the best way in the long run to save our own skins is to promote and perfect an international security system in which we share fully in the responsibility for its success.

The very fact that these recent differences have arisen among the Allies is the most persuasive and compelling reason for our Government to proceed immediately and without delay to the creation of the appropriate machinery suggested by Congress 16 months ago. Our present difficulties should not be the occasion for a cynical and disillusioned return to isolation, the bloody fruits of which we are now harvesting on the battlefields of the world. These difficulties, on the contrary, are the supreme and unanswerable reason why we must, with all haste, proceed at once to the creation of the machinery as outlined at Dumbarton Oaks. If for any reason this should be impossible, then a temporary council of foreign ministers surely can be formed now, to consult and to agree upon solutions for the problems which will not wait. The one unforgiveable sin for our Government is to do nothing. As a great man

once said, "I do not believe in a fate that falls on men however they act; but I do believe in a fate that falls on them unless they act."

On January 6 President Roosevelt said to the Congress and the Nation, "We shall not hesitate to use our influence—and use it now. We cannot and will not shrink from the political responsibilities which follow in the wake of battle."

This is a fine and encouraging statement. But many of our present difficulties may be traced to the reiteration of high principles during the past 16 months followed by the postponement by our Government of action on concrete problems. High principles serve a useful purpose, but are futile alone and unsupported. The time for action has arrived. The difficult and trying task of reconciling those principles with the hard facts of fear, and of hatred, of physical suffering, and of prejudices, must now be met.

Great inspirational conferences at long intervals are not alone sufficient. Patient and persistent participation in the daily affairs of this troubled world is required. Of paramount importance is the character and wisdom of the men who represent us. It will take boldness and imagination on the part of these men if we are to avoid the extreme nationalism which has contributed so much to our troubles. To resurrect and defend that old order of lawlessness and national irresponsibility will be inviting disaster. Our goal is not to defend a bankrupt system. Our goal is to create something new in the world; a system in which binding rules of conduct are accepted by all nations by agreement, rather than by force.

Out of the continuous process of adjusting differences and establishing order, new standards of national conduct, standards without precedent in this confused world, standards of economic, political, and moral conduct, must be created and accepted, if mankind is to avoid complete self-destruction.

American Infantry

REMARKS

OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. HALLECK. Mr. Speaker, the gentlewoman from Massachusetts [Mrs. ROGERS] has spoken of the pride of the Infantry. I should like to supplement her remarks briefly and to point out that the pride of the Infantry is the pride of the entire United States, and the United States should know why that is so.

The profile system of selection for the armed services of the young manpower of America which has been in effect for about 6 months now, divides the youth of this country into three categories—those with A, those with B, and those with C profiles.

The A profile represents those young men whose bodies are normal as to function and stamina and whose minds are evenly coordinated with those bodies—the old sound mind in a sound body, of the Romans. The B profile men are those who do not quite measure up to this championship standard. The C profile men are those who are in a still lower category.

In overwhelming percentages today—the A profile men are assigned automatically to the Infantry. So that the Infantry today represents the cream of the crop. It is the championship youth of America—and therein also lies its pride in itself and therein also should lie the pride of the mothers, fathers, wives, sisters, sons, and younger brothers of Infantrymen.

If a young man on induction and reception is assigned to the Infantry—it is an accolade. He is that fine type of youth who by his physical condition and his mental coordination, is the kind of boy we all hope our sons will grow up to be. If he does not make the required standard, he is not good enough for the Infantry, he fails to make that branch of the service and must go elsewhere.

The profiling is done on induction, done again at reception centers, and again about 6 weeks later. It is a triple screening process that allows of scant final doubt. This top physical condition and mental coordination of the A profile men carries with it something else which you might like to know of. An extensive comparison of the Army general classification tests—which determine what civilians call the I. Q.—it has been found that those with the A profiles have, generally speaking, high A. G. C. T. scores as well. So that the sound mind in the sound body also carries with it a high degree of intelligence.

You therefore not only have a great percentage of mentally and physically well-coordinated youth going into the Infantry but a large percentage of the most intelligent American youth as well.

Time was when the general opinion was that only the boys with the strong backs and the weak minds went into the Infantry, but if that ever was so—and I doubt it strongly—it is no longer so today. Today the Infantry of the Army of the United States represents the cream of the youth this country produces. The Infantry is the best there is in America, and therein lies its pride and the pride of the country.

In no other way can we continue the gruelling monotony of front-line combat—the dirt, cold, hunger, shock of it, the in-fighting, and the hardship, and the vista of the still long road ahead to victory—in no other way except with a championship team.

Your American Infantry today is that championship team.

First Combat Infantry Band

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mrs. ROGERS of Massachusetts. Mr. Speaker, on the 18th of December I made an announcement about the First Combat Infantry Band, from the floor, which I would like to amend slightly and elaborate on. The First Combat Infantry Band which is a most unique organization inasmuch as all of its members have been returned from overseas service in all theaters of operations—is a musical organization of the first water. Some of its members have been decorated for bravery and some have been wounded in action. It did not play overseas as a complete band, its membership representing many bands, some of them from the band that played under fire at Anzio beachhead for the morale of the troops there—some from other equally famous infantry regimental bands. Some of its members are musicians who served overseas as riflemen.

The First Combat Infantry Band has recently returned from an extended tour in Massachusetts where it was loaned to the Treasury Department for the sixth war loan drive which it was most helpful in bringing to a gratifying conclusion. The Treasury Department's appreciation for the work the band did in Massachusetts was most emphatic. It leaves shortly on a tour of general hospitals, at the request of the Surgeon General.

When I first called the First Combat Infantry Band to your attention, I announced that the band would play here in Washington at the request of the Disabled American Veterans on the 21st of January in a room in the Congressional Library. The date has been changed to Monday, the 22d of January, and the place has been changed to the Interdepartmental Hall at Constitution Avenue and Thirteenth. I know you will be very glad to hear this band on that date and also to pay it and the thousands of fighting American infantrymen it represents, your tribute by attending.

The bulk of the audience on that evening will consist of disabled veterans from nearby hospitals, but I have a limited supply of tickets which I will be glad to give to those Members who are seriously interested.

I might say that the Infantry as a branch of the service which has born the brunt of battle ever since we entered the offensive phase of this war 2 years ago, has little to publicize it beyond its performance in the field and nothing to glamorize it as some of the other branches have.

But the Infantry asks for no glamor nor does it seek it. Instead, it has a deep conviction of its vital job in war and a deep pride in doing it, and there it ends. This First Combat Infantry Band is typical of the Infantry's attitude to itself. It is not a glamor band picked only for its musical excellence. According to the musical critics who have heard it, it has most noteworthy musical excellence, but the men who make that excellence possible are first of all soldiers, and soldiers in every case who have completed extensive tours of duty overseas in combat with the enemy. The pride of the Infantry, I might say in conclusion, rests on the fact that all of the Infantry sees combat—cooks, chaplains, medical personnel, clerks, staff officers, and bandsmen—everyone, and more mothers,

wives, and sisters in America have their loved ones serving in the Infantry today than in any other branch of the service, serving in the hardest, toughest branch of the service, in front of which there is nothing but the enemy.

Blue Star Mothers

EXTENSION OF REMARKS

OF

HON. WILLIAM W. BLACKNEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. BLACKNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article pertaining to the Blue Star Mothers published in the magazine Editor and Publisher, of New York City:

BLUE STAR GROUP THIRD ANNIVERSARY PLANS ARE MADE

The Blue Star Mothers of America, a newspaper-sponsored association, will celebrate the third annual founder's day January 12, it is announced by Mrs. Edna May Standing of Cleveland, national president.

The organization was founded as a result of the Pearl Harbor attack by Capt. George H. Maines, military editor of the Flint (Mich.) News Advertiser and the Johnson newspapers in Greenville and Coldwater. The Flint News Advertiser financed its early activities as a home-front and war-aid association.

Blue Star Mothers are war mothers of men and women serving in the armed forces of the United Nations and have an internationalist viewpoint, according to Captain Maines, former promotion-circulation manager for the New York Daily Mirror, a founder of the American Legion and national chairman of the Americanism Commission of the Army and Navy Union. He designed the Blue Star Mothers membership card and emblem, wrote their first constitution and bylaws, and designed and created their duration window banners and chapter flags. The first annual national convention held in March 1942, voted him honorary life membership and the position of founder and national organizer.

After the Flint newspaper's sponsorship of the first Michigan chapters in January 1942, about 44,000 war mothers were enrolled with free memberships, the cards and window emblems being given away by the newspaper. The Cleveland Plain Dealer, through John Crawford, promotion manager, enrolled more than 80,000 members in 2 years, starting in May 1942

Last year the Blue Star Mothers gave away $270,000 worth of necessities, wheel chairs, crutches, musical instruments, fountain pens, playing cards, and gifts, to service men and women in hospitals in this country without deducting any funds for expenses. No Blue Star Mother official receives a salary. There are more than 600 active chapters in the 48 States.

The Governors of several States have designated December 7 as Blue Star Mothers' Day. The CONGRESSIONAL RECORD has carried several articles about the organization and its purposes. Application for a national charter has been read twice before the United States Senate and referred to the Committee of the Judiciary.

A unique feature of the group's leadership is the appointment of war mothers representing all races, creeds, and color to serve on an advisory board to the national president. The members cooperate with the American Red Cross, the O. P. A., and the Government agencies associated with the war effort, in providing women power to sew surgical dressings, as blood donors, assisting in rationing, and in the sale of War bonds, among other activities.

The News Advertiser still finances the founder's efforts and much of the organizing expenses.

Maines attributes the idea for the Blue Star Mothers largely to a remark made to him by General Pershing on his eightieth birthday—"Maines, the Army never knows what it is going to do. But it must be ready. You help the morale of the men and help the mothers of those in service."

In 1923-24, when Pershing was Chief of Staff and Colonel Marshall (now general) was his aide, Maines served as a press relations officer for C. M. T. C. work. After Pearl Harbor the idea of helping mothers grew in Maines' mind and he set to work.

"General Pershing's advice was being carried out," he recalled this week. "Of course, I have had the natural opposition to be expected by those who cannot conceive of a man who sincerely wants to put over a national program without thought of personal gain. I watched the thing grow and kept a hand on it so it would not become a racket anywhere. Now that we have excellent leadership the women are carrying on and I cooperate when invited."

Agricultural Workers

REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. BROWN of Ohio. Mr. Speaker, I take this time to call the attention of the House to two letters which I received this morning from my district; one from the United States Department of Agriculture War Board, of Madison County, Ohio, one of the richest agricultural counties in America, and another from a young farmer of 29 with three children who has produced 188,000 pounds of meat alone in the last year, relative to the drafting of farm workers under the recent order issued by the President and Director Hershey of the National Selective Service. I include these letters in the RECORD at this point. Each speaks more plainly than I can as to the dangers involved to our food supply if essential farm workers are taken off the land. It is even possible many Americans may go hungry unless the recent unwise draft order is quickly changed:

COOPERATIVE EXTENSION WORKS,
IN AGRICULTURE AND HOME ECONOMICS,
London, Ohio, January 16, 1945.

Hon. CLARENCE J. BROWN,
House of Representatives,
Washington, D. C.

DEAR SIR: Essential farm operators and agricultural workers are being drafted at this time from Madison County farms at an alarming rate. Announcement has been made publicly that all registrants between the ages of 18 and 26 would be ordered up for preinduction physical examination and that all those deemed physically fit for military service would be inducted regardless of their status as agricultural workers and farm operators.

To date, all of this group has been ordered up for physical examination and in many cases inductions have resulted. Numerous sales of agricultural equipment and livestock have been held during the past few weeks, and if the present rate of induction continues, many more will necessarily follow. We are enclosing several copies of sale announcements which indicate clearly that they are a direct result of the present induction program. These copies include farm operators farming large acreages of land and producing sizable quantities of livestock products for the market.

The farm sales being held in the county represent only a portion of the reduction being made. Many of the farm operators who will continue to operate are being forced to reduce their acreage of grain crops, to increase the acreage of land laying in grass, and to reduce the units of productive livestock all because of the extreme shortage of labor here. We cannot count on the older men, especially those beyond 60 years of age, to continue operating these farms to their greatest capacity.

The local selective-service board has further informed us that this group would be exhausted by spring and if the calls for men continue at the present rate, it will be necessary for them to begin taking men out of the 26- to 29-year-old group; furthermore, that it is possible that most of the physically fit in this group will be called for induction.

This board has no objection to the taking of all the men needed to bring the war to a successful close, but if this older group is taken along with the 18- to 26-year-old group from this county, it will be out of the question to meet the production goals requested. It is the opinion of the war board that the induction of the physically fit in the younger age group between the ages of 18 and 26 will reduce the production of food approximately 5 percent. It undoubtedly will change the method of operating the farms with a diversion from livestock to grain farming. It will force needed livestock on the market without a doubt but if the older age group is to be taken it will mean the loss of more than 50 farm operators. More farms will need to be sown down to grass or left idle and we believe will result in the loss of 15 percent of our farm production during 1945.

It seems to us the question to be decided is this: Do we need these essential men more in the Army than we need the food which would be produced by their efforts as farmers? We assure you that if it is decided that these men are needed more in the service, that every man left on the farm in Madison County will do his utmost but definitely feel that they cannot be expected to reach the requested farm-production goals.

Farmers of this and other agricultural areas have been spending 70 and more hours weekly during the past season in an effort to keep agricultural production up to the high level requested of them. The drafting of these young men from our county is taking the men who bear the brunt of the heavy work on these farms. Anyone familiar with farm work, including that of sowing the crops and later harvesting them, and with the care of large amounts of livestock, can readily see that it is a young man's work. These same young men and others have saved the country's food supply and have made possible an even greater production of crops and livestock in the face of farm labor and machinery shortage. It is this group that has been the operators of the farm machinery and the men who are most able to keep the available machinery in repair and working.

It is the opinion of the Madison County War Board that the situation is becoming serious in the county from an agricultural standpoint. It is felt that if we were to have an off-growing season, the absence of all of these young men deemed by us to be essential for the agricultural interest and for the

production of food, might prove almost disastrous so far as our contribution to the food supply of the country is concerned.

Madison County is a county of large farms, the eight- and nine-hundred-acre farm being quite common here. Operators of these farms are therefore in a position to furnish large quantities of food above that required for maintenance of the farm family. Hogs represent 50 percent of the income from Madison County farms, dairying ranks second, and beef cattle are increasing in importance.

Many farmers are raising the question of the legality of inducting all of these young men who had previously been given a deferred status because of their having been declared essential workers in the production of food and farm products.

There is no disposition on the part of the Madison County War Board, the farmers, or anyone else in the county to slow up the flow of men for replacement in the armed forces, but we feel that the matter of food is of prime importance even at this stage of the war, and the inducting of all 26- to 29-year-old men with II-C deferments will have its serious effect on the 1945 food production.

Only by the retaining of these essential farm operators and farm workers in a II-C deferred classification and a reasonable assurance that they will remain so classified through the 1945 crop season will Madison County's food-production goals be met; for only that portion of the farm program will be started for which there is assurance of sufficient labor to carry on throughout the season.

We would appreciate your thorough investigation of this situation and any assistance you might render in this connection.

MADISON COUNTY U. S. D. A. WAR BOARD,
G. FRUGH OVERTURF, *Chairman.*
W. B. WOOD, *Secretary.*

FAIRVIEW FARMS,
New Vienna, Ohio, January 15, 1945.

Hon. CLARENCE J. BROWN,
Representative of Seventh District of Ohio, House of Representatives, Washington, D. C.

DEAR MR. BROWN: Have followed your work and your interest in investigating various problems which occur down at Washington that affect the people of the seventh district and the general welfare of our Nation. The draft of Clinton County farmers is going to cut food production tremendously if it keeps up at the present rate. My brother, Donald, 25, married and one child, and I, 29, married, 3 children, have been put in I-A. We live on separate farms of 100 and 125 acres, but farm together as one unit.

Our 1944 farm-production records is as follows: Hogs sold 701, 170,060 pounds, 85 tons of pork; cattle sold 12, 8,760 pounds; sheep sold 89, 6,626 pounds; 38 pure-bred registered Southdown rams used for breeding purposes; wool sold, 803 pounds; chickens sold, 2,260 pounds; 188,509 pounds of meat and wool plus 38 Southdown rams and 3,076 dozen eggs, a great percentage of which go to the Townsley's hatchery.

Not because it is us, but when they start drafting men with farm productions like the one above, I believe it is high time somebody is investigating the draft of farm men, and especially the draft of Clinton County farm men. One member of the local draft board in the income-tax office just recently said now that they had several of the key men in agriculture, and named them, they wouldn't have any trouble sending the rest of them.

What is the latest regarding the drafting of essential farm men, and has there been any change since the "Tiddings" amendment?

Thanking you for your help and interest in the past, I remain,

Very truly yours,

ROBERT BERNARD.

Francis M. Peters, Jr., a Gallant Young West Virginian

EXTENSION OF REMARKS
OF
HON. JOHN KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. KEE. Mr. Speaker, the people of the State of West Virginia are not, either by choice or through opportunity, a seafaring people. From earliest childhood their eyes look up to the hills and it is a far cry from their hills to the sea. As wooded mountains and upland pastures do not ordinarily constitute a suitable environment for the development of mariners, it would not seem strange should the youth of the State show little inclination to "go down to the sea in ships." And yet, in apparent contradiction, we have today a splendid body of naval officers and enlisted Navy men, natives of West Virginia, serving upon all seas of the world and making brilliant records of courage, efficiency, and devotion to duty.

Only recently has my attention been called to one such record made in the far Pacific by a young naval officer from my home city of Bluefield, W. Va. I refer to Commander Francis M. Peters, Jr., who, for his courage and gallantry in action, now wears on his uniform the Silver Star,-a decoration pinned there by the then Secretary of the Navy, Frank Knox, shortly before the death of that distinguished official.

Under leave to extend my remarks in the RECORD and in order that the record of the courageous action of young Commander Peters be preserved to this and coming generations, I include herewith a news item published in the Bluefield (W. Va.) Daily Telegraph at the time the decoration was awarded to the young naval officer. The item, in which is quoted the language of the citation, is as follows:

COMMANDER PETERS GIVEN MEDAL

The Silver Star Medal for conspicuous gallantry as commanding officer of a high-speed mine layer, during action against Japanese forces in the Solomon Islands area has been awarded to Comdr. Francis M. Peters, Jr., United States Navy of Bluefield and Baltimore.

Commander Peters was born January 22, 1908, in Bluefield, and is the son of Mr. and Mrs. F. M. Peters of Bluefield and Charleston. His father is a member of the State liquor control commission. His wife, Mrs. Virginia Page Peters, lives at 5600 Wexford Road, Baltimore.

First announcement of the award was made by the fifth naval district here yesterday, upon receipt of a copy of his citation, signed by Secretary Frank Knox, which said:

"Although under continual threat of enemy submarine attacks and frequently subjected to severe aerial bombing and shelling by hostile shore batteries, Commander Peters (then a lieutenant commander) successfully transported troops and supplies through extremely hazardous Japanese-infested waters in support of the vital landing operations on Rendova Island and the subsequent occupation of the New Georgia group, skillfully driving off the enemy attacks and bringing his vessel through undamaged.

"The expert seamanship and aggressive fighting spirit displayed by Commander Peters contributed materially to the success of our forces in this area and were in keeping with the best traditions of the United States naval service."

Capitol Stuff

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John O'Donnell from the Washington Times-Herald:

CAPITOL STUFF
(By John O'Donnell)

The boys up on Capitol Hill are getting a bit snorty these days when it comes to the cold-turkey observation: "Is papa down in the White House telling us the truth?"

Time was, when even the mere suggestion that the great white father wasn't leveling with the boys would have aroused patriotic howls, breast beating, squeals, indignant squawks—all to the end that any citizen of the Republic who dared in wartime to question the personal veracity of President Franklin Delano Roosevelt was just a dirty so-and-so, who should promptly be laid by his heels (and the sooner the better) by J. Edgar Hoover's F. B. I.

Now comes Congressman the Honorable BARTEL J. JONKMAN, of Grand Rapids, Mich., who calmly puts in the CONGRESSIONAL RECORD for posterity 12 solid columns of type, the over-all gist of which is to indicate that neither Congress nor the American people can trust or accept as truth any observation that comes from the lips of Franklin Delano Roosevelt, of Hyde Park, N. Y.

The idea, as we get it, is that the Member of Congress from Michigan thinks that F. D. R. simply doesn't tell the truth and that he intends to put his observation in print.

Representative JONKMAN took as his theme in the House the phrase "that spurious Atlantic Charter." Then, and this much more importantly, he went into the cold banking proposition that if the Atlantic Charter were spurious (which it is) so is all lend-lease, so is all reverse lend-lease which after all is nothing more than the psychological juggling of non-existent cash by a bankrupt panhandler who wants to argue the point that he will cut you in on his take if he happens to make it with your money.

Representative JONKMAN, blowing the whistle on the cold fact that no such thing exists as an Atlantic Charter despite the White House bellowing and praying of former days, raises the question:

Are we not a bit sanctimonious and a bunch of mealy mouthed double talkers when we try to crack the whip over the Germans, accuse them of violation of international law and insist that United States lend-lease, in fact, was in accordance with punctilious observation of international law, of neutrality which we ordered—by White House decree—all United States citizens to observe?

Said Representative JONKMAN:

"Again—and I say it with all respect—how can we believe that the President would be so loose with his written word over his own signature and yet call attention to the utter

lack of validity of the spoken or written word of the Nazi government?

"President Roosevelt could make the unequivocal statements that there is no Atlantic Charter, and the Atlantic Charter was never signed, and in each statement he would be speaking the absolute and unvarnished truth.

"A charter is a grant from a sovereign to a subject, the first great example of which was perhaps the great charter of King John to the barons.

"That declaration of August 1941, which Churchill properly called 'a simple, rough-and-ready statement of the goal toward which the British Commonwealth and the United States mean to make their way,' was no more a charter or an Atlantic Charter than night is day.

"But does Mr. Roosevelt make such an unequivocal statement? No, indeed. I do not think he can be accused even of qualifying it with what another Roosevelt called weasel words. On the contrary, the President said, 'And there just is not any copy of the Atlantic Charter, at least I have not one.'"

The real snapper in the House declaration of Representative JONKMAN comes when he uses such tough words as "fraud, deceit and betrayal" tossed in the teeth of such distinguished wartime figures as President of the United States Roosevelt and Prime Minister of Great Britain Churchill.

They appear way back in the Appendix of the CONGRESSIONAL RECORD of January 15, on page A131, to be exact, and state, in JONKMAN's reference to the "signed" and written Atlantic Charter sent to Congress by F. D. R.

The Congressman insisted that if the Atlantic Charter did not exist today (which it doesn't) as it did when F. D. R. sent it to Capitol Hill, then:

"A contrary conclusion would lead to the inevitable admission that President Roosevelt and Prime Minister Churchill are guilty of fraud, deceit, and betrayal of the American people; and that President Roosevelt, in uttering and publishing an instrument as signed by Winston Churchill, when in truth such instrument was not signed by him, is guilty of forgery.

"The American people rely upon one advantage to be gained from lend-lease, namely, that the United Kingdom acknowledged and subscribed to the fundamentals of a just peace, and that we thereby had overcome at least one of the serious obstacles which, regardless of who may be to blame, constituted a failure of the League of Nations after the First World War."

Not All Is Profit for the Farmers During These Days

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. HAGEN. Mr. Speaker, on November 16, 1944, the following article appeared in the Times of Thief River Falls, Minn.:

Not all classes of livestock are fetching high prices on the market these days, judging by the returns recently received by George Barnett, of this city, on a young 100-pound sheep shipped to South St. Paul. Gross returns on the animal were $3, which, after deductions, left Barnett with net returns of $1.66.

Following is a break-down of the expenses and commissions referred to in the above newspaper article:

Hauling charges	$0.70
Federal tax on hauling	.03
Yardage	.09
Hay	.02
Fire insurance	.01
Weighing	.02
Loss and damage insurance	.17
Commission	.30
Total expense	1.34

In addition to the expenses listed above, the farmer-producer had to deduct from the $1.66 which he had left after his lamb was marketed, the costs of raising the lamb and fattening it for market.

Are all farmers making money on all produce they raise? The answer is "No" and there is no need for further comment.

Adequate Incentive Payments Needed to Produce Flaxseed

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. HAGEN. Mr. Speaker, there is a belief growing in the minds of people that under our present system of government we must be confronted with the problem before devising a solution.

In other words, we scramble for a cure when the problem becomes serious instead of working out a preventative beforehand. To some degree, this criticism is true.

Recently I received letters from many farmers and farm organizations, including the State president of the Minnesota Farmers' Union, Mr. Einar Kuivinen, of New York Mills, Minn. He sounded a warning that unless bold and adequate steps were taken relative to a Government flax program this Nation would face a serious drop in the production of flaxseed this year.

He has analyzed the need for increased production, and he and M. W. Thatcher, general manager of the Farmers' Union Grain Terminal Association of St. Paul, Minn., have made several constructive suggestions as to how to secure this needed increased flax acreage.

A copy of his letter follows:

DECEMBER 8, 1944.

The Honorable HAROLD C. HAGEN,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: We are calling to your attention a situation which is definitely serious and which therefore, will require definite planning if we are going to avert seriously hindering the prosecution of the war effort, and jeopardize the 1946 economy program in the field of building, reconversion, and rehabilitation.

This situation relates to the importance of producing flaxseed which is a vital war crop, and as such deserves specific and immediate attention.

All statistics indicate that the present supply of flaxseed, after setting aside the required amount necessary for the 1945 production, is so low that by the spring of 1945 we will be scraping the bottom of the barrel.

Naturally the supply of linseed oil and linseed meal for 1946 will depend entirely on the production of flaxseed in 1945, and according to figures afforded us by M. W. Thatcher, general manager of the Farmers Union Grain Terminal Association, St. Paul, Minn., the minimum supply needed will be 55,000,000 bushels, which will take approximately 6,000,000 acres, to raise this crop. About 85 percent of the total flaxseed production is to be found in the four Northwestern States of Minnesota, the Dakotas, and Montana. The rest is largely in Kansas and California, so the 1946 requirements must be met by what is produced in the Central Northwestern States in 1945.

The only countries we could import flaxseed from would be Canada and Argentina. Unless this country offered an incentive for the Canadian farmer, we could not get more than 5,000,000 bushels. The Farmers Union feels that this incentive should be paid to our own farmers and keep the money at home. We cannot get it from Argentina for several reasons. This year they are harvesting a flax crop that is the smallest in 21 years and out of a normal yield of about 70,000,000 bushels, they are only going to have about 30,000,000 bushels which they will need themselves, and, on the other hand, our international relationship is such that it dispenses with all hopes of getting flaxseed from there.

This shortage can be met right here in the Northwest, provided our farmers are given the proper consideration to make it worth their while and for your convenience, I am quoting from a letter written by M. W. Thatcher, president of the Grain Terminal Association and also president of the National Federation of Grain Cooperatives, to Hon. B. K. WHEELER, Senator from Montana, in which he outlines the methods to be used in order to get the required increase in flax production in 1945.

"The only way to get production in 1945 is to deal with the farmers as business people, just as this Nation deals with the Douglas Aircraft Corporation. The way to do that is to make a firm business deal with the farmers. Under present plans, we are going to get more wheat seeded than is needed, and less flaxseed. The prices are guaranteed for wheat in the ways you know, and it is almost a certain crop, if there is rainfall. Flaxseed is the most hazardous crop of all. At parity price for wheat around $1.65 in Minneapolis and parity price for flaxseed at $3.10 in Minneapolis, it is ridiculous to think that a farmer would put in the hazardous flax crop when he can raise more certain crops with a greater return. To get a farmer to plant flaxseed he must have three times the wheat price and four times the corn price which means $4.50 a bushel in terms of flaxseed. But we still have not met the hazards that obtain in flaxseed production as compared with the other crops. So there is just one way to get it, and that is to guarantee the farmer $15 an acre for putting in flaxseed and an incentive payment of $1.50 a bushel. The farmer wants some chance to gain. If he has a crop failure, which is more likely than with any other crop, he will know that he will get $15 and, if he raises 10 bushels, he will get the same $15. But anything he raises over the 10 bushels at $1.50 he would get a further payment of $1.50 a bushel as extra reward. Nothing short of what I have just stated to you will get the seeding or production. The programs that were put out recently by the Department of Agriculture are just a laugh to the farmers. We went into the country and had some meetings. They just won't go for it on the present program for the simple reason that it does not

pay. There is no point in taking the lid off the present price of flaxseed at $3.10 or parity price because, if you do, we will have a wild price market without any more supply on hand than we now have, and, of course, it will mean we would have to take the ceiling off all the articles into which linseed oil is introduced as a part of the cost—so changing ceilings and lifting the price at the market place through such procedure does not make sense."

The Minnesota Farmers Union fully concurs with the program as outlined by Mr. Thatcher, and because only the Congress of the United States can appropriate the necessary funds in time so that farmers will know before spring where they are at, so that they can make the necessary changes in their farm plans and get the needed additional flax acreage in, we are bringing this vital issue up for your fair and considerate appraisal.

May we have your earliest reaction on this letter.

Sincerely,

MINNESOTA FARMERS UNION,
EINAR KUIVINEN, *President*.

Congress did take some action, as is well known by this time. We provided for $30,000,000 for flax incentive payments.

These will be paid out to the farmers in $5 per acre payments rather than on an acre and bushel basis as many thought would be more advisable.

Payments will be made on each acre planted up to each individual grower's flax goal. A new national goal of 5,000,000 acres will be distributed among the 19 flax-growing States of the Union.

Following is an excerpt from a letter which I received from an agricultural conservation committee in one of the counties in my district of Minnesota:

We are advised that $30,000,000 has been appropriated for the growing of flax up to 5,000,000 acres. We are of the opinion that payment should be made on the per bushel production basis and not on a flat rate per acre as has been proposed, because a lot of low producing land put into crop will not insure our reaching the production goal desired in that marginal and submarginal areas would fail to come through with a complete harvest excepting under most favorable conditions and the per acre would not be a fair inducement to the more productive and highly fertile areas—the region we should try to encourage to grow flax and where larger yields with more assurance of a complete harvest is widely certain.

In my contacts with the Department of Agriculture, I have urged that the appropriation of $30,000,000 be distributed to flax growers on the basis of both acres planted and bushels produced. In this way, the best ground would be utilized to produce the greatest number of bushels possible. On the other hand, in some of the areas where the bushel production is relatively low, the acreage payment would be a guaranty of at least cost of production and thus encourage more acres planted.

Combined with this plan, I urged that the crop-insurance program include flax wherever sufficient statistics have been developed to insure successful operation of the insurance program.

Department of Agriculture officials seemed to agree with the suggestions made by myself and the others, but because of the lack of time, and due to the specific wording of the law authorizing the expenditure of the incentive payments, they felt it advisable to conform to the letter of the law and make the payments on an acreage basis only.

Although there is doubt in some quarters as to whether or not this program will bring about the maximum production of flax, we will watch the program with interest, and probably the experience of this season will provide a better program for next year.

Why Strip the Farms of Essential Labor?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. REED of New York. Mr. Speaker, assuming that the administration is at war for other than political purposes, I suggest that before it ignores the Tydings amendment and strips the farms of labor to overcome man shortage, that it examine the overstaffed war industries, including navy yards, both public and private. I have a letter from a man with an unimpeachable record of patriotism and an admirable record of service who writes to me as follows:

Representative REED.

DEAR SIR: I noted with some enthusiasm your comment anent W. M. C. demand for 1,600,000 more men for war work and military service. Either this W. M. C. is fooling a lot of people or they have an ulterior motive which fits in and looks to furtherance of a plan or program which of necessity, because of its nature, must remain sub rosa.

You said: "The war plants could be reduced by 25 percent of their employees, and production would meet all demands." I am of the opinion that this is the most forthright statement emanating from any Member of Congress for some time. If the W. M. C. does not know this, then they don't know what it is all about. It seems to me that the War Government in Washington is none other than the W. P. A. government of a few years back. Characteristics of both are so similar.

But to get back to manpower shortage, I can say without fear of contradiction, because the records available to you will prove it, that the Boston Navy Yard has been overmanned for 3 years at least. These are the figures: Approximately 50,000 men and women employees; absenteeism averages about 12 to 14 percent daily. (This is shown by shop tallies even though the master record has been doctored up a bit to conceal this fact.) At the lowest percentage of absenteeism, this would give us 12 percent of 50,000, 6,000 employees absent daily. Each employee works 9 hours a day. Therefore, this gives us 6,000×9 hours, 54,000 man-hours daily; for 6 days, 324,000 man-hours lost each week by absenteeism, and notwithstanding this loss of manpower, 324,000 man-hours weekly, the Boston Navy Yard has met every schedule to date. This proves conclusively that, meeting every schedule with 6,000 employees absent each day, the Boston Navy Yard was and is overmanned by 6,000 employees. This does not include manpower or man-hour losses due to loafing on the job by those who report for work. An impartial survey of labor in the Boston yard, one which does not make concessions to friendly Members of Congress, or one that bargains for political aggrandizement, but one which seeks the truth, would find that there is hardly a man or woman in the employ of the Boston yard who actually works 9 hours a day. The amount of loafing depends largely on how well one "fits" with shop masters. In such case the intermediate supervisors, who themselves are beholden to shop masters, don't dare enforce an assignment. This type of man-hour loss runs as high as 5 and 6 hours daily, and where there is a tie-in, the minimum loss per individual is 1 hour daily. * * *

If this is the same picture which is presented by all navy yards, private shipbuilders, and war industries, the War Manpower Commission is kidding somebody.

There always was and now is a manpower shortage in the Boston Navy Yard, but never a man shortage. With the loss of 93,000 man-hours per day the yard has kept its schedule. Obviously, to that extent, the yard is overmanned, to say nothing of the 44,000 man-hours lost daily because of loafing on the job, which, reduced to terms in men and women, represents an additional 4,500. It is apparent, therefore, that at least 12,000 employees could be dropped from the rolls at the Boston Navy Yard without affecting its efficiency. This agrees with your statement that 25 percent of employees in war plants could be dispensed with without affecting production.

Radio and Free Press

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. ANDERSON of New Mexico. Mr. Speaker, on New Year's Day, Edward J. Noble, chairman of the Blue Network, made a short talk on the importance of freedom of news to a lasting peace. In it he referred to the attitude of Kent Cooper, executive director of the Associated Press, a statement of importance in discussing the necessity for a free press and a free radio within every country as a foundation for a democratic world at peace.

Following is his address:

Ladies and gentlemen, at the start of 1945 we cannot be happy in our hearts at the state of mankind, but we can be determined in our minds that this year will build for us great strength for war and great hope for peace.

The Blue Network is privileged today to broadcast to you brief forecasts of developments in 1945 from leaders of significant activities in American life. You and I are apt to accept such broadcasts as being commonplace in a democracy, not appreciating their importance in a world at war, or understanding their significance in maintaining the peace to come.

Kent Cooper, the able executive director of the Associated Press, has long recognized the necessity of freedom of news to a lasting peace. He advocated, unsuccessfully, in 1919 that the following declaration be included in the Treaty of Versailles:

"Peace can only be maintained by short-circuiting self-seeking predatory governments through letting the people of each nation really know the peoples of other nations. This can best be brought about through the medium of a world-wide free press and freedom of international news exchange that will establish an international community of interests."

When the peace comes, the principles expressed by Mr. Cooper 25 years ago can become a reality. Our Government favors freedom of news as a world policy.

Under international covenant of the United Nations I believe each country should guarantee free access to news both to its own citizens and to the world at large. Violations of such an agreement should be punished as vigorously as an act of aggression.

Since the last war radio has emerged as a vital news medium. It is the most direct means of communicating the news and significance of an event to the people. If the potentialities of radio are to be fully realized, the peace treaty must provide for radio to operate without censorship or political control in any country.

There are many who still doubt the ability of the peoples of the world to live peacefully together. Surely that is not to be the destiny of humanity. There are many things that the peace settlement must provide, but I sincerely believe that one of the most essential is the establishment of freedom of news in all countries. A free press and free radio within each country can be the foundation for a democratic world at peace. Toward this end, we pledge the resources and energies of the Blue Network.

O. P. A.: Begotten by the Blue Eagle—It's a Bird

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. PLUMLEY. Mr. Speaker, while nobody will believe it, I hesitate to discuss a subject which I have in mind to talk about.

Yesterday at the invitation of the minority leader, the Honorable JOSEPH W. MARTIN, Jr., of Massachusetts, I attended a meeting addressed by some of the ablest and most distinguished gentlemen who represent the textile industry of the United States, who are very much disturbed, and rightly so. I listened with very great interest to their complaints with respect to the rulings made by the Office of Price Administration vitally affecting that particular industry countrywide, in general, and with regard to New England in particular.

This was not a new experience nor a new subject matter insofar as I was concerned except in that it referred to the particular industry which these gentlemen represented.

I contended, and I so stated, that the rulings of which they complained were made so arbitrarily with regard to the net worth profit formula and modified editions of it as to be entirely and completely in violation of specific laws passed by the Congress and that, moreover, the rulings were made deliberately, contrary to the intent of Congress as the O. P. A. has been told over and over again and as appears from the hearings and from the law itself, to which the O. P. A. officials pay no attention, seemingly.

Some of the very ablest lawyers in this country, hired for the worth of their opinions without regard to their partisan leanings, and lawyers both in and out of Congress agree that there is no justification for the rulings O. P. A. has made except that which stems from its desire to exercise the power it has usurped.

I am in complete agreement with the Cotton Textile Institute, Inc., in their opposition to the net worth profit formula of O. P. A. They state:

1. It strait jackets the industry's entire profit to the percentage return on net worth, before taxes, in the 1936–39 period.

A. This means that total profit permitted the industry will amount to $35,000,000 compared with $29,500,000 in 1936–39.

B. It bears no relation to volume. In the base period, industry worked its spindles 88,900,000,000 hours and produced 8,600,000,000 yards. In 1941–44 the industry worked its spindles 127,800,000,000 hours and produced 11,000,000,000 yards. Under this formula, industry will get no more for this big increase in working time and production. It would discourage instead of stimulating badly needed production of goods.

2. By limiting profit to $35,000,000 net worth formula would slash profits on sales to 1.75 percent. This means that any increase in raw material or other costs would wipe out profits overnight and bring many mills to brink of bankruptcy.

A. With taxes substantially higher now, application of 1936–39 yardstick would mean bringing net profits way below amounts for even that depressed period.

3. This formula would sharply curtail industry's contribution to the United States Treasury. In 1942 and 1943 Federal taxes of $99,000,000 and $97,000,000, respectively, were paid by only 245 cotton textile mills, or more than 2½ times the $35,000,000 the entire industry would be allowed under the formula.

A. Formula constitutes 100 percent profits tax with Treasury getting no benefit whatsoever.

B. It means that tax base for all manufacturing industries would fall to base period level of $2,700,000,000, on which taxes of $581,000,000 were paid, compared with $14,700,000,000 in 1943, on which taxes of $9,800,000 were paid.

C. It means Government would sacrifice enormous revenue with no benefit to consumer.

4. In theory, formula would aid the consumer but in fact it would help only processors and merchandisers beyond the mill level who would not be compelled to pass lower costs to consumers. It is in these fields that greatest price increases have occurred. Consumers actually would suffer, since it would discourage production at time when civilian and military requirements are at highest point in history.

I have heretofore protested for other industries against the unwarranted assumption and use of nongranted power and prerogatives and authority by the Office of Price Administration but to no avail against those hired, I think, to hold Congress in contempt and for the purpose of finding some way, if possible, to obviate and to avoid the law and the intent of Congress. That is exactly what I think, and I have reasons to support my contention.

Now, Mr. Speaker, the questions submitted to the O. P. A. by the Cotton-Textile Institute, Inc., are entitled to the careful consideration of every businessman and every citizen, for I assure you they will not be answered by O. P. A. in the interests of the businessman and the citizen if precedent be followed. They are all-important questions; they are well thought out by some of the ablest legal minds in this country, which, I regret to say, are not found in the O. P. A. in Washington. The only answer, in general, lies in the fact that the O. P. A. has no authority in law to do what it is attempting to do, despite all its alibis to the contrary. Did you ever hear the questions which the Cotton-Textile Institute, Inc., has submitted to the O. P. A.? Well, here they are, and I read:

1. Will you describe in detail (a) the industry earnings standard; (b) the product standard; (c) the conditions which determine the choice of the standard; and (d) the method for determining the raw material cost?

2. Is the industry earnings standard, with its emphasis on over-all profits, in accordance with the letter and spirit of the Bankhead amendment?

3. Will you list the items which you consider major items and indicate the percentage of total production which they represent?

4. According to O. P. A., the cotton-textile industry earned during the base period 3.8 percent on net worth, or about $29,526,000. Since then, according to O. P. A., net worth has increased 25 percent. In the revision of interim prices, or if and when the industry requests a price revision of any item, will the result of O. P. A. policy be to limit the industry dollar profit to $29,526,000 (adjusted for changes in net worth) and the dollar profit on the major items to their proportionate share of this figure?

5. Would the target-profit figure, resulting from O. P. A. policy, be fixed at the level calculated above, regardless of the volume of production?

6. At what assumed level of capacity operations will unit costs be calculated?

7. If unit costs are calculated on a high percentage of capacity and actual production declines below the assumed level, will costs be recalculated and prices increased to assure the industry a return equal to the dollar return in the base period? If the revision of prices is a question of administrative feasability, we should like your best judgment as to how frequently the industry price revisions will be made.

8. If the answer to question 7 is "Yes," then may it not be said that the industry earnings standard formula is a device not only for fixing price and profit ceilings but also for fixing price and profit floors?

9. If the answer to question 7 is "Yes," does it not follow (a) that the industry will receive as large a dollar return for a small volume of output as for a large volume; and (b) that the industry earnings standard rewards a decrease in production and penalizes an increase in production?

10. Do you believe that an over-all profit of $35,000,000 on sales approximating $2,000,000,000, or a return on sales, before taxes, of 1.75 percent, is an adequate return for capital and management, and commensurate with the present great risks? Do you believe that an over-all profit of $35,000,000 is sufficient for this industry when three retail organizations with sales of $460,000,000 made profits of $45,000,000 in 1942, and two of these organizations in 1943, with sales of only $369,000,000, made a profit of $37,000,000?

11. Is there anything in the law which indicates that Congress intended industry to be deprived of profits arising from increases in volume?

12. Labor now receives a greater income for its longer workweek than it received in the base period for a shorter workweek, and the farmer receives a greater income for his present larger crop than for his smaller base

period crop. Is there any reason why industry should be discriminated against by limiting its over-all profit to the base period, although its present output is very much larger than in the base period?

13. According to a representative sample of financial statements available to us, income taxes in 1942 and 1943 absorbed, respectively, about 63 percent and 67 percent of this industry's profit. More specifically, the companies in this sample paid income taxes of $99,000,000 in 1942 and $97,000,000 in 1943. If total dollar profits are limited to the dollar profits of the base period, $29,526,000 (adjusted for changes in net worth) what will happen to this industry as a source of Federal taxation?

14. Is it not a fact that the use of the industry earnings standard, as applied to the cotton textile industry, is in effect a 100 percent excess-profits tax on additional production, although the Government is not the beneficiary of the tax?

15. During the base period net income (before taxes and reserves) of all manufacturing corporations in the United States averaged around $2,700,000,000, on which income taxes of about $581,000,000 were paid. In 1943 net income, it is estimated, increased to $14,700,000,000 on which taxes of $9,800,000,000 were paid. Assuming a substantial prolongation of the war and the general application of the industry earnings standard, what would be the effect on the Federal Treasury of a profit limitation of $2,700,000,000, adjusted only for changes in net worth?

16. In view of the fact that increases in mill prices of yarns and fabrics have had a negligible effect on the cost of living and that increases in textile prices have been greatest beyond the mill level, what is the O. P. A. doing to restrict the cost of textiles and textile products beyond the mill level?

You Members of Congress had better give attention to this matter and to what I say. You know I am opposed to all this attempt to circumscribe and circumvent the law and the intent of Congress for the purpose of undertaking to establish in perpetuity the O. P. A., ill-conceived as the illegitimate child of the N. R. A., fathered by the blue eagle. What a bird!

Our Wasteful Manpower Policies

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. HOPE. Mr. Speaker, someone ought to introduce Food Administrator Jones to Selective Service Director Hershey so they could get together a little better on their policies. On the one hand we have the War Food Administrator urging that farmers increase their production above the record-breaking production of 1944. On the other, we have General Hershey threatening to take every able-bodied man under 26 off the farm. If that policy is carried out it will mean a brazen and flagrant disregard of the Tydings amendment which provides that men who are actually engaged in agricultural production and necessary to that production and who cannot be replaced, shall be deferred. If these men whom General Hershey is now trying to induct were necessary to agricultural production last year, when our goals were less than they are this year, they are certainly necessary now. They cannot be taken into the military service without utterly disregarding the Tydings amendment which Congress passed to protect our food supply, which is just as essential as munitions in winning the war. As a matter of fact, the bottom of our manpower barrel, as far as farmers were concerned, was reached last year. There are no reserves. Every man who is taken now means just that much less agricultural production. We used all the women and children last year. Farmers worked just as long hours as they possibly could work last year. They had just as much machinery last year as they are going to have this year, perhaps more. Manpower is going to be the determining factor in our agricultural production and we cannot meet our goals if every able-bodied man under 26 is going to be taken off the farm.

I do not believe the people of this country generally understand just how far Selective Service has gone in taking essential men off the farm already. Let me read you some extracts from letters which I have recently received from my district. It will be noted that in some cases essential men were being taken off the farm even before the recent directive.

Here is a letter from Edwards County, Kans., reading in part as follows:

I have one son in France, the other at home doing the work of two men, farming 1,200 acres of land, doing practically all the work himself. On top of that I have 185 head of cattle. They will have to be put on the market if he is called into service. I help all I am physically able. I have passed my eighty-first birthday.

Here is another:

I am 59 years and 9 months of age and due to arthritis, or more commonly called rheumatism, I am unable to do any heavy farm work. I and my son are, and have been, operating 1,120 acres of good land in Ness County, Kans., for a number of years. And whereas in 1942 my other son entered the armed services of his country, who is in the European theater of operations serving somewhere in Germany, leaving the registrant as the only help available. This farm consists of 900 acres of cropland and 200 acres of grassland and building sites. For the year 1944 we produced 5,025 bushels of wheat, 1,350 bushels of oats, 1,575 bushels of barley, 1,400 bushels of grain sorghums and corn, 30 acres of sweet sorghums for forage. We have sold 14,270 pounds of beef cattle, 1,542 pounds of hogs, 2,098 pounds of poultry and 1,398 dozen eggs. We have on hand at the present time 81 head of cattle of which 7 cows are kept for milking purposes; 7 head of hogs, and 225 laying hens. All of the above livestock were produced on this farm except 7 weanling pigs.

This registrant and myself have done the work and produced the products required of farmers in this part of the country. If the registrant is taken to war, I will not be able to carry on, and the farm will have to be shut down and all the machinery used in carrying on this project will necessarily be left idle. Furthermore, the registrant has never done any other kind of work except what has been done on this farm.

Here is another from Meade County, Kans.:

My husband is farming 1,700 acres of land and has 450 acres of pasture also. At the present we have 132 head of cattle, 26 hogs. We sent our boy, the only help his father had, to Leavenworth for induction into the service September 10, 1944, although we asked that time be granted him until the wheat was sold and feed cut. Our boy had worked 16 to 18 hours a day all summer, Sunday, too, to try and get as much work done as he possibly could so his father would not have too much to do alone. * * * Another boy, 19 years, was called to the service September 10 also. His mother is a widow woman with 6 smaller children to support. She farms about 700 acres of wheat, and her 5 older boys are in the service. What will she do?

Here is a letter from Kiowa County, Kans.:

We are farming 1,500 acres, both wheat and spring crops; also have a dairy herd of 20 cows; raising 100 lambs a year. You know enough about farming to realize that this program is a big one for 2 men full time; and if my boy is taken, I cannot continue.

Listen to this from Reno County, Kans.:

We have nearly 500 acres to farm; have over 100 head of cattle, all of which we have raised. Included among these cattle are 1½ dozen milk cows, also other livestock. * * * With the help of my son, we have been doing 3 men's work by working extra long hours, for there isn't any farm labor available here.

The following letter is from Sumner County, Kans.:

My son received notice to go to Leavenworth for his examination Friday, January 19. We are farming 720 acres of land, most of which is cultivated. Besides, we keep some livestock. I am not physically able to do the work myself and it would mean a serious reduction in our farming if my son has to go to the Army. The farming in this community was carried on with an absolute minimum of help last year, and I believe it is that way in all parts of the country.

These letters are typical of conditions in my district. There men, women, and children are working 70 to 80 hours a week trying to do their best to meet the goals which have been set by the War Food Administration. They cannot do more than they are doing now. Contrast this with the waste of manpower which is going on in our industrial plants. A banker in my district recently sent me the following affidavit made by a man who was told that there was a shortage of labor in our shipyards and who went all the way from Kansas to California to do his part in meeting this alleged shortage of help. The affidavit speaks for itself and reads as follows:

STATE OF KANSAS,
County of Morton, ss:

I, E. O. McCammon, being duly sworn, depose and say that I am a resident of Rolla, Morton County, Kans.; that on or about the 20th day of November 1944 I went to California to work in the shipyards, as I understood they were short of help and needed more men in order to meet the demand for new ships. I secured a job with the California Ship Yards of Wilmington, Calif. The first thing they did with me was to send me to what they called a school. In this school, that taught practically nothing not already known to the average man on the farm; they told me this school was to fix a person so they could do the jobs ahead, and for this schooling the school charged, for a 10-day course, $700 per pupil, or $70 per day per pupil was what the school got out of it.

After I had fooled away 10 days of time I could have been doing something worth while, I was then sent to the plant and after spending 11 days in the ship yards, during which time I loafed all but about 1 hour each day, there were more men there on the job than they could possibly use, being standing in one anothers way, I told the manager where I came from we were supposed to work when we were on a job and that if they could not use me if they would give me a release I would go where I was needed. They refused to give this release but inasmuch as I could not stand the terrible waste I quit anyway and will later try another place if I can find where I am needed. To the best of my knowledge I would say that ship yard had at least 2,000 more men than they had use for and in keeping them they are just adding that much more of the taxpayers' money on the cost of the ship than was necessary. In my opinion I would say if these jobs were not a cost-plus there would be a lot of men released for jobs where they are needed.

E. O. McCAMMON.

Subscribed and sworn to before me this 29th day of December 1944.

[SEAL] GEORGE L. HAYWARD,
Notary Public.

My commission expires January 6, 1945.

Every Member of Congress knows that the conditions reported in this affidavit are not unusual. They are typical of the waste which is going on in our industrial plants all over the country. Thousands of witnesses could be marshaled to testify to the same things that Mr. McCammon has stated under oath. We have a War Manpower Commission which is supposed to be doing something about the manpower situation in this country. Why does it not do something about the conditions that prevail in these war plants? Why has something not been done about strikes, about absenteeism, and the hoarding of labor on the part of employers? If we are so short of help why not increase the hours of labor in our factories slightly? If farmers can work 70, 80, or even 90 hours a week why can we not slightly increase the hours in our manufacturing plants where the average hours of work per week, according to the latest report from the Department of Labor, is 45.6 hours?

It all adds up to the fact that this administration has utterly failed in its handling of the manpower problem. Now, to cover up that failure, it comes to Congress and asks for a universal draft which means dictatorship or, in lieu of that, work or fight legislation. We may have to pass some legislation, not because there is any real need of it, but because this administration has shown itself utterly incapable of meeting the situation otherwise.

America's Obligation to Contribute to World Peace

EXTENSION OF REMARKS

OF

HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, January 18, 1945

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "There Is No Ivory Tower for Us," written by me, and published in the New York Times of January 14 last.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THERE IS NO IVORY TOWER FOR US

(By JOSEPH H. BALL, United States Senator from Minnesota)

WASHINGTON.—Any lingering illusions in the United States that the beautiful, peaceful post-war world for which we hope would become a reality without plenty of hard work, patience and faith on the part of ourselves and our allies were shattered rudely by events of the past few weeks.

Britain's veto of Count Sforza for the Italian Cabinet, the mess in Greece, Russia's exclusive little party in Rumania, signs of increasing exhaustion and possible upheavals in China and dragging of the explosive Russo-Polish row into the open left very few of us dreaming happily in our ivory tower about the wonderful new world that peace would bring, without, of course, our doing anything unpleasant or difficult about it.

As if these political headaches were not enough, the Germany army, which we had figured was practically down and out, suddenly came out slugging, ending our hopes of a decision in the war early this winter and piling up heavy casualties for us as well as the enemy.

War headlines, both military and political, made grim reading the past weeks and left in their wake a tide of pessimism regarding the future in America—a tide far wider and deeper than the facts justified.

Psychiatrists recognize as one of the common personality types the manic-depressive, described as a person who alternates between moods of geat elation and fits of despondency. If such terms can be applied to groups, then it would fit us Americans about as well as any. We seem to go up and down like a roller coaster. A few months ago, when our armies were plunging across France, the Philippines invaded successfully and Dumbarton Oaks announced the foundation for an international organization to preserve peace, we were on the crest of the wave. The war was almost won and the peace assured.

Then, as a result of military reverses and some nasty political developments internationally, we hit the trough in December, and our pessimism knew no bounds. Now, unless I misread the signs, we are snapping out of it in typical American fashion, buckling down to the grim job of winning the war and demanding that our Government do something effective to stop the political disintegration of the United Nations and get our feet planted again on a workable path toward international organization to prevent this thing from happening again.

There is no doubt that the unmistakable signs of the discredited power politics, spheres of influence pattern showing up in liberated Europe are danger signals. At the least they handicap the chances for success of a "general international organization based on the sovereign equality of all nations, great and small," toward which we are working. It would be a difficult task to impose that democratic and just pattern of international relations on a Europe already set in the mold of cynical power politics and make it work. At the worst, these developments might cause such deep antagonism in the United States as to endanger our participation in the proposed international organization. Certainly they have given the opponents of collective security plenty of "I told you so" ammunition.

But, despite these clear dangers, I believe that in the long run the dragging into the open of these difficult and explosive political issues in Europe is beneficial. It has blasted us out of our ivory tower and into the middle of this unregenerate and troublesome world in which, perforce, we must somehow live. We do not like the picture we see, but that typical American demand, "Let's do something about it," which has been at the base of much of our progress domestically, is heard again. I can testify that Members of Congress are hearing that demand from their constituents, and from what I read in the newspapers the executive branch of our Government is getting its share of it, too.

Already something has been done; unfortunately, not by the United States. Prime Minister Churchill, pocketing his pride, flew to Greece, met with all political groups there, and came out with a demand for a regency acceptable to all of them. That, after his speech in Parliament, was a great performance by a great leader who knows when to change course. Would that our Government were as alert to public opinion in this country.

The Polish situation, in the meantime, has continued to deteriorate, with the Lublin committee proclaiming itself the provisional government of liberated Poland. It promises to be a much tougher problem to solve than Greece. I believe we have a great deal in common with the Russian people, that many of our vital interests are the same or complementary. But it is also true that we in America have a very deep feeling for Poland, first to fight the Nazis, and the difficulty of getting together with the Russians to talk it over does not make a solution any easier.

But perhaps before we proceed to castigate Britain and Russia too much for the present deterioration of political unity among the United Nations it might be a good idea for us in the United States to look inward. How much of the present situation is due to failure of the United States to formulate a clear and specific policy toward these immediate problems and assume its share of responsibility for carrying out that policy? Have we ever proposed any different solutions to these specific problems and backed up our proposal by a commitment to do specific things if our solution is accepted? If so, it is not in the record.

We have had plenty of statements of American foreign policy objectives, all in nice, general, and harmless terms. We are for international law and order. We are for self-determination for all peoples. We are for no changes in boundaries without the consent of the people involved. We are for a lot of other very fine objectives, like the four freedoms and Senator BURTON K. WHEELER'S international bill of rights. There is no controversy or difficulty over fine objectives. Everyone is for them. Practically every nation in the world ratified the Kellogg-Briand pact outlawing war, including two-thirds of the United States Senate, but that tough little problem of how it was to be done was left conveniently blank.

How do we propose to secure as much self-determination as possible for all peoples in choosing their governments and how far are we willing to go to back up our solution? How would we settle boundary questions, how tough are we willing to be in supporting our position, and how far will we go in supporting the boundaries so drawn? Are we willing to join a full-fledged world government to enforce our international bill of rights, the only practical way to do it? I doubt if Senator WHEELER would be for that.

These are the tough questions in foreign policy; the how and what and how far. They are the ones we have not yet answered to our own satisfaction, let alone that of our allies. I believe it is because they are unanswered, because we Americans are groping for clear and specific answers, that we hear on all sides today the question, "Just what is our foreign policy?" On the Greek situation, for instance, were we prepared to propose a solution and back it up with our support if necessary? If not, what business have we to criticize what Britain did?

One reasonably familiar with the facts could present a good defense of British policy in Greece, a reasonable case for Russia's position on Poland. I do not intend to do that. There is one fact I believe we should always keep in mind in our negotiations with both countries. That is the fact that they and their peoples have been much closer to this war and taken much heavier losses than we. War fatigue is a factor with both countries. What that difference can mean was brought home vividly to me by a story I heard of a conversation at the recent air conference in Chicago.

An English delegate was trying to explain their different viewpoints to an American. "When you in America hear a plane overhead," he said, "you look up into the sky. You are thrilled. An airplane flying is a symbol of progress to you. When we in England hear a plane overhead, we don't look up. We look for the nearest air-raid shelter."

These developments in liberated Europe, tough as they may appear, fall into more proper perspective when viewed against the background of three facts to which our foreign policy must be oriented.

First of these is that we never achieve political objectives at one bound and there isn't a chance of achieving a world utopia in that fashion. We advance toward our goals—social security, a workable labor relations code, control of monopolies—step by step, and sometimes the steps are painfully slow.

We've been working at this system of democracy for 150 years, but we still have our corrupt municipal and State political machines, we still have millions of citizens to whom the Bill of Rights seems at times a mockery, and we still have our Teapot Dome scandals and our free-enterprise advocates playing the cartel game. We take it in our strike and sweat away at the job of improving these bad spots.

Why expect miracles in international politics that we've never been able to achieve in domestic affairs? Politicians who have been playing international power politics all their lives won't reform completely overnight because we think they should. It will take years to change their approach or get rid of them.

The second and most important fact is that a third great war will finish western civilization if we permit it to happen. The B-29's, the rocket guns, the flame throwers and V-1 and V-2 are bad enough. We can imagine what the V-5, or maybe the V-10 that science will have for the next war, will be like, or can we? We are getting a slight glimpse of the mess this war will have in its wake now. We dare not risk another. That means we must do everything and anything, join in every measure that offers any hope of preventing another great war.

That brings us to fact number three, that an international organization generally along the lines proposed at Dumbarton Oaks, whatever its weaknesses and shortcomings, offers greater hope than anything else likely to be agreed upon by the nations involved of preventing future great wars. At least it will be a joint effort of many nations, including all of the major powers, to solve this greatest of all problems facing our world. And, when the charter is finally drafted and agreed upon, it will be the only such proposal for joint action open to us, whatever background of power politics and spheres of influence maneuvering may intervene between now and then.

The only alternative to joining whatever comes out of the Dumbarton Oaks beginning is to try to retire to our ivory tower of isolation that V-1 and V-2 have turned into rubble. It just isn't there any more. The alternative to the best kind of collective security we can achieve is increasing militarization of this Nation, universal military conscription, ever-mounting taxes, more and more governmental control of industry, so basic in modern war, and at the end of the road almost certain war. That is not an alternative for a democratic people. It is suicide.

And what of these smaller nations—Greece, Poland, Czechoslovakia, Yugoslavia—about which we are rightly concerned? What happens to their independence and self-determination if we satisfy our moral indignation at power politics in Europe by staying out of an international organization and thereby wreck any chance for collective security in the world? Their chances of maintaining any real independence wouldn't be half as good as were Austria's in 1936. Their only hope for democracy, real independence, and self-determination lies in a strong collective security system.

Both for us and the world, despite the difficulties and the unregenerate ways of humanity, there is only one solution. Our ivory tower is gone. We are in the world for better or worse. We are in Europe for the second time in one generation, 2,000,000 strong. Let's roll up our sleeves and little by little help make it a better world and at least a more peaceful Europe.

Review of Book Entitled "The Philadelphia Lawyer"

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 18, 1945

Mr. GUFFEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by Allen Nevins reviewing the book entitled "The Philadelphia Lawyer."

The article is from the Book Supplement of the New York Times. The book was written by George Wharton Pepper, a former and distinguished member of this body.

Mr. Pepper is well known not only as a legal authority but also as an ecclesiastical authority, and I am reminded of what a Federal judge said to me a few years ago, that Mr. Pepper never expressed an opinion but always had an authority on both legal and church matters.

I am sure his former colleagues will enjoy reading this review.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PHILADELPHIA LAWYER—AN AUTOBIOGRAPHY BY GEORGE WHARTON PEPPER

(Reviewed by Allan Nevins)

This is a revealing book; more revealing even than the frank and loquacious Mr. Pepper intended it to be. It gives a more illuminating picture of Pennsylvania conservatism, with all its virtues and defects, than perhaps any other volume in print. Before the reader has gone halfway through these interesting pages, rich in local lore, in political anecdote, in personal sketches, he realizes that ex-Senator Pepper is more than an individual—that he is a type. As churchman, attorney, Republican leader and general leader in good causes, he expresses the quintessential qualities of a special kind of mind in a certain class in the elder generation of Philadelphians.

The special characteristics of this type (George Apley's first cousins in the Quaker City) are admirably indicated by Mr. Pepper's opinions. He indulges the illusion that he is a middle-of-the-road liberal, but that phrase has to be read in a Victorian connotation; for he remarks that his attitude toward public questions is almost precisely that of Mr. Hoover. He thinks highly of the Smoot-Hawley tariff of 1930. He holds that history will yet do full justice to the achievements of Harding. He expresses the warmest admiration for Coolidge. Indeed, he goes so far as to remark that Coolidge "will of course be denied by posterity the rank of Pitt, but he may in time be recognized as the Palmerston of our political history." Joseph N. Pew, he tells us, is grossly misunderstood. He is not really boss, and he has no selfish aims; "he seems to have only one objective, and that is the upbuilding of a strong Republican Party patterned after the major political parties in England."

Mr. Pepper's antipathy to the Democratic Party was strong in the days of Woodrow Wilson, whom he treats as a misguided if not sinister figure, and it has grown stronger as the years have passed. The last Democrat that he regarded as tolerable was Grover Cleveland. He holds the New Deal in abhorrence, and recalls with gratification the part he played in arguing against the triple A in the Supreme Court. When the books are balanced, he tells us, the New Deal will be found to have robbed both the working people and the propertied class of all opportunity to live a more abundant life. He excoriates "the dictatorial drift," the extravagance, "the Court-packing bill," and what to him seem other baleful features of Mr. Roosevelt's work. Mr. WALLACE he dismisses as a man whose only title to notice was his apparent ability to win farm votes.

Even the foreign policy of the administration has irritated him. Back in the Wilson period Mr. Pepper, as Senator, did his full share in helping put the League to death—an exploit in which he still, incredible as it may seem, takes pride. Strong vestiges of isolationism clung around him till 1940, and he frankly states that he never honestly believed that Germany was "potent enough to enslave the world or even that Hitler seriously contemplated the subjugation of America."

The record for our Philadelphia type might seem dark if we could say no more than this about the author. But Mr. Pepper has been more than a close associate of Joseph Pew and Dave Reed, a glorifier of Mellon and Coolidge, a hater of all Democrats, an enemy of the League and of the original World Court idea. Justice to the Apley cousinship, to the great clan of Whartons, Peppers, Wisters, Mifflins, and other Philadelphia conservatives, demands that the more creditable side be mentioned.

For there is a creditable side. Mr. Pepper took Pinchot's case in the legal battle against Ballinger and caught fire with conservationist enthusiasm. He refused political support from Boss Vare, of whose dirty methods he offers a vivid description. He deplored the use of the Federal injunction in labor disputes when that use was still common. He favored the submission of the child-labor amendment to the Senate and wanted it ratified. He suggested Owen J. Roberts for the job of investigating Teapot Dome, and thus helped give the Government an able public servant. He supported Wendell Willkie for the Republican nomination in 1940, though, of course, he deplores some of those defects which marked Willkie's divergence from Hoover.

His autobiography proves, too, that he has been a genial lover of humanity, or at least of the well-washed and well-schooled part of it. Now and then he has even slapped a Democrat on the back. The volume abounds

in good stories. One concerns Ollie James, who remarked that the Republican watchdogs in Congress were just like our "Kaintucky watchdogs—they don't bark at the home folks." Another presents the comment of Mrs. W. R. Newbold on being asked to sign a petition for expelling the strait-laced Smoot from the Senate. "I do not think I shall," she said. "I prefer a polyg that monogs to a monog that polygs." This formal, cautious Philadelphian found in the crisis of the war that he had more emotion than he supposed. We can almost forget his fight against the League as we read one passage:

"All through 1940 the unreasoning call of the blood grew stronger as the position of Britain became more perilous. May saw the Netherlands overrun. The 9 days wonder at Dunkerque quickened my admiration. When the collapse of France in June left Britain standing alone I was deeply moved. When the night raids on London began in August and continued thereafter with fierce intensity, I began to feel as if my own home were being bombed. Finally, when the British people, after intense suffering and strain, were found to be about equally divided on whether reprisals would be justified, I gave myself up to the luxury of unrestrained emotion. I said: 'These people deserve to win; and we must help them do it.'"

Assembly Line for Democracy

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the January 1, 1945, issue of Pathfinder:

ASSEMBLY LINE FOR DEMOCRACY

"If we Americans want common rights and privileges, we must be educated to entail the responsibilities. The school's great challenge today is to prepare men fit for public office and to prepare those who vote to choose wisely."

Harry Carman lolled with one leg curled over the arm of a green leather chair. The sun cast frosty rays across the Navajo rug at his feet. From the hall came the clatter of G. I. heels as the naval cadets changed classes. Talk had swirled, for an hour, out from the green leather chairs to the American tomorrow when 10,000,000 fighters would come home from the 5 continents to take up the task of building democracy in a world made alarmingly small by the airplane, the radio, and science.

Leadership in a republic cannot be concentrated at the top, Harry Carman had pointed out. "It must permeate the body politic. There must be leaders of opinion in every village, in every club, in every classroom. Democracy is measured by the number of its leaders. One way to increase our amount of democracy is to increase the number of our true leaders. * * * Development of this talent for bringing intelligence to bear on our national needs is the task confronting American educators today. It means that education of the future must concentrate on 'social engineering.'"

THE HUMANITIES

This was no stuffed shirt pedant, talking, although it was the dean of Columbia College at Columbia University. Dr. Harry James Carman is a part-time farmer from Greenfield, N. Y., who taught in one-room schoolhouses 40 years ago and was, for years, principal of a school in a Hudson Valley farm village. A nationally known historian and member of the Board of Higher Education for Greater New York City, he still spends summer vacations in operating an up-State farm. He is one of the Nation's outstanding authorities on agricultural history. So his concept for public education in the post-war reach from Morningside Heights to Podunk Center, spanning the cultural distances between with an philosophy that says education of the future must be based on "the humanities" rather than pedantic routine and "pat facts for specialists."

"Today," he said, "many of our customs and ways of social thinking and acting have been outmoded. Too many of our people are not aware of the new demands and new responsibilities placed on all of us by technological improvements.

"We glibly talk about our scientific age and of the need for the scientific habit of mind. We mean by these things a recognition of the fact that our lives from the kitchen to the battle line are shaped by the influence of machinery embodying scientific principles. * * * Yet, in spite of 50 years of teaching the sciences in our schools and colleges, the grasp of scientific method which is necessary for intelligent leadership in public life is largely lacking. Our schools have not taught science for laymen or science for leaders but science for specialists. One result is that in public life we are ruled by scientific ignoramuses while in the scientific laboratory we have, for the most part, political and social illiterates."

PRACTICAL CONCEPTS

Future courses in science should be designed principally for nonscientists, he contends, but should be compulsory for all students. These courses would explain the nature of science, "the concepts that apply to its various branches, the basic results achieved and an account of the way in which results can be achieved."

Comprehensive studies of history are also essential to future education. "The world of today is the result of an historical process," he said. "We are the past embodied and acting under new circumstances. That part of the past which is still alive in us must be studied in its origins before our motives and our desires can be fully understood. Hence a future leader must have at his command a knowledge of the development of modern man and his institutions. He must know how and why representative democracy was developed."

Third essential factor in post-war education, he feels, must be instruction in the humanities * * * philosophy, literature, music, and the plastic arts. "They have direct bearing on practicality and leadership. They deal with morality. There is no better way to get young people to think about the moral life—the life of right action and right feeling—than through the study of the humanities."

The G. I. heels died away down the hall. Dr. Carman spoke with a final gesture.

"We must have a pyramid of leaders reaching from the broad base of the grass roots to the Chief Executive, each man leading ideally in what he can do best and taking orders from another leader when another enterprise requires. Education for this leadership must not be restricted to any economic group. If we do restrict it, we are merely breeding up a ruling class * * * the last thing a democracy can desire or endure. There is, therefore, a great and difficult job facing the American colleges, the job of finding and financing the submerged brains of the Nation. Of whatever economic level, of whatever color and creed, the young men and women with good minds must be found and fostered; they are our greatest natural resource.

"If there are not hundreds and thousands of such young people among Americans, democracy hastens to its death. When you have no leaders in the sense I have developed, you get a Fuehrer."

Charles M. Hay

EXTENSION OF REMARKS

OF

HON. JOHN B. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. SULLIVAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to pay tribute to the late Charles M. Hay, Deputy Chairman and Executive Director of the War Manpower Commission, and most recently its Acting Chairman.

It was with a distinct shock and deep sense of loss that I received the information on Tuesday night that he had been stricken suddenly at the dinner table and had expired. With his untimely passing, Charlie Hay had completed a full and active life of service to his neighbors, his community, and this Nation. He began the practice of law in Greenville, Mo., in 1904. Because of his brilliance as an orator, the depth of his learning, and his highly developed sense of justice, he attracted State-wide attention so that while still a young man he was invited to full partnership in a large, active, and successful law firm in St. Louis.

A man of strong convictions, sincere in his purpose, his vigorous advocacy of the things in which he believed stemmed from his sincerity. He was courageous in his support of the things he believed right but tolerant in admitting the right of all others to their own personal convictions. Once the majority had spoken, he was strong and zealous in defending that verdict. A champion of the downtrodden, he had the satisfaction of helping to formulate and establish some of the fine progressive labor legislation of this decade. He was a deeply religious man, blessed in his family life, and walked with humility in the sight of his God and his fellow men even in the moments of his greatest triumph. He was a lover of our democratic processes, and in recent years he dedicated his golden eloquence to preaching the gospel of "what's right with America." Intensely patriotic, Charlie Hay no doubt realized he was shortening his life when he answered the call to duty and gave unstintedly of his strength. It was my privilege to be his friend and neighbor, his associate in the city counselor's office, and his Congressman. The people of the Eleventh District join their fellow citizens in mourning the passing of this fine American.

Utah's Steel Guinea Pig

EXTENSION OF REMARKS

OF

HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. GRANGER. Mr. Speaker, the following article deals with a problem of tremendous importance and interest to the people of Utah and the entire West, namely, the future of the steel plant located at Geneva, Utah:

[From Collier's of December 22, 1944]

UTAH'S STEEL GUINEA PIG

(By Murray Moler and André Fontaine)

It started slowly. First there was a handful of surveyors in high-laced boots who did things with transits and chains out near the rotting remains of the old summer resort, Geneva, Utah. They appeared, stayed around for a few days, then were gone without anybody paying much attention to them. In the green fields which sloped gently below the towering Wasatch Mountains, the farmers went about their eternal work without much thought that perhaps in a few months their whole way of life would be changed. The engineers came next, dropping off trains at Provo without any brass bands and disappearing into the city's population with scarcely a ripple.

The people knew, of course, what was coming; they'd read in their papers weeks before that a gigantic new steel plant was to be put up nearby. There had been talk about it along the irrigation ditches and on the front porches of the white frame farmhouses in the evenings; but there was as yet no change in their daily lives. It wasn't real for them until the construction superintendents began to arrive and the employment offices opened up and everybody was asked, either directly or indirectly, to come out and go to work.

There was no resentment at first, except possibly on the part of the Mormon Church, which didn't like the idea of a big industry intruding on the peace of the valley. But resentment began when the stories of neighbors having to leave farms their grandfathers had pioneered started to get around. And when it became necessary to import men from other counties and other States to fill out the construction crews, the resentment grew stronger.

The first letters began to come in to Ernest Rasmuson, editor of the Provo Herald, complaining about the boisterousness of some of the construction men, and the older residents buttonholed Mayor Maurice Harding with dire prophecies that the whole valley would be ruined. But the noisy, dusty, ceaseless action cut on the shore of Utah Lake near Geneva drew the valley people like a big fire in a small town.

The draft hadn't really bitten deep into the ranks of Utah County's young men yet—it was still early in 1942—and in the long evenings they used to drive their jalopies out to the lake and watch the work. In no time they became experts on all the statistics of the operation. The work was being done for the Defense Plant Corporation by the United States Steel Corporation, and when it was finished Geneva would be the first completely integrated steel plant west of the Rockies, the first to gather its own raw materials and fashion them into the finished product in one plant site. Two hundred and sixty miles away is the rich Iron Mountain for ore, 130 miles southeast are the vast Rocky Mountain coal fields, and a few miles to the south is a limestone mountain to provide the flux.

REVOLUTION—IN ROUND NUMBERS

They learned that, when finished, Geneva would have cost $200,000,000 and would employ 5,000 workers. The construction at its peak would use 10,000 men. The plant's 143 buildings would cover 3,703,000 square feet of what had been meadow; the contractors would have moved 1,500,000 cubic yards of earth, poured 650,000 cubic yards of concrete, laid nearly 100 miles of conduit and 76 miles of railroad track, and put up more than 100,000 tons of structural steel. And all in 2 years—they hoped.

For their parents, these figures, enthusiastically recited at supper tables, spelled one thing: revolution. And they began to worry about what it would mean to their lives and their countryside.

Across the Nation—mostly in the West and South—other parents had similar worries as new war plants began to go up in many a rural area. In Jacksonville, Ark., a huge ordnance plant which would eventually employ 13,000 workers was being built in a town of 400 population. Parsons, Kans., sleepily content as a division point on the Missouri, Kansas & Texas Railroad, was jerked awake to the realization that it was host to the Kansas Ordnance Plant which would employ about 9,000 workers.

At Las Vegas and Gabbs, Nev., two basic magnesium plants suddenly began to appear, swept the towns into a frenzy of war-consciousness and prosperity. Lake Charles, La., content with its memories of two past heydays as a lumber center and later as a resort town, found itself making new memories—perhaps—as the site of a petroleum refinery, a butadiene plant and a copolymer works.

As the construction gangs moved in, the older people in these and other places who remembered the First World War's ghost towns worried about what would happen to them after the war. The younger people didn't worry; they simply took the lucrative new jobs and enjoyed them. The rest of the people watched prosperity wash around them and were thankful. But now that the end of the war is in nearer sight, everybody is worrying. The subject of that worry is now the Nation's No. 1 problem.

What is to be done with these gaunt new plants that sprang up in cornfields? Almost everyone seems to agree that they should not be operated by the Government, but should be sold to private industry or junked. Suppose private industry doesn't want these factories that have boosted America's ability to produce higher than ever before, what is to happen to the scores of thousands of workers who migrated from every State in the Union to populate cities which grew where hamlets had been?

If the plants close, are they to be left to become a second jalopy hegira like the Okie trek to California in the thirties? And how about the millions of dollars that have been invested in new buildings and new businesses in these mushroom cities? Is this all to be part of war's waste?

Because it is in some ways typical, and because it is so important to the region it is located in, the Geneva Steel Works is a good guinea pig to examine, observe, and understand. In a sense, Geneva typifies the problem of all the new war plants, and not the least of its problems is geographical. The majority of the plants that sprang up in rural areas appeared in the West and South, neither of which had been noted for their industrialization. By and large, the people of those areas are now determined to keep the plants and keep them running. This is particularly true at Geneva.

Before the war the steelmaking capacity of the far West was relatively low, with the Columbia Steel Company, a subsidiary of United States Steel, and Bethlehem Steel Co., the chief producers. Westerners know that steelmaking is basic in any program of industrialization and consequently are determined that Geneva shall not be closed. For many of them, the fate of Geneva has become the key in the industrial battle of East versus West. They feel that the West has been an economic stepchild of the East for years, that freight and shipping charges have so boosted the cost of materials that it could not compete with the East, that all financing is controlled from the East and, naturally, the East has been favored when new industrial opportunities came along. The westerners, not inclined to meekness anyway, are bound and determined that this won't continue after the war, and they have made Geneva the watchword of their fight.

The East's answer is strong and pertinent: It has the industrial plants, the workers, and the financial set-up already in existence and running smoothly. It also has the larger part of the national market within short—and cheap—hauling distance. Granted that the country can consume just so much of the products of industry, why junk a producing machine that has been doing well for years, just to keep a war baby healthy?

FIERCE LOCAL RESENTMENT

It is reported that President Roosevelt personally picked out the site for the Geneva works in the days when no one could be positive that the Panama Canal wouldn't be blown up and our steel-hungry shipyards on the west coast be thus isolated from the steel-producing East. But even that distinction probably carried little weight with the 53,000 fiercely independent Mormon farmers, miners, and businessmen who populated Utah County.

They didn't like the trailer camp that sprang up near Geneva, and some of them were unhappy about the tremendously increased business the beer parlors in Provo were doing. They objected to the sudden overcrowding of everything from stores to homes. They resented the sudden, mushroom growth of nearby American Fork, Pleasant Grove, Lehi, and Orem. Dr. Fred W. Taylor, elderly retired physician, warned the new Provoans that they needn't be too fussy. After all, he said, it was the Mormon pioneers who had come into the valley when it was no more than a desert beside a muddy lake. It was they who had dug irrigation canals, cleared the land, and built the homes.

The Mormon Church felt the same way. A church has a long memory, and the sacrifices that Brigham Young and his followers made to establish a home where they would be unmolested were still too fresh. So they deeply resented the intrusion of big industry, and still do. Quite recently the church refused to let Geneva officials take part in a series of round-table discussions which were held at church-owned Brigham Young University in Provo.

But the tide they were bucking was too strong; it was a flood of dollars. Letters came into the Provo Herald office charging that the old-time residents were too clannish and thin-skinned, that they had no real reason to resent the few slighting remarks the newcomers had made. After all, this was progress.

During the next months, Provo's population climbed steadily to a high of 24,000, an increase of 30 percent, despite the loss of 2,000 young men to the armed forces. The population of the county bounced to 65,000, and in 1943, the peak construction year, the county's pay roll hit forty-five million. It is now leveling off at about twenty million, but that is still double the peacetime normal.

In the face of such prosperity no resentment could last long. The letters to the editor dropped off, the Mormons began to welcome the newcomers with the simple geniality they have made famous and even helped them form clubs designed to keep up home ties—like the Chicago Club, the Pennsylvania Club, and the Alabama Club. It wasn't long before they developed a pride in the big new war baby that had been left on their doorstep.

Even those men who didn't know a sintering plant from a coke oven began to boast that Geneva was an engineer's dream and to explain in detail just why. They were right, of course; most steel plants have grown slowly, have had to compromise with topographical eccentricities and difficulties of financing. At Geneva the engineers were given their heads in designing the most efficient plant possible and in picking a site. As a result, Geneva's production costs will be among the lowest in the country when the bugs are out of the machinery.

AN EPIC OF PRODUCTION

There were plenty of other things for Provoans to boast about. The Geneva works has been known to make hard-shelled steel men think in poetry. Its three blast furnaces can turn out 1,150,000 tons of iron a year, its 9 open-hearth furnaces can pour 1,223,400 tons of steel ingots each year, and its two rolling mills can slide out 700,000 tons of plate and 200,000 tons of structural shapes.

United States Steel's share in the program was unique. The mighty corporation engineered the construction of the plant without profit of any kind, with the Government merely paying all the costs—about 200,000,000 When it came time to operate, United States Steel set up a new subsidiary, the Geneva Steel Co., to do the job, again without fee or profit. Benjamin F. Fairless, United States Steel's president, didn't stop there, either. He assigned his veteran vice president in charge of all production, Walther Mathesius, to boss Geneva, named the ace production man from his Chicago plants, Robert G. Glass, to be vice president in charge of operations, and Peer D. Nielsen, a 39-year-old production wizard, to be general superintendent.

In addition, Fairless loaned Geneva a nucleus of trained steelmakers ranging from top executives to open-hearth furnace men. The rest of the workers were recruited from Utah County or any other county in the United States of America in which they could be found. Geneva had, and still has, serious trouble getting the 5,000 workers it will need when it reaches capacity production. It has about 4,000 now, and they're as enthusiastic as they are unusual.

Bob Graham, superintendent of the rolling mill, has a crew of 650 men and 200 women. Only 35 of the men had ever seen a steel mill before. Many of them are farmers, and Graham says that's one of the chief causes of absenteeism: They're farmers first and steel men second. When the fruit crops are ripe they go back to their farms for the harvest. Steel, they say, can wait, fruit can't.

The real boss of the big open-hearth building, its superintendent will tell you, is shapely Beulah Baxter, ex-housewife, who was recruited from her home in nearby American Fork. She's the housekeeper, and her vacuum cleaner looks like an overgrown tractor with brushes. Her reaction to Geneva is typical: she wants to keep her job after the war. "But," she adds, "if any soldier wants my job I'll be glad to give it to him."

John Cutler, who can roll a cigarette before you can pull a tailor-made from its pack, also wants to keep his job as third assistant pourer on the No. 3 open-hearth furnace and thinks he has a pretty good chance of doing it. A former miner, he comes from Springville, about 10 miles south of Geneva. Three other Utahans who work near him—Harold Taylor, of Salt Lake City; Rex Dimick, of Price; and Harry Wadley, of Pleasant Grove—agree that steel is a fine business and are determined that Geneva shall not be closed after the war.

A GOOD PLACE TO LIVE

An understandable fondness for a good job at nice pay is apparently not the only thing that makes some of the non-natives equally determined. Ed Shnore, for instance. He quit a job as inspector at the National Tube Co., near Pittsburgh to join the marines. When he got his discharge 3 years later he became a speed operator at Geneva; he controls the speed of the red-hot slabs as they travel through the stands that flatten them into ship plates—and he likes it.

"I'm never going back East," he says. "The Utah climate is wonderful, and you can go hunting and fishing whenever you want."

But the people of Utah, native and newcomer, constitute only one in an intricate mesh of forces that will finally determine whether Geneva will live or die. From resentment of Geneva, they have graduated to curiosity, to pride and finally to a fierce resolution that it shall not be taken from them. "Provo," says Mayor Harding, "is tied up, body and soul, to Geneva. If the plant should go out you'd see a depression like you never saw before. Men who used to make $4 a day get $3 easily now. Without the plant we'd have almost as much income as before, but there'd be a terrible psychological depression."

Beyond Provo and Utah County, a good portion of the entire West feels pretty much the same way. Senator JAMES E. MURRAY, Montana, Democrat, who heads the Senate Small Business Committee, recently held a 2-day session in San Francisco to hear west coast businessmen on their reconversion problems.

After it, he said: "Our conferences have brought out the fact that the full operation of the Geneva and Fontana (Henry J. Kaiser's plant near Los Angeles) steel mills is indispensable to any sound plans for full employment in the West. The legislation which Congress enacts on the disposition of Government plants must provide for the operation of these plants at full capacity. It must guarantee the people of the West that western steel, properly priced, will be available for the industrialization of the western States."

All western governors and Congressmen are stoutly behind MURRAY on this point, and, with the exception of most of the largest steel companies in the East (who, understandably enough, are not too anxious to have a new competitor), most of the rest of the country probably agrees that Geneva should be kept in full operation. But there is a big difference between "should" and "can" when you're dealing with $200,000,000 investments and a system where the chief incentive for production is profit.

Benjamin F. Fairless takes a businessman's view. He says he doesn't know whether Geneva can be economically operated after the war or not. At a press conference in Salt Lake City he said that United States Steel would be glad to own and operate Geneva in peacetime if "there was a reasonable prospect of doing so at a profit." As things stand now, he said, United States Steel's connection with Geneva will end with the war. And, so far, the firm isn't doing much to extend that connection. They're making market and cost surveys, and waiting.

There are, for instance, freight rates (Geneva is 850 to 1,100 miles from its four chief market centers on the coast), shipping rates (if Geneva is to compete with eastern steel), west coast markets, foreign markets, the price which would have to be paid for Geneva (steel men figure the construction cost about double what it would be in peacetime), and how much it would cost to convert it from production primarily of steel plates and shapes to production of the much broader range of steel that peacetime markets demand.

As far as markets are concerned, Fairless said the peacetime consumption of the 11 Western States was 2,400,000 tons a year. Present production, at full capacity, of western plants is 3,500,000 tons. And you can't use up more than a million tons of steel every year by making more paper clips.

Freight rates don't make the picture any clearer. The normal rate for finished steel products from Geneva to the coast was $12 a net ton. This was cut to $8 under special wartime provisions, and everybody expects the rate to be finally fixed at less than $12 after the war.

Assistant Attorney General Wendell Berge has recently filed an antitrust suit against 17 western railroads that may affect this rate. What happens to that suit may make a whale of a difference to Geneva's chances of running at a profit. Berge charges the railroads got together and fixed rates at a level higher than they would have reached under unbridled competition. If he is successful in providing this and in forcing the roads to compete actively for the business of Geneva and other plants, the resulting lower rates may go a long way toward helping Geneva's eventual operator show a profit.

Foreign markets are anybody's guess; but United States Steel seems to think that even if China, for instance, decides to industrialize overnight, there will be a long time lag between the peace and the shipment of the first large order across the Pacific. And, besides, shipping rates to the Orient from the east coast are only about 20 percent higher than from the west coast—a difference which definitely does not put a plant located right on the east coast, like Bethlehem Steel's Sparrows Point, Md., works, out of the running.

The question of how much Geneva's ultimate owner will have to pay for the plant is one of the most important factors in determining the plant's future. It is pretty well agreed that if anyone has to pay the original cost—two hundred million—he'll have about as much chance of operating the plant profitably as Hirohito has of signing the peace in Washington. What the eventual price will be is tied up with Government policy on disposal of war plants, and that is something which not even Nostradamus himself could predict.

The little item of reconversion is somewhat clearer. United States Steel estimates it will cost about fifty million to shift the plant over to peacetime uses. The Defense Plant Corporation is also studying this subject, and is playing with the idea of doing the job itself, so that the eventual purchaser would not have that financial haymaker landed in his breadbasket the minute he takes over. If the D. P. C. does this, the chances of a western combine's buying the plant are greater, because it could handle the reconversion cost on easy payment terms.

The possibility that just that will happen is beyond the idle-talk stage. First Security National Bank, which does business in Utah, Wyoming, and Idaho, once said it was willing to talk terms on Geneva. First Security was organized and formerly headed by Marriner S. Eccles, Chairman of the Federal Reserve System, who now stoutly denies he's interested. Another candidate is the ubiquitous Henry J. Kaiser, who seems to like the taste of the steel business which he is getting with his Fontana plant. Fontana was built with a Government loan of ninety million and has a capacity of about half of Geneva's 1,200,000 tons a year.

When you go outside the steel business for prediction on Geneva's future, you run into a quite different point of view and a lot more variables. Provo's Mayor Harding, for instance, is confident that Geneva will not close. He gives four reasons: (1) A large steel industry is needed in the West to supply the region's demands without transcontinental hauling; (2) World War No. 2, particularly in Russia, has taught the necessity of decentralization of industry; (3) the country realizes that population should not be crowded into a few sections; and (4) politics.

Harding rates No. 4 as the most important. He thinks the Government won't "let the plant be taken away, because the entire West wants it, and our politicians are organized to make sure it stays here. After all, it

doesn't take many of these States to swing an election."

Harding hopes Geneva will be sold to a western outfit because "the temptation is too big for the eastern interests to curtail western operations—or shut them down entirely—if demand slackens and lucrative production by their eastern mills is threatened. We've seen situations like this in the oil fields where big companies shut down the smaller operations when their biggest investments were threatened."

Utah's Gov. Herbert B. Maw is just as flat-footed in his determination that Geneva shall not be closed. When he returned recently from a trip to Washington on Geneva business, he stated that prospects for continued operations of the plant are tremendously bright.

"Utah," he said, "will not permit her mill to be closed down and her rich ore shipped east, where high-grade iron ore is rapidly becoming exhausted." Furthermore, he added, the Federal Director of Contract Settlements, who will play no small part in deciding the fate of war plants, is Robert H. Hinckley, a Utah boy from Ogden.

One of the most complete studies of the Geneva situation was printed a few weeks ago by Dr. J. R. Mahoney, director of the University of Utah's bureau of economic and business research, who has made the entire United States steel industry his hobby for years. He thinks Geneva will live.

WHY GENEVA WILL SURVIVE

To support this, he points to the efficiency of its operation. It costs only $10.76 to mine and deliver to Geneva the ore, coal, and flux needed to make 1 ton of pig iron, he says, and this is the lowest in the country. Next lowest is at the United States Steel subsidiary at Birmingham, Ala., where it costs $11.40. (This, it should be noted, is one of the most favorable items for cost comparison which Mahoney could have chosen. While other plants may not be able to deliver materials as cheaply as Geneva, their over-all production costs may be comparable. For one thing, the comparison will surely be affected by how much is ultimately paid for Geneva.)

Mahoney dismisses freight rates as not too important, feeling certain that they will be brought into line by competition. He's enthusiastic about Oriental markets, especially since Japan's steel plants have been catching hell from our B-29's. He points out that Geneva's continuous plate mill is the most modern of its kind and says that "only a few additional units will be necessary to equip the mill to produce a full line of various flat-rolled products or tubular pipe—which constitute the bulk of steel used in manufacturing or by western industry."

So, concludes Mahoney, "the economic factors that will determine the chances for successful post-war operation of Geneva are on the whole favorable. Such problems as do exist present no obstacles which are insurmountable. Geneva * * * can be operated successfully on a substantial part-capacity basis in the economic situation that may conservatively be expected to prevail at the close of the war. Business conditions in the West may even be vigorous enough to require the full capacity of the plant. In any event, a continuation of the western trends of industrial growth should soon lead to harmony between plant capacity and markets."

But Provo's Editor Rasmuson is not so sure. He gives Geneva a 50-50 chance. "Even if the politicians are confident," he says, "you begin to wonder when you hear such men as Fairless who see the situation only in cold-blooded commercial terms."

In the welter of cross-statements and conflicting forces, there is at least one thing of which Utahans are absolutely certain. Things will never be the same as they were before that 1942 "invasion."

Prosperity in the Post-war Era

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the RECORD excerpts from an address entitled "Post-war Prosperity—Or Not?" delivered by John Brandt, president of the National Cooperative Milk Producers' Federation, at the organization's twenty-eighth annual meeting, in Chicago, Ill., December 6, 1944.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

We have recently passed through a national election with all its bitterness, arguments, criticisms, and certainly the most glittering promises of unbounded prosperity for the future that this Nation has ever known. We did it in the midst of the world's greatest war emergency. We came out of it as a nation ready to get down to business and go to work on the job before us. The political campaign and the election itself had very little effect if any upon the actual prosecution of the war.

Through the campaign we listened to the presentations and promises of the leaders on both sides. We listened to the statements pro and con as to how one or the other would not be best fitted to fulfill these promises, but have you ever stopped to think how little we heard or were apprized of the concrete planing or the means by which these promises could be fulfilled.

We were promised the fullest employment—sixty million fully employed at wages higher than present levels, a take-home income in the coming peacetime equal if not better than in wartime; industrial expansion for satisfying the wants of a fully employed and high-earning population; lower taxes to encourage industrial expansion, and higher earnings and bigger dividends in business; greater expansion in agriculture at high-price levels; more people encouraged to go into farming through mustering-out compensation and supplemental easy loans to our soldiers; shorter hours of work and more time for leisure, the production from which is to all be assimilated in a home market and in a world of international trade that knows no tariff or other regulation barriers in competition with and to people whose hours of labor per week will be twice that contemplated for our people and whose take-home pay will be a minor fraction of that which we are promised—but who among us now knows or understands how this utopia is to be accomplished?

Few people believe that the promises can be fulfilled for all, and we now go merrily about our planning for individual groups with the thought in mind, that we will look out for ourselves first and let the promises take care of the rest. If the American people haven't as yet made up their minds, they'd better do it right away, that the fulfillment of promises of prosperity cannot be accomplished by borrowing on the future for the satisfaction of today. By the time the war is over we already will have passed the peak of our ability to borrow on the future without seriously affecting our monetary valuations. Therefore, in spite of all the promises that have been made, it becomes the combined duty and obligation of all groups—business, labor, and agriculture—to try to protect the already inflated-dollar value from further inflation or complete repudiation.

It is the combined job of these groups to consider the possibility of maintaining national income at a figure sufficiently high—at least 150 to 160 billion dollars a year—to enable us to meet the fixed obligations of government and still have something left over to carry on our desired standard of living. Business cannot expand to give jobs to labor and continue to pay the high percentage-wise income tax now assessed against it. Labor cannot buy farm products unless it is fully employed at a high wage level, but neither business nor labor can accomplish its end unless it builds toward the goal on a foundation of a self-supporting agriculture. The prosperity of the three groups must be associated with an American standard and way of living that is peculiar to America alone. Our association and trade with the rest of the world must be developed in such a manner that it will not interfere with or reduce our own standards. Otherwise, we must either face extreme inflation of our dollar values or ultimate repudiation of our war debt.

In the inflated position we find ourselves as a Nation, we cannot hope to liquidate this indebtedness in an orderly manner except through the means of taxation against a high national income, a national income that is high enough that even a high percentage-wise taxation will not absorb so much of the net income so as to break down the standard of living we are capable of maintaining, provided, however, that the fullest production is attained. High wages and high earning power alone will not do the job. It must be associated with high production per individual in order that the high earning power after taxes are deducted will be able to buy in a fully supplied market at reasonable prices.

It is essential that we check the present trend toward further depreciation of the value of the raw material that goes into the finished product. Of late we have been drifting farther and farther toward a position where the price of raw material as it leaves the farm, the mine, or the forest, is of little consequence with respect to the retail price at which the consumer must make his purchase. The road to higher purchasing power for the earned dollar can only be shortened through the channels that the raw material passes in its processing, manufacturing, and wholesale and retail handling.

It is paramount that the people of this country recognize this fact. Otherwise they will continue to lay the blame on the producer of raw material—a blame which is already bringing about misunderstanding and clashes between groups in their battle for economic security.

So far as the National Cooperative Milk Producers' Federation is concerned, I am satisfied that our membership is unselfish in its desire to bring about the proper balances between the various groups and is willing to cooperate in any way and on a basis that is fundamentally sound. We ask for no special privileges or gratuities from the public treasury. We only ask for a price at the market place for such of our products that we produce for home consumption that will permit the farmer to receive a return for his efforts that will match the hourly return for other groups, and we are willing to put forth effort that engrosses our time for the full 365 days of the year, as we have in the past, in order that America shall have all that it needs of the best food produced in the world.

If our farmers' efforts produce more than can be consumed in our home markets and this surplus needs to be diverted into other markets, which include world markets, at prices below those to which we are entitled for goods sold in home markets, we do not ask to be subsidized or to be the objects of governmental gratuities. We are perfectly willing to take such loss ourselves. We are a grown-up member of the family of American

business institutions and can and should stand on our own feet.

Much discussion has taken place and many articles have been written concerning the possibilities of maintaining a high degree of prosperity in America. Much stress is given to the manufacture of durable goods as a means of maintaining full employment and high earning power in industrial activities, with the contention that full employment and high volume of business turn-over will furnish purchasing power to the extent that farm prices will follow the same high level and result in prosperity for agriculture. It is intended that the combination of all these circumstances will furnish the source of tax income to alleviate the tax burden as it applies percentagewise to the total national income. Furthermore, such a combination of circumstances in America associated with a wide-open and most liberal policy in international trade relations, is to furnish the basis for an outlet for continued expansion of the possibilities of the great American resources.

All of this planning paints a beautiful picture of prosperity springing from the roots of a devastated world where many of the natural resources have been depleted during this world emergency. However, dreams and word pictures blow up like bubbles unless founded on factual actualities, upon which foundation the future world must build for its prosperity, otherwise we will have a "flash in the pan" prosperity that will be the result of the spending of money that is called national savings but is largely spending borrowed money that is not derived from creative wealth.

Much of the savings now in the hands of the American people is already mortgaged in full and is secured by a tax lien that must be paid, and it can only be liquidated through a sound program of the utilization of all productive forces which have a full balance so far as the various groups that make up American citizenry are concerned. It must be a program of a high degree of self-sufficiency for all classes and world trade built on realities of a nation first supplying itself from its own resources and then drawing on its neighbor for the balance of its needs.

The development of world trade must fully recognize the conditions that exist in other countries, which include social and living standards, all of which are part of the wage and other income relationships. Here in our own country if we depend upon durable goods for the maintenance of full employment and high business turn-over, we miss the biggest field of opportunity and we will fail following this war as we did following the last one. But it will not take quite as long for the bubble to break. This field furnishes a very minor portion of business and employment opportunity and runs its course in a short time, as durable goods, which have a general depreciation turn-over of about 10 years, only temporarily fill the gap of consumer demand left empty during the wartime period.

It is agriculture, food processing, and distribution, and various types of small business that hold the key to a stable, high degree of prosperity. Take, for instance, the automobile industry in its fullest capacity for the employment of labor and investment in business turn-over, which reaches down into the steel industry. We find that agriculture alone presents an investment opportunity of ten times that of the entire business investment in the manufacture of automobiles and employs twenty times as many people. Agriculture's job is one of liquidating inventories nearly ten times as fast as that in the production of durable goods.

Then let's take small business—the barber shop, the beauty shop, the corner grocer, the bowling alley, the recreation center, and the thousands of small individual businesses. In these the turn-over in business activity and the liquidation of inventories is a daily or monthly operation, and it is upon these that we must depend to establish a foundation for long range and stabilized prosperity. In agriculture alone America has at least 35,000,000 of the Nation's best customers. While the opportunity of sale of the products produced on the farms is dependent upon high earning power for workers and industrial expansion to furnish labor for such workers, neither high wages for workers nor industrial opportunity can be more than temporarily sustained unless the large group that lives on the farm and produces wealth from the soil is maintained in a prosperous position.

There are two problems that seem to continually plague the world. One is that of not having enough, and the other is that of having too much, and the funny part of it is that both of these problems can be in effect simultaneously.

America's first problem is that of our home situation. We cannot maintain American prosperity with agricultural prices at world levels. We must find a home for American surpluses through a program of segregating temporary, seasonal, or real surpluses from the home market requirements—these surpluses to be disposed of either through chemurgic development, or through foreign trade at prices that admittedly cannot be on a level at which American people can afford to sell if we are to sustain a high national income.

The American farmer is not asking anyone to pay his bills. He is asking for legislation that will legally permit him to segregate such products as he produces in excess of the needs of the American market, and to organize the machinery to dispose of these products in other than normal American outlets. He fully realizes that the day has come when we must all think in terms of paying off our national debt rather than incurring additional obligations.

A two-price system must be inaugurated, one for the home market and one for the utilization of farm products in other than normal channels and the sale of our excess production in foreign markets. If this is done, the American farmer will do his share in maintaining a high national income so necessary in the support of prosperity following this war.

World Organization for Peace

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, January 18, 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column entitled "This Morning," written by John Temple Graves, which appeared in the Birmingham Age-Herald on January 13, last. The caption over the column is "While we read history we make history."

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

THIS MORNING

(By John Temple Graves)

"WHILE WE READ HISTORY WE MAKE HISTORY"

Those of us who have believed that the threat to this century's second chance at world peace is from isolationists on one side and sentimental champions of a world all love and white wonder on the other, and that the greater threat may be the second, have a friend now in Franklin D. Roosevelt, it would seem. "Perfectionism," he declared last Saturday, "no less than isolationism or imperialism or power politics, may obstruct the paths to international peace. * * * In our disillusionment after the last war we preferred international anarchy to international cooperation with nations which did not see and think exactly as we did. * * *" The President warned that the Atlantic Charter "does not provide rules of easy application to each and every one of this war-torn world's tangled situations. * * * It is a good and useful thing * * * to have principles toward which we can aim."

If the President is thinking of world organization for peace now not as a de novo and arbitrary thing based in Utopia, but an organic one grown out of history-long trial and error and world-wide present-day ties and antagonisms, his thought is the hope of the world. And that begins to seem to be his thought and the thought of America.

In history there have been four devices for keeping the peace. All have failed. There was the Pax Romana, maintained through the ancient world by the might and police power of one nation—Rome. That peace died when Rome, for want of competition, turned soft and corrupt and the barbarians swept in. There was the Holy Alliance after Napoleon in 1815, when the Emperors of Russia, Prussia, and Austria joined to hold the fretful realms in awe. That peace died when the alliance became an agency of repression and dark reaction, against which our country laid down its Monroe Doctrine and revolutions all over Europe in 1948 launched a quarter of a century of disorder. There was the peace then after Germany and Italy became nations, preserved in balance of power between the Triple Alliance of Germany, Austria, and Italy, and the Triple Entente of England, Russia, and France. The shot at Serajevo ended that in 1914. The balance had grown to be, for want of an umpire, not a balance but a rivalry of power.

Then there was the Woodrow Wilson peace of 1919. A League of Nations undertook to umpire the competition of nations, limit their rivalries, hold them together in synthetic unity under a parliamentary law. That peace was destroyed when, with America leading, the League was ignored, and in developing crises nobody cared enough or believed enough to stand fast.

Pax Romana, Holy Alliance, balance of power, League of Nations—all four have failed. But in each there was a truth. And in the failure of each a lesson. Is it not possible that the peace we seek once more—and must have for very existence's sake this time—may be hoped for in an organization embodying the truth in all four plans and employing the lesson in the failure of all? A peace based on a police power such as Rome possessed, but without that lack of competitive effort and balancing that let Rome decay. A peace maintained by a concert of greatest powers such as the Holy Alliance was, but with some element to make more certain of holiness, democracy, for example. A peace based on genuine associations of interest in balance, such as were the Triple Alliance and the Triple Entente, which balanced power before 1914 but with an umpiring and cohering organization above them to keep the balance a balance rather than a sharpening rivalry. A peace of true world organization like the League of Nations, but rather than one synthetically contrived and arbitrarily maintained, one grown and growing on a basis of natural spheres of interest and power among the nations, regions, and hemispheres.

And isn't such a peace through such an organization what is attaining form in America's mind out of the contributions of Walter Lippmann, Sumner Welles, Cordell Hull, and Messrs. Hill, Hatch, Burton, Ball? A world organization as complete as was the League

of Nations, as organically arrived at as the balance between the Triple Alliance and the Triple Entente, as realistic in recognition of nations in whom greatest power resides as was the Holy Alliance, and as physical in control against disorder as old Rome?

It is possible to see such an organization taking shape or in promise. It is possible to look ahead now to world organization based on the tripod of power which Russia, England, and America make, but including all other nations, with recognition of organic realities that concern Russia in one part of the world, England in another, the United States in another, and with a sufficient police force in being, whether jointly or separately maintained, to make sure that no nation, not even one of the great, may hope to achieve anything by war. Or, more simply, an organization for umpiring the competition, balancing the power, and policing the hot spots of the world.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the Washington Post on January 15, 1945:

ST. LAWRENCE SEAWAY

(By Janet R. Keith)

CANADA READY TO PROCEED

Governor Dewey has just recommended that the State of New York should proceed with development of the St. Lawrence seaway and power project, in conjunction with the Dominion of Canada and the Province of Ontario. This suggestion followed closely upon the heels of defeat in the United States Senate for an amendment which would have tied the St. Lawrence project into the rivers and harbors bill.

Senate objection to the seaway was not based primarily on criticism of the project itself. Opposing Senators, led by Senator JOHN H. OVERTON, felt that the agreement should be made the subject of a treaty rather than of a routine Congress vote.

However, it is expected that a new attempt to get congressional approval of the project will be made soon after the Seventy-ninth Congress convenes. President Roosevelt recently gave his unqualified support to the seaway plan:

"Of course, I want action as soon as possible on the St. Lawrence seaway. It is logical and inevitable. The quicker the better."

The idea of a great seaway which would permit oceangoing vessels to move in and out of the Great Lakes is not new. Investigations and negotiations have been going on since the beginning of the century. As far back as 1905 the Government of Canada and the United States appointed a Joint Standing International Waterways Commission "to report upon the conditions and uses of boundary waters." This body was later replaced by the International Joint Commission, which conducted a thorough investigation in 1920 and 1921, and recommended a combined development of the upper St. Lawrence for deep-water navigation and for power. In 1924 an International Joint Board of Engineers commenced a thorough study of the project from an engineering point of view.

Defeated in 1934

The culmination of all these investigations was the St. Lawrence Deep Waterway Treaty of 1932, signed by Canada and the United States. The treaty provided for a 27-foot waterway from the head of the Great Lakes to Montreal, and a combined power-navigation project in the International Rapids section enabling development of 2,200,000 horsepower, to be evenly divided between the two countries. When the treaty came before the United States Senate in 1934 for ratification, it fell 12 votes short of obtaining the necessary two-thirds majority. (The Niagara Convention of 1929, which had provided for preserving the scenic beauties of Niagara Falls and expanding power production in that area, was also defeated in the Senate.)

The next important step was the signing, in 1941, of the Great Lakes-St. Lawrence agreement, which embodied the main features of the 1932 treaty and the Niagara Convention. This was an Executive agreement which could have been ratified by a simple majority vote in both Houses. But when the United States went to war, the seaway plan was shelved to make way for pressing wartime legislation.

But now the St. Lawrence scheme is back in the limelight once more. This time with all governments thinking anxiously about providing full employment in the post-war period, the seaway is being advanced as a vast public works project, which would employ between 50,000 and 100,000 men for a period of from 4 to 6 years.

Transportation costs

Then, of course, there is still the basic argument that the seaway would cheapen transportation costs over a vast area. The commodities most affected would be bulky products with comparatively low value per ton; grain, ore, and coal. There have been widely differing estimates as to the exact savings which would be effected by the seaway route. The most recent study of the economic aspects of the project, carried out by the Office of Foreign Economic Administration, estimates that wheat charges from Duluth to Liverpool by the St. Lawrence seaway would be 5.2 cents per bushel less than rail-water routes now available. This would amount to a difference of $1.74 a ton.

Opponents of the plan point out that the seaway would be closed to navigation during 5 months of every year. And they also contend that the savings to be effected by the scheme would not be commensurate with the high initial cost. In the case of export goods, the savings in transportation costs might actually be passed on to the buyers in the form of lowered prices rather than to the producers on this continent who will bear the cost of the seaway.

Enormous power

But it is possible that the navigation aspect of the scheme may ultimately be of less importance than the power development. The F. E. A. study estimates that "the electricity developed at the International Rapids section from one dam will be as much as the total waterpower development in the Tennessee Valley since 1933, and three times as much as the power developed at Dnieper Dam, the pride of Russia."

Since the treaty of 1932, the St. Lawrence project has been approved by every committee of Congress which has considered it. Canada is prepared to place the matter before Parliament as soon as the United States has taken legislative action. Governor Dewey is so much in favor that he wants the State of New York to proceed with the matter on its own. And the position of Ontario, which would be the Province most affected by the power development, was stated recently by Premier Drew:

"We have indicated our desire to proceed with the development. It constitutes one of the most important projects for this Province, providing in the first place a very considerable amount of employment in the construction, and then providing a large source of new industrial and agricultural development from the power produced."

Drafting of Nurses

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. LYNCH. Mr. Speaker, under leave to extend my remarks, I include an article from the New York Sun of January 9, 1945, by the distinguished columnist, Dave Boone.

I personally have an open mind on the question of drafting nurses, and am awaiting the report of the Military Affairs Committee, which presently has this matter before it. The good, sound common sense of Mr. Boone, however, appeals to me, and I commend his article to the consideration of the Military Affairs Committee:

I think President Roosevelt's appeal to nurses will bring thousands into the services quicker than you can shake a stick, provided he does something to cut the red tape and bureaucratic fumbling that's made it hard for 'em to get in.

I'll take the country's nurses ahead of all other female groups when it comes to sacrifice and response to a mercy call. They ain't holding back. In fact, they're pretty indignant at the pettifogging tactics that have kept thousands out.

They're being rejected for the minor physical defects like warts and freckles, and they can't get in at all, they say, without a high-school diploma. A high-school diploma hasn't much to do with a good, brave nurse.

Gosh, some of the stuff they get in the high schools today are about the last things that would help in caring for the wounded and dying. It takes things to be a nurse that ain't found exclusively in high schools. Florence Nightingale would have been a great nurse, high school or not.

It would be almost as sensible in wartime to bar 'em from nursing if they ain't Frank Sinatra fans, can't do the samba, and never posed in a mink coat for a magazine ad.

On Sabotage

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication from the Fort Wayne (Ind.) News-Sentinel:

ON SABOTAGE

To the EDITOR OF THE NEWS-SENTINEL:

The word "sabotage" is a very recent addition to the English language, and is of French derivation. It is defined as wanton

destruction of an employer's property; thus, it would seem to be more applicable to destruction or violence occurring during labor troubles or strikes than to other acts; but during World War No. 1, it was used to describe any act that could be construed as obstructive to our military effort. Thus, it could be applied to any act that would be either obstructive or destructive of the rights of any citizen, or unit of government.

Shortly after our involvement in the present war, several Germans were executed for attempted destruction of plants that were essential to our conduct of the war, the object being to accomplish our defeat for lack of material, which would increase our casualties. This was classed as sabotage.

But, since the election, we learn that the conduct of the war has been retarded for lack of supplies, despite the preelection assurance that all military requisitions were being delivered in abundance, and right on time—this, of course, to keep the labor vote in the bag. Just previous to the election, the head medicine man made a speech, in which he minimized the effect of strikes in our war production and, by half-truths, by his failure to state the number of man-hours lost by nonstrikers due to the tie-up of material by a smaller number who were actually on strike, he brought it about that many votes were garnered at the expense of our sons and brothers, many of whom are beginning to wonder what they are fighting for.

Could this, by any chance, be classed as sabotage?

Despite labor's no-strike pledge, we are again confronted with an attempt to sabotage privileges that were guaranteed by the Bill of Rights, of an employer, whose business has no connection with war production, by calling a strike in order to tighten the stranglehold of labor leaders and thugs, under the fraudulent guise of war necessity. And in order to force the hand of the W. L. B. many unions, who are wholly engaged in war production, threatened a support strike, despite the fact that we are told that we are 40 percent behind in our deliveries to the fighting front. Might not this be classed as sabotage?

And the great Atlantic Charter, which was acclaimed as a second Magna Carta, the document that was to guarantee liberty and self-determination to all nations, great or small—coming from the leaders of nations that are classed as democracies—created hope in many small nations that their emancipation was at hand; that they would not become puppet states, or be seized by stronger powers who know not the meaning of democracy. Now the framers of that charter have classified it as being on a par with what was once called campaign oratory.

Would it be sacrilege to suggest that this be classed as sabotage of the hope and faith of those weaker nations?

All prediction being based on the fact that coming events cast a shadow before—recent events prove that those who predicted increased weight of the mailed fist were not false prophets. Reverting to the Montgomery Ward case, and all of the illogical factors involved, the most glaring and preposterous of the whole dirty mess is the idea of aiding the war effort by those who are totally engaged in war production—their threat of betrayal of those on the fighting fronts, with the threat of a support strike for the selfish purpose of forcing a firm who is not engaged in war production to bow to an order of the W. L. B. in the interest of certain employees who are receiving compensation far in excess of those who are doing their fighting and dying, and who would be shot at sunrise for acts less obstructive, and the rendering of less aid to the enemy. And the irony of it is the thought of their brothers in uniform being used to enforce such an order, which, if upheld by the courts, will be but another milepost passed on the road to totalitarianism.

All who reverence our Constitution should rejoice in the knowledge that there is one man—Sewell Avery—who is still possessed of enough of the spirit of '76 to make a legal protest in the courts against the sabotage of constitutional rights; and let us hope and pray that the scales of justice be not balanced on the side of totalitarianism.

E. A. NUTTLE.

Do Justice to Poland

EXTENSION OF REMARKS

OF

HON. DANIEL K. HOCH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. HOCH. Mr. Speaker, for many years I have been closely associated with Polish people who are now naturalized American citizens. They are rearing their families in America and by precept and example are teaching their children to become genuine Americans.

I admire the many virtues of these people and realize that they are based on principles that they brought with them across the sea.

Consequently, my sympathies go out to the Poles who still dwell in the mother country, and my hope is that when this war is over and the peace shall be established the principles of the Atlantic Charter may be applied to this people.

Unless the smaller nations, all of them, shall be granted self-determination—shall be permitted to decide for themselves what kind of government they want—the war will not really have been won and the permanent peace which is now the hope of the world may not be realized.

It is my hope that the principles of the Atlantic Charter shall be insisted upon in the final post-war adjustment.

The Neglect of Process

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George E. Sokolsky, from the New York Sun of January 8, 1945:

THESE DAYS

(By George E. Sokolsky)

THE NEGLECT OF PROCESS

Just as a matter of record, I have never been to an American race track in my life. Nor have I bet any money on a horse. It is not a matter of morals with me; just that I prefer other amusements. Nevertheless, I think that the procedures employed in closing the tracks were all wrong. In fact, there were no procedures; no action by Congress; no conference among interested parties; no consideration for close to a quarter of a million Americans who directly or indirectly earn their livings by this industry; no consideration for the States which have been receiving enormous revenues from racing.

I am not criticizing the closing of the race tracks because I do not know whether they should or should not be closed. But I note that British, Canadian, and even Russian tracks continue open and as the British manpower shortage statistically should be greater than ours, I note the fact and try to appraise it. But when I recall that horse racing is a tremendously popular sport among the British, whereas with us the most national of all sports is listening to a crooner on the radio. And as between a crooner and a horse—well, it is a matter of taste.

But to return to procedures, the question constantly obtrudes itself that we are nowadays an extraordinarily disorderly people. Take, for instance, this entire manpower trouble that led to the closing of the race tracks. Bernard Baruch called attention to it before the war started, several times since the war began and about a year ago when he gave the Government a definite program for handling it.

So instead of an orderly consideration of a major problem, the unions proceed as though there were no war, insisting upon all their rights which include such idiocies as Petrillo's hold-up and the persecution of independent unions even in companies with an outstanding war-production record. Suddenly, there are terrible shortages in war materials. General Patton's brilliant advance into Germany is held up for lack of supplies—a lack due to inadequate production on account of improper utilization of manpower. I wrote two articles about this last summer—before the election. But there was an election, and during elections bad things are not discussed by those in power, and for some reason the opposition avoided discussing this question. So, the people believed that our soldiers were getting everything they needed at any time anywhere that they were—which was untrue.

But the facts came upon us. They hit us square in the face. They hit us with a bang. So we closed the race tracks. Exactly what did that solve? What could it solve? That was one of those spur-of-the-moment brain waves, without procedure, without consideration, which sound grand but mean not a single constructive thing. On balance, it is the bunk.

Liberals are always irked by what the conservatives call the due process, which often becomes an addiction to red tape. It is, of course, an impediment to brain storms, to the brilliant improvisations which shock and give hope of something wonderful. But in the end due process saves us from useless motions, vast injustices, and oppressive government.

Really, I cannot get terribly excited about the closing of the race tracks. But I do become worried when I see a respected citizen like Mr. Byrnes, a former United States Senator, a former Supreme Court Justice, act by ukase instead of by some procedure which gives to those who have a stake in the particular industry an opportunity to protect themselves.

Prohibition which crept upon an unnoticing people ceased to be the suppression of the consumption of alcohol; it became the principal moral issue because out of it arose a contempt for government from which we have not altogether recovered. Suppose, for the sake of argument, we admit that every step taken by every agency of government during this war was correct and worthy, we still must insist upon respect for procedure, for the rights of citizens, for an avoidance of anything that even resembles tyranny. Best results can be accomplished by democratic procedures, giving those directly interested an opportunity for just treatment.

Gold and Silver As Money in the Post-war World

EXTENSION OF REMARKS

OF

HON. BERKELEY L. BUNKER

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. BUNKER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I am including an article written by Mr. Francis H. Brownell, chairman of the board of directors, American Smelting & Refining Co. Mr. Brownell is a distinguished American in his chosen field. This article is very thought provoking and worthy of serious study:

Before considering the future of gold and silver as money it may be helpful to review briefly their history after mankind had generally adopted them as money.

Until after the Napoleonic wars gold and silver at various ratios to each other (usually 15, 15½, or 16 ounces of silver to 1 ounce of gold) were used as money by all important nations. But the prices of both gold and silver were constantly varying with supply and demand. Hence, they were also constantly varying with each other in ratio as the market of either metal changed. Credit could not be granted with the option of paying in either metal at the existing legal ratio without probable loss to the creditor and gain to the debtor, since the latter would pay in the cheaper metal. Even if the debt were specified as payable in one metal—for example, gold—the situation was not much improved, for gold might be and often was of a different value at the time of maturity of the debt than it was at the time the debt was incurred. If the price of gold had advanced when the debt became due, the lender made an unbargained-for gain, with corresponding loss to the debtor. If the price fell, the creditor made a loss and the debtor a corresponding gain.

When England, after final victory in the Napoleonic wars, came to reorganize its monetary system, it decided to try to avoid the evils of a money varying with supply and demand as both gold and silver had previously varied. Its statesmen realized that the most important function of money is that of being a permanent standard or measure of value of all other goods and services. If gold and silver, either or both, are used as money, their value in themselves, i. e., their market price, must not change, as otherwise they become a variable measure of value of other commodities. This fact had not been realized in any previous monetary system. But England realized it and in order to provide an unvarying standard, decided to try to peg the price of gold. It chose gold because it happened at the time to have more gold (in value) than it had silver and because gold, having greater value in the same weight, is better adapted to international trade. Accordingly England made its unit coin consist of a specified number of grains of gold and then fixed or pegged the price of gold by directing the Bank of England to purchase all gold on offer in unlimited quantities at £3 17s. 9d. per standard ounce, and to sell all gold on demand in unlimited quantities at the same price, plus a small handling charge of 1½d., about 3 cents in United States money. This price of gold pegged by England was equivalent, in United States money to $20.67 per fine ounce, delivered at United States mint.

The price of gold was thus effectively pegged and it remained constant, notwithstanding wide fluctuations and large increases in the supply of gold from time to time, as the great gold fields of California, Australia, South Africa, Alaska, and Canada were successively discovered. The annual production of gold increased over 50 times, from less than 400,000 ounces in 1816 to over 21,000,000 ounces in 1914, when the First World War broke out. But the price never changed. As a standard measure of value, the result was all that could be desired. The effect was magical. It made London the banking center of the world and contributed very largely to the commercial and banking supremacy which England achieved during the nineteenth century. The beneficial effects were so pronounced that ultimately it led the newly created German Empire to adopt gold monometallism after the Franco-Prussian War of the early 1870's, and Germany's action soon compelled other nations to do the same. Even the United States abandoned in 1873 the free coinage of both gold and silver at a fixed ratio.

For the remainder of the nineteenth century and until the First World War, a period of about 50 years, the gold standard, with a pegged price for gold, reigned supreme.

But the price of siver was never pegged as was the price of gold. So far as silver was used as money, it continued to be an unstable standard, varying in price from time to time with changes in its supply and demand. No wonder that silver lost its prestige and came to be regarded as too changeable in price to be used as money. As gold was sufficient in quantity at that time, there was no incentive to peg the price of silver as gold was pegged, and so the use of silver as money was gradually lessened, almost abandoned except as subsidiary coinage.

The First World War threw Great Britain and many other participating nations off gold temporarily. At its conclusion there was no hesitation on the part of all these nations in desiring to return to the use of gold. In Central Europe, particularly in Poland, Czechoslovakia, and Hungary, there was a demand for new silver coinage because of people's loss of confidence in paper money. No money was considered trustworthy unless adequately backed by gold or silver, or both.

England went back to gold in 1926, but notwithstanding gallant attempts to stay upon the gold standard, she was forced to abandon it in 1931, and her example was shortly followed by other European nations. In 1933, even the United States went off gold and in 1934, stopped all new gold coinage, withdrew all gold then in circulation and made it a penal offense for any individual, including corporations, to own more than $100 worth of gold except that specifically allowed in process of mining and fabricating or held in fabricated form, such as jewelry. In the same year, the United States raised the price of gold to the $35-per-ounce level, but did not adopt measures to peg or stabilize it at that figure, since it would not sell freely at that price.

Today there is no nation on the gold standard in any actual true sense, nor has there been for 10 years or so.

The breakdown of the gold standard is complete. And it was not caused by the present World War. It happened before that war began—several years before. The physical insufficiency of gold was the main cause.

After the breakdown of the gold standard, Great Britain went to a "managed currency" system. It sought, through stabilization agreements with many countries, to substitute the English pound in place of gold over as wide a world area as possible, often referred to as "Sterlingaria." Other countries were forced to develop national bargaining in the exchange of commodities, a quota system or various other substitutes, all of which proved to be inadequate to carry on international trade at anything like its former volume. When the United States raised the price of gold to $35 per ounce in 1934, much of the European gold came to the United States in payment of its balance of trade. In short, the world monetary condition between 1931 and the outbreak of the present World War was one of great uncertainty and confusion.

The experience with overissues of paper money in the First World War was relatively small as compared with the overissues and the monetary chaos that will exist at the end of the present war.

Let us now briefly survey the monetary situation of various nations at the close of the present war since the future monetary use of gold and silver will be largely dependent thereon.

First, Great Britain: One would naturally expect that, as the first to peg the price of gold and so to originate the single gold standard, to her own great benefit, Great Britain today would be, as it was after the last war, the leading advocate of a return to the former gold standard. No definite policy has been announced as yet, but the statements of some of her leading economists and statesmen, and action so far taken, all seem to indicate a future monetary system which controls the external value of the pound in accordance with its internal value. Such a managed monetary system probably will, but may not, utilize gold. Just how gold would be used is not yet disclosed. But it would seem that in carrying out the main purpose of maintaining control over the external value of the pound, one of the two following alternatives would necessarily result in use of gold:

1. If the price of gold is not pegged by the United States, Great Britain must act as if the price of gold is not pegged but a flexible market price substituted. This, in effect, would be to return gold to its status prior to the Napoleonic wars. It no longer would be a fixed, constant measure of other commodities. Its price would again vary with supply and demand. It no longer would be an invariable yardstick of values. Or—

2. If the price of gold is pegged (by the United States, with or without other nations, including England), the number of grains of gold in the monetary unit will not be a definite quantity, but either (a) will be changeable to the extent necessary to keep the external value of the pound the same as its internal value, or (b) the pound and sovereign will not be tied to gold at all, but gold might be accepted in international exchanges as the equivalent (at its pegged price) of the pound at it changeable values.

It seems highly improbable that Great Britain actually desires that the use of gold as money be ended. The British Empire produces over 60 percent of the newly mined gold of the world, excluding Russia, from which we have no figures. Of the British production, the three Dominions—South Africa, Canada, and Australia—produce nearly half of the total production of the world. South Africa alone supplies over one-third of the new annual world production, excluding Russia. Great Britain itself produces no gold.

But however much Great Britain might like to favor the interest of its three large dominions, she dare not endanger her own economic situation in order to help Empire gold production. We must remember that Great Britain had a bitter lesson in attempting to return to the gold standard after the First World War. She was unable to remain on gold and she is now much less able to return to that standard because of the greatly increased exhaustion of her wealth caused by the present World War. The nation's indebtedness owed at home has more than doubled. She was compelled to block Eng-

lish sterling and so now owes other nations, including India, several billion pounds, estimated to equal about $12,000,000,000. The stocks and bonds owned by her nationals in foreign companies have been commandeered and sold to purchase war munitions. During this war, her foreign trade and foreign banking have been practically lost. Looking to the future, Great Britain's chief aim must be not only to regain, but greatly increase, the export position she formerly held and also to regain her former position in shipping and in world banking. She has not sufficient gold (or ability to get it) to enable her to return to the gold standard unless the United States helps. So Great Britain plans returning to the monetary policy followed between 1931 and the beginning of this war, viz, to tie to the English pound (which is not convertible into gold) the currencies of the rest of the Empire and of as many other nations as possible, particularly those of western Europe—France, Belgium, Holland, the Scandinavian countries, Portugal, Spain, etc. This will naturally be followed by tariff agreements. The following account in the Wall Street Journal of October 6, 1944, describes the plan.

"LONDON.—Sir John Anderson, Chancelor of the Exchequer, has announced that he has signed, on behalf of the government, an Anglo-Belgian financial agreement, soon to be followed by a similar Anglo-Dutch agreement. This announcement is taken here as marking the first stage of a prospective western European system of monetary cooperation intended to stabilize exchanges and facilitate reciprocal trade.

"It is expected that France, Norway, and Denmark will arrive at similar agreements with Great Britain as well as with each other, thus completing the western European financial link-up.

"Complementary tariff agreements have not yet been formally discussed, perhaps because a resumption of trade, except on a most limited scale, will be impossible for many months to come. But it is reasonable to interpret the completed or prospective monetary agreements as preparing the way for them.

"The Anglo-Belgian agreement follows closely the lines of the recent Belgo-Dutch arrangements, the avowed object of which was to facilitate commercial exchange under a free trade or at best a low tariff. The first step has already been taken in waiving all duties on reconstruction goods exchanged between the two latter countries."
